

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

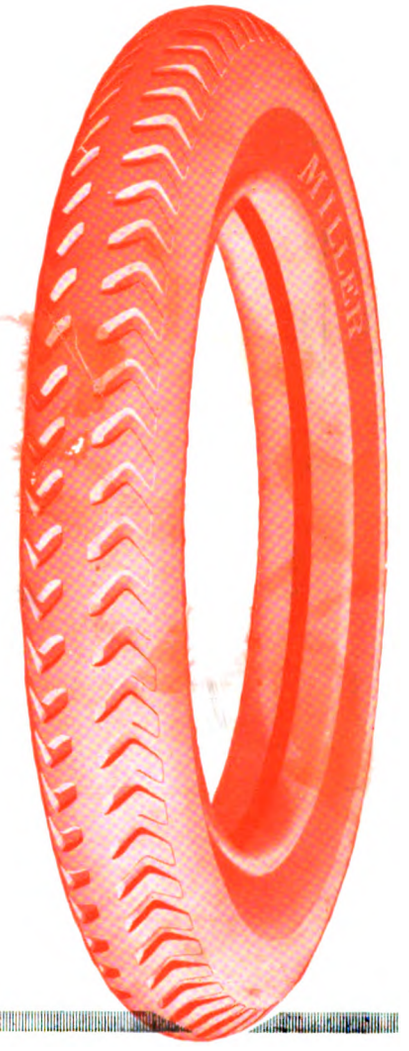
Hundreds of Inquiries for the Miller Tire Survey Coming in from Tire Dealers

MILLER UNIFORM TIRE IDEA GETS IMMEDIATE RESPONSE

Up to the time that Miller first presented its story of Uniform Tires, tire advertising had been based largely on generalities and unsubstantiated claims.



Manufacturers claimed for their tires many superiorities—yet few of them proved their claims.

They pictured to their dealers wonderful selling opportunities, yet but few gave figures to prove the success their dealers had had or told how they had been made.

The Miller Uniform Tire Book has changed all this.

We knew we had startling facts to tell. We knew just where our tires excelled and why.

But we did not tell our story until every claim we made could be proved a fact.

Miller UNIFORM MILEAGE Tires
GEARED-TO-THE-ROAD

How well Uniform Tires have proven out is best told by the wonderful response we have received from advertising these facts and from every dealer who had gotten one of our Uniform Tire Books.

Hundreds of inquiries for our agency proposition have already been received. Each day finds many more coming in.

The big tire investigation was conducted in every state in the Union. It occupied about three months, and is undoubtedly one of the largest trade researches ever made by a private concern.

If you have not received your copy and are interested in the facts Miller has to tell, send in your name today. This instructive book will be mailed you free.

This UTILITY Universal Rim Wrench

Automatically Fits Every Demountable Rim Nut

New—Improved Price Still $1.50

This is absolutely the most convenient of all the wrenches for use with demountable rims, in the public or private garage, or for road-side rim changes.

It saves hours of time because without readjustment this one tool **automatically fits any nut on any demountable rim,** as well as many other nuts about cars that you have formerly had trouble to reach or turn.

Car Owners Buy It Fast

The early-season demand for the new UTILITY Universal Rim Wrench is a record breaker. It has already started to move from dealers' shelves.

Beautifully finished in nickel and black enamel, more compact and lighter, built with practically unbreakable jaws, shortened to go into the tool box without folding, absolutely rigid in action, it is a stronger brace than ever, that cannot close up or slip while in use by the operator. **A display sells it.** Show it to your trade for sales. **Use it in your garage or repair shop for profits.**

Order From Your Jobber Today. He has it.

Practical Reasons for Equipping the

CORBIN-BROWN SPEEDOMETER

Operating on the centrifugal principle, the Corbin-Brown is immune to electrical disturbances and is not affected by extreme temperatures.

Compound governors enable it to record accurately as low as two miles an hour. These governors also absorb all shocks so that the indicating hand remains steady.

The trip odometer is **below** the indicating hand. Its reading is not interfered with when the car is in motion. The season odometer is 100,000 miles, with automatic reset to zero when the limit is reached.

The Corbin-Brown can be connected to either right or left wheel or to the transmission. It records speed and mileage whether the car is moving forward or backward. In some other speedometers the indicating hand does not record any mileage when the car is moving backward, while the odometer subtracts mileage instead of adding it.

The Maximum Speed Hand, an extra feature, registers the highest speed attained and remains at that point until reset to zero, which can be done in an instant.

50 Reasons Why You

A Liberty Bond gives you a look into the future, but defeat in the war will keep you tied to an unfortunate past

Just now, let your money talk in terms of Liberty Bonds.

Read This Page

Translate your good intentions into Liberty Bonds. Russia to-day is paved with good intentions—for the Germans to walk upon.

You buy Liberty Bonds because the man behind the gun is doing his bit, and you want to do yours. He cannot fight long without your help.

Germany has announced her eighth tyranny loan. We are offering our Third Liberty Loan. Can we allow ourselves to be outdone by Germany?

"When innocent blood from the four corners of the world cries out for justice," what will your answer be? Speak through the Third Liberty Loan.

IT is better to wear a Liberty Bond button on your coat than the print of the Kaiser's heel on your neck.

Liberty Bonds at $100 each are the credit of America laid out for you on the bargain counter.

The price of a Liberty Bond is $100. The price of defeat in the war is a lifetime of servitude to German interests.

Every Liberty Bond you buy is a safe financial investment in the future happiness and self-respect of your children. Buy as many as you can and let them inherit as good a country as you did

If you can't go to the front yourself, put your name on your money and send it. A Liberty Bond does it.

A Liberty Bond is a profit-sharing certificate on the prosperity of America.

A Liberty Bond will pay you interest on the future of America. Defeat will make you pay compound interest on the future of Germany.

A Liberty Bond is an old-age insurance policy, fully paid and non-assessable.

You must buy or pay—buy a Liberty Bond or pay Germany.

The Liberty Bonds you buy out of savings are anchors to windward. Ill fortune finds you prepared, for your bonds are as good as cash.

Liberty without Liberty Bonds is the kind in which the Kaiser specializes. Ask the Russians. They know from tragic experience.

Where are the spendthrifts of yesteryear? Buying Liberty Bonds. The air of liberty, they find, is better than champagne, and the effect lasts longer.

Our Allies keep on supporting their war loans; Americans will not hang back when the Third Liberty Loan calls. Most of the civilized world is united against Germany.

The campaign for the Third Liberty Loan is a spring drive in which every American is summoned over the top. And let us all be shock troops

You buy Liberty Bonds because you believe, with every American, in backing this war to the last dollar, the last ounce of energy.

You owe a debt of Freedom to America. Buy a Liberty Bond and pay the debt.

The $100 Bond is the cornerstone of Liberty.

You buy Liberty Bonds because they help to arm, outfit and feed the soldiers and sailors who are fighting democracy's battle under your flag.

If you don't believe in the premature peace that the pacifists demand, if you don't want to see the United States "Russianized," buy Liberty Bonds.

The time to talk peace is when the Germans lay down their arms.

It's either the "mon" or the Hun

Digitized by Google

Must Buy Liberty Bonds

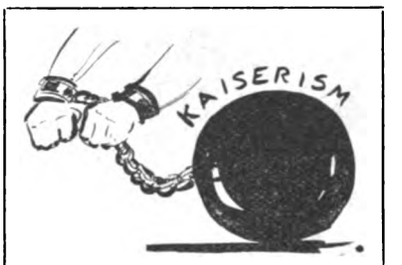
And Read This Page

Our boys in France are as anxious as the Germans to know whether you have bought your Third Liberty Loan. Which will you disappoint?

The American citizen should buy Liberty Bonds, because they are for the purpose of defending his country and his home.

The American citizen should buy Liberty Bonds because the men we have sent into the perils of the trenches have a right to our support.

The American citizen should buy Liberty Bonds because they are the means by which the United States is keeping its faith with its Allies in the war.



Conscription limits the age of the fighting man to thirty years, but there is no age limit for buying Liberty Bonds

The American citizen should buy Liberty Bonds because they will give the Government the means to bring the war to an early close and to put an end to suffering and slaughter.

The American citizen should buy Liberty Bonds because they represent to-day the highest form in which a citizen can perform his duty to his country.

The American citizen should buy Liberty Bonds because they are the bulwark of defense, keeping from the women and children of America the horrors which Germany visited upon the women and children of Belgium.

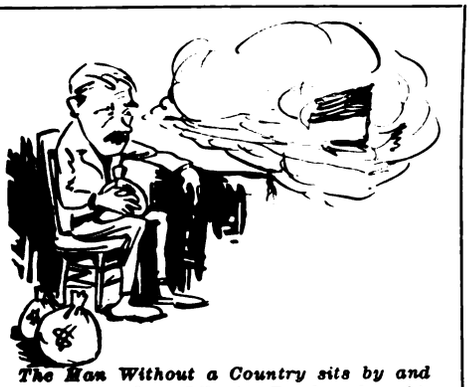
Uncle Sam is offering you one kind of bonds, and the Kaiser another. The Kaiser's don't fit Americans of the breed of Washington, Lincoln, and Wilson

Three periods urge purchasing Liberty Bonds: Past, for the gift of democracy; Present, for our boys in France; Future, for the safety of the world.

The hope of the child, the desire of the woman, the determination of the man, are the objects Liberty Bonds will buy.

You must buy a Liberty Bond to preserve your self-respect, to still your conscience, and to prove your patriotism.

Two reasons for purchasing Liberty Bonds are: To show that you are a wise business man; to prove that you appreciate your country's ideals.



That man in khaki, to whom you wished "best o' luck," wants you to buy Liberty Bonds and show you meant what you said

Purchasing a Liberty Bond will mean helping insure these United States against depredatory powers for ages to come.

Each of us should buy Liberty Bonds to assume at least part of the individual responsibility which the war imposes on the nation as a whole.

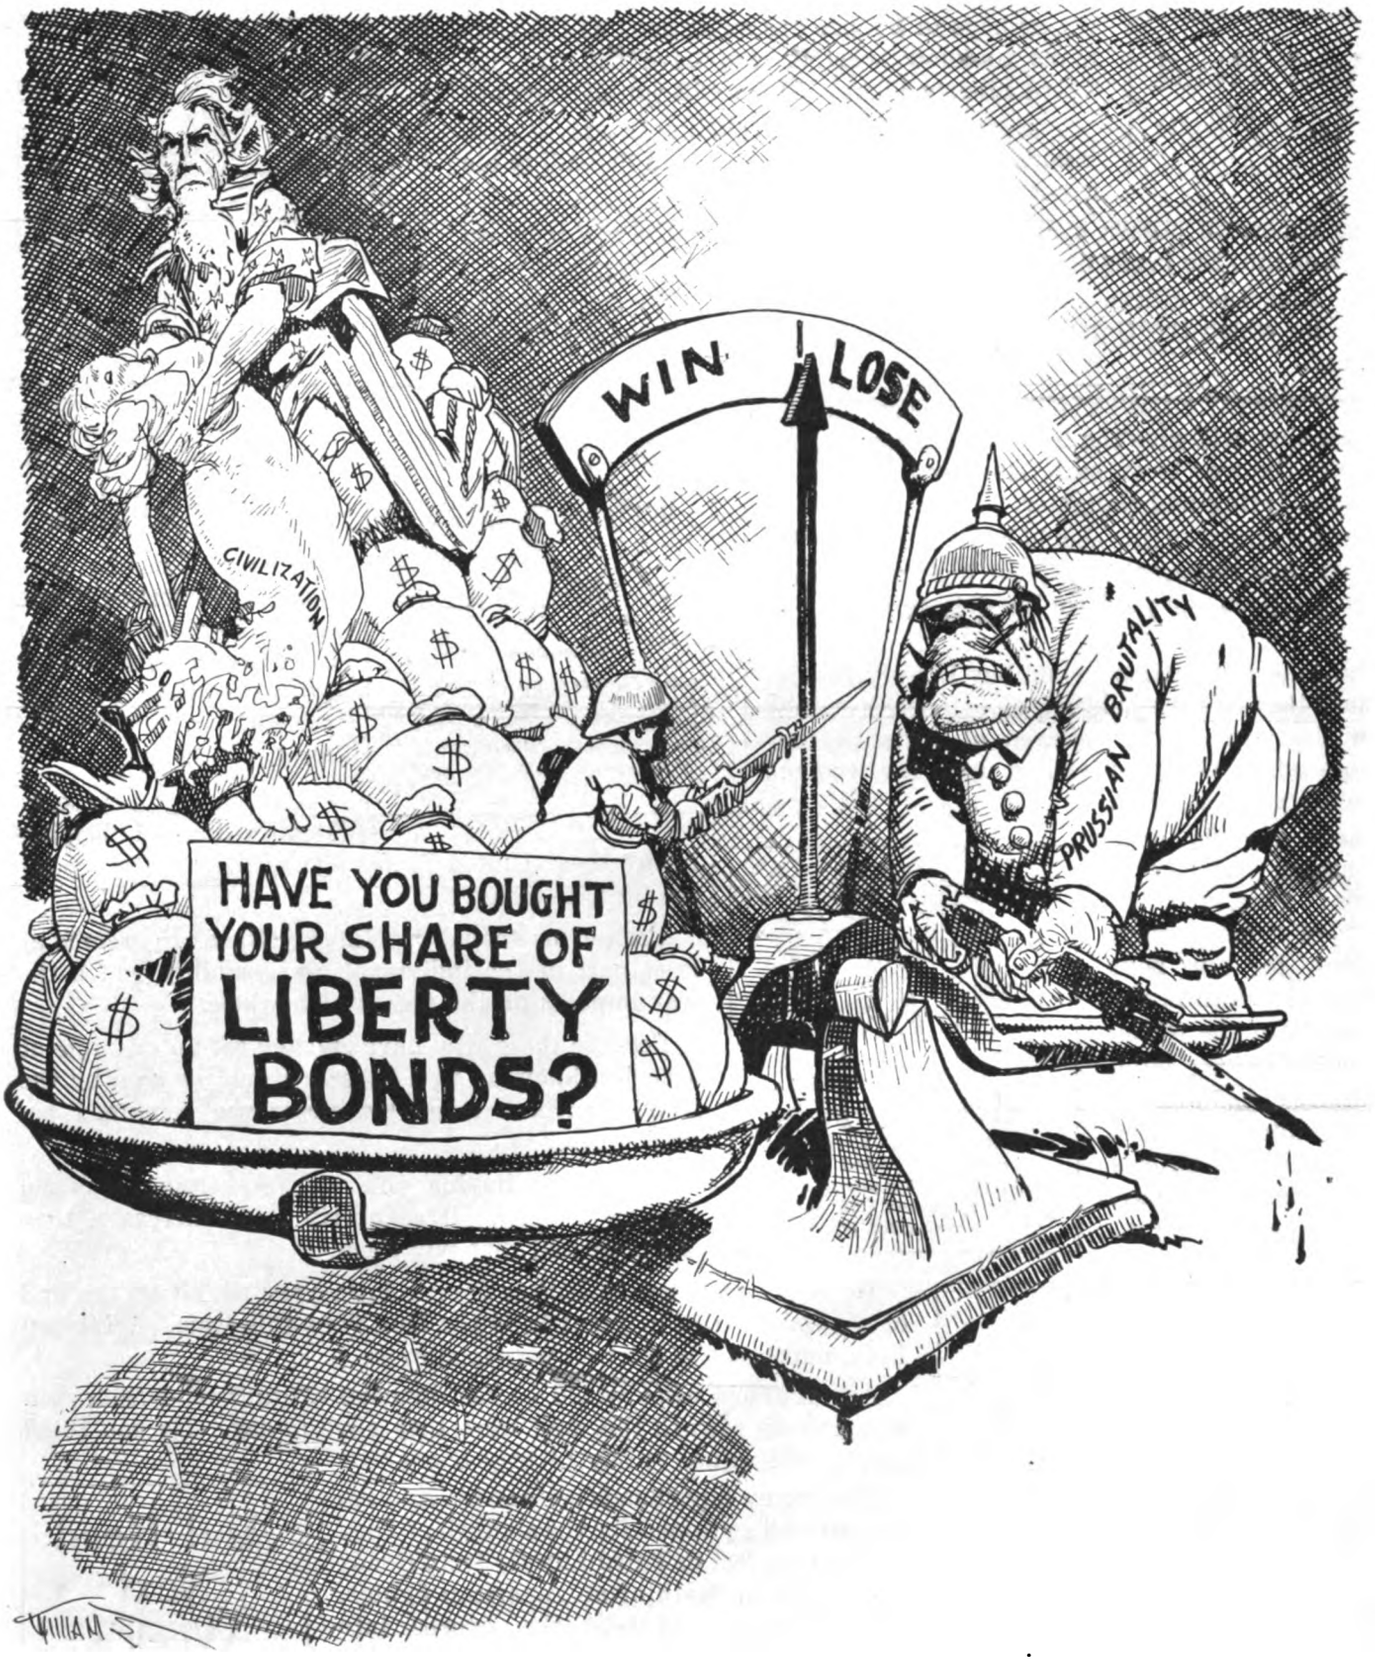
Because those who have enlisted set an example of sacrifice, knowing that Liberty would be won by the small sacrifices made by those who remained behind.

Because by buying now we are helping self and helping country. If a Liberty Bond increases, they are increased that buy them.

The Man Without a Country sits by and refuses to buy Liberty Bonds when his flag is flying somewhere in France—but he is lonesome

Do you want German Kultur forced down your throat on the end of a sword? You may get it, if the Hun wins this war. A Liberty Bond purchased is the best way to stop it.

Ask yourself what would be the financial attitude of Washington and Lincoln toward this war were they alive to-day. Do you think they would refuse to buy Liberty bonds?



The enemy buys bonds so that his soldiers may be well equipped for the struggle. Your failure to invest in Third Liberty Loan Bonds may result in death of an American fighter.

Time enough to beat the swords into ploughshares after the Kaiser is beaten into submission. The Third Liberty Loan is an effective weapon against him.

BUY LIBERTY BONDS

Have YOU Started Yet

On the Campaign in the Trade in Your City for the

Third Liberty Loan ?

Here's What New York Is Doing

THE dealers of Greater New York held a meeting Friday, March 29. Charles M. Brown, president of the association in the Borough of Manhattan, was made chairman of the Liberty Loan in the Greater City.

John B. Elsey, president of the Bronx association, was made chairman in the Bronx.

Arthur Randall, president of the Brooklyn association, was made chairman in the boroughs of Kings and Queens.

The Borough of Richmond, which is Staten Island, will be handled from Manhattan.

Headquarters are to be at the office of Manager Charles A. Stewart in the Woodward Hotel.

Stewart is to institute a bulletin service.

Individual dealers are to canvass their own organizations.

Any dealer who needs assistance will be supplied with speakers and canvassers from the association head quarters.

The work is to start intensively Saturday, April 6.

It will not end until the LAST DAY, Saturday, April 27.

The New York trade bought $5,448,100 of bonds on the Second Loan. It will try to beat this mark by SOME.

Other Cities Are Lining Up—Are You ?

From other cities come reports that the work will be started with a push during the present week, so that everything will be in fine working order by April 6, the day the big drive begins.

Atlanta is going to have a big parade April 6. Hopes are high.

Next week we shall tell what various cities are doing. Send your story in now, no matter if you are just getting started. Give it to us NOW so it can appear in next week's issue of Motor World.

Use the Plan

Last week in Motor World on pages 12 and 13 was printed a plan for organizing a city's trade for the Liberty Loan. If you haven't a better plan use this one.

On pages 12 and 13 in the issue of March 20 were printed questions and answers in simple language, telling what a bond is and why it should be bought. Read these pages to your organization.

This week on preceding pages are many reasons why you should buy Liberty Bonds. Read these to your organization.

Get Publicity

Let the newspapers know what the trade in your city is doing. Don't hide your light under a bushel. The more publicity you can give to your work the better the work will go.

Issue bulletins through your own trade.

Run a thermometer. Mail one every day to firms in the trade.

Remember This

The campaign runs three weeks—then stops. And old Kaiser Bill is sitting safely back of the lines in France watching YOU. A big over-subscription of the loan is a bigger reverse for Germany than the loss of miles of territory.

The Best Drive-Away Route Between Cleveland and New York

It Has Only 25 Miles of Road Not Thoroughly Modern, Is 587 Miles Long and Has Plenty of Hotels and Garages

NEW YORK, April 1—A new drive-away route between Cleveland and New York has been mapped out. It is the best drive-away route between these two points and other Western points contiguous to Cleveland. It is 80 miles shorter than the usual Mohawk valley route, only 30 miles longer than the route by way of Pittsburgh and Philadelphia, and in its entire length of 587 miles there are less than 25 miles which are not of thoroughly modern construction.

The new route was mapped out by R. H. Johnston, manager of the New York Branch of the White Co., because of necessity. With both cars and trucks scheduled for delivery over the roads, and both the Mohawk and Pittsburgh-Philadelphia routes found by personal inspection and investigation to be in a condition too bad to permit extensive drive-aways, another route had to be found.

With the exception of a few stretches of bad roads here and there and in the outskirts of a few of the towns in the gaps between state roads and paved streets, the entire route is over excellent highways.

The greater part of the new route between Fort Lee Ferry, New York City and Westfield is over fine state roads, many of which are so new and have been subjected to so little traffic that they are absolutely flawless.

Owing partly to the spirit of the times, and because the road from New York toward Cleveland leads toward and through Liberty, N. Y., Johnston has christened the new route the "Liberty Highway."

Most of the way the route follows the several valleys which distinguish the Southern Tier counties. The road winds picturesquely through these valleys, following the meanderings of the water courses. At Suffern, N. Y., just over the New Jersey line, the "Liberty Highway" meets the Ramapo River and runs with it past Tuxedo Park to Harriman. Here the road strikes off sharply to the west and mounts ever higher and higher, by easy grades, through Goshen, Middleton and Wurtsboro to Liberty.

Just beyond Liberty, the descent begins into the basin drained by the Delaware River. First the road runs side by side with Little Beaver Kill, then with Beaver Kill, as far as Hancock, whence the road parallels the Delaware River to Deposit.

Along Beaver Kill and the Delaware River Johnston found numerous places where the adjacent hillsides were showing a tendency to slide down over the road. Strong concrete retaining walls have been built along this road for miles at a stretch, but when a hill-side starts to move, the retaining walls can do little to hold it back. Fortunately, there are road-gangs constantly patrolling the roads and, as soon as one of these miniature land-slides occurs, the road is quickly cleared.

From Deposit the road mounts over the hills and, after crossing the Susquehanna River at Windsor, meets this lazy stream again at Binghamton and follows it almost to Waverly. Beyond Waverly, the road courses along the banks of the Chemung River past Elmira and Corning through Addison. Here the road again strikes over the mountains and descends to the valley of the Canisteo River a few miles from Hornell.

From that city, the road goes cross-country to Wellsville, where it meets the gentle Genesee. This river is left sharply behind at Belvidere from which the road leads through a beautiful valley through Cuba and Hinsdale to Olean.

Then comes that perfect, almost unused road following the course of the Allegheny River through Vandalia to Salamanca. This river is followed still further to Red House, whence the road again goes over the hills, so that the next body of water is Lake Chautauqua at Jamestown. Skirting this lake for 20 miles, the road leaves it at Mayville and drops several hundred feet in the next 6 miles to Westfield on the shores of Lake Erie.

At Westfield, the scenic part of the Liberty Highway is at an end. Here, too, is almost the end of the modern im-

(*Continued from page* 11)

proved roads. New York State thought it wise to build a fine highway from its southeast corner to Westfield, but it did not think it worth while to build to the Pennsylvania State line.

Similarly, Pennsylvania did not think it worth while to connect up the New York State line with the Ohio State line. Ohio, in turn, did not go further east than Ashtabula with its good road system. Thus it happens that, between Westfield and Ashtabula, the road has not been systematically improved.

The war-time urgency has resulted in some belated attempts to put this road in condition, but this part of the road is still the poorest link of the great Liberty Highway. From Ashtabula to Cleveland the roads are splendid.

An idea of the generally fine condition of the Liberty Highway may be obtained from the schedule which was followed in Johnston's recent exploring trip. He made Elmira from New York the first day, Erie on the second day, and drove from Erie to Cleveland on the morning of the third day. In other words, a driver may safely figure on a schedule of 250 miles per day. In fact, a touring party which keeps going could easily cover the route in 2 days, in which case Hornell would be the logical night's stopping place. Those driving trucks over the road should be able to maintain a schedule of approximately 100 miles per day.

Johnston has immediately commenced driving new cars and trucks over this route from Cleveland to New York. He strongly recommends that dealers send at least part of their drive-away parties over the new Liberty Highway. Even if there were no other reasons, the overcrowded condition of the hotels, garages, and even the roads of the Mohawk Valley and the Lincoln Highway routes make it advisable that a third highway should share the ever-increasing drive-away traffic.

The Liberty Highway is well provided with both hotels and garages and, as for the roads, they are practically bare of traffic.

Soldiers' Families Taken to Camp

NEW YORK, April 1—Fifty-eight motor cars were donated to the A. A. A. yesterday by residents of New York to carry soldiers' families to Camp Upton. The club provided tickets to the Motor Parkway, so that the cars could make the trip of 78 miles to the camp in quick time.

FOURTH INSTALMENT IN A SERIES OF SIX STORIES

The Street Without a Name

By Ray W. Sherman

MILLER, the Sennett dealer in Merrylton, was having trouble getting started with his 1918 business. He had a fine territory with all sorts of prosperous farmers, but he never had seemed able to get out of this the profits that he was entitled to.

Reilly, the Sennett distributer in Callawassa, insisted that Miller come down once in a while and talk to him, and every so often Reilly went down and talked to Miller. This time Reilly was down talking to Miller.

"Have you sold your year's allotment of cars yet?" laughed Reilly.

"Well, hardly," smiled Miller, "but I do think I'm getting a start. I got that prospect list you told me about fixed up and I put new windows i and next week the carpenter is coming to build that accessory display cabinet you told me about."

A Ray of Light

"That's fine!" enthused Reilly. "It begins to look as though we were going to get somewhere. If we keep it up at this pace I think we ought to make some money this year. What do you say?"

"Looks good to me," said Miller, who displayed more enthusiasm than he had had in his system for the past ten years.

"What are you going to do?" asked Reilly. "Are you getting some of these things started and paving the way for the sale of a lot of stuff this summer?"

"Yes, I am getting my prospect file ready and I figure to go out and get quite a lot of business."

"What about your advertising?" asked Reilly, glancing over the plans that Miller had drawn for his summer business.

"I haven't figured on much advertising," said Miller. "You see the papers here are small and they don't amount to a great deal and your papers down in Callawassa cover this country pretty well. I figured that the advertising you were doing down there was going to be quite a lot of benefit to me."

"Aren't you going to do any advertising in your own papers?"

"No, I haven't figured that I would. I sort of thought it would be a rather useless expense and I want to keep expenses down as low as possible. You know that's one of the things you told me to do—to cut out all the waste I could—and I figured that this advertising was going to be pretty much waste."

"I don't think you're quite right on that," said Reilly. "I think you ought to spend some money in your local papers advertising your business."

"Maybe you're right," said Miller. "I'll think it over again and find out what the rates are and about what I can do. How much do you think I ought to spend?"

"Well," figured Reilly, "if you do anything at all this year, you ought to do at least $50,000 worth of business and inasmuch as it's going to be a hard year you probably have got to fight for what business you get, I should say you should spend about 1 per cent of this $50,000. That is, about $400. Maybe a little bit more and maybe a little bit less. It all depends on how things pan out, but I should say figure on about $300 for a starter to run through a good portion of the year and if it works as well as it ought to, add a little bit more to it."

"I'll try that," said Miller.

Local Advertising Valuable

"A lot of the country dealers that I have," continued Reilly, "pass up a good bet on this advertising in their local papers. They look upon their local papers as a sort of necessary nuisance and they don't take full advantage of them, but I think the local paper in the small country town is one of the greatest possibilities in advertising that there is to-day.

"This paper oftentimes goes out only once a week or twice a week, but it is read from cover to cover by every man in this part of the country. He gets the Callawassa paper for the news of the world, but when he gets his own home town paper he goes over it from beginning to end, reads all about who has built a new barn and all that sort of stuff and I believe your advertising there would receive an unusual amount of attention.

"You've got to advertise your goods, Miller, or you're not going to get your stuff across to its maximum possibilities in this territory. You can look over the dealers in this town and find those who advertise and those who don't and see the difference in the business they have done. The most successful man here is Smith, and he has been one of the heaviest advertisers in your local papers. I think you ought to do the same thing.

"The rates in this local paper aren't very high. You can get a lot of space for a small amount of money. You should give good displays and keep the name of yourself and the things you sell before the public so that when anyone says car they will think of Sennett cars, and when they think of Sennett cars they will think of you—and not of me. As it is, my advertising in the Callawassa papers is about the only thing that is coming into this territory, and when they think of Sennett they think of Reilly. This may make some of them want to come down to my town and do business with me, whereas if you keep your name before the public in the same way in your own local paper, they will think of you instead of me when they consider buying a car.

Advertising Is Like a Well-Known Street

"My newspaper advertising has been one of the biggest helps I have had in building my business. I have spent money for advertising when there has been doubt in my mind as to whether it would bring in a good return. Despite that I have tried to make my advertising such that it would pull results. I have paid a lot of attention to it and spent a lot of time on it. I have tried to get as large a personal element into it as possible and bring myself in close touch with the car-buying people in my town.

"Advertising is just like a well known street. It brings people to you. If you had two streets and on the corner of one was a sign which said that the street went somewhere and there was no sign on the other street, most of the people would go down the street to which the sign pointed.

"It is a peculiar thing how people will act under the force of suggestion. If you make a suggestion people are likely to follow it, whereas if left to their own devices there is no telling where they will go. You should get the way to your store so well posted with advertising that whenever people think of buying a car selling for about $1500, they will think of your car, and when they think of your car they will know right away

The Street Called Advertising

"Advertising is just like a well-known street. It brings people to you. If you live on the street called 'Advertising,' there are always a lot of people going by your door; but if you're on an unknown street you are out of the limelight and out of the thoughts of the people who buy."

Quick Demountable, Interchangeable Wheel for Liberty Motorcycle

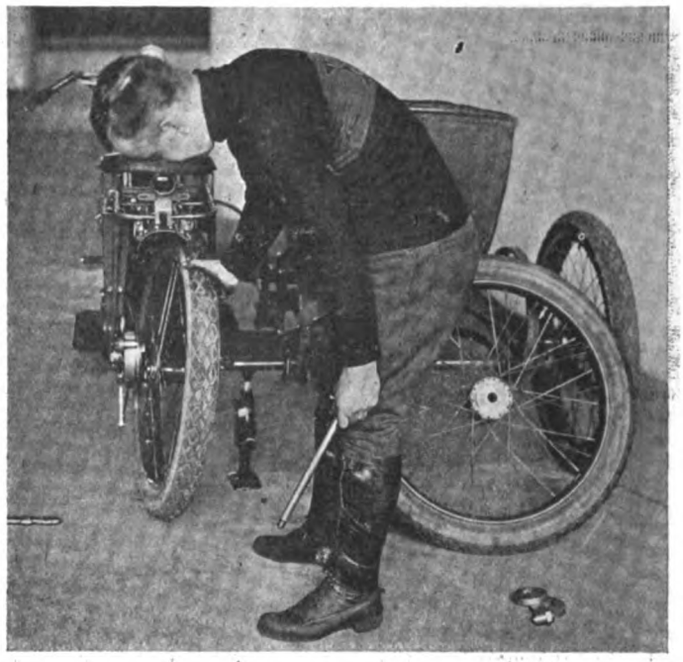
The wheel used with the new Liberty motorcycle is a quick demountable type and is interchangeable and can be used for front, rear or side car

THE most novel feature of the U. S. A. motorcycle that has been developed by the Quartermaster Corps is a demountable wheel which makes it possible to replace a damaged wheel in less than a minute. Heretofore demountable wheels have been used only on passenger cars, but the fact that motorcycle wheels are often damaged in service at the front made it seem desirable to develop a demountable wheel for this work. A spare wheel is to be carried on the side car, and this will take the place of either the driving wheel, the front wheel or the side-car wheel.

The chief problem in connection with the design of such a demountable wheel is, of course, to provide means for the transmission of the driving and braking effort to it. How this has been accomplished in the U. S. A. motorcycle demountable wheel may be seen from the sectional view of the rear wheel hub herewith. It may be pointed out in this connection that all of the bearings used on the wheels of the motorcycle are annular ball bearings, which also denotes a new departure in motorcycle construction, at least so far as American practice is concerned.

There are essentially three parts to the rear hub construction, viz., the central part, which forms part of the wheel; the left-hand part, which carries the driving sprocket wheel and is supported in the left-hand prong of the rear fork, and the right-hand part, which carries the brake drum and is supported in the right-hand prong of the rear fork. The central part consists of the outer hub shell *A* mounted on two annular bearings on the sleeve *B*. The hub shell *A* has an inward flange at one end, and a ring nut is screwed into it at the other end. The flange and ring nut are cut with grooves for felt packing, so as to keep dust out of the ball bearings and retain the lubricant in them. It will be seen that the ball bearings at the right-hand end of the hub shell have both the inner and the outer race clamped tight and therefore will take any thrust loads, whereas the outer race of the left-hand bearing is free in the shell.

Each of the side members of the hub construction also consists of an outer shell and an inner sleeve. In the case of the left-hand part the shell is supported on the sleeve by two adjacent ball bearings, while the right-hand part has only one ball bearing. Attention may be called to the provision of felt packing wherever there is a chance for dust and grit to work into the interior of the hub.



The driving connection between the central member of the hub construction and the two outer members is similar to that of a Hookham joint. The central member is formed with a tongue transversely across its face at each end, and each of the outer members is formed with a corresponding groove. To prevent incorrect assembly the driving members on opposite ends of the hub are different in form. The whole assembly is held together by means of the central bolt *C*. When this bolt is removed, the central part of the hub construction can be drawn laterally from the two end parts. There is a cross-pin through the head of the bolt to facilitate the removal of same.

In order to make it possible to withdraw the wheel from the rear fork, it was necessary to hinge the rear portion of the mud guard. If a wheel becomes damaged and the rider wants to replace it with his spare wheel, the first thing he does, if it happens to be the rear wheel, is to drop the stand to raise the machine off the ground. Then he unscrews the

Digitized by Google

nut from the rear hub bolt. The wheel then drops out of its own accord. It is then replaced by the spare wheel, the bolt is replaced and the stand raised to let the wheel down to the ground. The various operations are illustrated by the accompanying photographs and drawing.

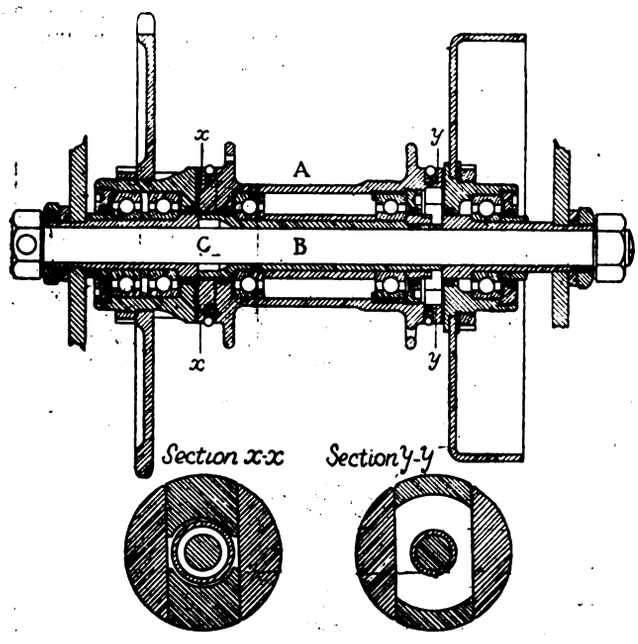
Aside from the hub construction, the new wheel corresponds to the standards adopted by the S. A. E. It is 28 in. in diameter and fitted with a 3-in. tire on a CC clincher rim. There are forty spokes, and these are so laced that there are four crossings. The spoke has a maximum diameter of 0.148 in., and the diameter of the swaged part is 0.120 in. Spokes are made of carbon steel containing from 0.40 to 0.55 per cent of carbon and having a tensile strength of not less than 140,000 lb. per square inch. Each complete spoke and nipple must be capable of sustaining a dead load of not less than 1580 lb.

A spare wheel is carried at the back of the Liberty motorcycle and can be used in place of any other that may be damaged. This shows how easily the rear wheel may be removed. Less than one minute is required to replace a wheel

Advertising a War-Time Expense

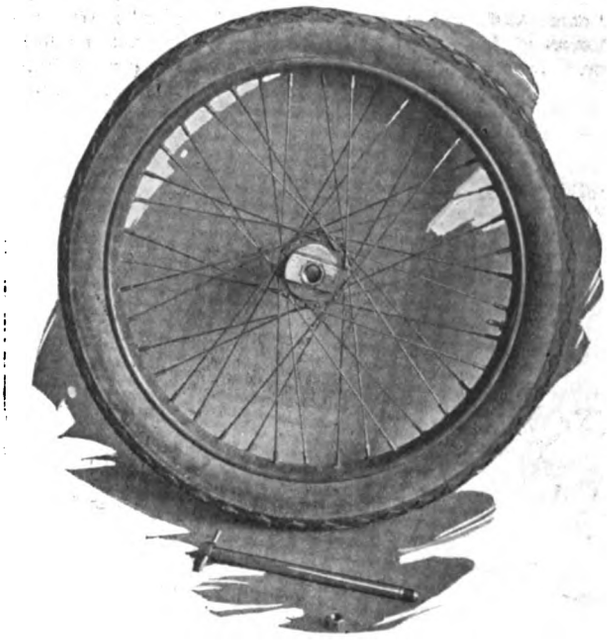
March 28—The British War Government recognizes advertising as a necessary expense even in the cases of those firms which now are engaged almost entirely in the manufacture of munitions.

The British Ministry of Munitions has recently made a statement in the *Manchester Guardian* regarding advertising, in which it states that no arbitrary rule has been made in reference to the advertising expenses of those establishments which, as the Government expresses it, "are controlled." The statement follows:



"In dealing with such establishments for the purpose of munitions levy, it has been the practice of the Ministry to make full allowance for advertising on a pre-war basis; and while it is possible that cases may arise in connection with contracts with the Ministry in which advertising charges would have to be more or less disregarded, owing to the particular contract basis, such charges are in general treated as part of the legitimate establishment charges of the firm. All such cases are dealt with separately on their merits."

Sterling Trucks Go Overland



MILWAUKEE, March 28—The Sterling Motor Truck Co. last week sent a fleet of eleven Sterling trucks overland to Baltimore, for delivery to the Calvert Motor Truck Co., distributer. The fleet was accompanied by M. R. Curriden, sales manager of the Calvert company. The distance is about 1000 miles, and it was figured to cover the route in 8 or 9 days. The H. Kliensbans Co., Pittsburgh, recently drove two 5-ton Sterlings overland from Milwaukee in six days, covering about 700 miles. A fleet of 2½ and 3½-ton Sterlings will be forwarded to the same distributer in the same manner at the end of this week.

To Make Kerosene Carbureter

DETROIT, March 28—The Kerosene Equipment Co. will take over the Detroit Kerosene Carburetor Co., and will establish a factory in Detroit to manufacture kerosene carbureters and kerosene products. E. E. Schwarzkopf, president and treasurer, and J. W. Racklyest, vice-president, of the Detroit Kerosene Carburetor Co., will head the new company in the same official capacity. The Kerosene Equipment Co. is being organized under the laws of Delaware, with a capitalization of $50,000, all common stock, issued without par value. Hartford capital is now behind the project.

Internal construction of the quick detachable, demountable Liberty motorcycle wheel

Appearance of the wheel itself, which is a rugged type, well able to stand the roughest usage

BETTER MECHANICS

No. 62

Installation of the Genemotor On the Ford

THE following instructions cover the installation of the Genemotor starting and lighting equipment for any standard Model "T" Ford car. The instructions do not cover the installation when the car has previously been fitted with accessories such as tire pumps, water pumps, special ignition, distributors, etc.

The Genemotor equipment is a single unit outfit, that is, one unit performs both functions of cranking the engine and charging the storage battery. The wiring is what is known as the two-wire system, and no fuses are used. The Genemotor is complete and includes all the outfit necessary to make the installation with the exception of the electric bulbs.

Preparation

Before dismantling the engine be sure that it is in good condition, running smoothly and the carbureter adjusted properly.

1. Drain and remove radiator and water connections.

2. Remove the starting crank and ratchet.

3. Remove fan bracket complete with fan and belt.

4. Remove fan drive pulley on the crankshaft.

5. Remove the engine bolts A shown in Fig. 1.

6. Clean and wipe engine carefully to insure perfect seating of parts.

Installation

1. Mount Genemotor supporting bracket on the side of the engine, using one or two of the ⅛-in. washers which are furnished for use between the bracket and engine as necessary. Gaskets should be used on each side of the bracket. Assemble front water connection and bolt *A*, Fig. 1, and also bolt bracket at water inlet temporarily.

2. Chisel off part of the two rear heads *G*, Fig. 2, in the nose pan of the engine and bend out the edge of the nose with a wrench to clear the chain, Fig. 3. Assemble the driving sprocket *C* on the crankshaft. Next lay the starting crank ratchet inside of fan pulley *D* with holes for pin in line and force the pulley inside the sprocket. Remove small screw *F* from the end of the pin *E* and drive pin home. Then expand the end of the pin by replacing the screw *F*, being especially careful to note that the end of the pin *E* is below the teeth of the sprocket.

3. Place the fan belt under pulley *D* and replace the starting crank and rivet to the ratchet.

4. Place the Genemotor in supporting cradle and clamp the strap over it loosely.

5. Feed the chain under sprocket *C* and rivet the ends together. Then pass the chain over the small pinion on the Genemotor and align by shifting the Genemotor backward and forward as necessary. The chain should be adjusted to give ⅜-in. deflection under ordinary finger pressure, and when this adjustment is completed the Genemotor should be clamped firmly in place.

6. Remove the fan shaft from the Ford fan and reassemble with the new fan furnished, first packing the fan body with bearing grease. Mount the fan on the engine and tighten the belt to the proper tension.

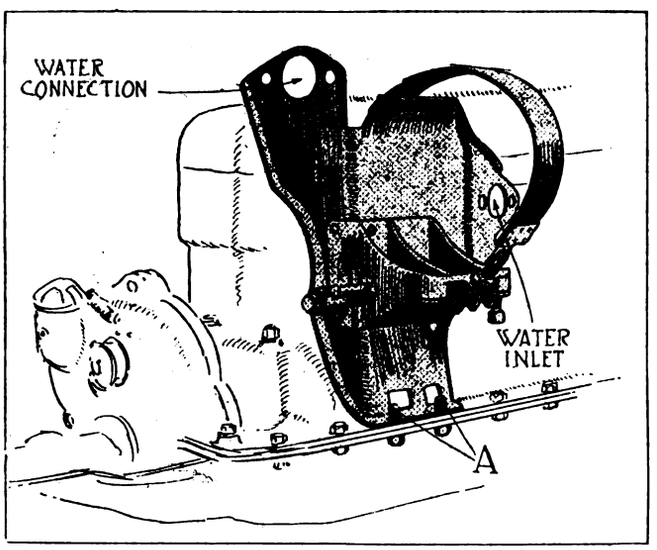

Fig. 1—Steel frame and cradle for supporting the Genemotor in position at left side of Ford engine

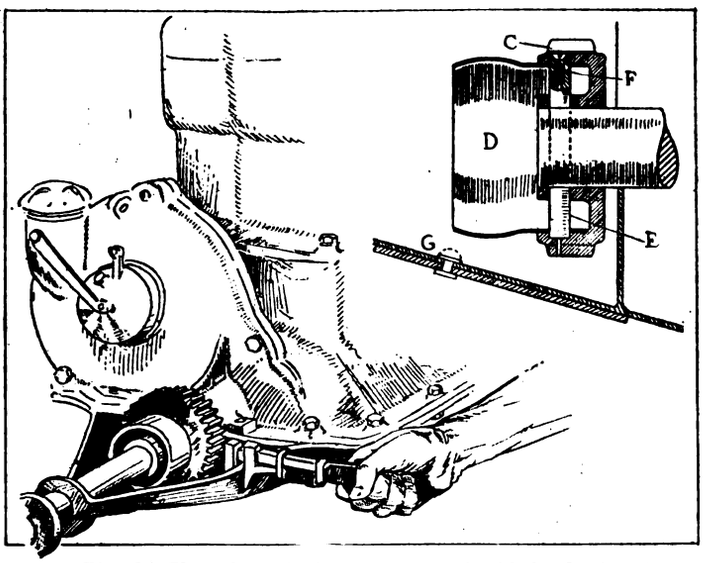

Fig. 2—The edge of the nose pan should be bent out slightly with a wrench to clear the chain. Fig. 3—Above—Method of fitting the new fan pulley

Digitized by Google

7. Replace the radiator and water connections.

8. Attach the primer rod and lever furnished with the equipment as shown in Fig. 3.

9. Mount the starting switch and cutout under heel board as shown in accordance with the dimensions given in Fig. 4.

10. The battery box should be mounted on the left runningboard as shown in Fig. 5. Bend the fender with a heavy bar to form an opening between the body and the fender to allow battery cables to pass through. The lighting switch should be mounted on the steering column and cable attached to it clamped between the recess in the switch box and column. Wire up the head and tail lights with leads supplied in accordance with the wiring diagram, Fig. 6.

The Genemotor should be connected to the switch and cutout and a piece of circular loom should be slipped over each one of the main battery cables where they pass through between the body and fender. The leads should be securely fastened by the clamp on the outside of the battery box. Connect the negative battery cable.

Touch the positive terminal to the battery with all switches off. If no spark is noticed, no grounds exist in the wiring and the terminals should be connected permanently. The headlights should be fitted with 12-16 volt bulbs. The tail light should be fitted with proper adapter and a 12-16 volt bulb.

11. An ammeter is not regularly supplied as a part of the system, since charging is at all times assured through the inherent regulation of the single unit Genemotor equipment. Many owners, however, consider the addition of an ammeter a desirable feature for checking the system and it can be added by substituting wiring, as at *A*, Fig. 7, in place of lead 8.

12. Turn engine over by hand; and see that everything is clear. The starter and lights are now ready for use.

Maintenance

Put distilled water in the battery every 2 weeks. Grease the chain every 500 miles and keep it at the proper tension.

The ball bearings at each end of the Genemotor should be lubricated with a few drops of non-acid oil every 1000 miles. Never put oil or grease on the commutator.

If the commutator is rough or dirty clean with fine sandpaper only.

Never operate the Genemotor with the battery removed unless the two Genemotor terminals are first connected with copper wire or cable; otherwise the Genemotor will overheat and injure the windings.

Lights must not be used with the battery removed.

Never operate the Genemotor with small regulating brush removed or with contact surface reduced, as in such case the normal charging current cannot be produced.

In extremely cold weather it is advisable to "break away" the engine by hand cranking, turning over a few times, thus preventing undue drain on the battery.

If the engine does not fire promptly pull the priming rod; if still no success is met with, examine the ignition system and adjustment of the carbureter.

Remember the starter is only intended for cranking the engine. Should the starter fail to turn the engine over, before attempting any adjustments try cranking by hand to be sure the crankshaft is free to revolve.

The Genemotor is designed to give satisfactory operation with the Ford cars running under normal conditions. If, as with any electric starting and lighting system, the car is habitually operated on short runs with many stops or at very low speeds the battery may become depleted, due to the fact that in such cases the average charge is less than the requirements for starting and lighting. Special charging may then be necessary.

Monthly Inspection and Service Contract

Used by Detroit Electric Dealers in Kansas City, Chicago and Minneapolis

This agreement made and entered into at Kansas City, Mo., this *11th* day of *February*, A. D. 1918, by and between ANDERSON ELECTRIC CAR COMPANY, a Missouri Corporation doing business within the State of Missouri (hereinafter called Company), and *Mr. C. R. Butler* of Kansas City, Mo., who is the owner of Detroit Electric Automobile *Model 75, No. 10534* (hereinafter called owner), WITNESSETH:

WHEREAS, It is of mutual advantage to the parties hereto that the Detroit Electric Automobile of said owner be operated with the greatest efficiency and the lowest possible maintenance cost, and

WHEREAS, The Company, by reason of its superior facilities and the volume of its business and the efficiency of its skilled electrical and mechanical employees, and by means of regular inspection and prompt minor adjustments and repairs, is enabled to minimize the maintenance cost and to raise the service efficiency of said Detroit Electric, and

WHEREAS, The owner desires to bear a portion of the expense of such maintenance, inspection and service,

NOW, THEREFORE, in consideration of the making by the owner to the Company of the payments hereinafter provided to be made and the performance of the covenants hereof by the owner, the Company hereby agrees to furnish the following service:

Grease and Oil entire car where provision for such is made, except differential gear and motor. (These parts are cared for when car is overhauled, which should be done twice yearly.)

Adjust chains, brake rods, radius rods, torsion rod (when not frozen), spring shackles, controller lock, all controller speeds, foot brakes, controller brakes, motor brushes, steering gear, and grease cups (all grease cups should be turned down once each week), and adjust door bumpers and stops, and window catches.

Examine batteries by taking gravity readings of a sufficient number of cells. Locate leaky and dead cells, if any, and determine and report condition of battery as to flushing and general care.

Clean commutator and dress down controller contact fingers and segments.

Line up wheels unless misalignment is due to accident. (In this case the owner will be notified and authority secured for necessary labor and materials, if any.)

Inflate pneumatic tires.

This service does not include replacements of broken, damaged, worn or lost parts, but a report and recommendation of necessary repairs, if any, will be submitted, together with an estimate of the expenses for materials and labor required.

It is specifically agreed that when notice of the necessity of replacement of broken, damaged, worn or lost parts shall be furnished to the owner, that thereafter the service hereinabove provided shall not be rendered with respect to such broken, damaged, worn or lost parts, and that by reason of such inspection and service, the Company does not assume to make any warranty other than the written warranty, if any, made at the time of and as an incident to the original sale of such car to the owner.

It is specifically agreed that this service shall be rendered by the Company only upon the date or dates agreed upon from time to time, and such date shall be fixed as nearly as practicable upon the same date of each successive month, but the Company shall give the owner notice three days prior to the date of such inspection and service. The car must be delivered by the owner to the Company's place of business upon the date appointed, and permitted to remain with the Company a sufficient length of time to permit the rendition of such service, and then called for by the owner. The Company will, however, upon request of owner, call for and deliver the car, for which service the owner agrees to pay 25 cents in each direction, and the owner agrees, in each case when he requests such service that the employee of the Company becomes the agent of the owner and that the Company shall be absolved from all liability arising while the car is in the possession of such employee, at the request of and as the agent of the owner.

The owner agrees to pay to the Company, upon rendition of invoice, immediately following inspection service and report, monthly, the sum of Three (3) Dollars. If for any reason the owner fails to bring the car to the Company's place of business for service on the regularly appointed day, and a lapse of more than five weeks occur between service dates, the charge for the first service following such lapse shall be Five (5) Dollars.

It is mutually agreed that this service contract shall be and remain in full force and effect for a period of *1* year and until cancelled by either party by the giving of written notice to the other. The sale and transfer of said car by the owner shall, upon notice to the Company, constitute a cancellation of this agreement, but the new owner shall be entitled, upon application, to be substituted as a party to this agreement.

IN WITNESS WHEREOF the parties hereto have caused these presents to be properly executed at Kansas City, the day and year first above written.

(SEAL) .....

ANDERSON ELECTRIC CAR COMPANY.

Owner's Address, *1324 Grand Ave.*
Res., Rochambeau Hotel.
Telephone, *South 5800 Bell.*

By *A. T. Clark,*
Kansas City Manager.

This is the form of contract employed by Detroit Electric users in Chicago, Kansas City and Minneapolis. The contract provides that the owner shall secure monthly service and PAY for it

THE LAW

As It Applies to Dealers, Garagemen, Repairmen

The editor of this department is glad to answer questions. In sending queries, always include copies of contracts, notes, etc., to which you refer

By George F. Kaiser

Anti-Glare Laws

Editor Motor World: If convenient, and it is not too much trouble, will you please mail us copies of the different anti-glare laws for automobile headlights as adopted by the different states? We presume that you have these copies on file, and if you will send us same we will appreciate it very much.—Electric Appliance Co., New Orleans, La.

Answer—It is not possible to mail you copies of all the state anti-glare laws, as they are too lengthy to be copied on the typewriter. If you write to the Secretary of State of each state you can get a copy of the different motor vehicle laws containing the above. A digest of the Headlight Laws was published in Motor World under date of Sept. 12, 1917. A copy of this is being mailed you.

During 1918 the legislatures of the various states convene as follows:

Georgia	June 27
Kentucky	January
Louisiana	May
Maryland	January
Massachusetts	January 3
Mississippi	January
New Jersey	January 9
South Carolina	January 9
Virginia	January
New York	January 3
Rhode Island	January 2

The statutes of the states whose legislatures do not convene during the year 1918 will, of course, remain the same.

Stole Customer's Coat

Editor Motor World: We are operating a public garage in the state and recently had a party drive into our place to have some repairing done on his car. In the meantime other cars came in for storage, thus blocking the way for him to get out, so he left his car with us for storage with the other cars (but no charge was made him for storage) which were in the city during a public entertainment.

During the time his car was in our place for such storage, he claims a fur coat was stolen from it. He gave us a check for the labor we put on his car, and, *after claiming that we would be responsible for the stolen goods*, he has notified his bank to stop payment on this check.

What we want to know is, are we responsible in a case of this kind? We did not charge him for storage, and we have a sign up in our garage that we will not be responsible for goods that are left in cars. What would be the effect if we had charged storage, in view of the fact that we have such a sign.—Subscriber.

Under ordinary circumstances a garageman must use ordinary care and prudence to keep the property left with him so that it will not be damaged or stolen. Articles left in the car must receive the same care and attention as the car itself if the garageman's attention is called to them and he consents to their remaining there.

If a garageman notifies a customer that he will not be responsible for personal property unless it is checked at the office he is, of course, not responsible if the owner fails to check it.

A garageman is under the same responsibility to keep the property of customers who are having repairing done, so that it will not be damaged or injured. It seems to be the law that if a garageman wishes to relieve himself of responsibility as to robes, etc., he must provide a locker in which they can be placed or a place where they can be checked.

"Fair" Is Not "Good"

The Supreme Court of New York decided recently that when a garageman contracts to put a car in "good running order" he does not carry out his contract by putting it in "fair condition."

Suit was started by a garageman against a motorist to recover for repairs. It appeared that the garageman had been employed to make repairs and furnish supplies, and after certain work had been done a new agreement had been entered into in writing under which the garageman undertook to put the car in "good running order."

When the work was finished the car was driven to the motorist's place of business, but he would not accept it until it was examined by his mechanic. The car was then returned to the garage and the motorist later called with his mechanic. When the call was made the car would not start for at least 20 minutes and the magneto and muffler did not work properly.

The garageman refused to allow the owner to take the car out on the road and test it. The court held that the car had not been put in "good running order" because one of the men in the garage admitted that it had not been put in "first-class condition," and "fair condition" was the most he would say of it.

The court held further that the garageman should have allowed the car to be tested, because the motorist was clearly entitled to make a reasonably adequate examination.

Be Careful of Minors

Another case was recently decided in favor of a minor against a garageman. The minor bought an automobile from a dealer and paid part of the purchase price in cash and gave a promissory note with two endorsements for the balance.

When the note became due after the minor had used the car for several months he notified the dealer that he was going to disaffirm the contract on the ground of infancy and that he would like to have his money back.

The dealer's answer to this demand was a suit on the notes. The court decided against the dealer, however, holding that as the purchaser had bought the car before he was of age he had the right to disaffirm it, and that the dealer, having the car back in substantially the same condition in which it was sold, should be satisfied and return the purchase price as he was not entitled to the purchase price and the car, but only whichever of these two the minor chose to give him.

The court held that as the dealer rented cars for hire from a garage where he stored them, a return of the car by the minor to that garage was a proper redelivery, since it had been delivered to the purchaser from there when it was originally sold, and the endorsers of the minor's note were released from liability.

No Lien Law This Year

The garagemen's lien law bill originally sponsored by the United Garage Associations has been introduced in the New York Legislature for the third successive year. This bill would give garagemen and repairmen a lien for storage, maintenance or repairs, and under it the lien would not be lost if the vehicle was allowed to go out of the garageman's possession, as he would have a right to retake possession by a replevin suit. This bill is a great improvement over the present New York lien law, but I do not believe it will be enacted into law this year because it was introduced so late.

Repairshop Shortcuts

From Motor World Mechanics

NO. 1610—SMALL BATTERY CHARGER

There are times in every shop when just a little charging is required to put a battery in A1 condition, and it may not be desirable to go to the trouble of putting it on a regular charging line. In such a case an old car generator driven from the line shafting may be used. Only a simple charging board is required, consisting of a regular car ammeter, a home-made rheostat for varying the rate of charge and a cutout relay, the function of the latter being to break the circuit when the speed drops or motion ceases entirely, thus shorting the battery.—E. Hempel, Buffalo Overland Branch, Buffalo.

NO. 1611—BUSHING REMOVER

This bushing remover is for taking out bushing where only one end is open. The first operation is to thread the bushing. Next a bolt carrying a sleeve and a nut is screwed into the threads in the bushing. Then by holding the bolt head and turning down on the nut the bushing can be readily pulled.—R. C. Rognon, Salt Lake City.

NO. 1612—FOR ADJUSTING BRAKES

This generally is a two-man job, but can be made into a one-man job by using a jack in the manner shown. If the jack is a little short, put a block of wood between it and the seat support. Any degree of tension can be obtained in this way by varying the thickness of the block of wood by a fraction of an inch if the lift of the jack one notch gives too much tension.—Percy Everingham, Oakland, Cal.

NO. 1613—DRIVING FORD BUSHINGS

One good way to drive out the bushing in a Ford steering spindle is to thread the bushing and leave the tap in place. Then drive a small rod through from the other end, thus forcing the bushing out. The tap will easily stand the strain.—R. C. Rognon, Salt Lake City.

NO. 1614—UNIVERSAL FORGE

The device consists of two gas blow torches and a cast-iron table topped with firebrick. Each torch is carried in a universal clamp so that the flame may be effectively directed on the work, or the torches may be removed and used separately. Air pressure is supplied by a blower to a reservoir under the table, the reservoir providing an even flow of air. Rubber tubing is used to conduct the air and gas to the torches.—Harry A. Tate, Superintendent A. W. Haile Motor Co. (Studebaker), Buffalo.

NO. 1615—SILENT CHAIN DOLLY

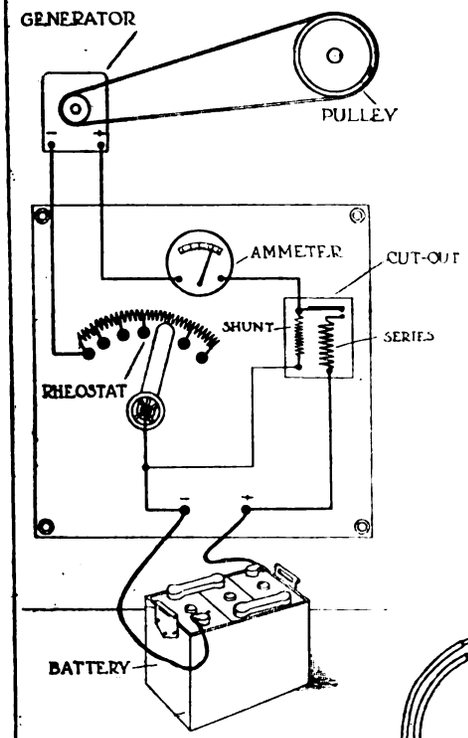
This dolly is for riveting the link on a silent chain. The full cylindrical portion is placed between the chain and the crankcase with the adjusting nut resting against the wall of the case. The shoulder of the dolly is the anvil for the rivet. The nut is adjusted until the tool will stand in place without holding. Then the riveting is done.—Kane Cadillac Co., Buffalo.

NO. 1616—ELEVATOR SAFETY DEVICE

When an elevator is controlled by a pull rope there is always danger when a car is being loaded or unloaded that someone on another floor will start the elevator. To prevent this happening is the purpose of the device shown. A cylindrical block is bolted to the rope and is slipped between two spring jaws when the elevator is stopped so that in case pressure is applied to the rope the elevator cannot be moved.—A. Selzer, Foreman Buick Motor Co., Buffalo.

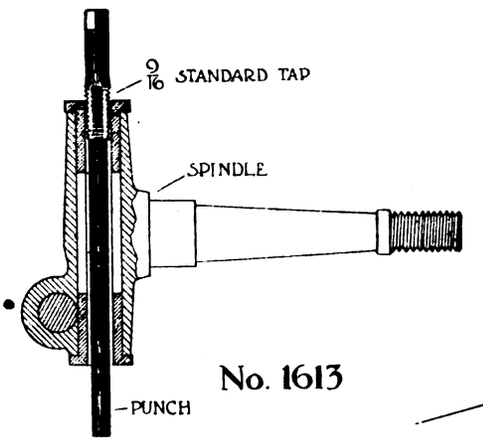
NO. 1617—BALL SOCKET WRENCH

This wrench is for adjusting the ball and socket joints in steering rods. Usually the adjustable side of the socket has six radial slots or castellations, the member being held from turning by a cotter pin resting in one of the slots. The usual method of adjusting it is with hammer and cold chisel or some equally makeshift device. Hence the desirability of such a tool. It may readily be turned on a shaper using a fine tool, i.e., one which will clear the teeth. The work should be pivoted at the center. After a central hole is drilled the material between the teeth is roughed out and then the teeth are formed.—Kane Cadillac Co., Buffalo.



NO. 1618—SHOP DOOR LOCK

An electric door lock with two push-buttons is an excellent device for allowing easy egress from the shop, yet making entrance without a key impossible. Pressing a button unlocks the door. One button is placed close to the door so that anyone wishing to go out may push it and thus open the door. Anyone wishing admittance must go to a window, and if it is granted, the door is opened by the pressing of a button by the attendant at the window. These two buttons are connected in parallel.—Kane Cadillac Co., Buffalo.



$1 a Shortcut

SHOP men are invited to send in the ingenious kinks they have worked out for saving time and labor in their shop. Motor World will pay $1 for each Repair-shop Shortcut that is accepted for publication. The only requirements are these: 1—*Describe the shortcut briefly but clearly, in few words.* 2—*Send a sketch, in pencil or pen, no matter how rough; our artists will finish the job.* 3—*Write on ONE side of the paper only.* 4—*Sign your name and initials, the name of the company you are with and the town. Write plainly. If your name is unusual or if there might be any doubt as to the spelling of the name print it in capital letters with your pencil.*

Editorial Observation

Solve Your Problems

EVER since the motor car industry has been a little bit of an industry we have heard about the problems that are connected with it. We are still hearing about them and doubtless as long as there is an industry we shall hear about the problems that are connected with it.

There are problems connected with every business. There isn't a phase of activity in life in which there not problems. If there were no problems there would be no zest to business or sport or anything else. The surmounting of problems is what the business executive is for.

Too many times a man who has problems to meet does too much talking about his problems and not enough thinking about them. There probably isn't a problem in business that could not be solved if it were taken hold of in the right way by the man who has to meet it.

We have our used-car problem. It is a problem for thousands of dealers, and out of the thousands there are a few dealers who have successfully met with a problem and have solved it. They have made their used cars a business instead of a problem—and are making money on them.

The same thing can be done with any phase of business if it is given thought and attention. The good business man solves his problems and instead of recognizing that they are problems transforms them in some way into a business asset. They no longer remain a liability.

Similarly, we have the problem of the curbstone dealer, the problem of the cut-rate tire man, the problem of the mail-order house and the problem of this and the problem of that, yet there is not one of these things that hasn't in some way been encountered and solved by the successful business man. And he is successful because he knows how to solve problems.

He who takes hold of his problems in an energetic way will soon discover that they are only details of business. He will find himself riding successfully over the road that before he began the journey looked so rough that progress seemed impossible.

Consider the Dealer

PERIODICALLY, but happily with diminishing force, the talk of industrial curtailment begins to circulate. It matters not whether this curtailment is due to so-called "drastic restrictions" or whether it is the natural curtailment due to shipping embargoes or war production interfering with normal output, the attention is always focussed on the factory.

As a matter of fact, the factory itself is not the thing to be considered at all, but rather the vast selling organization which depends upon the factory for its livelihood. The personnel of this great organization exceeds the factory payroll many times over in most instances. War work secured by the factory will not repay these men who are out in the field selling the commercial output of the plants.

For this reason the overloading of factories with war work which could be more equally distributed is wrong. It does no particular hardship to the factory so far as the production machine is concerned, but it does do harm to the dealer organization which has been built up and upon which the prosperity of that particular business, and in a measure that of the country, depends.

The men in the selling end of the business would not starve to death. They would drift into other fields and would find their level in many industries.

In the meantime a powerful team that could have supported a taxation, which in turn would have poured money into the treasury of the government, has been destroyed.

Let us not, in our eagerness to have the factories of our industries contribute a heavy share of the munitions, overlook the dealer organization upon which the prosperity of the industry depends. The dealer should receive the support he deserves.

By speeding production and working at a war-time pace we can absorb the munition work and in addition carry on the industries which form the wealth of the nation. We must manufacture enough commercially to support the dealer, who must have something to sell in order to stay in business.

Letters from Readers

THIS page is for the use of MOTOR WORLD readers with something to say. Letters on subjects of interest to dealers, garagemen, repairmen and jobbers are always welcome.—EDITOR.

Going on Cash

Editor Motor World: I have been in business one year and want to establish my business on a cash basis. Any information you can furnish me along these lines will be appreciated.

I have noticed a poster asking the public to stop wasting gasoline and giving data on the amount of gasoline consumed, amount wasted, etc. Where can I obtain these posters?

Where can I obtain posters relative to "service." I noticed one in a garage reading: "Service does not mean something for nothing," etc. Are there any firms that print placards and signs of this kind?—W. F. Sherwood, Irvona, Pa.

Answer—A great many dealers and garagemen are putting their business on a cash basis. We are sending you a copy of Motor World of Dec. 6 in which the first story relates to the cash business. There is a letter there that you could use to send to your customers if you care to do so.

Posters relating to service can be made by any printer according to your order. We do not know of any one who issues a standard poster of this kind. Our suggestion is that you decide what you want to say on the poster and have a printer in your town make some for you.

The poster relating to gasoline was sent out by the National Automobile Chamber of Commerce, 7 East 52d Street, New York City.

What Do YOU Say?

Editor Motor World: In looking over Motor World issued Feb. 20 our attention was particularly caught by an article on page 13 under the title, "You Must Be an Automotive Dealer."

While the treatment of this subject by the writer was no doubt based on first hand information gathered from the distributers who were exhibitors at the Kansas City show, we are inclined to believe that the figure used in making up the example of a "typical" dealer's possible profits on a year's business were entirely imaginative.

Our conclusion is based on several years' experience with one of the best sellers in a territory where we have consistently enjoyed the pick of the business. During the last season our gross business of $111,000 shows a net profit of about 4 per cent with an invested capital of $30,000, and we are very much inclined to think that your "typical" dealer after he has absorbed his losses on second-hand cars and other losses incident to a business of this character will find his net profit more like 10 per cent on his invested capital than 10 per cent on his gross business.

We do not mean to convey the impression that the business does not offer an opportunity for profit, but we do wish to go on record to this effect. To make money the layout must be composed of the following elements: Sufficient capital; experience; popular live line; aggressive merchandising methods; hard, well directed work.

Even this combination is not a sure money maker every season, as so much depends upon the distributing agency through whom the dealer buys his cars. In the last analysis it is the attitude of the distributer to his dealers that makes or breaks them, and from what we can hear from the dealers in other lines of cars the distributers are pretty much alike in their business methods. To the man with limited capital and experience who is contemplating breaking into the retail automobile business we most sincerely recommend serious introspection. —J. C. Hunchberger, Glendale, Cal.

Answer—As suggested in your letter of March 3, the figures on page 13 of Motor World of Feb. 20 were not quite true to fact. When we run across the man who is a real automotive dealer we shall be able to have a very good story on how much profit he makes out of his various departments, but so far we have not seen a man who handles all the different lines mentioned in this particular story.

We have also heard the argument against the automotive idea that it contains all sorts of business troubles for the dealer. This is true, but it is not any more true than it is of selling cars.

Dealers have had and always will have trouble selling cars, and the trouble connected with an automotive business do not seem to be any more numerous in proportion than they are in the car business. Neither is the overhead proportionately greater, whereas the profits are proportionately much larger. We should like to have further ideas from yourself and other readers on this subject.—EDITOR.

That Income Tax

Editor Motor World: Please refer to your issue of Feb. 6 on Income Tax. Would like some information in reference to manufacturers who sell their cars, using quantity discount. For instance, the factory ships cars, allows 18 per cent and charges war tax on balance. After a certain number of cars have been purchased this discount will reach 25 per cent, yet the war tax has been paid on the 7 per cent. How does the manufacturer arrive at the war tax that he pays the Government? Is there a refund to the dealer at the time this rebate is paid?

Also in reference to a distributer who receives a certain price and pays the factory a war tax on the price he pays the factory. He sells this to the sub-dealer at an increased price and also charges a war tax on the increased price. Is this legal, inasmuch as the distributer undoubtedly keeps the war tax on the difference between the price he pays the factory and that which he receives from the dealer? — Spencer Auto Garage, Charleroi, Pa.

Answer—There is a tax of 3 per cent levied on the price for which the cars are sold by the manufacturers. Monthly reports are filed by the manufacturers, who can put in a claim for the rebate due.

As regards manufacturers and distributers or distributers and dealers, they must straighten out the matter of the tax among themselves, as the Government is only interested in seeing that the full tax is paid to it.

Why the Motor Truck Has Come to Stay

Editor Motor World: When a country, unprepared for the greatest calamity that can befall it, is plunged suddenly into a mighty war whose end no one can foresee, it almost invariably follows that business conditions are disrupted, thrown into chaos, and often temporarily paralyzed.

In such a crisis, corporations and all big business houses suspend the mad pursuit of private fortunes in order that their products or their plants may be devoted to the needs of the country whose flag protects them and whose standing, in the eyes of civilized nations, is their pride.

It is hard indeed to define the line at which the pursuit of profits ends and pure patriotism begins. Some there be whose possible loss of inflated profits looms big, but these fortunately are in the minority, and the vast majority of business men are only too glad if they can serve their country through their businesses; and since the Government allows subsidized business a liberal profit there is the less reason for delaying to come to the rescue.

That the maker of the motor truck should come to regard his business as a patriotic duty was probably foreseen by almost nobody when war was first declared, and only within the past few months has it become apparent that an industry, still in its infancy, was destined to grow into and to remain one branch of the world's biggest businesses.

The gulf between private gain and public service was so quickly bridged that the amazing performances of motor

Digitized by Google

trucks are now accepted as a matter of course. There is no dissenting voice to the statement that the motor truck can haul more quickly and more economically over the shorter distances than the railroads can, but there are several other advantages in motor truck transportation that have not yet been discussed to any extent but which are fully as important as those which stand out so prominently.

One of the greatest of these is the amount of labor saved. In a railroad shipment from Philadelphia to New York, the goods are placed on a dray or truck, taken to the freight station and unloaded, then transferred to the freight car and carried to the shipping point where the same process is repeated, a total of six operations. In a solid load motor truck shipment the load is put on the truck by the business firm that sends it out and it is not handled until it reaches its destination, a total of two operations. Multiply this solitary instance by a few millions and you begin to get some idea of the amount of labor that might be saved.

Then, too, railroads do not always carry shipments to a point anywhere near the final destination and the consignee who wants to get his merchandise often has to drive to the freight station five to fifteen miles away. The motor truck does not run on rails and in these days of sturdy construction can run anywhere that a road can go, and in consequence the merchandise can be delivered to the very door of the firm to which it was shipped. These two reasons alone would be quite enough to insure the motor truck's place as a fixture in the future scheme of merchandise transportation.—Vim Motor Truck Co., A. G. MacKenzie, Advertising Manager, Philadelphia.

Must He Know It All?

Editor Motor World: Note last paragraph of your Reilly story: "Give the Goods a Chance," in March 6th issue of Motor World.

Buy Liberty Bonds

You say that you do not see how a salesman can expect maximum results, unless he uses all points of salesmanship manufacturers have created for him to use.

Do you believe that this would be possible in the automobile accessory game?

Do you think it possible for an accessory salesman to memorize all factory talks on all the lines that he handles, and be able to present a fair competitive argument against a similar article of another manufacturer?

For instance, they handle the patent cotter pin that has a great many advantages over the old style plain type, but it takes time to explain this to a dealer, and there is a like condition throughout the entire line up and including the highest mechanical problems, that would be magneto and carbureters.

Some time at your convenience would like to have an expression from you as to what this condition will finally result in. Will it not eventually come to a point where we will have to use specialty men covering the different branches of the line?

For instance, a specially trained man on ignition and items pertaining thereto. The same on carburetion; others for lighting and starting, and still others for ordinary items of the line.

This question has been brought up and discussed quite a good deal throughout various parts of the country, and by various jobbers that have never as yet found a plausible remedy, unless it is the specialty salesman plan.—Ozburn, Abston & Company, C. B. Johnson, Sales Manager, Memphis, Tenn.

Answer—Answering your second paragraph, I will say that I don't believe a jobber's salesman is a 100 per cent salesman unless he knows all the sales points of his goods. I don't think, however, that he could use all of them on every visit that he makes to every garageman, because it would take all day to go through the list.

I believe using the maximum number of points on a certain number of articles is, however, possible with every visit.

I do not think it possible for an accessory salesman to memorize all the factory talks on all the lines he handles, but I do believe he should be able to present a fair competitive argument against a similar article of another manufacturer. By that I do not mean that he should go into competitive argument against other articles to an unwise extent.

As to the patent cotter pin, I don't see how you really can expect to sell an article like this unless you actually present a sales point. Of course, this takes time. Do you see any other way to sell an article than to take time enough to explain its sales point?

As to your eventually employing specialty men I would not say that I believe this would be your plan of the future. I do believe, however, that a man can specialize on a certain group of goods on each trip, aside from representing the entire general line. Perhaps specialty men are necessary in cases where you have a starting and lighting system and other large units of that kind, but for the ordinary run of goods that are jobbed I hardly think that would be necessary.

O. R. McDonald, who is now with the Gibson company, and who used to be with the Herring Motor Co., tried the plan of having the salesmen concentrate on tires at certain times. They, in other words, became tire specialty men for at least one trip. In this way the Herring company was able to move a considerable volume of tires. I believe McDonald's experience was that the ordinary man could not handle the entire line of goods and do a good business in tires. In order to move any tires he had to concentrate on them.

It seems to me there is a good thought in this as applied to every thing that a jobber handles. Supposing you wished to move a stock of piston rings, a stock of tire covers and a certain line of spark plugs. In this case could not the salesman school himself on the arguments for these particular goods and show the dealer how to sell them, concentrate on them and push this line out in addition to supplying the dealer's needs with whatever else there is in the line.—EDITOR.

IF AMERICA needs more women to drive ambulances in France, it is certain that five competent motor car pilots will be found in Parsons, Kan. Dressed for roughing it, the five women pictured above left the Briscoe Plant at Jackson, Mich., Wednesday, March 20, driving as many Briscoe cars. The man in the picture is C. E. Ervin, Briscoe dealer in Parsons. The long trip over roads that in some places were impassable was made without incident.

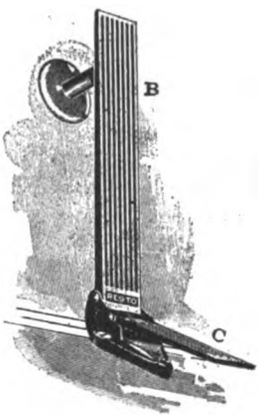
Accessories

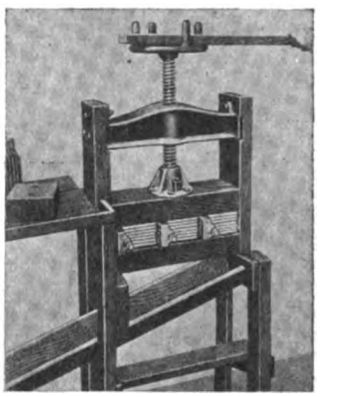


CARBORUNDUM PRODUCTS

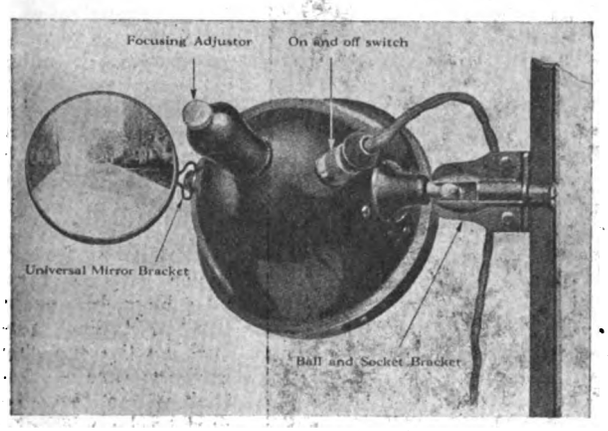
A complete valve grinding outfit is furnished consisting of two tubes of compound, fine and coarse, a booklet of Carborundum Cloth for cleaning valve stems and spark plugs, and a package of Carborundum cloth strips. Price 75 cents. Tubes of Carborundum compound are 25 cents, either coarse, medium or fine. Two sizes of grinding machines for shop work also are produced. No. 3 machine is equipped with a 6 in. Carborundum wheel and a tool rest and sells for $7.50. No. 4 machine has a 7⅝-in. wheel and a tool rest and sells for $10.50. Foot-power attachments can be furnished for either.—The Carborundum Co., Niagara Falls, N. Y.

E-W TIRE RETAINER

This is a ring of heavily rubberized fabric built around over 50 braided wires and fitting into straight side bead rims to convert them for the use of straight side tires. Price, all sizes, $2 per pair.—Rubber City Clearing House, Akron, O.

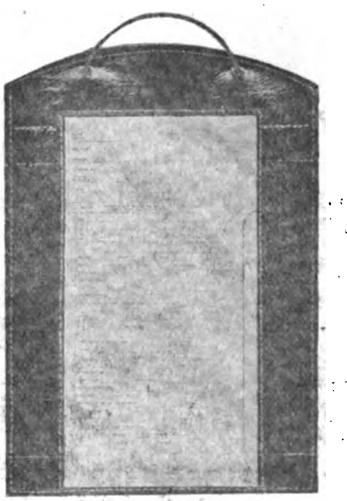


RESTO FOOT REST

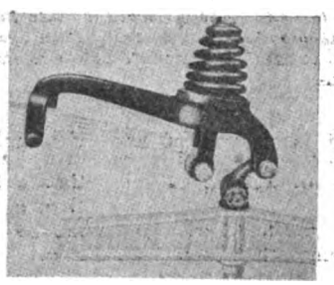


The object of this device, which is applicable to any car having a plunger type accelerator pedal, is to relieve the strain on the driver's leg muscles by permitting a variety of positions of the foot. A variation of more than 8 in. is permitted. Furthermore, the device can be extended to make it easier for a short driver to reach the pedal.

The foot normally rests against B and C; moving the foot forward and depressing the upper end of B increases the speed. A screw in the base under the part C can be adjusted to give a uniform speed. Price $2.75.—Bloom Auto Specialty Co., Tiffin, O.



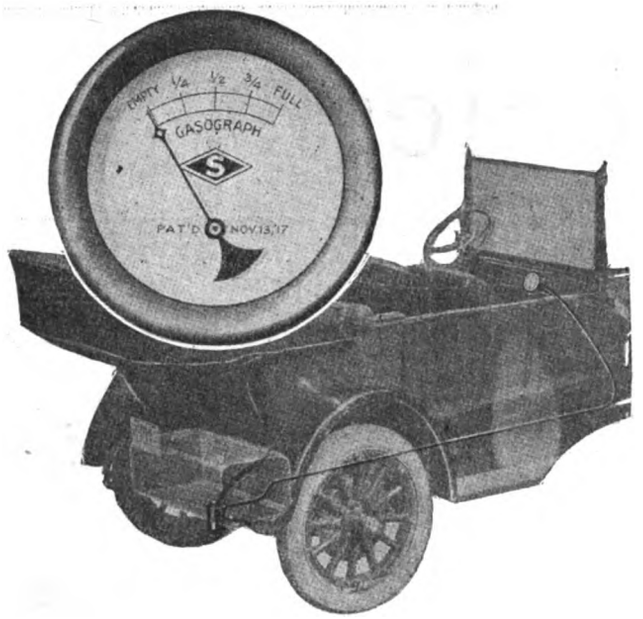
AMBU PLATE PRESS



Negative plates of storage batteries frequently require pressing because of the bulging of the active material or to straighten the grids in case of slight buckling. The Ambu plate straightener has been devised for this purpose. There are no metallic parts which can be reached by dripping acid, and such acid as is squeezed out is conducted along a trough and into a receptacle so that floors are not harmed. Three groups of plates can be pressed at the same time. Price $32.50.—American Bureau of Engineering, Chicago.

E & J SPOTLAMP

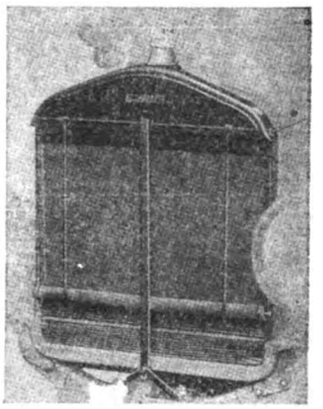
This 1918 model 98 spotlamp is 7 in. in diameter and 7½ in. deep. It is equipped with a universal bracket which can be attached to any windshield. The focusing adjuster is at the back of the handle and the switch in the plug that carries the cable. The lamp is equipped with a mirror carried on a universal bracket. Price $7.50.—Edmunds & Jones Corp., Detroit.



BURGESS REBOUND CHECK

This is a combined rebound check and shock absorber employing the lever principle. It is connected between the ends of the Ford spring leaves and the axle. The movement of the lever compresses a coil spring which absorbs small vibrations and also serves to check rebound. They are applicable to any Ford. Price, $15 per set of four.—Gibson Co., Indianapolis.

INSPECTION RECORD



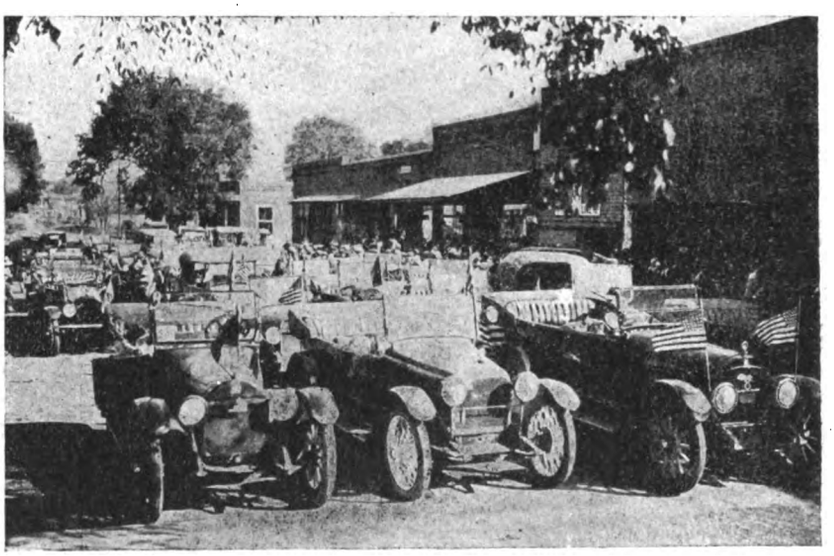
This is a strong imitation leather holder with a celluloid face into which are slipped various inspection and record cards giving instructions for mechanics working on cars. The instructions on the card are clearly visible through the celluloid and the card kept clean. Outfit No. 1 including 1000 duplicate inspection forms, two binders for these forms, 500 time slips, and one binder, 500 duplicate requisitions and 10 card holders costs $35. An outfit containing a smaller number of forms and 5 card holders is $20.—Thomas J. Harton, 212 Church Street, New York.

Digitized by Google

GASOGRAPH DASH GAGE

The Gasograph is a dashboard gasoline gage operating on a new principle. It can be attached to any tank regardless of position. The weight of the fuel in the tank creates pressure which is transmitted by means of a small copper tube to the Gasograph which registers the quantity of fuel. For rear tanks, $6; for under-seat tanks, $5.—New Standard Adding Machine Co., 3701 Forest Park Boulevard, St. Louis.

HARAC RADIATOR SHIELD



This is an adjustable curtain for Fo which is attached to the front of the radiator and controlled from the driver's seat by a cord. It is lowered by gravity. Any desired opening can be obtained and the temperature of the cooling water carefully regulated to give greatest e.. ency. The device is installed in about 5 min. Price for 191. and 1918 Fords, $5.—Harac Sales Co., Philadelphia, Pa.

"The Small Town Has the Money"

SO frequently has it been demonstrated to business getters in every branch of selling that "the small town has the money" that the dealer of the Middle West is learning not to overlook small town prospects. To the end of further exploiting the out-of-the-way territories, the Kansas City Automobile Dealers' Association routed its fifth annual trade trip this year through many of the "one railroad" towns of smaller than county seat proportions.

The accompanying photograph shows the tour stopping for half an hour in Dexter in one of the typical southern Kansas towns where agriculture is the mainstay and where crops were good this year. Situated between two county seats, both many miles from a large city, Dexter has been somewhat neglected by territory motor car salesmen. The dealers, therefore, found it a fertile field for prospects, and took advantage of the situation.

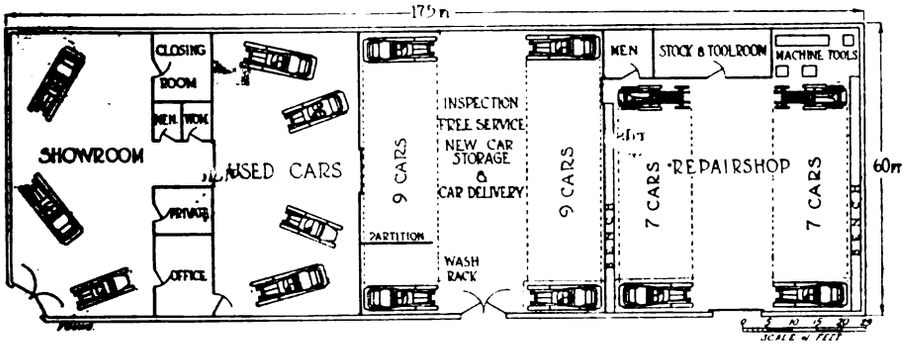
The fifteen-piece band carried by the tour has played a couple of snappy new airs, a "song-plugger" is singing one of the new patriotic song hits, and when he finishes the secretary of the association and the president of the State Good Roads Association will tell the typical small town crowd of men, women and children what they should do to make their roads good, how much it will cost them and how much they will save in upkeep of vehicles.

Here is the typical small Kansas town where money abounds and which the "rush" salesmen and territory man have frequently passed up for poorer prospects in larger cities. This town, Dexter, in Southern Kansas, turned up some live prospects and a few subsequent sales for the members of the Kansas City Automobile Dealers' Association who are shown stopping here on their recent fifth annual trade tour into the territory

Meantime some of the dealers are already working among the men and women in the crowd, asking about the crops and extolling the virtues of the dealer's car in the tour. When the speaking is over the crowd will wander around among the cars and there will be prospective purchasers lined up before the tour starts.

Stock salesmen have not yet penetrated the small Kansas town to a great extent in unloading securties. For this reason there is more ready money in the banks to be spent for automobiles that are necessities in the community life of country merchant and farmer.

The Kansas farmer who buys his necessities in typical towns such as the one shown in the picture has found that he cannot well afford to be without an automobile. The question that is puzzling him and which he must answer sooner or later is: "Which one?"



The automobile salesman who is making the biggest gain in business through Kansas is the one who visits every small town in his territory and thoroughly works these prospects at this time of year, when the crops are being moved and when fall work is not of the rush variety.

SCIENTIFIC CONSTRUCTION

GARAGES *SHOWROOMS* *REPAIRSHOPS*

We shall be glad to draw a plan for you or give you any other aid in your building, free of charge. But be sure to send full details, including a sketch of the plot, showing position of streets

In this plan the new car and used car salesrooms are separate yet both are adjacent to and accessible from the office

Salesroom and Service Building

Editor Motor World: We are enclosing plan exterior sketch of a building we are about to lease when erected, and ask that you give us the best arrangement and size of showroom, office, repairshop, inspection and service space, used car space, stockroom, wash rack, location of benches, windows, gasoline pump and entrances, and if posts have to be used, the correct distance between them.

Our business is strictly a dealer's proposition, selling the Franklin car exclusively, giving monthly inspection service and repairing on same, and making no attempt to do garage work on storage; selling gasoline and oil mostly to our Franklin owners.—Young & Lawton, Syracuse, N. Y.

Answer—Here is a plan for a showroom and service station in which all the items requested in your letter are carefully attended to.

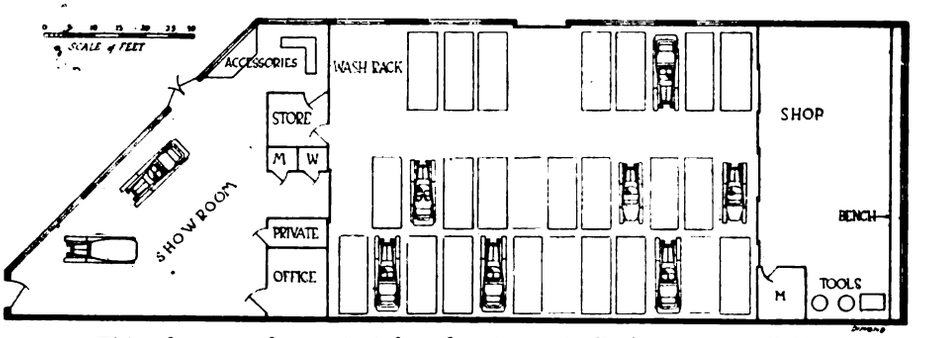
The location of the gasoline pump has been omitted, but it should be placed at the entrance to the inspection department.

Posts are not required and should not be used in a one-story building.

In looking over this plan, please note that new and used car showrooms are both convenient to tht offices. Inspection, free service, new car storage, car delivery and wash rack are combined in one room, inasmuch as you will find this arrangement best.

Using an Odd Shape Plot

Editor Motor World: We would like very much for you to let us have your ideas and plan of forming a salesroom and service station either one or two stories on the following location: This lot was formerly 60 x 180, but lately the Standard Oil Co. has purchased a three-cornered piece facing two paved streets in the southwest corner of this lot with 50 ft. frontage on each street. It is our intention to make our salesroom and offices so that they face the Standard Oil filling station, as we figure this would make a fine display window.—Dimond Motor Sales Co., Benton, Ill.



Answer—We agree with you that the space facing the Standard Oil Co.'s plot would make a fine window and we have used it accordingly.

You leave the matter of one or two stories optional, but we have made the building one story because it is quite a large building as it is. However, if, after looking the plan over, you feel that the building is not large enough for your requirements, we shall be glad to devise a plan for a two-story building.

You understand, of course, that the double row of cars in the garage utilizes the space most efficiently and at the same time it does not cause any inconvenience, providing the cars in the back row are those which are taken out late in the morning, and those which occupy the front row must be ones which go out early. Cars in the single row should be doubtful ones which may go out at various times.

We Want More

MOTOR WORLD wants to print pictures of farmers who use sedans. In our issue of March 6 we requested readers to send in photographs; we have received one. It was sent in by F. H. Hagel of Rochester, Mich. He shows the farmer and his family in a Ford sedan. He likes the sedan because of its luxurious exclusiveness. Haven't you sold some sedans to the farmers in your territory? No matter what make of car you sell, if you have, we would like to have pictures of them to print in the Summer Merchandising Number of MOTOR WORLD, which comes out April 24. This photograph is a small kodak print about 3 x 4 that Hagel took himself, apparently, but it is very good. See if you can't send us some. Then you can show your farmer customer how nice he looks when he appears in print.

This plan was drawn to take advantage of all the room available on an odd shaped plot of ground

Spotlessly clean and well arranged, Chicago's Exchanged Car Show is every bit as attractive as any exhibition of new cars

Chicago's Second Exchanged Car Show

Passenger Cars, Trucks and Accessories Displayed by Nearly 100 Exhibitors—Success Assured

CHICAGO, March 30—Chicago's second annual exchanged car show opened to-day at the Coliseum with every foot of space filled with cars that had been taken in on trade—with accessories on the sides. The exhibits overflowed into the annex, where were exhibited trucks and truck formers. There are thirty-eight exhibits of passenger cars, sixteen truck displays and about fifty booths devoted to accessories. The show will continue until April 7, and is open from 11 to 10 each day, including the two Sundays.

Disposition of used cars taken in by dealers as part payment on new ones always has been a problem. The Chicago Automobile Trade Association solved it a year ago by staging the first used-car show—although it was really a sale. It was so successful that the idea was used this year in almost the same way. The only real difference is in the name. Approximately 10,000,000 free tickets were distributed by the members of the association and the motoring organizations, but gate receipts to-day show that there will be many who pay the 25-cent admission fee.

The cars displayed for sale are all examined by a competent technical committee which vouches for their condition and affixes a tag stating the condition. As these are sold they are removed twice a day and replaced by others. About 800 have been examined. Of these seventy-five were rejected by the technical committee; twelve of these were taken off the Coliseum floor because the changes demanded by the committee were not made.

It is too early to attempt to estimate the attendance during the eight days the exhibition is scheduled, and it is not the attendance itself that makes for the success of a display of cars which are sold off the floor of the hall. Nevertheless, there is reason to anticipate that the record of last year of nearly 40,000 people will be exceeded. That number, when spread over 7 or 8 days, does not fill up a building as large as the Coliseum and its annex, but it does give the visitors an opportunity to examine the cars in comfort. There were two sales in the first 30 minutes.

It is the actual business done that makes for the success of a show of this kind, and if the records of last year are any criterion, the dealers who are displaying cars will dispose of most of them. According to the figures given out of the sales a year ago 375 cars were sold, ag-

Digitized by Google

gregating $275,000. With the greater demand for used cars this year these figures may be expected to be exceeded.

Wednesday will be Chicago Association of Commerce Day, and will be featured by a luncheon of the dealers' association, the Chicago Association of Commerce and the accessory exhibitors. Among the speakers will be Robert E. Beach, business manager of the Association of Commerce, and William M. Webster, commissioner of the National Association of Accessory Jobbers. A dinner in the evening will be addressed by Charles M. Stiger, president of the Motor and Accessory Manufacturers' Association.

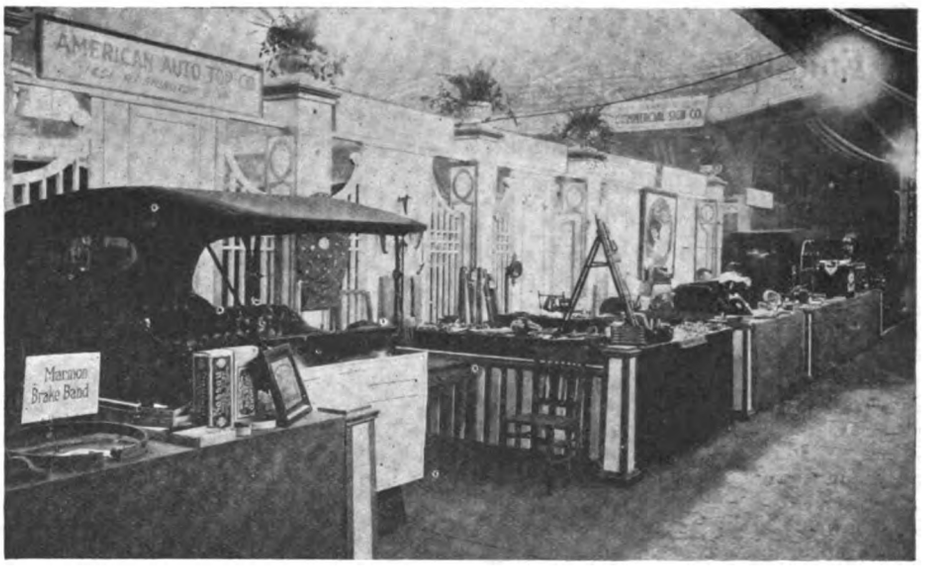
The show as a whole looks almost as good as a new car show. The prices at which the cars are held are good reasonable prices and should make a good transaction for both seller and purchaser. The prices range from $150 to $4,000. When the initial show plans were made a year ago, the Chicago dealers faced the problem of overcoming the impression in the public mind that a "second-hand" car nine times out of ten was worth just about what it would bring for junk. They overcame it by employing the name "used car," which this year was changed to "exchanged car" and by assurance that the cars were worth the money asked.

This was the plan of inspecting and appraising every car allowed to enter the show and affixing a tag showing that the Chicago Automobile Trade Association guaranteed each car to be as represented. This plan gained the confidence of those who came to the show last year, and was largely responsible for the success of the first efforts Chicago dealers made to bring exchanged cars together to compete for public favor.

In the process of this inspection and up to the time the car, if it passes inspection, is sold, three different tags are affixed to it. The first one, a white tag, is filled in by the dealer and attached to the car before it leaves his place of business. This tag shows the make, style, model, motor number, number of cylinders, horsepower, color of body, color of wheels, the original list price, and the lowest cash price for which it will be sold. In addition, it shows the condition of all of the mechanical units, the lighting system, the tires, upholstery, paint, curtains and top. All of this information must be given, together with the name of the dealer offering it.

When the car comes to the inspection field with this information attached, each item is checked over carefully, and if the findings of the mechanical inspection and appraisal committee are the same as those shown on the card for each particular part covered, three members of the committee affix their signatures to the tag.

If any part does not, in the mind of the committee, come up to the dealer's statement, notation is made and the car sent back for further overhauling. Only two opportunities, however, are given for a car to come within the official O.K. of the inspection committee.



If the lowest cash price which the dealer has placed on the car is not within reason the committee refuses to allow it to enter the show at that price and appraises the car itself, offering the dealer the privilege of showing it at that price or having the car ruled out of the show.

When the officially O.K.'d cars come to the show the white tag is removed, and the green tag showing the price of the car, the make, style, number of cylinders, motor number, owner's name, condition shown by road test, and also the mechanical condition, is sealed to the car in the same way that the doors of freight cars are sealed. A complete record is kept of the serial numbers of these green cards so that there is no chance for substitution, and when a car is sold a sales ticket or a contract with a reasonable deposit must be shown which corresponds with the price listed on the green tag.

As soon as the car is sold a red tag is attached, giving the green tag number and the name of the car, together with a request to the show manager that the car be placed outside the Coliseum, where the exhibitor's driver or the owner will take it away. The lower part of this tag is perforated and forms a call check, which is given to the purchaser. Cars can be moved out and in twice daily.

There are perhaps many places in Chicago and elsewhere where the price of an exchanged automobile or truck can be juggled to influence buying, but the Coliseum and Coliseum Annex are not numbered among them. A man might as well attempt to go into a State Street department store and buy a suit of clothes at a price lower than that at which it was marked as attempt to get an exchanged automobile or truck at the Coliseum or Coliseum Annex during the show at a price lower than that which is marked on the green tag.

Dealers think so well of this plan of inspection and appraisal that it is possible a permanent committee may be appointed by the Chicago Automobile Trade Association, whose duty it will be to make inspections and appraisals throughout the year with the thought of elevating the exchanged automobile and truck business to the plane where it rightfully belongs.

There is even an accessory section in Chicago's Exchange Car Show

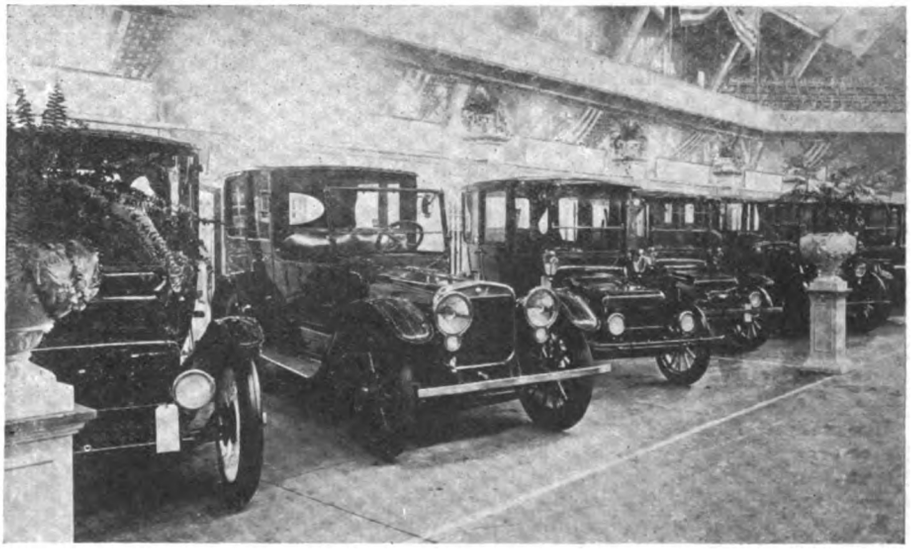


Exhibit of the Anderson Electric Car Co. at the Chicago Exchanged Car Show

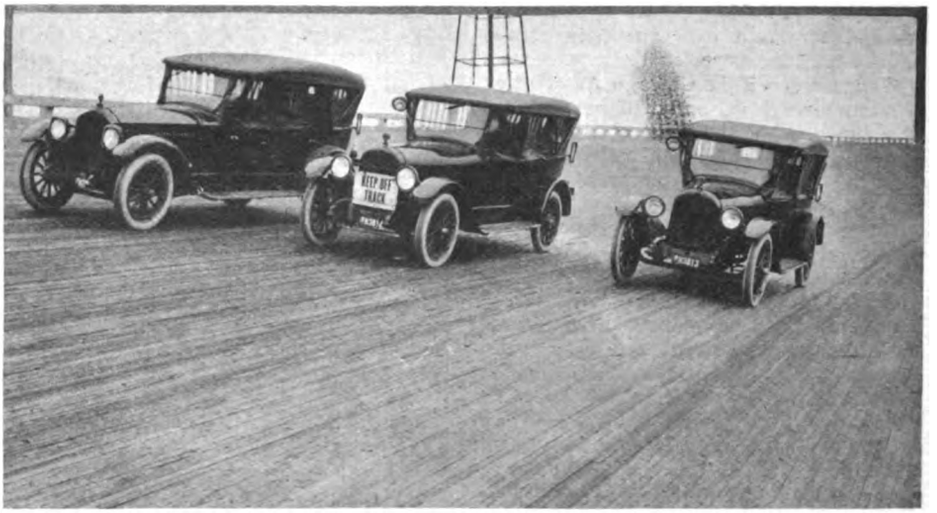
Studebaker Test Cars End 30,000 Mile Drive

Two of the New Sixes and a Four Driven Continuously on Chicago Speedway

CHICAGO, March 29—Thirty thousand miles at 45 miles per hour is the way in which Studebaker's new models were tested out to determine their ability to stand up under long use. This unusual baptism of speed was given the new cars on the Chicago speedway this winter. After their grind the three cars which underwent the test were taken to the Studebaker factory of Detroit and torn down to see what this mileage had shown up in the way of wear.

The entire test was a secret one, only Studebaker men and a few dealers being permitted to witness it. It is announced that the inspection of the cars after the test showed very much less wear than was anticipated.



In running day in and day out these cars piled up a mileage equal to anywhere from 5 to 8 years' service in the owner's hands. Most of this work too was done in winter weather, some of it during the great blizzard that struck Chicago early in January.

The Chicago speedway was chartered in the early part of last December and three of the new series 19 Studebakers were started out on the track with a picked crew of drivers, mechanics and pitmen, superintended by F. M. Zeder, chief engineer of the Studebaker Corp. Relief drivers were provided to keep the cars running in spite of everything until their speedometers registered a full 30,000 miles.

Plowing through drifts of snow that had all but obliterated the great 2-mile oval that forms the Chicago speedway and enduring weather that kept the mercury around 17 degrees below zero for days, the drivers of the test cars gamely stuck to their task of keeping the cars going. The great blizzard that crippled every transportation facility and buried the city beneath a blanket of snow stopped the cars temporarily, but not for long. Zeder says that after 2 days the crew succeeded in digging their cars out of the drifts and resumed the test, keeping to a daily schedule of approximately about 500 miles.

Before the cars were put on the track, according to Zeder, the experimental cars were driven over the worst mountain roads of Pennsylvania, New York, New England, Northern Michigan and Canada. These road tests consumed about 10,000 miles.

The cars were started on the track December 14. The Big Six finished March 3, the Light Six March 7, and the Four March 12, each completing 30,000 miles. The longest day's run was 731 miles made by the Big Six with the thermometer ranging about 10 degrees below zero.

It was 12 degrees below zero when the photographer snapped this view of the three Studebaker cars on test at the Chicago Speedway

Overland Earnings Top $6,000,000

TOLEDO, April 2—The report of the Willys-Overland Co. and its subsidiaries for 1917 shows a net income, after all deductions, including reserve for taxes, of $8,121,544, equivalent to $3.16 a share on the common stock. This is figured after payment of regular preferred stock dividends. In 1916, the company earned $9,565,718, equivalent to $5.71 a share on the common stock then outstanding. The decrease in actual earnings amounted to $3,444,174.

The net earnings of the company and its subsidiaries, after ordinary deductions and reserve for taxes, increased slightly in 1917, being $10,193,490 as compared with $10,016,420 in 1916. The decrease in net income was due to the writing off of $1,330,798 for depreciation and an increase in interest charges. As the dividends paid on the common stock exceeded the actual earnings after all deductions were made the company drew on its surplus to the extent of $2,318,026. This, with other expenses charged against the surplus, decreased it from $27,596,593 to $24,301,384.

Orders for airplane motors and parts to the present time, amount to more than $12,000,000, and further orders are assured, according to the report of John N. Willys, president. In addition, the company has received an ordnance contract amounting to $15,000,000 and the company has completed negotiations for a munitions contract. Plans have been made for filling truck contracts as another means of counteracting the passenger car curtailment.

Studebaker Producing 40 a Day

CHICAGO, April 2—Conflicting rumors as to the real status of production of the new Studebaker models are set at rest to-day by the statement of a Studebaker official that though there has been considerable delay, new models now are coming through at the rate of 40 a day; this is expected to be stepped up to a rate of 1500 per month before May 1. The production so far has been limited to the small six almost entirely although a few big sixes have been turned out and production of the small fours is just beginning.

Ontario Dealers Organize

TORONTO, ONT., April 1—An association of the automobile dealers in Ontario is being formed here to-day, tomorrow and Wednesday. It is expected that between 100 and 200 will attend the convention. To-day has been devoted to registration. Tuesday there will be discussions of trade subjects. Officers will be elected Wednesday. The jobbing trade will have a session Wednesday. The meeting is being handled by the Retail Merchants' Association of Canada, which has already successfully organized a dozen other trades with local and sectional units, all federated in the one dominion body.

McFarlan To Add Truck

INDIANAPOLIS, April 1—The McFarlan Motor Co., Connersville, Ind., will manufacture motor trucks in addition to cars. The first model to be produced will be a 3½ ton truck. The truck will be worm drive and will be equipped with a special six-cylinder motor to be manufactured by the Teeter-Hardly Motor Co., Hagerstown, Ind. The estimated price of the truck will be about $4,000.

New York State Jobbers Organize

ROCHESTER, N. Y., March 28—The first steps in the organization of the jobbers of New York State into an association were taken here to-day. A meeting of 10 jobbers from up-state cities was held at the Rochester Club under the direction of Field Representative George Fritz of the National Association of Automobile Accessory Jobbers.

Another meeting will be held April 10 for effecting a permanent organization. The temporary chairman is Mr. Owen, of the Chapin-Owen Co., Rochester. The temporary secretary is Mr. Ball, of Joseph Strauss & Co., Buffalo.

Fritz recently returned from Colorado, where 11 jobbers organized as the Inter-Mountain Automobile Accessory Jobbers Association.

Plenty of Gasoline; No Need to Curtail

So Says Mark L. Requa, but Adds That We Must Not Waste —Transportation Needed

CHICAGO, March 30—That there is plenty of gasoline and oil for all proper uses was reaffirmed to-day by Mark L. Requa, director of the oil division of the National Fuel Administration. Director Requa said:

"As conditions stand to-day, there is no immediate necessity for curtailment in the proper uses of gasoline and oil, but that means oil and gasoline must be used carefully and economically. There is none to waste. Oil and gasoline are like the whole war, purely a question of transportation."

This was a part of the fuel director's talk to the Western Oil Jobbers' Association, which has been in convention here, and ended with a dinner last night. The name of the association, during its convention, was changed to the American Petroleum League.

Director Requa laid stress upon the error of placing reliance upon doing business as usual in his talk on "War Service in the Petroleum Industry." He added that business was not as usual, and will not be so long as the war lasts.

"Transportation—Railroad Cars, Engines, Ships—is the crux of the situation. We have the facilities for the production of the oil in any quantities the government and public needs, but we cannot always get it where it is needed."

In discussing the plan of regional distribution of petroleum and its products, which is being worked out, he expressed confidence that whatever the national needs may be, everything that is necessary will be done to meet those requirements.

"If zonal distribution of petroleum products is necessary to supply what the nation needs, zonal distribution will be accomplished. If pooling of tank cars and ships will meet national demand more efficiently, these facilities will be pooled. If well drilling supplies must be allocated, in order to produce the greatest quantity of oil to meet increasing demands, the well-drilling machinery will be allocated. If the petroleum industry or any part of it is so unwise as to engage in profiteering, ways and means will be found to correct that condition."

Effect of gasoline and oil operated engines in the improvement of city transportation was illustrated by Sheldon Clark, chairman of the Legislative Committee of the National Petroleum Association, when he predicted that Chicago would have a population of 10,000,000 by 1950. This growth, he said, would come through better transportation facilities, developed through the use of petroleum.

Petroleum products' effects on the war were brought out in Mr. Clark's statement that "With the expansion of the oil industry we are becoming the king breakers, for without oil the war against autocracy could not be carried to a successful conclusion."

Philadelphia Loan Committee

PHILADELPHIA, April 1—The Philadelphia Automobile Trade Association has divided its Liberty Loan campaign committee into three groups for cars, tires and accessories and it is planned to sell $1,000,000 worth of bonds. By way of stimulating effort ten teams have been appointed in the motor car group. The complete committee follows:

Group A Motor Cars.

A. E. Maltby.....Chairman
W. A. Almy.....vice-chairman

Team 1.

C. R. Cunliffe.....A. M. Pollock

Team 2.

S. Stankowitch.....S. R. Blocksom

Team 3.

O. W. Lloyd.....H. L. Bogardus
F. G. Browning.....J. J. Smith

Team 5

E. W. Browning, Jr.....O. W. Doolittle

Team 6

Benjamin Hoffman.....E. M. Bartlett

Team 7

T. S. Johnson.....H. B. Harper

Team 8

W. G. Herbert.....A. W. Lockwood

Team 9

J. G. Barlett.....N. G. Wilson

Team 10

A. W La Roche.....G. P. Parker

Group B Tires

W. R. Walton.....Chairman
Garfield List.....Vice-Chairman
E. H. Fitch.....Vice-Chairman
F. A. Kissel.....D. D. Yard
S. M. Beatty.....H. D. Worthington
R. L. Warren.....Charles E. Fellows
E. B. Richardson.....T. Y. Sutthan
Harry G. Fittler.....H. E. Elliott
W. F. Metzger.

Group C Accessories

G. R. Shearer, Jr.....Chairman
A. W. Stellwag.....Vice-Chairman
E. B. P. Carrier.....Albert Strelcher
V. A. Petry.....C. H. Walz
N. A. Almang.....T. Scott Evanson
E. E. Smith.....W. J. Little
C. B. Solly.....George L. Carroll
E. Fyfe.....J. H. Nash
W. L. Batt.....S. C. Simon
F. E. Stow.

100 Salesmen in Bond Drive

NEW YORK, April 1—The Liberty Loan Committee of the Automobile Dealers Association is rapidly perfecting its plans for the coming drive. At a meeting held last Friday it was decided to have 100 salesmen make a direct appeal to every member of the trades embraced by the committee, including cars, trucks and accessories, bicycles, carriage and body builders and saddlers. A Brooklyn division of the committee has been appointed, of which Arthur E. Randall, of the Detroit-Cadillac Motor Car Co., is chairman. Other members of the committee are A. D. Corwin (Buick), C. J. Maxson (Reo), C. M. Bishop (Dodge), William H. Kouwenhoven (Locomobile), D. D. Martin (Martin Evans), Frederick W. Brecht, Robert P. Lumley, Charles F. Batt.

American Women Must Release American Men

They Can Do It by Doing the Work of Men—Jobs That Women Best Fit Into

CHICAGO, March 27—Efficiency experts have decided that the time has come for women to do the work of men, and this after an exhaustive study of American needs and resources, according to information presented at the conference on "Labor Problems Under War Conditions" now being held here under the joint auspices of the Society of Industrial Engineers and the Western Efficiency Society.

Taxi drivers, chauffeurs for cars and trucks, factory employees in certain lines of work—to be determined by special study as to factory work woman can enter without harm to herself—as well as elevator operators, waiters and hotel and club porters, Pullman car conductors and porters, office workers—all these must be undertaken by women at once. Boys and girls from twelve to sixteen years old should have jobs part of the time. Enemy aliens should work under armed guards, on roads among other things. That these are necessary was set forth by C. E. Knoeppel, New York consulting engineer and efficiency expert, in his address last night.

That the Government is considering women as workers even in lines which now are classed as military or semi-military occupations was shown in the statements of Miss Florence M. King, president of the Woman's Association of Commerce of the United States. As president of this organization Miss King has had inquiries from the Government as to training women to be inspectors of war materials.

Knoeppel made the first report as a result of questionnaires sent out to 1000 manufacturers, labor leaders, industrial engineers and economic experts. Seventy-five per cent was to manufacturers. The conclusions drawn by him are based on conclusions from this questionnaire and from personal study of the situation. Some of them are that women are needed in industry; that organized labor has nothing to fear from women in industry; that women should have equal pay for equal work; that man power should be utilized to the fullest degree before calling on women in the heavier industries.

"Women in Industry—Replacing Man" was the subject of both afternoon and evening sessions yesterday, and this morning was devoted to a round table along similar lines. Mrs. Joseph T. Bowen, chairman of the women's committee of the Illinois State Council of Defense, had a paper regarding women's work in the war.

Pennsylvania S. A. E. Discusses Absorbers

Has Series of Meetings Dealing With Parts Affecting the Comforts of Driving

PHILADELPHIA, March 28—Should a shock absorber merely retard the motion of the spring on the recoil or should it act both during compression and recoil? This was the question around which centered most of the discussion held at the March meeting of the Pennsylvania S. A. E. Mark H. Landis, of the Landis Engineering Co., read the paper of the evening, which dealt with shock absorbers for automobiles and motor ambulances.

This was the third meeting of a series dealing with the different parts which affect the comforts of driving. The first meeting dealt with springs and the second with tires. At the meeting at which springs were discussed the conclusion was reached that in order to secure the most comfortable riding qualities springs having a low rate of vibration should be used; these springs must be capable of compressing rapidly to absorb jolts, and their action must be modified by some auxiliary device.

Landis in his paper briefly reviewed the development of shock absorbing devices. He divided all of the different devices developed for modifying the action of the spring into three general classes and these into sub-classes.

The three general classes are auxiliary springs which are either of the coil spring or air type, frictional shock absorbers and shock absorbers of the hydraulic or hydraulic and pneumatic type. These different types were taken up in succession and their strong and weak points indicated.

Philadelphia Plans April Rally

PHILADELPHIA, March 28—The latest activities of the Philadelphia Automobile Trade Association include plans for a big get-together rally in April, such as recently was held in the Hotel Adelphia, pushing solicitations for the Third Liberty Loan and working for the compulsory placing of a license tag on each car or truck of a train coming through from factory to distributing point. On this latter point, the association contends that cars in a train of this kind should be allowed to have a sign attached, reading "Car (or truck) in Transit," such cars to run as close together as possible, the first and last car in the train to display regular license tags.

Highway Builds Government Trailers

EDGERTON, WIS., April 1—The Highway Trailer Co., Edgerton, Wis., has been awarded a contract said to involve $450,000 for the construction of trailer trucks for the use of the United States army. The order, it is stated, was placed on a cost plus 10 per cent profit basis and calls for 5, 10 and 15-ton trailers. James W. Menhall, president and general manager of the company, some time ago evolved a new trailer design for airplane transport which is considered far in advance of any vehicle yet built for the purpose.

Nash Releases Quad Patents

KENOSHA, April 1—Announcement comes from the offices of the Nash Motors Co. that it has released the use of all patents, drawings and engineers to the Government for the duration of the war in order that the manufacture of Nash Quads for army service may be facilitated. As soon as the company released the rights, the Government awarded contracts for 2000 Quads each to Paige and Hudson in Detroit and to National in Indianapolis. Transmissions and some other parts will be manufactured by still other concerns to be supplied to the contractors.

Scrap Metal Prices

NEW YORK, March 30—Following are the prices paid by New York dealers for scrap metals during the past week. They are from *Iron Age:*

	Cents per lb.
Copper, heavy and crucible	23.50
Copper, heavy and wire	23.50
Copper, light and bottoms	21.00 to 21.50
Brass, heavy	16.25 to 16.50
Brass, light	12.25 to 12.50
Heavy machine composition	23.75 to 24.00
No. 1 yellow rod brass turnings	13.50 to 14.00
No. 1 red brass or composition turnings	19.00 to 20.00
Lead, heavy	6.75
Lead, tea	5.75
Zinc	6.00

Doble Company Plans 50 Steam Cars a Month

Buys All the Assets of General Engineering Co. Which Formerly Owned Doble Patents

DETROIT, March 28—The Doble-Detroit Steam Motor Co. has purchased the assets of the General Engineering Co., former owner of the Doble patents. The company will issue $1,500,000 of stock to five voting trustees, who will issue the voting trust certificates for the same amount to the General Engineering Co. The voting trust certificates which, by agreement, will not be divided until a future date, will be in full payment for all the patents, rights, good will and assets of the General Engineering Co. Two of the voting trustees will represent the General Engineering Co., and three the Doble-Detroit Steam Motors Co. The former company will, in due course of business, be dissolved. There are no royalties to be paid by the Doble for either patents or licenses.

The company has advanced its production plans and deliveries of standard cars, now in process of manufacture, will start in April.

It is planned to deliver fifty cars during that month and the early part of May, and production will increase until full capacity has been reached. The average monthly output will be 1000 trucks. The added directors of the company are: Kirk B. Alexander, who has also been made vice-president; William J. Fisher, Harrington E. Walker and Harold C. Johnson. Other directors will be added until the full membership of fifteen has been attained.

Concrete Roads Would Save Their Cost

Figures for Tractive Effort Vary Widely with Road Surface

THE Packard Motor Car Co. has recently made some tests to determine the relative values of different roads, as regards resistance to tractive effort. It has been found that unsurfaced concrete offers a resistance of 30 lb. to the ton, surfaced concrete 50 lb., gravel 82 lb. and dirt roads 99 lb. The experiment was performed with a Packard 3-ton truck carrying a capacity load and operating at a speed of 12 m.p.h. Taking the unsurfaced concrete as standard, the truck will make 7.2 miles per hour over surfaced concrete, 4.8 miles per hour over gravel, and 3.6 miles per hour over dirt roads. This makes a relative cost of $0.167, $0.194 and $0.207 per ton mile in the last three instances.

A computation has been made showing that if all roads traveled were gravel as compared with dirt, the annual saving in operating America's 400,000 motor trucks would amount to $70,200,000; if concrete is compared with gravel $167,400,000; and if concrete instead of dirt $237,600,000.

Going through other data collected from practical results with motor truck operation, a traffic census on the Cleveland-Akron highway proved that goods were being hauled over that road on motor trucks equivalent in tonnage to one freight carload an hour. This has since been increased substantially.

The Cleveland-Akron-Canton Transfer Co. operating a fleet of 13 Packard trucks will accept shipments in Akron late in the afternoon for delivery in Detroit the following morning.

Return Loads System Takes Strong Hold

Detroit, Chicago, Cincinnati, Cleveland, Buffalo and Other Cities Form Bureaus

WASHINGTON, March 28—The return loads system of motor truck transportation is taking hold in many sections of the country. St. Louis is organizing a truck organization to handle the return loads business for St. Louis and surrounding country within a radius of 100 miles under the direction of the St. Louis Chamber of Commerce. The State Council of Defense of Illinois has appointed an active committee to work with the chambers of commerce and commercial organizations throughout the state to establish return loads bureaus. Numerous inquiries are coming into the offices of the Highway Transport Committee asking for information about the establishment of return loads bureaus. Detroit, Chicago, Cincinnati, Cleveland, Youngstown, Pittsburgh, Buffalo and a number of other cities are already establishing some motor truck transportation, although very few as yet have created return loads bureaus.

The above information was brought back to Washington by Frank E. Williamson of the Highway Transport Committee, who addressed the National Industrial Traffic League in Chicago on March 20, where he explained the objects of the committee and its work establishing return loads bureaus in co-operation with chambers of commerce and other commercial organizations in the territory north of the Ohio River and east of the Mississippi to the Atlantic seaboard. The National Industrial Traffic League is composed of the principal shippers and manufacturers of the United States, and Mr. Williamson's address has resulted in numerous favorable inquiries from league members.

The Highway Transport Committee is publishing a pamphlet which will be ready for distribution early next week and which will explain in detail how return loads bureaus can be established and maintained. The pamphlets will be distributed to all chambers of commerce, public service commissions, state highway commissions and municipalities. Pamphlets can also be obtained by application to the Highway Transport Committee, Munsey Building, Washington, D. C.

The Highway Transport Committee has received word of organized effort by the Ohio branch Council of National Defense to supplement steam and electric railroad transportation by motor truck transport.

To Promote Motor Transportation

KANSAS CITY, March 28—The Kansas City Automobile Club is starting this spring a definite line of work to promote motor transportation in the Kansas City territory. Frank A. Davis, chairman of the Road Committee, is organizing his forces from among the membership to inspect all the roads leading to population centers within 100 miles. A map of these roads has been made, which provides for two routes to each of the centers designated. When the Inspection Committee returns its report, the material will then be at hand for the actual promotion of freight traffic on these lines and for the promotion of road improvement. The entire territory is to be roused as far as possible to the necessity of using these main arteries, and the agitation is to be directed toward the improvement by the localities to handle freight traffic.

A preliminary report on the road situation declares that there is not a single 365-day road 50 miles in one continuous stretch in any direction from Kansas City. The report states that there is a possibility of an embargo this summer on shipments of freight for less than 50 miles with the further possibility that the limit will be made 100 miles. In view of this, the automobile club officers believe that it is essential to get the roads leading into the population centers improved as quickly as possible, and the business men of the district aroused to the necessity of making ready for handling freight traffic over such roads.

Coming! Coming! Coming!
In 21 Days

Not the circus!
Not a new car!
Well, what is it ten?
It's the Summer Merchandising Number of Motor World.
It will be out April 24.
It will give you plans and ideas for summer business.
It will tell you how to face our NEW conditions.
It will tell you a lot of things that will mean money to you. Watch for it!

Franklin Production Increases 135 Per Cent

SYRACUSE, March 28—The H. H. Franklin Mfg. Co. reports an increase of 135 per cent in production during the past year over 1916. During 1917 the company manufactured 9000 cars as compared with 3800 for the year previous.

Oakland Dealers Drive-away

DETROIT, March 28—Sixteen Oakland dealers left Detroit yesterday over the road for Buffalo. Upon reaching that city they will return to the Oakland factory at Pontiac and leave Detroit again Friday with sixteen more cars for Buffalo.

Automobile Import Ban Arouses Winnipeg Trade

Dealers' Association Wires Every Legislator Regarding Resolution of Protest

WINNIPEG, CANADA, March 28—The Winnipeg Motor Trades Association is not letting the grass grow under its feet with reference to the rumor that the Government will ban automobile importations as a war measure, and the executive committee has taken prompt action in the matter. A meeting of the members of the association was called and a strong resolution drafted protesting against the proposal and setting forth briefly the consequences that would be entailed. This resolution was telegraphed to every Manitoba member in the Ottawa House and to every Senator from the West. A copy was also sent to Western associations affiliated with the Manitoba Motor Trade Association, who in turn will take similar action.

Winnipeg Dealers' Personnel

To further strengthen their case the local association has provided A. R. Leonard, its Ottawa representative, with full information as to the Motor Trades Association personnel in Winnipeg and the Province of Manitoba. Here, in brief, is what Mr. Leonard will lay before the Government:

Winnipeg dealers have $9,000,000 invested.

They employ 900 men, with an annual payroll of more than $1,100,000.

The duty on imported cars, delivered in Winnipeg, in 1917, totalled more than $900,000.

Annual sales approximately $20,000,000. These figures do not include those of the Overland agency, whose returns can only be obtained at Headquarters and will be submitted to the Government by their own representative.

The above figures do not include any of the 700 dealers in the rest of Manitoba, whose average investment is $5,000, each of whom employs four or five men.

Monroe Stepping Up Production

PONTIAC, MICH., March 28—The Monroe Co. is gradually stepping up production to normal again through the use of coal cars for shipping and driveaways which are taking away a considerable number of cars daily. The railroad embargo and the condition of highways have held up production to a large extent for the past 90 days.

Baker Electric Advances

CLEVELAND, March 28—The prices of the Baker R. & L. electric cars will be advanced April 1. The five-passenger brougham type, rear drive, will be increased $150 up to $3,150, and the five-passenger brougham type, double drive, will advance $200, bringing this model up to $3,400. This increase is necessitated by the advance in labor and materials.

Tractor Demonstration Covers All Farm Work

Educational Exhibit Scheduled for Stockton, Cal., April 17-19—The Rules

SAN FRANCISCO, March 28—What is described as educational tractor demonstrations will be held under the California Tractor and Implement Association on the University farm at Davis, Cal., April 17, 18 and 19. The demonstrations and expositions will be entirely educational in character, and will be immediately under the supervision of the Society of American Agricultural Engineers.

The list of the different tractors that are to be demonstrated has not yet been made public. The rules covering the demonstration provide for plowing for 1½ hr. each afternoon, harrowing for 30 min. and other activities for 1 hr. The mornings will be given over to private demonstrations, and in these all plowing must be at a depth of 8 in.

The rules provide that not more than one tractor of a size and model will be permitted to operate during the public demonstration. Those companies or individuals demonstrating must be members of the California Tractor and Implement Association. Some of the rules governing the demonstrations follow:

Boost "Buy Now" Movement

EAU CLAIRE, WIS., March 28—Six motor car and accessory dealers of Eau Claire, Wis., with the co-operation of two local manufacturers, are publishing a series of nine business articles written by E. LeRoy Pelletier, Detroit, and originally written for and published by the Milwaukee Automobile Dealers, Inc., during its annual show in January. The series is designed to build up retail business by pointing out the fact that there will be a shortage of cars in 1918 and that purchases should be made at once lest there be disappointment. At the same time the timid intending purchaser is reassured that it is perverted patriotism to put off buying anything he needs or can afford, particularly so essential an article as a motor car. The following concerns stand sponsors for the advertisements: Union Auto Co., Tanberg Auto Co., Northwest Wisconsin Overland Co., Kinney Motor Car Co., Taylor Motor Car Co., Clemon's Auto Supply Co., United States Gearshift Co., and Gillette Rubber Co.

Used Cars Sell Well in St. Louis

ST. LOUIS, March 28—The week just closed is reported to be one of the best weeks in used-car sales in St. Louis. A dozen firms so report. This is especially notable in that it was the week following the used-car show. Sentiment now is in favor of an annual used-car show.

Little Nebraska Town Holds Successful Show

Holdrege, with Population of 4,000, Doubles Last Year's Attendance

HOLDREGE, NEB., March 28—That a large city setting is not essential to staging a successful automobile show has been demonstrated by the two annual shows held at Holdrege, Neb. Co-operation of the dealers and of the various business interests of the city is here shown to be the real essential.

This second annual show closed March 23, after four days of success. More than 7000 persons saw the cars, trucks and tractors. This was double the attendance of the first show held a year ago.

Holdrege is a city of nearly 4000 persons, but it boasts a community spirit that gives it advantage of many a city of several times the population. This community spirit made possible the erection at Holdrege of the second largest auditorium in Nebraska.

Passenger cars were displayed in the main buildings of the new auditorium, while a truck and tractor display was held in a canvas covered annex. The total floor space was 23,000 sq. ft.

From a publicity standpoint the show has done more for Holdrege than any

Rules and Regulations of the California Tractor Demonstration

1. In the afternoon of each day public demonstrations will be held, divided into three periods as follows:

Plowing	1:30 to 3:00
Harrowing	3:00 to 3:30
Stunts	3:30 to 4:30

Private demonstrations will be held in the mornings on the portion of the field allotted for that purpose, also during the "stunt hour." Each public and private allotment shall be entirely under the control of its owner, except that all plowing must be done to a depth of at least eight inches, measuring the furrow wall. Re-working of ground already plowed in public demonstrations will be permitted on Thursday and Friday mornings and Wednesday, Thursday and Friday afternoons between 3:00 and 3:30.

2. Not more than one tractor of a size and model will be permitted to operate on the field during public demonstration. Extra equipment of slight variation in design are not to be interpreted as distinguishing different size or model. During the public demonstration no tractor will be permitted in operation in any other part of the field.

3. Size of land allotted to each tractor exhibitor for private demonstration and for public demonstration will be determined by the average width of plows which they undertake to pull.

4. All exhibitors will be allotted land in the same field or adjoining fields during each day's demonstration. (It appears on this date, March 16th, that each exhibitor will be allotted one field for private demonstration and one field for public demonstration. The private field will serve for special demonstrations during the mornings, sufficient area being reserved to plow in the public demonstration Friday afternoon. The field allotted for public demonstration will be half plowed on Wednesday afternoon and the other half on Thursday afternoon. This cannot be definitely determined until all entries are in.)

5. All plows on any given gang must be set at the same depth and kept there during the demonstration period. This depth must be at least eight inches. Plows found operating otherwise will be ordered from the field for the balance of the day's work.

6. In all public demonstrations the motor of tractor must not be run at more than 10 per cent above its catalog speed.

7. Positions on field first day will be arranged by lot. Each exhibitor will be required to finish his land daily in a workmanlike manner and assist in plowing the end lands as directed by the general manager.

8. Each field will be surveyed and staked ready for each day's demonstration.

9. Each tractor shall bear a placard showing the brake horsepower of the engine, the revolutions per minute, the plowing speed in miles per hour, and the kind of fuel used and its Baume test. Tractors using more than 5 per cent gasoline shall be classed as burning gasoline and be so placarded.

10. All tractors on the demonstration field belonging to one exhibitor must be kept on or along the land allotted him for that day's demonstration, until the hour designated by the management for returning to headquarters.

11. No machine will be allowed to operate with special equipment other than designed for practical use with same. No spectacular methods will be permitted on the part of salesmen or others to attract crowds. The demonstration must speak for itself.

12. Each tractor exhibitor will have the privilege of burning any kind of fuel he desires but no one will be permitted to burn fuel of a higher gravity test than that used by his competitor burning the same kind of fuel. All exhibitors will be required to obtain fuel from source designated by general manager.

13. Manufacturers will be privileged to make turning tests or tests of drawbar pull of their tractors during any day of demonstration, but if submitting to these tests, which will be conducted by the University of California, they thereby agree that the results may be made public. These tests must be made in forenoons, or following public demonstrations afternoons.

14. The interpretation and enforcing of these rules shall be left to the field manager of the demonstration under the direction of the committee.

15. Each company exhibiting at this demonstration shall appoint one manager who will be expected to report to the general manager not later than 8:30 o'clock each morning for instructions and information regarding the day's work. This manager of exhibits will be held accountable for the work of his company, and no instructions will be issued to any one else, nor will requests, instructions or complaints be recognized from any one but this exhibit manager. He shall wear a badge furnished him specifying his being official exhibit manager.

16. Each exhibitor will be expected to keep plows, tractors, etc., around his tent arranged in first-class order, and the land allotted to him for exhibiting purposes free from circulars, rubbish, etc., such as will be distributed around headquarters daily. They will also be expected to use care at all times in operating machinery in respect to its safety for all visitors. The management will appreciate co-operation of these exhibit managers in all matters.

17. Each entrant will sign the rules and hereby agrees to live up to the rules and co-operate with the committee in every way to make the tractor demonstration a success.

18. No companies or individuals are eligible to demonstrate unless they are members of The California Tractor and Implement Association.

19. It shall be against the rules and regulations for any tractor manufacturer to put on an exhibit on the street corners of the city where the tractor demonstration is held, or to do any other thing in the way of exhibiting machines that would detract from the tractor demonstration and the regular established exhibits in the tents.

20. Exhibitors of machinery to be driven by belt power will be permitted only in the exhibit tent, not in connection with the field demonstration or exhibitors' headquarters tents in the field.

21. During Saturday the members of the Association will come to the campus of the university as guests. A plot of ground will be given to the association, which plot of ground will be at the disposal of the Demonstration Committee. The members of the association are individually bound to comply with the one rule that the university has made—i. e., there shall be no sales efforts of any sort on the property of the University of California on Saturday. All exhibiting members are obligated to see that their entire sales force observes this rule. It will be permissible to take the names and addresses of prospective customers, but it will be against the spirit of this regulation to go further. All exhibiting members are expeced to appear in the parade on Saturday afternoon, with every available tractor.

BUY LIBERTY BONDS

other affair, such as festivals, trade weeks, conventions. As a large part of the attendance is from out of the city, the show is naturally an immediate stimulant to all the merchants.

The eight Holdrege dealers enter into this affair with enthusiasm, bringing to the front all the "pep" and resources of their various organizations. As the show results in a number of sales, immediate and future, this enthusiasm regarding this event never abates. To make each show excel the preceding is the plan of this dealer group.

Reorganize American Die Casting

DETROIT, March 28—C. D. Cutting, J. H. Armstrong, R. W. Smith, and F. D. Tobin, of the C. A. S. Engineering Co. of Detroit, have purchased an interest in the American Die Casting Co. of Indianapolis, together with E. Barton Hall, formerly director of purchases at the Curtiss Aeroplane Co., Buffalo. The Indianapolis company has been completely reorganized, enlarged, and the capacity tripled. The company makes a specialty of Fahrig bearing metal. The officers of the company are: President, Lawrence Olson; treasurer, E. Barton Hall; secretary, C. D. Cutting, and assistant treasurer, W. L. Jenks.

Overland Prices Raised

TOLEDO, April 1—The Willys-Overland Co. has increased the prices of both passenger cars and trucks from $35 to $100. The new prices which are effective April 1 follow:

Model 90	New Price	Old Price
Touring	$850	$795
Roadster	835	780
Country Club	875	840
Sedan	1340	1240
Chassis	800	710
Model 85 B-4		
Touring	$985	$930
Roadster	965	915
Sedan	1485	1485
Coupe	1285	1285
Chassis	880	845
Model 85 B-6		
Touring	$1195	$1130
Roadster	1195	1115
Sedan	1620	1620
Coupe	1420	1420
Chassis	1110	1045
Model 88-4 (Knight)		
Touring	$1625	$1525
Sedan	2325	2225
Coupe	2275	2175
Limousine	2425	2325
Chassis	1475	1375
Model 88 (Knight)		
Touring	$2100	$2000
Varsity	2550	2550
Sedan	2800	2700
Coupe	2675	2675

1200-lb. Chassis	915	880
1200-lb. Express	975	930

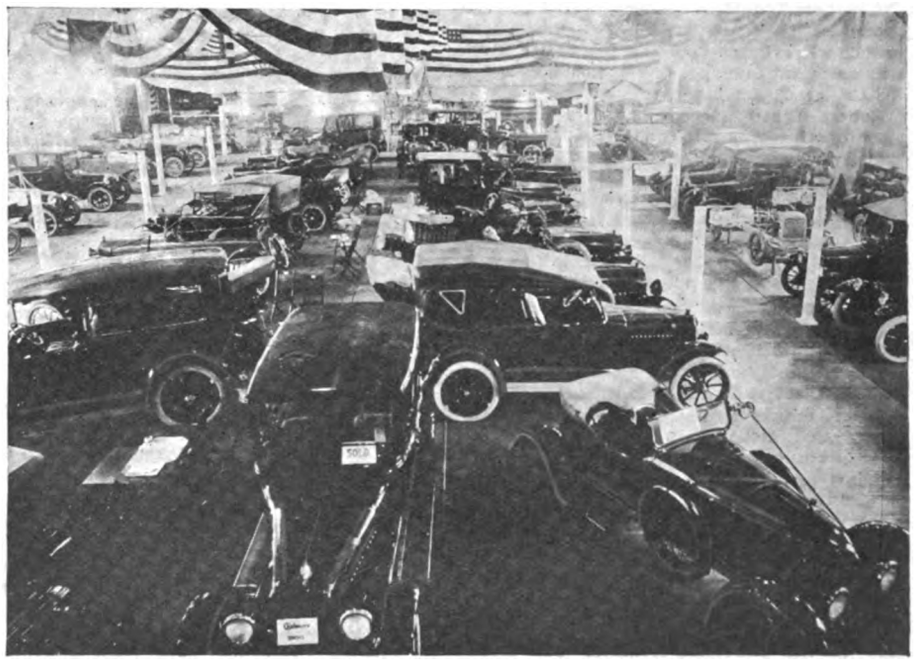
Bridgeport Already Plans Its 1919 Show

First War-time Exhibit Entirely Successful—Cars and Trucks Sold Freely

BRIDGEPORT, March 28—The success of the sixth Bridgeport show, which opened Monday, March 25, can best be judged by the fact that Manager Benjamin B. Steiber has received from 50 per cent of the exhibitors orders for reservations for the 1919 exhibition. Sixty automobiles, evenly divided between passenger and commercial cars, had been sold when the fourth day of the show ended.

This year, as in others, lack of space confronted the management, and the State Street Casino was engaged for the truck and tractor exhibitions, while the armory was devoted to showing the passenger models. In all there were 58 exhibitors, a considerable increase from the number of exhibitors for 1917. The attendance was figured as being about 15 per cent better than last year. The general consensus of opinion was that war has not dimmed the enthusiasm of the public or exhibitors, for there were but few who were dubious about the success of the show project.

In the aggregate the floor space of the show was 28,000 ft. The armory, which was leased to the managers of the show by the Connecticut Home Guard, which omitted drills of an entire regiment for the week, is slightly larger than the Casino. Both buildings were beautifully decorated with flags and bunting of the colors of our Allies, and a feature of the decorations at the armory was a big American flag devised from hundreds of red, white and blue incandescents.



It is admitted that a large percentage of the dealers entertained doubts about the success of the first war-time show here, but it can now be said that practically all are well pleased with the undertaking. All of the local newspapers carried automobile editions especially featuring the show, and the amount of advertising was large.

Reo Drops 2-Tonner

LANSING, March 28—The Reo Motor Car Co. will discontinue the production of its 2-ton truck. This move was necessitated because of the contract it has with the Government to make tracklayer tractors, and until the completion of that contract the company will make only one model of truck, that being the ¾-ton speed wagon. It is reported that Reo will discontinue the heavy model for the period of the war, but if the Government needs are taken care of before that time the company will probably resume production. The price of the ¾-ton truck after April 1 will be $1,275 instead of $1,175; the price of the chassis will advance $75, making the new price $1,175.

10 Per Cent Dividend for Montreal

MONTREAL, March 28—As a result of the recent motor show held under the auspices of the Montreal Automobile Trade Association a 10 per cent dividend was declared, after a 10 per cent rebate on space rentals had been made to exhibiting shareholders.

Here is Bridgeport's sixth show, but its first war-time show

Prominent Tradesmen Assume New Duties

Resignations and Promotions Place Workers in New Places

O. S. Tweedy, formerly manager of branch sales of the United States Tire Co., will become vice-president and general manager, May 1, of the L. A. Young Industries, Inc.

Daniel P. Egan, for eight years associated with dealers at Madison, Wis., but more recently with the Frint Motor Car Co., Milwaukee, distributer of the Oldsmobile, has returned to Madison to become sales manager of the Lawson-Hokanson Co., Buick distributer in western Wisconsin.

Paul G. Bender, for several years on the staff of the Packard-Missouri Motor Co., St. Louis, has resigned to become sales manager for the Econometer Co., makers of a device for measuring fabrics.

W. A. Mylet is now manager of the Dixie Flyer department of the Neustadt Auto & Supply Co., St. Louis.

L. Rubenstein, St. Louis, is now sales manager for the Commercial Accessory Manufacturers' Agency, 3132 Locust Street, St. Louis.

George T. Vigar, formerly of the Reifling-Vigar Motor Co., Ford agents, St. Louis, has joined the truck staff of the Brandle Motors Co., St. Louis.

Frank A. Hayes, formerly engineer with the Willys-Overland Co., Toledo, has been appointed chief engineer of the Willys-Overland, Ltd., of Toronto, Ont.

Henry C. Limbach, former production manager of the Zenith Carburetor Co., Detroit, is now equipment engineer of the Strong, Carlisle & Hammond Co., Detroit.

W. Whitney Slaght has been appointed experimental engineer of the Pierce-Arrow Co., Buffalo. He was a former student at the University of Michigan.

Raymond V. Morris has been appointed general manager of the Savage Tire Co., San Diego, Cal. He was formerly connected with the Curtiss Aeroplane Co., Buffalo.

N. J. Fitch has been appointed manager of the Detroit branch of the Bearings Service Co., succeeding E. G. Volker, who has been promoted to manager of the New York branch. Previous to coming to Detroit Fitch was assistant manager of the Bearings Service Co. at Cleveland.

Robert Walsh, former advertising manager of the Maxwell Motor Co., Inc., has joined the Fred M. Randall Co., Detroit, advertising agents.

A. C. Faeh, who resigned as advertising manager of the Baker R. & L. Co., Cleveland, to become sales and advertising manager of the Osgood Lens & Supply Co. of Chicago, has returned to his former position.

W. J. Carr, for 2 years purchasing agent of the Falls Motor Corp. of Cheboygan Falls, Wis., is now in the purchasing department of the Aluminum Castings Co.

L. A. Closter, Chicago, has been appointed district manager for the Federal Motor Truck Co., Detroit, in Michigan, Indiana, Ohio, Kentucky, West Virginia and western Pennsylvania. Closter was associated with E. C. Brady, Cole distributor in Chicago, and later with the Centaur Motors, Inc.

Gould Allen, sales manager of Fuller & Sons, Kalamazoo, has tendered his resignation to take effect about April 1, and will become manager of the Detroit office of the Wetzel-Hall Co. Allen formerly was secretary of the Harrison Radiator Co., Lockport, N. Y., and for 5 years was sales manager of the Covert Gear Co., Detroit.

R. B. Bowman, formerly with the White Co., Cleveland, has been appointed district manager for the Central West territory.

Joseph G. Fitzsimons, president of the Carolinas Auto Supply House, Charlotte, N. C., has joined the aviation section of the navy.

C. L. McClellan, Hartford, Conn., has resigned from the sales force of the Universal Auto Co., Franklin, Hupmobile and Diamond T distributors, and accepted a similar position with the Colonial Automobile Co., Studebaker dealer.

F. D. Trapp, Hartford, Conn., has been assigned as sales manager of the New Haven Packard branch just opened, having been transferred from a similar position with the Hartford branch. Truck Sales Manager Flower of the Hartford branch also goes to New Haven. Howard D. Graves becomes sales manager of the Hartford branch.

F. E. Provost, comptroller of the Hartford, Conn., branch of Willys Overland, Inc., has resigned and accepted a position of like nature with the Aetna Life Insurance Co.

R. G. Remington, formerly of the United Truck Co., Grand Rapids, Mich., has joined Russell P. Taber, Inc., Hartford, Conn., and has been assigned to the truck department.

E. A. Adamas, Hartford, Conn., has joined the Capitol City Auto Co., Hartford, and will handle Sandow motor trucks. He was lately connected with the truck department of S. A. Miner, Pierce-Arrow distributer.

F. L. Thorpe, Hartford, Conn., resigned recently from the Hartford branch of The Packard Motor Car Co. of New York, and has joined the Winton sales section of The Capitol City Auto Co., Hartford.

Charles L. McNulty has resigned as district sales manager of the Saxon Motor Car Corp., Detroit, effective April 1. He will be connected with the Oklahoma Truck Corp., Oklahoma City, as secretary, treasurer and general manager. This is a new organization which will distribute Bethlehem trucks throughout the State of Oklahoma and in the Wichita, Kan., territory with the branch house at Wichita.

W. Dewees, formerly purchasing agent of the Saxon Motor Car Corp., Detroit, has become affiliated with the Trussed Concrete Steel Co., of Youngstown, Ohio.

Thos P. Myers, who for the past year and a half has been vice-president and sales director of the General Engineering Co. and the Doble-Detroit Steam Motors Co., Detroit, has resigned and will probably go into government work.

Elmer E. Cadwell has been appointed assistant advertising manager of the Ajax Rubber Co. of New York. He was formerly in the advertising department of the Michelin Tire Co., Milltown, N. J., and the Willys-Overland Co., Toledo, and the Canadian branch in Toronto.

E. H. Shepard has been appointed manager of the Detroit branch of the Stromberg Motor Devices Co., Chicago, succeeding George H. Hunt. Shepard has been sales engineer for the Stromberg company in Detroit for the past five years.

E. Preisendanz has been elected president of the newly-formed organization, the Camden (N. J.) Auto Trades Association.

W. O. Rutherford, sales manager of the B. F. Goodrich Co., Akron, has been elected vice-president of the company.

H. M. Adams has been appointed Eastern district manager of the Willard Storage Battery Co., Cleveland, to succeed A. W. Sayer, who has been recalled to the main office. Adams will have headquarters in New York.

Cassius F. Baker has been appointed supervisor of agencies of the Templar Motors Corp., Cleveland.

C. E. Williams, formerly assistant sales manager of the Velie Motors Corp., has become associated with the Selden Truck Sales Co., Rochester, N. Y., in the same capacity.

Henry T. Myers, for three years sales manager of the Truck division of the Studebaker Corp. of America, Detroit, has returned to Boston as branch manager of the Boston territory to succeed George N. Gordon. Myers occupied this position before he went to Detroit. He will continue as manager of commercial car sales.

George L. Moscovicz, who has been doing special work for Mitchell Motors Co., Racine, for some time has been made advertising manager, succeeding F. K. A. Kapp, resigned.

Edward Hutchins, formerly supervising engineer of the Federal Rubber Co., has been elected vice-president of the Gillette Rubber Co., Eau Claire, Wis.

W. T. Edwards, formerly with the battery division of the Intermountain Electric Co. of Utah, has been elected president and general manager of the Edwards-Warden Motor Parts Co., Salt Lake City.

James E. Kepperly has been appointed general manager of the Curtiss Aeroplane & Motor Corp., Buffalo, succeeding William A. Morgan. Kepperly has also been elected vice-president, a member of the executive committee and a voting trustee. He has been associated with Willys interests for some time, and is vice-president and counsel of Willys-Overland, Inc.

A. B. Walton, formerly sales manager of the Master Carburetor Co., Los Angeles, has received the commission of captain in the ordnance department.

O. S. Comer has been promoted to the position of assistant to the foreign sales manager of the J. I. Case T. M. Co., Racine.

W. E. Perrine, production manager of the Standard Parts Co., Cleveland, has been promoted to the position of assistant general manager and chairman of the executive board. He will carry on the work of Christian Girl.

W. A. Cluff, who for some time has been auditor of the Mason Tire & Rubber Co., has been elected to the board of directors. He has also been appointed first assistant treasurer.

C. J. E. Leach has been promoted manager of the New York State branch of the Massey-Harris Harvester Co., Batavia, N. Y. He was formerly manager of the Kansas City branch.

T. S. Gamble, former advertising manager of the Maxwell Motor Co., Inc., has been appointed a lieutenant in the aviation department of the army. He is now at the Ohio State University at Columbus.

H. Montgomery has been appointed purchasing agent for the munitions department of the Harroun Motors Corp., Wayne, Mich.

Roy Coffeen has succeeded M. L. Bridgeman as manager of Willys-Overland, Inc., distributer at Cleveland. Bridgeman has joined the Neighbors Auto Co., Dodge distributer.

W. L. Agnew, former advertising manager of the Chalmers Motor Co., has been placed in charge of the wholesale department for the distributers of Liberty cars at Savannah and Atlanta.

Charles A. Clark has been appointed district sales manager for the Acason Motor Truck Co. and will have charge of Eastern territory with headquarters in Boston. Clark was for some time connected with the Knox Tractor Co., and more recently with the Gramm-Bernstein Co. of Lima, O.

R. T. Hodgkins, general sales manager of the Studebaker Corp. of America, has sent his resignation to the company, effective April 1. He has not announced his plans.

BUY LIBERTY BONDS

Harry L. Bill has been appointed general factory manager of the Winton Motor Car Co., Cleveland. He was formerly factory manager of the Chalmers Motor Co. and more recently manager of the experimental station plant of the aircraft board at McCook Field, Dayton.

R. L. De Lisser is secretary and Eastern sales manager of the J & D Tire Co., Charlotte, N. C. In Motor World last week it was stated that he was Eastern sales manager alone.

White Earns $3,800,308

CLEVELAND, April 1—The White Motor Co. earned net profits of $3,800,308 in 1917, after the deduction of income and excess profits taxes. This is equal to 24 per cent of the $16,000,000 outstanding capital stock, approximately the same as in 1916, when there were no taxes to deduct. Assets amount to $25,573,537, an increase of $4,366,757 over 1916, most of which has been added to the surplus. Current liabilities of 1917 are only $4,057,236, leaving a net working capital of $20,244,301.

JOBBERS PROPOSE ACCESSORY SHOW IN OCTOBER

CHICAGO, April 2—The possibility of an independent accessory show in October, separate from that in connection with the National shows and not in any way connected with the September accessory show scheduled for Chicago, is suggested in a bulletin which is being sent out this week by Commissioner William M. Webster, to members of the National Association of Automobile Accessory Jobbers. The bulletin states that the board of directors of the association by practically unanimous vote will recommend at the Virginia Hot Springs convention that the date of the annual meeting be changed from January to the last week in October. The change is made because a January meeting brings the following meeting into May, which is a bad time for jobbers to leave their businesses. It is suggested that an accessory show be held in conjunction with the October meeting and if possible under the same roof. Commissioner Webster has not applied for sanction from the Motor & Accessory Mfrs. Assn. He states that he has obtained options on several places for the proposed combined convention and accessory show. The matter will be brought up for ratification at the Hot Springs convention.

2200, Not 220, Scripps

DETROIT, April 1—In an item which appeared in Motor World last week it was stated that the Scripps-Booth Co. has orders on its books for 220 cars. Through a typographical error one cipher was omitted, the correct figure being 2200 cars.

Settled Weather Aids Dealers' Driveaways

Increasing Numbers Invade Detroit —Long Trips Are Being Started Daily

DETROIT, March 30—Settled weather has improved the condition of roads and large numbers of dealers are coming here to drive away cars. Even the ordinary dirt roads are in good shape. These bettered road conditions have somewhat decreased the cost of driveaways.

The Hupp Motor Car Co. reports that the expense of driving twenty cars to St. Louis was less than the freight cost of $34 per car. The trip was completed in 2 days. The Hupp company has during the past week sent overland one hundred and fifty cars; fifteen cars went to Indianapolis; three to Wabash, Ind.; eight to Urbana, Ill.; two to Hardin, Mo.; six to Little Rock, Ark. These are only a few instances.

The Paige-Detroit Motor Car Co. averages forty cars daily for driveaways. Some of the more notable driveaways follow: forty-five went to one distributer in Birmingham, Ala.; twenty-eight started for Rutledge, Ga., and ten were taken by a Des Moines distributer.

Exclusive of government trucks Packard is driving away, it sent overland since December 12½ per cent of its passenger car production and 21 per cent of the truck output.

The driveaways of the Reo Motor Car Co. are increasing steadily. Where 8 per cent of the company's production was sent away 3 weeks ago by driveaway, the percentage now is 28 per cent. A train of twenty-six speed wagons bound for Atlanta together with ten speed wagons and passenger cars for Charleston were piloted by a Cincinnati dealer as far as his city. He was also taking four cars for himself.

Dodge Brothers drove away 1500 cars this week. Fully 50 per cent of the cars driven away go to points within a 300-mile radius. Many dealers, mainly around New York City, Boston and other eastern cities, are maintaining three teams of five men each. These teams are constantly kept busy going from their cities to the Dodge Driveaway Garage. While one team is leaving here another is arriving at its destination and the third is on the way back.

Dealers Buy Studebaker Branches

SAN FRANCISCO, March 28—Effective March 15, the C. N. Weaver Co., Studebaker distributer, takes over all the territory of the San Francisco Studebaker branch. This includes northern California as far south as Porterville and the western half of the State of Nevada. The C. N. Weaver Co. has been Studebaker distributer since 1913. C. N. Weaver, president of the company, was formerly an employee of the Studebaker Corp., having been connected with this firm for hearly 25 years. For several years before Studebaker began the manufacture of automobiles he was the manager of the vehicle branch at San Francisco and continued as automobile manager until he took over the dealership in 1913.

At the same time the F. L. Shaw Co., Studebaker distributer at Dallas, has taken over the Dallas branch of the Studebaker Corp. with the exception of the New Mexico territory, which will be transferred to the Kansas City branch.

Doan Buys Studebaker Branch

TOLEDO, April 1—The Doan Motor Car Co. has taken over the Studebaker retail branch at Toledo, Ohio. Charles Doan, the proprietor, previously was sales manager of the Blevins Auto Sales Co. of Toledo, former Studebaker distributers, and also was manager of the Studebaker Sales Corp., which handled the territory just before the Studebaker Corp. took it over as a branch less than a year ago. L. A. Kellar has been appointed manager of the Studebaker branch in Chicago.

Changes in Selden Organization

ROCHESTER, N. Y., March 30—At a meeting of the directors of the Selden Truck Sales Co. yesterday, George C. Gordon was reelected president. The following elections were also made: William C. Barry, first vice-president; Robert H. Salmons, formerly secretary, second vice-president; Hal. T. Boulden, formerly sales director, vice-president in charge of sales and advertising; Wilbur F. Reynolds, formerly export manager, third vice-president in charge of foreign sales, and Edwin S. Osborn, formerly assistant treasurer, secretary and treasurer. Charles E. Williams was appointed assistant sales manager. C. Henry Mason will handle advertising under Mr. Boulden. At the meeting the capital stock of the company was increased to $750,000.

To Mend Our Soldiers' Rubber Boots

WARREN, O., April 1—The Arthur Vulcanizing Machine Co. has received a government order from the War Department for vulcanizing machines to be used in the repair of rubber footwear. A separate shop in the salvage plant of the American Expeditionary forces in France has been established and a number of vulcanizers are being installed. This work is being carried on under the supervision of Paul B. Masters, secretary and treasurer of the Arthur company. The vulcanizing method used is the same as that used for repairing tires and tubes and the materials used are the same. Half soles, heels and patches are put on.

"Business and War" at Salesmanship Congress

Herbert N. Casson, of London, England, to Be Chief Speaker—Expect Big Gathering

DETROIT, March 30—Plans for the Third Annual World's Salesmanship Congress to be held in Detroit, April 24 to 27, are maturing rapidly. The keynote of the Congress will be, "Business and War Time." The principal speaker will be Herbert N. Casson, of London, who went to England from this country 5 years ago. Casson has been Sales Council to the Standard Oil Co., American Telephone Co., and International Harvester Co., was editor of the New York World and lately founded the Industrial Efficiency Movement in Great Britain.

This year the Congress is being held several weeks previous to the customary time. This is as a result of requests made by men of large business interests, who believe that such a conference with representatives of big business and salesmen discussing the difficulties facing the country's industries will have beneficial results at this time.

Some of the topics to be discussed at the coming Congress include: "To Win the War Can the Nation Do Without The Individual Business Man?" "Are the World Nations Going Bankrupt?"

E. Leroy Pelletier will address the Congress on the subject, "Is So-Called American Extravagance a Commercial Asset or a Liability?" Other subjects along this line are: "What Shall We Do With Business to Win the War?" "Is Enough Consideration Being Given to the Difficulty of Starting Up a Business and Having It Shut Down?" "Are We Sentencing Ourselves to a Seat on the Economic Doorstep of the Universe?"

Resolutions respecting the conduct of business during the war will be drawn up and sent to the business interests of the country by the Congress. In all about 100 addresses will be delivered. One which will be of particular interest will be by statistician Roger W. Babson, now in Washington as a special agent from the Department of Labor.

Four prominent business men are coming from Japan. They are: T. Alasaka and Uhei Satou of Tokio, Saijiro Ishizaki of Osaka, Japan, and Shinjiro Nomi of Bendai, Japan.

TRUCK LINE FOR PAIGE

Will Have All Sizes from 1 to 5 Tons—Separate Truck Department

DETROIT, March 28—The Paige-Detroit Motor Car Co., after studying the motor hauling situation and making an exhaustive investigation of the problems involved, will market a complete line of Paige trucks, ranging from 1 to 5-ton capacities. A separate truck department is being organized and a complete truck factory equipped, comprising several buildings in addition to those already included in the Paige group. The new truck plant will be entirely distinct from the passenger factory, but the product will bear the Paige name and will be exclusively and completely a Paige product.

Southern Dealers Plan Drive-aways

BIRMINGHAM, ALA., April 1—Owing to demand which is crowding the books of distributers, several leading Birmingham dealers are leaving within the next two or three days for factory points to arrange for some method of meeting local conditions. Robert C. Lees, president of the Overland Motor Car Co. of Birmingham, last week received ten carloads of new cars, which were for immediate delivery, and he stated that double this number of machines could have been disposed of as readily. Dealers declare that March has proven the best month the automobile industry has witnessed in this territory, and they all agree that the zenith has not yet been reached.

Studebaker to Make 150 Cars a Day

DETROIT, March 30—The Studebaker Corp. has started quantity production of its new models. More than 1000 have already been manufactured and shipped, and are being turned out at the rate of 40 cars a day. This will be increased to 100 a day in 3 weeks, and 150 a day in 6 weeks.

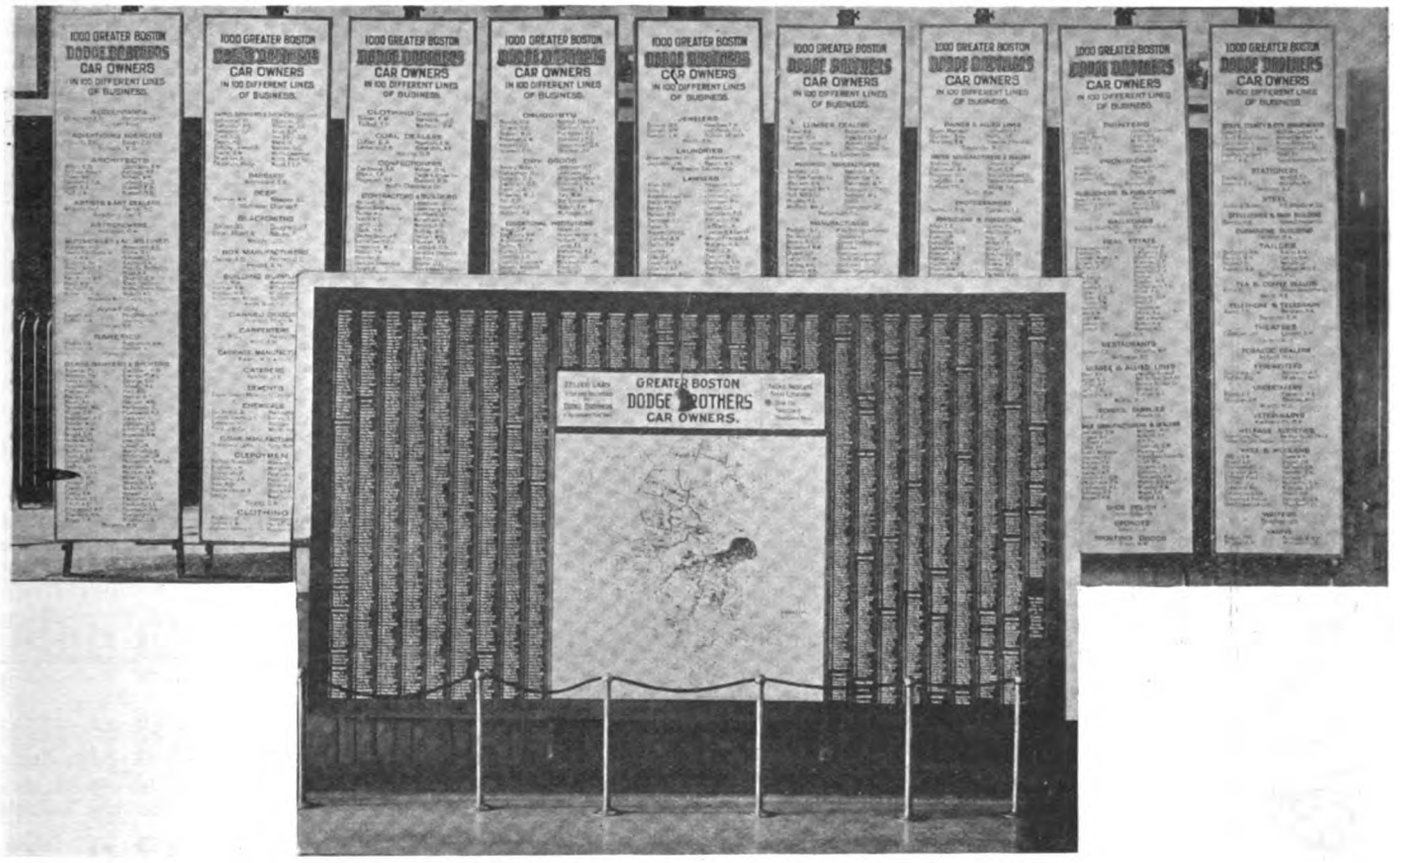
The Street Without a Name

(*Continued from page* 16)

where you are and all about who you are.

"This advertising also serves to give you a certain amount of stability and reliability in the eyes of the public. People consider that a man who advertises must be quite a reliable merchant, or else he wouldn't be so conspicuous every week in the paper. The paper is well thought of and the good name of the paper is reflected upon this advertising. There are some papers that refuse advertising that is considered undesirable. It hurts the good name of the paper.

"Once upon a time there was an old fellow who said that no matter what you had, even if it was a mouse trap, the world would beat a path to your door, providing you had a very good article, but with present day advertising methods that stuff is somewhat passé, because no matter how good a thing you have you can't get it across unless you advertise.



"I'm talking now particularly about newspaper advertising, in a local territory. You may have the best car in the world and be the best dealer in your section of the country, but if you don't continually keep impressing that fact upon the public they are going to go down some other street when they want to buy.

"Furthermore, advertising makes it easy for you to sell your goods. The advertised article is the one that a man asks for and thinks of when he wants to fill a need. If I were you I would set aside a certain sum of money for this advertising, lay out a campaign to run a good portion of the summer and then I would start the campaign and let it ride. It's bound to get you results at some time and you don't have to sell very many cars to get all your money back and then some.

"If you live on the street called 'Advertising' there are always a lot of people going by your door, but if you're on an unknown street you are out of the limelight and out of the thoughts of the people who buy."

Henshaw Makes Your Neighbor His Salesman

BOSTON, March 28—C. S. Henshaw, Dodge Brothers dealer, had a celebration a few days ago, and in preparation for it he had arranged a map around which were painted the names of more than 2000 owners. It cost several hundred dollars, but it was worth it, he said, to hear people say as they looked over the map many such things as this:

"Why, I didn't know John Smith of our town owned a car."

"Oh! there's Uncle William's name."

"See, they have your name on the wall, pa."

In the center of the board was a map with a lot of dots showing the number of owners in each city and town. These were very thick in some of the places. The cities and towns were groups about the map alphabetically, and the names of owners were arranged in that manner, each name being painted on by hand. Since the motor show the board will have to be enlarged a great deal. It now covers a large part of the wall on one side of the salesroom, measuring some 8 ft. by 1 ft. There are ten other signs on an easel giving the names of 1000 owners of Dodge Brothers cars in Greater Boston that are in more than 100 lines of business. The two make a fine display and prove particularly good silent salesmen.

Coming—THE SHOW CALENDAR—*Events*

"NORMA"
BALL BEARINGS
(Patented)

As a potential factor in the performance of a car or truck, no part, no item of equipment is too small to deserve the most critical scrutiny. From least to greatest, throughout every detail of construction, one consistently high plane of service capacity must obtain, if the utmost security against failure and dissatisfaction is to be realized.

Makers of high-grade electrical accessories long since realized this—which explains why they have standardized their magnetos and lighting generators on "NORMA" Bearings, that their reputation and that of their customers might not suffer as a result of bearing failure in their machines.

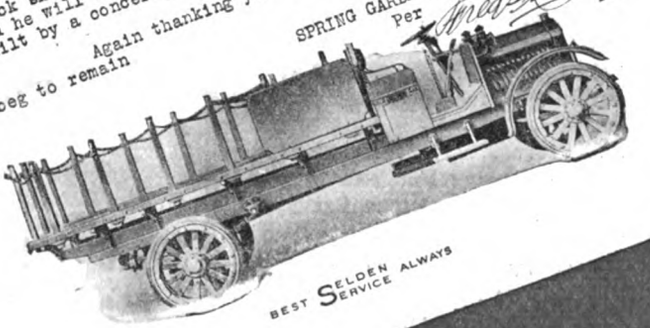
A letter that speaks for itself

Gentlemen:

The writer wishes to express his sincere appreciation of the courtesy shown him by the Officers of your Company and the heads of the different departments.

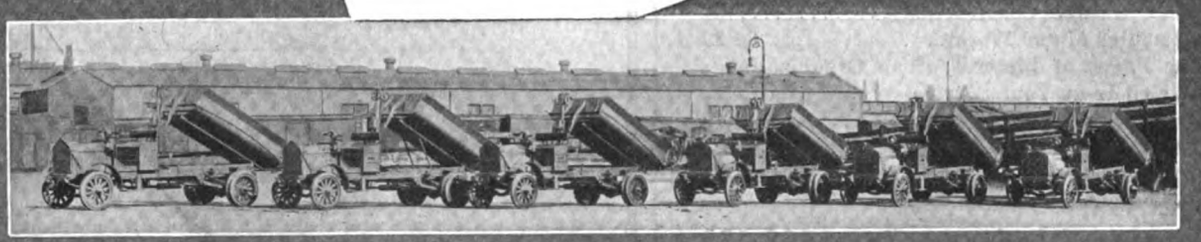
It is a real pleasure to meet men such as you have in your organization, and I am only sorry that I did not visit your factory a long time ago.

As to your factory, I will frankly say that it was far beyond my expectations as to size and modern equipment for manufacturing motor trucks. I was amazed to see the number of trucks under construction at one time and the amount of stock that you have on hand in the line of parts.



Any man contemplating the purchase of a motor truck should without fail see a factory such as yours, and he will be thoroughly convinced that the truck is built by a concern that is reliable from all angles.

Again thanking you for the favors shown, we beg to remain



Very truly yours,

SPRING GARDEN AUTO & MACHINE CO.

What the Dealers Are Doing for the 3d Liberty Loan

Let's Hear from Your Town
Get Started Early and Finish Strong
Read These Stories—Then Go Them One Better

DEALERS in many cities are organized and working for the Third Liberty Loan. Every city, every dealer and every individual in the trade should be engaged in this work. There is no excuse for not being so engaged.

What Chicago Is Doing

In the second loan the trade raised $969,000; its quota in the third loan is $1,800,000.

President George H. Bird of the Chicago Automobile Trade Assn. is chairman of the Liberty Loan Drive. Vice-chairmen have been appointed as follows: Passenger Car Division, George H. Bird; Trucks, E. J. Kilborb; Accessories, Ward Perry; Tires, A. W. Moore; Wagon and Body Builders, William J. Hughey, Sr.; Garages and Repairshops, H. E. Halbert; Liverymen, F. M. Johns; Motorcycles, R. C. Crist.

In addition to these there are four sales managers assisting in sales work. They are called captains and are supplied by the Liberty Loan Campaign Committee. The captains with the divisions they assist are: R. B. Barton, Passenger Cars; M. Ferguson, Trucks and Accessories; J. R. Carnahan, Tires, Wagons and Body Builders; C. E. Sutton, Garages, Repairshops, Liverymen and Motorcycles.

Each dealer appoints a chairman within his own organization and is responsible for the results obtained there.

Every morning Assistant Secretary T. D. Beard sends out a bulletin telling of good work that has been done by different companies and individuals. In connection with this bulletin there is an indicator of results, on one side of which are printed the names of firms who have contributed, and on the other side are names of those who have not bought any bonds. Obviously there is no honor connected with being listed on the wrong side of the sheet.

In the second campaign the thermometer on page 7 was used. This time the same thermometer, or a speedometer or some other device will be employed. This "sheep and goat" affair is distributed every morning to all the dealers in the trade and hung in their front windows. Those who are on the proper side of the indicator hang them in the window and those on the wrong side make every effort to get over on the right side.

One of the leading dealers makes a practice of checking over his list of employees after they have purchased bonds to see whether they are buying according to their ability. Anything that savors of a lack of patriotism is summarily dealt with. Companies which sell bonds to more people than they have employees are given a rating of more than 100 per cent. There were quite a number of these in the last campaign.

Frequent meetings of the committees are held.

What Madison, Wis., Is Doing

L. F. Schoelkopf, president of the Madison Assn. of Commerce, has charge of the Liberty Loan Campaign. Dealers are lending cars and carrying flying squadrons about the county. The automobile division of the Assn. of Commerce is keeping up-to-the-minute data on road conditions and assists in booking speakers and bond salesmen.

What Green Bay, Wis., Is Doing

The Brown County Automobile Trade Assn. is looking after the transportation in Brown County. It has appointed a committee of three to act with the Central Committee in selling bonds. Solicitation is being made throughout the trade.

What Mankato, Minn., Is Doing

The automobile dealers are affiliated with a City Committee in Liberty Loan work. There are 25 chairmen with squads of three salesmen who are canvassing the entire city. There are soliciting squads and flying squads. The former make house-to-house calls and if any individual does not buy the matter is left open for the flying squad. Class A citizens are asked for $200 or more, and all others for whatever they can buy. There are 350 solicitors in Mankato and Blue Earth counties, the latter of which has 30,000 people.

What Cincinnati Is Doing

The Cincinnati Automobile Dealers' Assn. is working with Team A of the local Liberty Loan Committee. H. E. Leyman, one of the directors of the association, is chairman of Team A. A thorough canvass is to be made and cars are being furnished for the transportation of speakers and salesmen. Forty-five cars are being furnished to the War Educational Board School which is instructing motor mechanics.

What Harrisburg, Pa., Is Doing

The Harrisburg Motor Dealers' Assn., of which J. Clyde Myton is secretary, has invested $500 of its treasury funds in Third Liberty Loan bonds. In addition each dealer is canvassing his own organization.

What Oklahoma City Is Doing

While no concerted action has been taken by the Oklahoma City Dealers' Assn., every member is making a canvass of his own organization.

WATCH THE INDICATOR

This bulletin issued daily until October 28th, by The Chicago Automobile Trade Association.

Telephone Calumet 6946 for particulars, how to get your name on the proper side of this poster

This is the thermometer that the Chicago Automobile Trade Association had posted in the salesroom windows during the second loan campaign. A similar plan is being used in the third loan campaign. Those who have bought bonds are on the left side and the others on the right. Nearly everyone got in the proper column before the finish

What Hartford Is Doing

A prominent part was played in the opening of the third Liberty Loan Drive by the Automobile Club of Hartford and the Hartford Automobile Dealers' Assn., Inc. The drive began on the closing day of the annual Hartford motor car exhibition. The Automobile Club of Hartford had a booth at the show, where literature was passed out during the week. Fred W. Dart, a charter member and founder of the automobile club as well as the dealers' association, was appointed chairman, with Russell P. Taber and Ralph D. Britton as associates.

This committee in turn appointed the following subcommittee: Edward H. Richardson, Ralph A. Barkman, Dwight Burnham, William H. Miner, Howard D. Graves, William M. Turnbull, Robert J. Flynn, Arthur Beeman and Daniel A. Harrington, Jr. Each committeeman was instructed to call on three dealers at the show and sell him Liberty Bonds. In addition Chairman Dart and his associates established a Liberty Bond sale booth in the lobby of the armory where the show was held. Several well-known local women held the booth. Every car in the show bore on the radiator a Liberty bell. Other literature was passed around freely, such as transparent pictures for windshields, stamps, stickers, etc. The committee also arranged with the Dime Savings Bank to finance all who may want to buy bonds on the installment plan.

Chairman Dart said that very good results have been already attained. Dealers and club members will also work on the drive this coming week among their trade. Major E. Alexander Powell, now stationed at the government arsenal at Springfield, who was with the Belgian Army in 1914 and noted the advance of the Germans toward Paris, spoke in the evening.

An automobile parade was held Thursday evening and this stimulated interest, as did the presence of the tank Britannia, which manoeuvred in Pope Park. Mayor Hagarty and Governor Holcombe spoke from the deck of the tank about the Liberty Loan Drive. Indications are that the local quota will be oversubscribed.

What New York Is Doing

Charles M. Brown, president of the Automobile Dealers' Association of New York City, is chairman of a trade committee representing the five boroughs of Greater New York. The trade raised $5,000,000 on the second loan, and it has been asked to raise $12,000,000 on the third loan. It is proposed to have a force of 100 salesmen to canvass the trade.

The members of the general committee are:

Chairman, Charles M. Brown, the Winton Company; vice-chairman, Charles E. Miller; secretary, Charles A. Stewart; R. M. Johnston, the White Company; E. S. Hare, Packard Company; F. G. Carrie, New York Marmon Company; C. E. Riess, Charles E. Riess & Co.; A. G. Southworth, Buick Motor Company; Water E. Woods, Van Cortlandt Vehicle Corporation; W. C. Poertner, Poertner Motor Car Company; Harry Houpt, Hudson Motor Car Company of New York; H. J. De Bear, Maxwell Motor Company; I. M. Uppercue, Cadillac Motor Company of New York; C. H. Larson, Oldsmobile Company of New York; E. Lescaris, 114 West Fifty-fourth Street; John F. Plummer, Liberty Motor Car Company; William Haradon, Royal Garage; John B. Elsey, Bronx Auto Dealers' Association.

Representing Brooklyn Automobile Sales Section: Arthur E. Randall, Brooklyn Motor Dealers' Association; A. D. Corwin, Buick Motor Company; C. J. Maxson, Reo Motor Car Company; C. M. Bishop, Bishop, McCormick & Bishop; William H. Kouwenhoven, 2 Remsen Place.

Representing New York Accessories Section: J. C. Nichols, 161 Broadway; Louis Mansbach, care of Times Square Auto Company; William A. Allen, 16 West Sixty-first Street; F. W. White, Stewart-Warner Company.

Representing Brooklyn Accessories Section: D. D. Martin,

Digitized by Google

1374 Bedford Avenue; Frederick W. Brecht, 1580 Flatbush Avenue; Robert P. Lumley, 1408 Newkirk Avenue; Charles F. Batt, 998 Bergen Street.

What St. Louis Is Doing

Nearly all the dealers are members of the Chamber of Commerce and are working with that organization in the Liberty Loan Campaign. The first two weeks the campaign will be general in character, and after that will come concentration on the trades. Twenty car salesmen have enlisted as bond sellers.

What Mason City, Ia., Is Doing

As soon as the receipts of the recent show are figured up the Mason City Automobile Dealers Assn. will invest the profit in bonds. E. H. Wagner is secretary. In addition to this the association is working with the City Board of the Liberty Loan.

What Parsons, Kan., Is Doing

The dealers in Parsons and Labette County are working with the Labette County Bankers' Assn., which is handling the loan.

What Newark, N. J., Is Doing

The state chairman of the loan work is in Newark. He has appointed a local chairman and local committee, the latter being made up of representatives of the various industries. The sub-chairmen select their own committees.

The executive secretary of the New Jersey Automobile Trade Assn., C. E. Holgate, maps out the automobile trade in blocks and a different block is assigned to each committeeman, who calls on his prospects and reports to the general committee's chairman, turning in whatever cards have been signed up and following up his list until it is finished.

More than 1000 employees from local shops and salesrooms are in the service. Two of the board of trustees are in France, and the trade is strongly supporting all war activities. A page newspaper advertisement was run by all the dealers Sunday, April 7, incorporating one of the cartoons used in Motor World, March 27.

What Des Moines Is Doing

The Motor Trades Bureau of the Chamber of Commerce has picked out five teams of three men each from the car and accessory trade. Letters have been sent to every dealer asking him to make a list of his employees and the amounts they will buy. The teams of salesmen then go to the places of the different dealers and complete the work. All the firms are card-indexed in an effort to ascertain the amount they would be justified in buying.

What Cleveland Is Doing

The Cleveland dealers are co-operating with the Cleveland Liberty Loan Committee which has been organized on a real selling basis. M. L. Bridgman, sales manager of the H. F. Neighbors Motor Co., is one of the leaders. The men of the city have been card-indexed, and the cards are given out to selected salesmen, many of whom were chosen from the automobile trade. In fact there has been much comment as to the large number of salesmen that the dealers were able to contribute.

What Baltimore Is Doing

Baltimore is fortunate in the opening of its Third Liberty Loan Campaign in that President Wilson was the principal speaker after viewing the military spectacle of 12,000 men. An "Over There" Liberty Loan exhibition was held in the Fifth Regiment Armory. Along the five miles of the parade were more than a half-million people whom salesmen solicited. The automobile trade contributed many salesmen, at the request of Walter F. Kneip of the Baltimore Automobile Dealers' Assn., which plans to devote certain days every week to the selling of bonds.

What Philadelphia Is Doing

Daily meetings are being held at association headquarters and reports are issued there. The first day this sale was $170,000. Committees meet in the association rooms at lunch, compare notes and ideas. It is planned to sell a million dollars' worth of bonds in the trade, which is divided into three groups, with the following teams, chairmen and salesmen:

Group A—Motor Cars

A. E. Maltby, chairman.
W. A. Almy, vice-chairman.

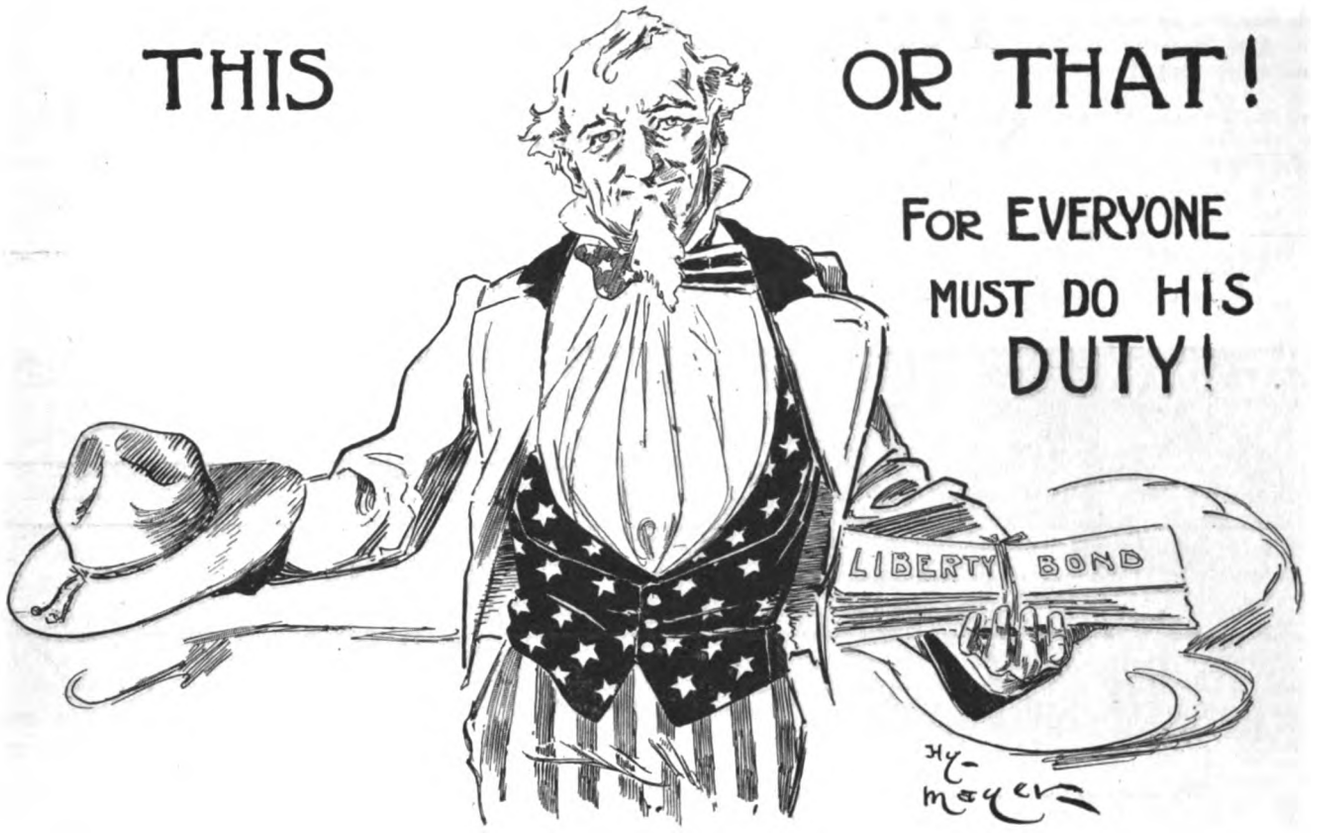
F. E. Stow



What Milwaukee Is Doing

The participation of Milwaukee motor car manufacturers and dealers in the Third Liberty Loan campaign will be even more thorough than that of the second loan campaign, when the industry greatly exceeded its quota and ranked among the top-notchers in the percentage of over-subscription. An efficient system of solicitation has been worked out by the Milwaukee Automobile Dealers, Inc., which organization embraces practically every distributer and dealer in Milwaukee. Its campaign not only will cover the distributers and dealers, but the entire industry, including makers of engines, complete vehicles, parts, etc., the whole having been grouped as one for the purposes of the drive.

On Saturday, April 13, the M. A. D. will provide a complete section in the Liberty Loan demonstration to be held in Milwaukee. Preparations are being made for an immense turnout. To show their patriotism and avoid discrimination, it has been decided that all who participate in the motor industry section shall walk instead of riding in cars or trucks. Frank J. Edwards, president of the Kissel-Kar Co. and Edwards Motor Car Co., has

Digitized by Google

Come Across or The Kaiser Will

Will you lend your dollars to the United States Government, or will you help pay a big indemnity to the Imperial German Government?

been appointed general chairman of the section. Alton J. March, president of the M. A. D., has been selected as commander, and Bart J. Ruddle, assistant secretary and manager, will act as quartermaster. It is hoped to have from 1000 to 1200 persons in line, a call having been issued to every garage, service station, salesroom, tire and supply house, repairshop, filling station, etc., to send not only the employers, but every employee who can be spared.

There was a similar participation in the preparedness parade held in Milwaukee in June, 1916, and the two Liberty Loan demonstrations during 1917, in all of which the motor industry section made perhaps the most impressive showing of any industry which took part.

What Spokane Is Doing

The dealers are contributing trucks to carry floats for the Spokane Inter-State Fair, which is putting on the Liberty Loan Pageant. The floats are "Monitor," "Merrimac," "Goddess of Liberty," "Keep the Home Fires Burning," "Burning Up of the Maine," "The Liberty Bell," etc. In addition, dealers are turning out 400 men who will assist in the work.

What Boston Is Doing

The Boston Automobile Dealers' Association has named George T. Kimball chairman of the Liberty Loan committee. A committee of 40 men will be chosen and a mass meeting of the trade will be held Thursday, April 11, at which there will be well-known speakers. The committee and its numerous assistants will then canvass the trade. Dealers played an important part in a Liberty Loan parade on April 6.

What Minneapolis Is Doing

The Minneapolis Automobile Trade Association will not make a separate campaign for the third Liberty Loan sale, although it led the city in the second loan campain. The association will subscribe for a proportion of the bonds, but owing to the attitude of objection by the executive committee of the loan organization will not make a separate campaign. The reason is not given. The association has offered to the loan committee and the war savings committee the use of the Minnesota Motor Reserve, Special Service No. 1, which means use of 2000 cars or units of 10 in 200 districts. This service has been accepted. The association also has offered the valuable service to agents of the Department of Justice in the State.

Ontario Dealers Organize With Retail Merchants

New Association Becomes Section of General Trade Movement

By Ray W. Sherman

The Ontario Car and Accessory Dealers had their pictures taken in front of the Ontario Parliament Building in Toronto as part of their convention program

TORONTO, April 4—The motor car and accessory dealers of Ontario have formed an association, and while the number who took part in the first meeting was not large there are good prospects of a successful organization.

Many associations have been formed with enthusiasm, and have then died more or less slowly because there was not the necessary machinery for keeping them alive. The machinery is, however, provided in this case, which makes it seem likely that the association will grow and become one of the best in the trade.

The machinery which can do this is the Retail Merchants' Association of Canada, which has enrolled in its ranks various trades with a membership of about 12,000. The trades include the bakers, grocers, druggists, butchers and numerous others. Each operates as a section of the parent organization, has separate meetings and handles its own problems but operates through a central association headquarters in Toronto, much as labor organizations operate.

This means that Secretary W. C. Miller of the Retail Merchants' Association is also secretary of the new car and accessory section. It means that the organizing and operating facilities of the Retail Merchants' Association, with its headquarters at 2 College Street, Toronto, are at the disposal of the new section.

As the organizer for the parent association travels around Ontario in his work with all the other sections he will at the same time do organization work among the car and accessory dealers, gathering dues, forming locals and building up the association wherever he goes. This permits organization work to be done in all trades with a single overhead.

One For All—All For One

Some of the measures that are taken up by the parent association may not affect the motor car and accessory trade directly, and some may not affect the grocery trade directly, but all of them are for the betterment of retail conditions generally.

With this machinery the motor car section is enabled to start out strongly and without going through that financially struggling period that has been the downfall of so many motor trade associations.

The officers of the new association—or section—are: Chairman, S. H. Rowed, Ontario Garage & Sales Co., London; first vice-chairman, Arthur Sharp, Wolseley Tool & Motor Car Co., Ltd., Toronto; second vice-chairman, Joseph J. Duffus, Ford dealer, Peterboro; treasurer, Henry Angrove, Angrove Bros., Kingston; secretary, W. C. Miller, 2 College Street, Toronto.

The idea of the association was conceived by the accessory jobbers, who are quite close to the car dealers throughout the province, and some of whom are also car distributers. Hyslop Bros., one of the leaders in the movement, is a jobber, and is also the distributer of the Cadillac in Canada east of Manitoba.

Quite a few of the Toronto dealers attended parts of the convention, but they were closer to their places of business than were the out-of-town men and so did not stay to the finish in any large number. The next convention will be held at a time when the sales season is not so near at hand. It is stated that the Toronto dealers favor the movement, despite their absence, and will likely give it their support.

The convention was attended by men from considerable distances. London was well represented, there were several from Peterboro and Kingston, and messages of support were received from Ottawa and as far west as the "Soo" country. Having set the machinery in operation, the jobbers of accessories declined to accept offices, stating that the organization should be one of the car interests and not guided and directed by the accessory end of the trade. The jobbers, however, stated that they would lend every possible support.

Digitized by Google

In some sections in "the States" the big city car dealers have declined to interest themselves in state associations that have been promoted by the jobbing interests, and it was desired to avoid any such condition in Ontario.

Discuss Many Subjects

The convention was called for Monday, Tuesday and Wednesday. Monday about 50 men appeared during the day and registered, but no attempt was made to hold meetings until Tuesday. Tuesday and Wednesday there were addresses and discussions with the election of officers Wednesday afternoon. Talks were made as follows: B. W. Swieman, president of the Ontario Provincial Board of the Retail Merchants' Association; Secretary W. C. Miller; W. M. Gladish, Motor Magazine, "Organization"; A. A. Briggs, Dunlop Tire Co., "Tires."

John E. Gossett, Travelers Insurance Co., "Automobile Insurance"; Mr. Beach, Imperial Oil Co., "Credits" and "Oils"; F. W. Evans, Canadian Fairbanks-Morse Co., "Present Day Problems"; Ray W. Sherman, Motor World, "The New Motor Car Business"; Donald Johnston, Stewart Products, Ltd., "Speedometers"; H. C. Not Unlike "The States"

The problems that are bothering the Canadian dealers are in many cases much the same as those that trouble the dealers in "the States." For instance, there is just as great a need here as across the border for better business and accounting methods. John C. Kirkwood, who handled this subject in an address, received close attention. Several dealers told how they budget their year's expenses and keep their various departments separate and make each pay.

There was an interesting discussion on used cars, which resolved itself into the conclusion that the problem requires business-like handling and can be solved if so treated. Interest was expressed in the appraisal plans used in several American cities and in the National Used Car Market Report.

London tried a used-car mart with an auctioneer, but the expenses were high and the bids very low, so the plan was dropped. The Ford dealers in London have practically set values for various Ford models.

A question agitating the Canadian trade just now is the talked of restriction of certain imports from "the States." Cars, tires and accessories are spoken of as being on the list. A firm restriction would favor those goods made in Canada and would curtail the businesses of those dealers the bulk of whose wares are imported. Numerous inquiries have been made at Ottawa and the best information that can be secured is that there is just as much opposition to the plan as there is support, and that the situation is very indefinite. Few dealers believe a drastic plan will be put into effect. The reason for the proposed plan is that Canada has been buying so much more from "the States" than "the States" have been buying from Canada that the balance of trade is disturbed and Canadian exchange is off 1½ or 2.

This matter will be handled by the new organization, which has also lent its support to various other activities of the parent retailers' association. About 30 resolutions were passed. They are:

What They Did

1—Support to care of returned soldiers and employment for them wherever possible.

2—In favor of daylight saving. Canada didn't set its clocks ahead when the United States did.

3—In favor of a false advertising law.

4—Creating the new association.

5—Against special prices to dealers by some manufacturers.

6—Against manufacturers selling to consumers.

7—Favoring a law requiring merchants to keep books. The present law provides that books must be kept, but not until a man has been in business 5 years.

8—Urging members to aid the Ontario Provincial Board of the association in securing data as to the damage that is being done to the retailing trade throughout Canada by mail order companies.

9—Pledging support to the development of the buy-at-home idea.

10—Not passed. Resolution recommending that retail price be made part of the trade mark. It was deemed inadvisable because of the complications that would arise.

11—Recommending that members take advantage of the freight savings department of the association. This department scans the bills of members, investigates the rates and classifications and returns to the member half of any overcharges that are collected. In case of no discovery of an overcharge there is no charge to the member.

12—Favoring an Inland Trade Commission, to have supervision over trade affairs, regulations and disputes the same as the Board of Railway Commissioners guides railway affairs.

13—Tabled. This resolution recommended that manufacturers who do not ship an order complete be required to pay any increases in duty or freight that are made before the balance is shipped.

14—Favoring an amendment to the Pedlers and Transient Traders Act to bar out those who seek to sell to dealers or consumers but who have no place of business in the municipality.

15—Asking the government to require all catalogs of mail order houses to be mailed from the mailing point. It is charged that hundreds are shipped to distant points and mailed from there, saving the mail order houses 8 cents on each catalog.

16—Asking that retailers be relieved of the cartage charges at one end of a shipment. Some now pay at both ends.

17—Favoring the giving of publicity to the price maintenance idea, in order that customers may understand that price maintenance means trade stability and general fairness instead of higher prices.

After Poor Payers

18—Recommending some arrangement whereby it can be made possible for dealers to collect accounts from government employees. They cannot now be sued, although it is stated that officers are required by the government to pay all debts before going overseas.

19—Recommending that the rate of 25 per cent, which is placed on the value of land and premises of all retail merchants, so as to ascertain the amount of business tax that they now pay, be reduced to 10 per cent of the assessed value, instead of 25 per cent.

20—Favoring a lien law.

21—Favoring the application of the bulk sales act to retailers as well as to wholesalers.

22—Recommending that members take advantage of the insurance policy examing department of the association.

23—Against avoidance of the anti-trading stamp act by retailers who substitute guessing contests and other schemes.

24—Favoring the extension of express service facilities in some form to those districts which are not now being served by express companies.

25—Against cities going into the retail business, in selling to the public.

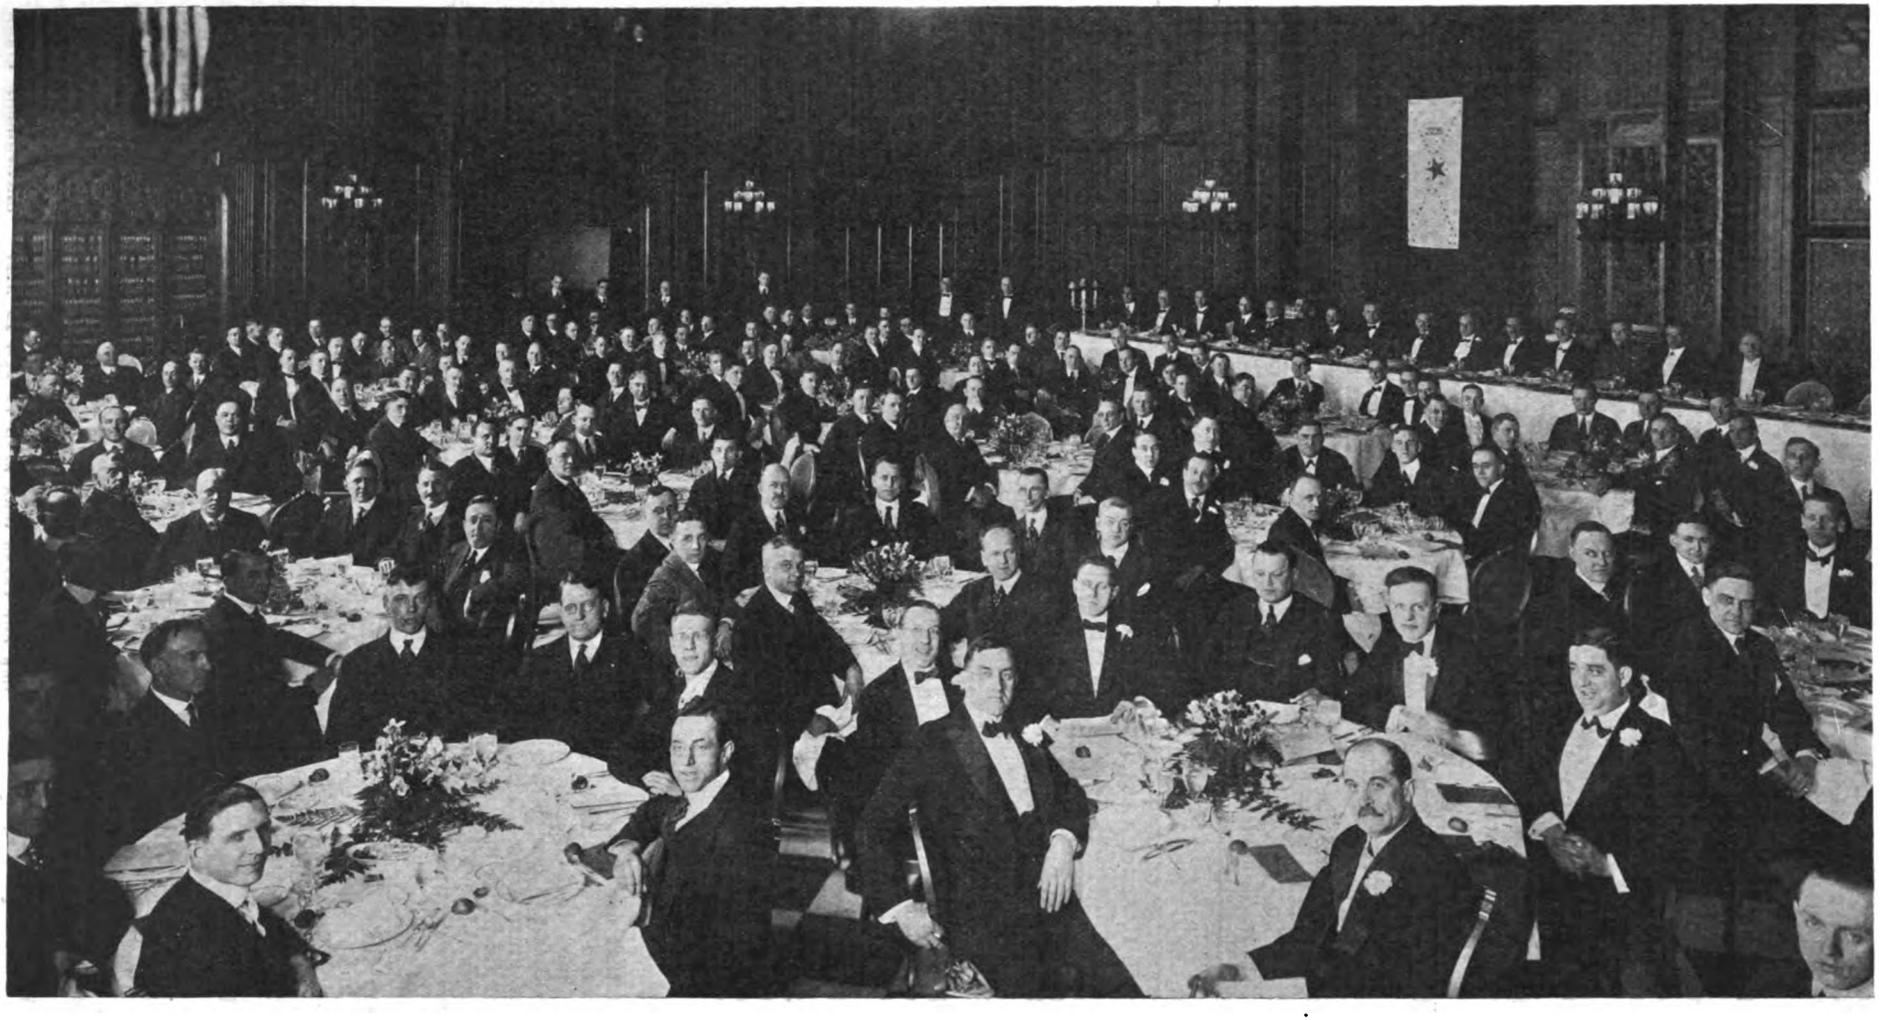
Who Pays the Freight?

26—That retailers specify when ordering whether they wish to pay freight and cartage charges. At present some pay and some do not. Also, that the retailers' association be consulted by the railways before rate changes are made.

27—Recommending to members the credit reporting bureau of the association, which reports delinquents to members.

28—Recommending that the retailers, credit men and bankers be permitted to have a joint hand in the framing of a proposed bankruptcy act, so that the retailers may be protected.

29—Urging wholesalers to investigate before opening dealer accounts, as some accounts are believed to have been opened at dealer rates with customers who are not dealers.



30—Asking manufacturers to leave off the retail price of the goods, in case the goods are generally used by price-cutters as a bait to the public.

31—Recommending a law to require a government standard for paint and a label on each can stating the ingredients.

Chicago Dealers Hold Big War Dinner

It was their annual get-together dinner, but this time it was made a patriotic affair, and just as midnight struck the roar of cannon cut short the speaking and they all stood and sang "The Star-Spangled Banner." This was the way Chicago and its motor car trade ushered in the Third Liberty Loan

Paid attendance, 1918	3,368
Passes distributed, 1917	300,000
Passes distributed, 1918	1,000,000

CHICAGO, April 8—Now that Chicago's second annual exchanged car show is over it is possible to get a line on the real situation in the 1918 used-car market.

For some months the trade has talked about the higher prices that used cars would bring this summer. The show has demonstrated that this is a fact and not a theory, although there was every ground for the theory beforehand.

A study of some of the figures shows that a car that was a year old last summer sells for about what it did last summer despite the fact that it is two years old now.

Furthermore, in figuring the depreciation on cars, the 1918 price of a car should be used in figuring two years' depreciation. Let us explain this statement.

Supposing a manufacturer has continued his model A—as many have—without much change for two or three years. Last year it may have sold for $1,000. This year the same car may be selling for $1,500. Let us say that a two-year-old car is worth 60 per cent off the original list. In the case of this model A, now two years old, the original list was $1,000, but the list to-day is $1,500. Therefore, in figuring the 60 per cent depreciation for two years of service it should be figured on the $1,500 price and not on the $1,000 price which the car brought when new.

It is not to be understood from the foregoing explanation that the percentage to be used on two-year-old cars is 60 per cent. The percentage is explained elsewhere in connection with the republication of the Motor World Used Car Chart that was first printed a year ago. The chart is still good except that in place of the original lists the 1918 list should be used.

To illustrate by a few typical sales: At the 1917 Chicago used-car show 19 1916 Dodges sold for an average of $615. At the 1918 show four of these same models, now one year older, sold for an average of $640, which is an increase of 4 per cent for the same cars now one year older. The Dodge is the best car from which to secure these figures because it represents a standard of value and is a ready seller. It has but the one type, whereas some other lines have several types, which makes it difficult to obtain true figures due to the data that are sometimes lacking.

The upward trend in the whole new car field has had much to do with used car values. Everything tends to be higher even though the list price of a particular car has not been raised.

Two things affect used car values: The comparison of the used car with its own 1918 price and a comparison with the generally elevated plane of all new car prices.

For example: Supposing the price of a certain car has not been raised. It nevertheless is elevated somewhat in the used car field because of the general upward trend in used car values, but it is not worth as much more in proportion

Some of the Sales at the Chicago Exchanged Car Show

All These Cars Are Rebuilt and in A-1 Condition

Haynes Touring, 35-T	$800
Studebaker E D Touring	600
Maxwell Roadster, 1916	425

as are cars the prices of which have been increased new.

More than ever the Chicago show has demonstrated the value of rebuilding or fixing up used cars that are taken in trade. Last year there were some cars that might have been fixed up more. This year there was hardly a car in the show that didn't look just about as good as any new car. The cars looked as well as a new car that has been driven a couple of weeks.

One dealer was found to have a competing make in the show in bad condition. He was using it as a horrible example. A polite request from the management caused him to remove the car from the show, and everything moved happily thereafter.

Salesmanship provides one of the good methods of avoiding losses on used cars. One exhibitor had a Packard that the committee and himself had entered at $1,500. Exhibitors were supposed to sell their cars at the prices marked on them.

This exhibitor finally decided, after several attempts at a sale, that the price was too high. He wanted permission to mark it down to $1,200. He entered into a spirited controversy with the management, and hardly knew what to say a few minutes later when he went back to his exhibit and found that in his absence the salesman had sold the car for the listed $1,500.

Last year Motor World said that the Chicago show demonstrated that to handle used cars successfully dealers must:

1—Take them in at a right price.

2—Fix them up and make them really usable.

3—Sell them at a price that would make a profit or at least prevent a loss.

If that fact was demonstrated that year it is more than demonstrated this year. It is the only way to handle the used car situation. The dealer must first determine how much it will cost to refit or rebuild the car that is offered in trade. He must then determine what the car will bring in the market when in good condition. He must then deduct from this market value the cost of overhaul and the selling expense. This gives him his allowance. Any other way is mere guess-work.

Chicago has developed some mighty good used car departments. After the show Saturday night the used car managers had a dinner downstairs in the Coliseum. There were about 30 of them —everyone an expert. It is these men who are solving Chicago's used car problem, with the backing of the proprietors along Michigan Avenue.

When a car is to be taken in trade it is first appraised by the used car manager. He KNOWS what the car will bring in GOOD condition. He FINDS OUT how much must be spent to put it in GOOD condition. He also knows what it will cost to handle the car. From this KNOWN resale price he deducts the overhaul and other expenses and tells the new car department what can be allowed for the old car. With this method there is no guess-work. Every dealer should have a used car expert and should pay attention to what this man says. What's the use of having a used car expert if no attention is paid to his recommendations? If he says the car will sell for $600 rebuilt and that it will cost $100 to rebuild and sell it what is the sense in allowing more than $500 for the cars? If the used car man should make a mistake and bid too low take the profit yourself. Don't insist on giving it to the customer.

With used cars handled this way there is no used car problem. It simply adds extra merchandise to the dealer's line.

One other factor in the situation is the rate at which cars are selling. In Chicago and elsewhere sales are good. Just at present there is a strong demand. Some of the dealers sold as many cars before the show as they did during the show, and many have new car orders that they can't fill. They are driving cars and getting what they can by rail, but there is still that old-time pleasant sensation of an excess of orders.

One thing no one seems to know is whether this will continue all summer. In New York one dealer says he believes people are buying early this spring, and that he doesn't know whether it is paving the way for a slump later in the summer.

Under those conditions it seems wise for the dealer to trade wisely and to make a profit on his used cars, rather than to figure on a mere even break. Later, if there should prove to be a new car shortage, due to a heavy early summer sale, the used cars would fill in nicely if there were a good stock on hand, and especially if they had been taken in at a price that would permit their sale at a profit.

Salesmanship is one of the factors that should not be overlooked in the used car show—or the used car business.

Those exhibits that were attended by good salesmen sold cars, and some of those not so well attended did not do so well. In the show was one salesman who was à champion stand-and-look-and-say-nothing type. In another exhibit was a salesman who dropped in to work a few hours, and did so well he decided to stay at the show instead of at the salesroom.

As a general rule the sales work was well handled, but it is apparent that with a used car show on the dealer who works intensively will get the results while the man who doesn't believe the show is an opportunity won't get them.

As was the case at the first show, there were about as many cars sold in the salesrooms as at the show. Many times a prospect would not be just suited with a car in the show and would be taken to the salesroom where there was a greater variety and a better opportunity to concentrate the buyer's mind on the sale.

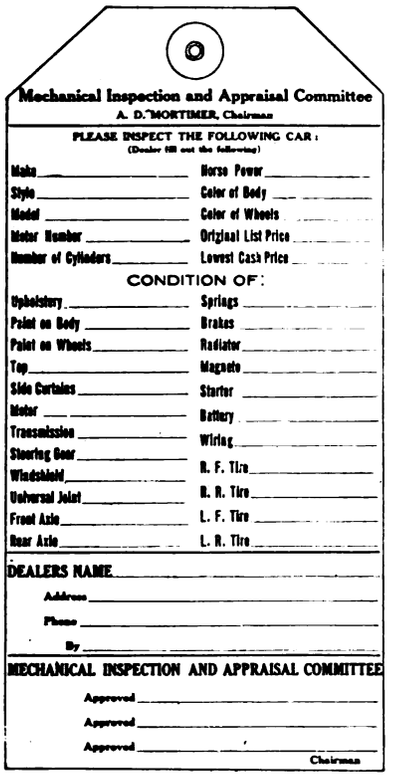
Why Chicago's Exchanged Car Show Was Successful

SEVERAL cities have tried used car shows, but with small success. Chicago has held two and each has been successful.

There are several reasons for Chicago's success. A mighty big reason is that it has an enormous population upon which to draw. It can sell more cars than could be sold in a smaller town. Of course, the show in the smaller town might not cost so much for rent and other expenses and the returns might be worth while. A study of shows held in other cities, however, indicates that they have not been held strictly on Chicago lines. It is also well to add that a slight slip in some respect may spoil the whole result.

Reason No. 2 is the method of admitting cars, the inspection committee. In some of the shows that have been successful there has not been much care exercised in admitting cars. Chicago set out in its first show to make the public respect the used car business, and it has operated ever since with that ideal in mind.

Elsewhere in this story are shown the forms used by the inspection committee, consisting of A. D. Mortimer, chairman, Haynes; E. E. Ross, Hudson, and Willard McAllister, Mitchell. Mortimer was made responsible. He would admit no car that did not check up O. K. in all points, and if the price was not right that had to be corrected too. The result was that the show looked almost as good from a car standpoint as a new car exhibition.



Some used car shows have admitted "crocks," have not kept the shows clean, have permitted gasoline and oil in the cars, have let them run on the show floor and fill the building with smoke, and have given the entire show a rather "crocky" atmosphere. This is something that must be avoided.

Reason No. 2 is the promotion. Chicago spent $6,000 in newspapers, tickets, etc. Last year 300,000 tickets were distributed free. This year 1,000,000 were distributed. They were sent to prospect lists, to corporations and through every avenue that would insure a wide distribution. Then a charge of 25 cents was, as usual, put on the gate. This kept out the kids and the undesirables. Nobody had any trouble getting in if he made an effort to get a ticket somewhere, but the public could not saunter in and out at will. And with every ticket there was a war tax of 3 cents.

While the sales at the show were up to par some were of the opinion that billboarding in the country for a few hundred miles might have brought in more farmers.

Also, the management of the show was turned over to a show manager, Thomas P. Convey, who managed last year's show. An outside manager, or at least one who is impartial, and who knows the show business, is an essential.

How Chicago's Exchanged Car Show Inspection Committee Works

When a dealer wishes to enter a car in the show he fills out the tag shown at the left. This must be filled out in detail according to the condition in which the dealer judges the car to be.

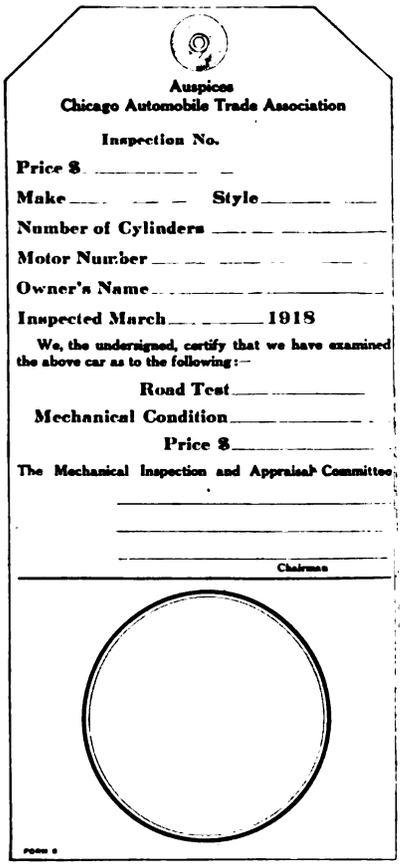
He then takes the car to the inspection place.

The committee enters the car's number, model, year, motor number and all other identifying marks in a book.

The committee takes the tag off and checks the car over. Where it finds the dealer's estimate is correct it OK's the notation. If any part proves not to be up to what the committee considers good condition it notes its exceptions on the back of the card.

For example: If the finish were not good this would be noted. If the steering wheel had play this would be noted. The car would then be sent back to the dealer with instructions to do certain work.

After the work has been done the dealer may ask for another inspection. The Chicago dealers have found that the committee is very firm, impartial and expert. Nothing gets by unless it is right and there is no favoritism.



When a car has passed it is taken by the dealer to the show building. Here the committee checks it against its record book to make sure it is the same car that was inspected.

The committee checks all the noted exceptions again, makes sure everything is all right, and then admits the car to the building.

Here the tag shown at the right is attached to the car and the tag at the left is removed. The car may now enter the show.

When a car is sold the tag at the right is replaced by a "sold" tag, and no car can be removed unless so tagged. It is permissible, however, to take an unsold car out provided another is put in. The circle is for the official stamp of the Chicago Automobile Trade Association.

The year of the car is not noted on the tags, because this tends to create a false value. The used car experts who handled the situation say the show forcibly demonstrates the fallacy of yearly model designation, as it often tends to belittle the miles of service that remain in the car.

GHOSTS

That Are Unemployed

By Ray W. Sherman

THIS is the fifth of a series of six articles. Others in the series are:

1—The Man Who Was a Slacker
2—The Horse Without a Rider
3—The Locked Door
4—The Street Without a Name
6—The Invisible Ink

"HAVE you got the envelopes addressed yet for those circular letters we were going to send out to your car prospect list?" asked Reilly of Miller, his dealer in Merrylton.

"No, I haven't got them done yet," admitted Miller as he played with a paperweight on Reilly's desk.

"Well, when are you going to get them done and get them down here so we can get this thing started?" demanded Reilly.

"I'll get 'em down next week," said Miller. "You see, I have been pretty busy. I have had to fix all those broken windows you told me about and put in an accessory display case, and I have been doing so darn many things that I haven't had time to get at this job."

"Well, when do you expect to get started?" asked Reilly.

Is It Worth While?

"Do you really think it's worth while sending out all these letters?" queried Miller. "Don't you think it is quite an expense and that it doesn't bring in the returns that some folks think it does?"

"What do you mean, expense? You've got to spend money for something, haven't you, if you are going to get any business?"

"Yes, I know, but all these letters cost money every time you send them out, and a lot of the people you send them to will never buy cars anyway."

"Well, if that's the case, you might as well sit up in your door on a chair in the sunshine and wait for people to come along and buy your stuff, and if you think you can get rid of twenty cars this season that way, why, hop to it. I am willing. The one thing that I am anxious about is that you get rid of these twenty cars. If you do that, you can make some money for yourself and for me and for the Sennett. We've all got to make money this year.

"These form letters are one of the most important factors of your business, no matter whether you see it that way or not. By yourself you can make only so many calls on a prospect, but with letters you can make any number of calls. There is no limit.

Reaching 100 People at One Time

"Furthermore, a letter can go where you can't go. A letter can walk into a farmer's home in the evening after he has done his chores and is reading the paper and can talk to him and say things to him that you couldn't impress upon him if you tried for a hundred years, and a letter can do that same thing that same evening with a hundred customers. How long would it take you to call on a hundred people?"

"Well, it would take quite a while," agreed Miller.

"Certainly, it would take quite a while. And after you had gotten all through the results of your work wouldn't be as effective as they would be if you sent out a hundred good sales letters. You should always use sales letters to supplement your personal sales work. If you go and call on a man and make a certain statement maybe it impresses him and maybe it doesn't, but if the same thing comes along in a letter, he then remembers that it is exactly the same thing you told him when you were talking to him, and he reads it over when there is no one around to bother him, and it makes more of an impression upon him sometimes than anything could that you could say.

"A form letter is just like a sort of a ghost or a spirit that creeps into the man's home when he isn't looking and influences him towards buying your car. They keep pushing at him and pulling at him and telling him that the Sennett is a good car, that he ought to have a car, that you are a good dealer, that a lot of other people in the territory are using Sennett cars, that they all like their cars, that the Sennett factory is a wonderful factory, that it has been in business for years, it is a highly reliable institution, and that he really can't afford to get along any longer without one of these cars.

"The letters keep telling him that sort of stuff and before he knows it he begins to believe that a lot of it is true, no matter whether it is or not. And each time that his belief becomes a little stronger it makes it all the easier for you when you go round to make personal calls on him. Then, finally, some day one of your personal calls is going to do the trick and you are going to get the man's order.

Unseen Influence of Form Letter

"On the other hand, if you don't use form letters your calls on the man are necessarily few and far between. You may call on one man every day, but you can't call on many people that often because you haven't the time. Your physical limitations are too great. All this unseen influence of the form letter is a mighty power that you can put to work for you at a small cost if you will only set about it.

BETTER MECHANICS

No. 63

Stationary Shop Equipment and Standard Tools

THE technical service department of the Packard Motor Car Co. has made a careful analysis of the shop equipment most essential to efficient work, and has prepared lists showing what equipment is desirable to purchase with the money at hand.

About the first thing that a shop owner desires to know is the equipment most necessary for his use. This depends largely upon the size of the shop, the number of cars requiring service, or whether replacement of parts or actual repair is to be made. The usual method is to purchase in a more or less hit or miss manner until the amount of money at hand is invested. The four following lists are based on investments of $5,000, $2,500, $1,000 and $500 respectively, and are so balanced that practically all of the necessary service work to be done may be handled.

In no sense of the word is it to be understood that the prices given are absolute. To-day prices are changing so fast that such a list is impossible. However, the price given is the average price at which the equipment may be purchased from any reliable machinery house.

$5,000 List

	Price
5-hp. electric motor	$210.00
Shafting, pulleys and brackets	50.00
Belting	60.00
Hydraulic press for truck tires	700.00
Acetylene welding and carbon-burning outfit	60.00
Battery charging and repair outfit	300.00
Lathe tools, shaper tools, reamers, files, jacks, etc.	145.36
Milling machine	1,155.00
Lathe	595.00
Shaper	500.00
Drill press, wheel and lever feed	90.00
Press	60.00
Heat treating furnace	110.00
Valve grinder and valve seat-reaming tool	30.00
Portable forge	22.50
Bench drill to ½ in.	24.00
Emery grinder and buffer, 10-in. wheels	29.00
Power hacksaw	16.75
Swivel bottom vise, 4 in. jaws (four)	36.00
Air compressor	50.00
Air hammer	50.00
Universal electric drill	91.00
Taper shank twist drills ⅛ in. to ¼ in., with Packard special size	20.52
Chain fall (two)	115.00
Taps and dies S. A. E. ¼ in. to ¾ in., with die stock and top wrench with special packing sizes	18.00
Voltmeter	75.00
Portable crane	125.00
Two engine studs (swivel jacks) at	110.00
Set of taps and dies from ⅛ in. to ¼ in., with Packard special size	6.00
Blow torch	5.20
Taper shank twist drills ⅛ in. to ¾ in., 1/64-in. graduations, No. 403 high speed	58.17
Reamer and attachments for broaching main bearings	250.00
Bending bars, crow bars, etc.	25.00

Blacksmith Tools

	Price
10-lb. striking hammer	$2.00
5-lb. striking hammer	1.00
Square flatter, per pound .20	
Hardie, per pound .20	
Hot chisel, per pound .40	
Cold chisel, per pound .40	
Bolt tongs, per pound $1.00	15.00
Angle jaw tongs, per pound .60	
Pick tongs, per pound .60	
Lathe tongs, per pound .60	
Swage block, per pound .10	
Wrecking truck	20.00
Breast drill	3.50
Solid box blacksmith vise, 4 in. jaws	9.00
Anvil (80 lb.)	8.00

$2,500 List

3-hp. electric motor	$160.00
Shafting, pulleys and brackets	40.00
Belting	40.00
50-T press for truck tires	100.00
Acetylene welding and carbon burning outfit	60.00
Battery charging and repair outfit	100.00
Lathe, tools, shaper tools, reamed files, jacks, etc.	108.25
Milling machine	700.00
Lathe	550.00
Drill press, wheel and lever feed	90.00
Press	60.00
Valve grinder and valve seat reaming tool	30.00
Portable forge	22.50
Emery grinder and buffer, 10-in. wheels	29.00
Swivel bottom vise, 4 in. jaws (two)	18.00
Solid box blacksmith vise (4 in. jaws)	9.00
80-lb. anvil	8.00
Air compressor	50.00
Engine stand (service jack)	55.00
Electric drill to ⅝ in.	91.00
Chain fall (one)	51.50
Taps and dies S. A. E. ¼ in. to ¾ in., with stock and tap wrench, with Packard specials	$18.00
Taps and dies U. S. S. ¼ in. to ¾ in., with die stock and tap wrench with Packard special sizes	18.00
Set of taps and dies from ⅛ in. to ¼ in., with Packard special sizes.	6.00
Blow torch	5.20
Taper shank drills, ⅛ in. to ¾ in., 1/64-in. graduations, No. 106 carbon steel	20.52

Blacksmith Tools

	Price
10-lb. striking hammer	2.00
5-lb. striking hammer	1.00
Square flatter, per pound .20	
Hardie, per pound .20	
Hot chisel, per pound .40	
Cold chisel, per pound .40	
Bolt tongs, per pound $1.00	15.00
Angle jaw tongs, per pound .40	
Pick tongs, per pound .60	
Lathe tongs, per pound .60	
Swage block, per pound .10	
Weaver wrecking truck	20.00
Breast drill	3.50

$1,000 List

2-hp. electric motor	$100.00
Shafting, pulleys and brackets	20.00
Belting	20.00
Acetylene welding and carbon burning outfit	35.00
Lathe tools, shaper tools, reamed files, jacks, etc.	33.70
Lathe	350.00
Drill press, wheel and lever feed	90.00
Press	30.00
Valve grinder and valve seat reaming	30.00
Portable forge	22.50
Emery grinder and buffer, 10-in wheels	15.00
Swivel bottom vise, 4 in. jaws (one)	9.00
Solid box blacksmith vise (4 in. jaws)	9.00
80-lb. anvil	8.00

Pressed Steel Wheels for Cars and Trucks

THE Detroit Pressed Steel Co., Detroit, has developed and is starting production on pressed steel disk wheels for passenger cars, trucks and tractors. The passenger car wheels are styled "Disteel wheels" and are of the single disk type, but those for trucks or tractors are either single or dual disk, depending on the size. Passenger car wheels may be demountable or may be fitted with demountable rims.

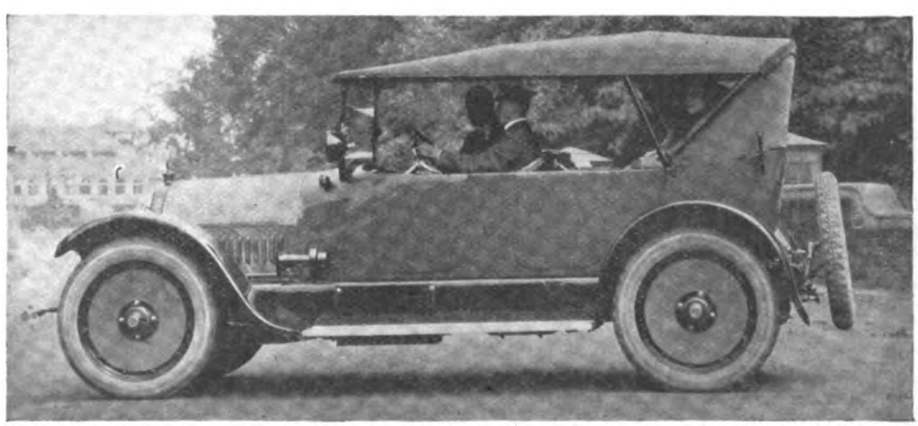
The wheel comprises a surprisingly few number of parts. A cast steel hub is fastened to the axle and in the manner required by the axle construction, and to this the steel disk is secured, slipping over the four studs on the permanent hub flange. The wheel is locked in place by a wheel locking flange which carries the four nuts and their lock washers in a self-contained unit. This system has been found better than that of holding the wheel in place by one large nut. Not only is less force required in removing and replacing the wheel, but also the possibility of the nuts setting in place is removed.

Left—Disteel wheel mounted on a ¾ floating type rear axle. The load line passes through the disk

Right — Disteel wheels conform harmoniously with the present type of body design, concealing brake bands and rods

The rim is integral with the dished steel flange and has an outer ring that is held in place by eleven nuts on the 34-in. type. This construction is noteworthy because of the extreme line-in of the parts without loss of strength and because the outer ring when removed leaves the casing entirely free.

Hubs of Cast Seel



As stated, the hubs of these wheels are cast steel. The disk and rim are ordinary 25-point carbon blue annealed steel, the flange varying in thickness from 3/16 in. to 3/32 in. In general, it may be stated that the weight of the wheel is less than that of the universal of wood of the wire spoke type—including the hub installation.

Although it is not claimed that the wheel is not in any sense of the word a flexible wheel, the absolute rigidity of previous dual disk wheels is removed by the dished disk construction By this construction it will be noted that the load line crosses the disk, eliminating a concentration at any definite point. The load is carried both in compression and suspension over the entire surface.

Among the advantages claimed for this wheel are freedom from climatic effects, such as shrinking, swelling, cracking, etc., and the ability to endure shock without complete destruction, and if bent the wheels may be straightened without much difficulty. Because of the fact that all of the wheel is inside of the tire tread, it is much more protected from accident than either the wooden or wire wheel.

One previous objection to this wheel construction was that of appearance, and in this the Disteel wheel has removed much of the cause for complaint. The design harmonizes nicely with the present stream line and body lines, and pleasing color contrasts are possible on the wheel construction. And the disk effectively conceals all parts such as brakes, rods, etc.

At the present time the Detroit Pressed Steel Co. is only equipped to manufacture wheels for the following cars: Cadillac, Packard, Murray, Winton, Hale, Dorris, Jordan, Hudson, Peerless, McFarlan, Fergus, Olds, Hupp, King, Chalmers.

Repairshop Shortcuts

From Motor World Mechanics

NO. 1619—RIVETER FOR LININGS

A tool for putting rivets in Ford transmission bands quickly and easily is made by fastening a curved piece of iron to a wooden block which is then fastened in the vise when in use. A handle is shackeled to the top of this piece of iron to give the necessary leverage. The plunger tube is spaced from the main post with babbitt and held by U-bolts. The plunger is automatically raised by a spring. The bottom of the main post is drilled out and a die which can be easily replaced if broken is fitted in the hole.—E. E. Bittinger, Springs, Pa.

NO. 1620—ELECTRICAL TESTING UNIT

A unit for testing circuits in coils, generators, ignition systems, etc., is made by constructing a box to contain six dry cells. A handle is fitted to it so that it can be easily carried. The cells are connected in series and flexible wires lead from the terminals. The positive lead is directly connected to the terminal. One negative lead is connected to the terminal and the other goes through a 6-volt, 2 candle-power lamp. In order to test any kind of wiring as to an open circuit, use the positive and the negative (1) wires, thus connecting the lamp in series with the dry cells, and if there is a complete circuit, the lamp will light. In testing on storage battery circuits, use wires negative (1) and negative (2) which leaves out the dry cell circuit.—E. C. Stillger, Olson Bros. Garage, Ithaca, Neb.

NO. 1621—TO PREVENT OIL LEAKAGE

To remedy oil leaking out of the engine rear bearing a flat strip is placed around the shaft, and this is held in place by a coil spring which is wrapped around it. The felt should fit closely and fill up the space between the flange and the bearing.—C. C. Spreen, Flint, Mich.

NO. 1622—FORD COIL TESTER

A convenient Ford magneto coil tester is made by using a regular double pole knife switch with two 10-amp. fuses. Four sockets are connected in parallel and an extra socket is cut into one of the branches, and in this socket is an attachment plug. Two ordinary ice picks with wooden handles form the terminals of the leads. Carbon bulbs of a 32 cp. are used. In testing the coil assembly it is necessary to unsolder the ground connection. By touching one ice pick to the coil winding and the other to any part of the frame, a short circuit will show itself by flashing or burning.—O. W. Hall, Hall Garage, Fort Collins, Col.

NO. 1623—AXLE OVERHAULING STAND

A stand particularly adapted to Ford rear axles is made from angle iron riveted or welded together. The top cross member is 3 x ⅜ x 14 in., which just accommodates the left half of a Ford rear axle. The pan is galvanized iron divided into compartments. The stand for the drive shaft housing is made of pipe fittings. Parts of a pipe vise are used to hold the axle housing firmly. Lag screws can be used to bolt the stands to the floor.—O. W. Hall, Hall Garage, Fort Collins, Col.

NO. 1624—FORD COIL TESTER

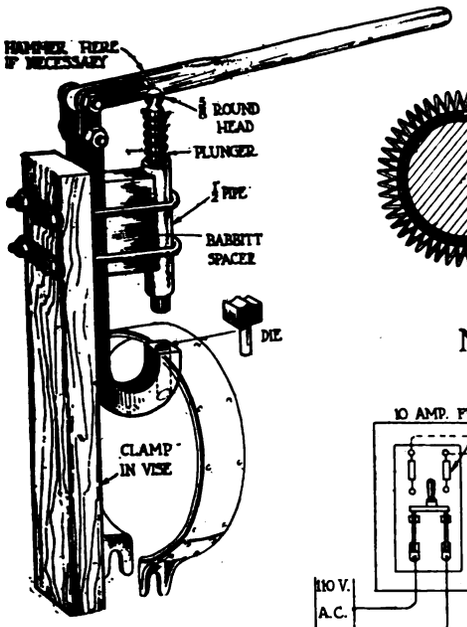
For testing Ford coil units a set of instruments is mounted on a board. The required articles are an alternating current ammeter reading from 0 to 2 amp., a transformer such as used for operating toy trains, an adjustable spark gap and a double pole single-throw knife switch. Metal terminals are so set as to connect with coil unit terminals. A coil in good condition should draw between 1.2 and 1.4 amp. and show a good hot spark at the spark gap and also operate without excessive flashing at the contact points. —O. W. Hall, Hall Garage, Fort Collins, Col.

NO. 1625—TRUCK FOR OIL BARRELS

A handy truck for barrels of oil can be made from wood. The uprights are 2 x 6 in., the diagonal braces are 2 x 4 in., and the top cross pieces are 2 x 6 in., with a notch cut in them the same radius as the barrel. Castors are fitted to the bottom so the barrels can be moved about.—C. C. Spreen, Flint, Mich.

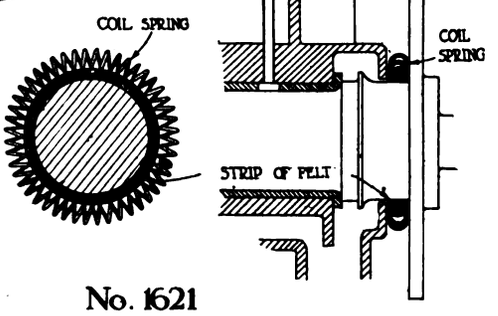
NO. 1626—CHAIN BATTERY HANDLE

A simple and cheap storage battery handle is made from a couple of cross links from an old non-skid chain. They are linked together, the ends opened enough to slide over the handle of the battery, and tape wrapped around the center for a comfortable handle. The battery can be slipped into the box without skinning your hands.—Karl Koett, Leyman Buick Co., Norwood, Ohio.



NO. 1627—FABRIC CUTTING KNIFE

A knife for cutting one layer of fabric at a time is shown. The work may be done by pulling or pushing the knife, the motion of the knife in each case being indicated by the arrow. Naturally the cutting point must be sharp.—Elizabeth Automobile Co. (Franklin), Elizabeth, N. J.



$1 a Shortcut

SHOP men are invited to send in the ingenious kinks they have worked out for saving time and labor in their shop. MOTOR WORLD *will pay $1 for each Repairshop Shortcut that is accepted for publication. The only requirements are these: 1—Describe the shortcut briefly but clearly, in few words. 2—Send a sketch, in pencil or pen, no matter how rough; our artists will finish the job. 3—Write on ONE side of the paper only. 4—Sign your name and initials, the name of the company you are with, and the town. Write plainly. If your name is unusual, or if there might be any doubt as to the spelling of the name, print it in capital letters with your pencil.*

DRIVE-AWAYS!

How Some Dealers Are Taking Hundreds of Cars a Month From Detroit

A fleet of twenty-six Paige cars ready for a drive-away to Philadelphia, March 23

DEALERS must drive away cars or they will not get them. Spring and the coming summer, with improved road conditions, usher in bigger business for dealers, and to be assured of good business the dealer must be prepared—be prepared with an ample supply of cars—a surplus stock that will not be exhausted before another supply arrives.

Dealers from all parts of the United States are traveling hundreds and sometimes thousands of miles—some over half way across the continent—to drive cars away from the factories.

Recently 250 cars left the Dodge Driveaway Garage, Detroit, in one day. Of this number four went to Jefferson, Iowa; two to Brookings, Iowa; three to Arkansas; six to Greenville, S. C.; eleven to North Platte, Neb.; five to Alva, Okla.; five to Stuttgart, Ark.; eight to Pratt, Ark.; nine to St. Louis, Mo.; six to Rocky Mountain, N. C.; four to Martinsville, Va.; three to Franklin, Va.; five to Marion, S. C.; four to Darlington, S. C.; five to Shawnee, Okla.; five to Quartertown, S. D.; one to Jackson, Miss., and five to Port Jervis, N. Y. The balance went to nearer points.

1500 Driven Away in Week

This simply illustrates what was done by only one factory in only one day. Similar programs are going on at other factories. Dodge Brothers sent out the third week in March an aggregate of 1400 cars; the week previous, 1500 cars. If this rate is maintained—and there is every indication it will be—March will show a great increase over the drive-aways in February. Those of the latter month exceeded the total of January. The drive-away system has come to stay.

Does a drive-away injure the cars? No! If properly handled, it is good for them. In these days of great production, it is almost physically impossible for a manufacturer to give a road test to two or three hundred cars every day. The drive-away serves this purpose. The stiffness of the motor is thus worn off, and when the car reaches the hands of a buyer it should be in fine running condition. Dealers are seldom heard to complain of a car brought to them in poor condition.

Paige Uses Paraffin Coat

Paige, for instance, applies a coating of paraffin to the body and greases the nickeled parts. Should any mud splash upon the car while en route, the varnish is still unharmed. When the car reaches its destination it is given a warm bath and it again looks like new.

The interior of the Dodge garage where the cars are housed pending departure

Dealers going to a factory to drive back cars usually take with them the required number of drivers. If they cannot secure a sufficient number in their own town they engage additional men at the factory. A number of dealers have been able to obtain men who were only too glad of the opportunity to drive cars for them, merely for the pleasure it affords the drivers. It offers them a vacation, and all they ask is expenses.

A systematic schedule is usually followed. The dealer when starting back with his fleet of cars leads the procession, the last car of which is driven by his most dependable mechanical man. It is essential that the first man know the best roads. With a 15- to 20-mile pace set by him, the others follow about 200 feet apart. The last man sees that none get separated very far or fall behind. A certain mileage for that day is determined at the start; that is, it is aimed to reach a certain town. When that point is attained the team puts up for the night at a hotel. Approximately 150 miles can be made in one day.

One to Two Dozen in Driveaway

The number of cars constituting a drive-away varies from one car to two dozen or more, but the most satisfactory seems to be not more than fifteen cars. This is a large enough number for the team captain to look after. To have more than fifteen occasions too great a delay at gas filling stations, where time is consumed not only in taking gas but waiting in line for the others to fill up. The delay of one car sets back the entire train. The smaller the train the lesser is the percentage of lost time. In other words, a fleet numbering fewer cars is more efficient and tends to reduce the time of travel.

Maxwell has hit upon a plan that is

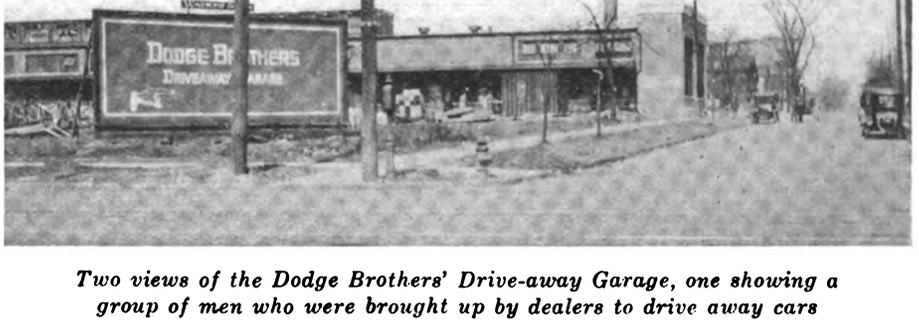
Digitized by Google

proving most satisfactory. With the aid of a trailing bar one driver can take charge of two cars. Ten cars now compose a team. This requires but five men, thus saving 50 per cent on labor cost. A fleet of this number can fill with gas and the men can eat a meal in a period of 1 hr. It has been demonstrated that these cars can travel 50 miles farther in one day than a train of fifty cars. These bars are supplied the dealers at $5 each, but they save the dealer 50 per cent of the railroad fare to get the men to the starting point of the drive-away, the food and lodging cost of these men, and their payroll. The trailing bar more than pays for itself. And there is another advantage in that it slows down the drivers to a limited speed of 20 miles.

Bonus to Drivers

Besides having dealer drive-aways, Maxwell engages in this work in its own behalf. The company maintains fifty drivers who are kept busy nearly all the time delivering cars to its various distributing warehouses. The rates paid the drivers are governed by the distance and conditions of the roads between the terminals. A premium is added for every car that is delivered in first class condition. Many dealers use this bonus system with great success.

Dealers are urged by the Maxwell company to take trucks with passenger cars wherever possible. This permits the loading of the passenger car on the truck and saves tire wear on one vehicle. Of the drive-aways from the Maxwell company 75 per cent is by dealers.



Paige Does Own Driving

The Paige drive-away is increasing weekly. Approximately 350 cars were driven away in February, and in March, it is believed, the total will reach 500. This company handles its drive-away system with crews engaged by the company but paid for by the dealers. With this system in operation it has been found that the cost for a drive-away to Pittsburgh from Detroit is only $7.50 per car more than the freight charge between these points. This company also has warehouses. They are situated in Kansas City, Atlanta, Dallas, Los Angeles, San Francisco, Portland, Ore., and Boston. To these the cars are freighted and the dealers in their re-

A form used by the Maxwell Motor Sales Corp. One is given the driver and a duplicate is retained at the plant. Its purpose is obvious. A similar form could be used to advantage by dealers

spective sections come for them. A supply of 800 to 1,000 cars is always maintained at each warehouse.

Dealers desiring cars from the factory must send in a requisition three days in advance. They cannot come up and expect to find their cars ready for them.

Oakland Leased Freight Cars

Oakland has been driving cars to its Cleveland distributer all winter. A string of fifty railroad cars was leased to ply between Chicago and Pontiac, and another train of twenty-nine was leased to travel between Pontiac and Kansas City, Minneapolis, Omaha and Chicago. As in the case of Paige, dealers come to these points for drive-aways. Within 300 miles of the plant, drive-aways are quite common.

The Hupp Motor Car Corp. averages twenty-five cars daily. In one day forty-two cars left for Kansas City and the following day twenty departed for Louisville, Ky., and thirty for Omaha. Ten cars are driven away from the Saxon plant every day. In some instances the prospective owners of cars come after them.

Some dealers were aware of the conditions and stored cars during the winter months and now have generous supplies to draw on, thereby losing no business and cashing in on their long-sightedness.

Collier Company Going Ahead

BELLEVUE, OHIO, April 4—At a stockholders' meeting of the Collier Motor Truck Co., F. W. Steinen and Charles Matz were elected to the board of directors. The officers are: President, R. A. Palmer; vice-president, S. H. Penfield of Jamestown; secretary and treasurer, John F. Corl. The company is making preliminary plans for an extensive factory building, to be built on the large tract of land owned by the company at Bellevue. New agencies have been established in the states of New York, Pennsylvania, Massachusetts, Rhode Island, Connecticut, Delaware, Ohio, Michigan and Louisiana, and an announcement will shortly be made by the company pertaining to the development of additions to the line of Collier trucks.

Willys-Overland Distributing Plant Leased

SANDUSKY, OHIO, April 4—The Willys-Overland Co. has leased a building here as a distributing and shipping plant. The plan is to drive the cars from the Toledo factory to the building here, and then either ship them to other points or drive them away. The plan has been adopted as a result of poor transportation facilities in Toledo.

THE LAW

As It Applies to Dealers, Garagemen, Repairmen

The editor of this department is glad to answer questions. In sending queries, always include copies of contracts, notes, etc., to which you refer

By George F. Kaiser

Relief from Stopping Vehicles in Front of Residences

Advice was recently sought by a resident of New York City as to what relief the law accorded him from the continued stopping of business motor cars in front of his residence. It appeared that certain delivery wagons were in the habit of stopping in front of the inquirer's house while making deliveries across the street and that when he suggested that they stop in front of the house where they were making deliveries, he was given advice he did not care to follow.

Outside of the fact that there is a city ordinance in New York City which provides:

"Trade wagons shall not be allowed to collect on any street or public place, to the obstruction of travel or the annoyance of persons coming and going on the streets, sidewalks or cross walks, or any property owner or resident in the vicinty," there seems to be no law prohibiting a vehicle from stopping at any point on a public street, providing it is only kept there a reasonable length of time and no nuisance such as the emission of smoke, dropping of oil or excessive noise is committed.

Liable for Delivery of Car to Wrong Person

Where a motor car left with a dealer for repairs is re-delivered to the wrong person, he must stand the consequences and cannot excuse himself by contending that he had a sincere and well founded belief that he was delivering the car to the owner's agent nor that he used care when re-delivering it, is the decision in a recent Massachusetts case.

Suit was brought by the owner of a motor car against the dealer who had delivered up a car, which had been left for repairs, to the owner's chauffeur when he presented an order for delivery signed by the owner's daughter. The car was subsequently wrecked while the chauffeur was on a "frolic of his own," as the Court termed it.

The owner testified that he had never expressly or impliedly consented to the order or the delivery of the car to his chauffeur.

The Court pointed out that leaving the car for extensive repairs to be fixed by agreement after an examination is different from where a car is stored with the idea of keeping it in commission. It was decided that in the former case, it was no part of the authority usually possessed by a chauffeur to take the car out.

The dealer was therefore held responsible for damages to the car because he was under duty not to return it or deliver it to anyone without the owner's expressed or implied consent. The Court said that the damages would be the true market value of the car at the time it was wrongfully given up.

The fact that the order was signed by the owner's daughter was held to be no excuse for the wrongful delivery, the Court saying that the mere relationship of father and daughter alone was not enough to make her her father's agent.—Doyle vs. Peerless Motor Car Co. of New England, 116 N. E. (Mass.) 257.

After the above case had been disposed of, the dealer turned around and started suit against the daughter for the damages sustained by reason of the fact that it had been led to surrender the car wrongfully because of the written order which she had given the chauffeur.

The Court decided that the dealer was entitled to recover the fair market value of the car at the time it was given up on her order with interest to the date of the verdict.

The Court, however, refused to allow the dealer his disbursements and expenses, stating that they were caused by the dealer's own wrongful act in giving up the car. 116 N. E. (Mass.) 559.

TO EXPLAIN to the dealer and garageman various phases of the law is the purpose of this department. Mr. Kaiser will be glad to help you untangle your legal knots. Send them along.—EDITOR.

No Building Law

Editor Motor World: Could you give me some information on building a garage for general repairing? Could I use a frame building with cement bottom, or do I have to have the whole building fireproof? What is the law in this state on garages?—John De Handt, Sodus, N. Y.

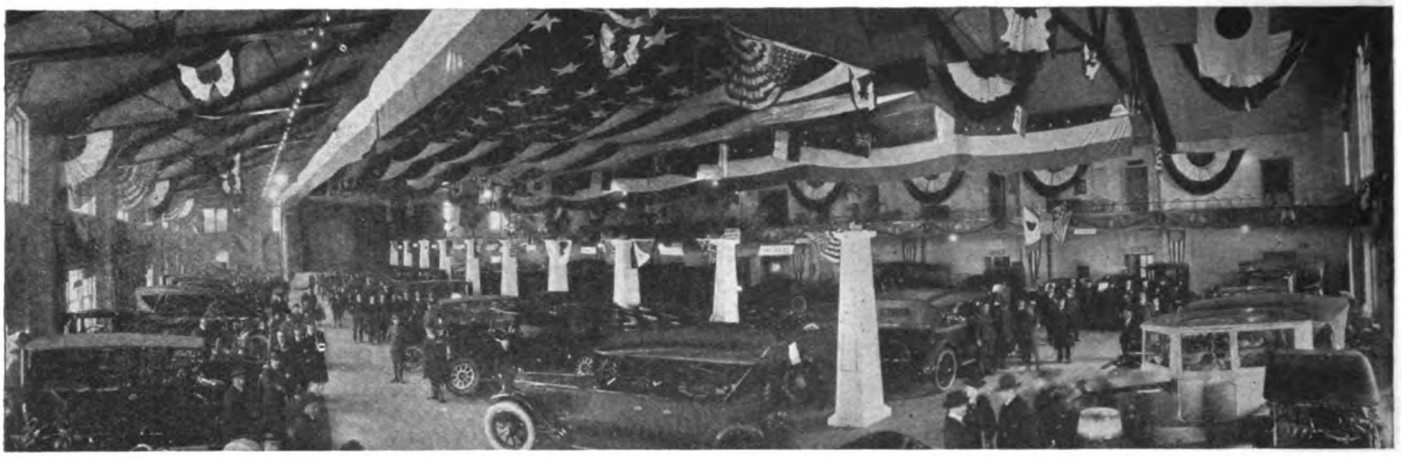
Answer—There is no state law in New York at the present time which you would have to comply with in building your garage. In fact the only New York law that you need to become particularly acquainted with is the garagemen's lien law.

Promise Was N. G.

It has just been decided in the New York courts that a garageman cannot proceed against the owner of a motor car for gasoline and accessories furnished when it appears that they were furnished to another person, who originally owned the car and subsequently went into bankruptcy, even if the last owner made a verbal promise to pay the bill. This is a case under the statute of frauds, which provides that there cannot be a recovery on a promise to pay the debt of another unless the promise is in writing.

Help Recover Stolen Cars

PORTLAND, ORE., April 4—W. M. Klinger, general manager of the automobile department of the London & Lancashire Fire Insurance Co., has been establishing automobile identification bureaus in the principal Pacific Coast towns as a clearing house for data on cars that will make their recovery easy if stolen. The bureau system is free to any motorist, whether his car is insured or not. Its purpose is to obtain identification data on his car before it is stolen. The motorist fills out a post card containing questions to be answered about his car. This card is then filed away. If the car is stolen later the identification data on the card are sent to the chief of police of every large city in the country and sooner or later the car is recovered.



$1000 a Minute

SEATTLE, April 4—One thousand dollars a minute for five minutes for War Savings Stamps was the record set by automobile dealers and distributers of the city at the meeting of the Automobile Dealers' Association. The meeting raised $5,100 for stamps in five minutes. Members of the organization voted to affiliate with the national organization of motor car distributers. It was also voted that all dealers would notify their customers of a tight Sunday closing as well as evenings at 6 o'clock.

Bar Licenses to Enemy Aliens

MONTREAL, April 4—In the Province of Ontario the Government has passed an Order-in-Council providing that alien enemies shall not be granted licenses for motor cars or motorcycles this year. Special legislation would be required to put this act in force in the Province of Quebec, so it only applies to Ontario.

The Duluth show was typically western in its striking decorations

Tractor Parade Held as Publicity Stunt

Wichita Dealers' Idea Arouses Interest of All the People in Farm Machinery

WICHITA, KAN., April 4 — The Wichita Thresher and Tractor Club put on a parade of tractors and threshing machinery through the streets of Wichita as a publicity stunt.

But it developed into far more than a mere advertising device. It aroused the personal interest of bankers, business men, clerks and women in the practicability and ease of operation of oil and gasoline-driven motor machinery for increasing production in the Southwest.

Wichita is a city of 75,000 people; it has a Federal Farm Loan Bank, one of the twelve in the United States, its district being Kansas, Colorado, Oklahoma and New Mexico; it claims to be the second largest market in the world for the distribution of agricultural implements and machinery and the first in thresher distribution; it is the largest broom corn market in the world; it is an important grain and live stock market, and the oil business has given the city a wonderful growth.

Since most of these features of dominance are affected by the growth of a tractor, truck and automobile business it was to be expected that the city officials would come more than half way in helping to arrange for the parade. The only restriction was that the large tractors should not wear their spikes. This requirement was met in some cases by holding iron bands around the cleets on the wheels of the heavier machines.

Some sixty tractors, nearly each one pulling some piece of threshing equipment, larger ones pulling harvesting and threshing outfits, traveled about three miles over the city paved streets, the parade being witnessed by more than 15,000 people on the streets and hundreds more from their office windows. More than twenty of the tractors, small and large, were driven by women, and this feature provided one of the most striking and significant lessons of the parade to the spectators, especially the bankers and the women. Most of the female drivers were girls, ranging in age from 17 to 20. As far as the public that saw the parade was concerned, the girls might have been expert tractor operators and mechanics. As a matter of fact, several of them had never been on tractors until the day of the parade. All had operated automobiles; they were given 10 or 15 minutes' special training in running tractors and then sent out onto the streets of Wichita in the crowd to keep their line in the parade—and got away with it without a hitch.

The driving of the women was a "nice feature" of the parade. But it proved to be a tremendously important one in that hundreds of business men who have farms or who are in a position to encourage the sale of tractors as well as thousands of farmers who had wondered who would drive their tractors if they bought for spring plowing certainly saw their questions answered.

The Wichita show was given in its forum and on Thresher Row, Thresher Row being about five blocks in the implement district, where are the warehouses and salesrooms of the companies handling tractors and threshers. On two vacant blocks all day long the tractors were exercised, and the visiting farmers could see them in operation and even try the machinery themselves.

The Wichita territory is starting much road improvement work this year; agricultural land is generally kept in pretty good use, and tractors are already being generally used for spring plowing; winter wheat now looks in fine condition and farmers are eager to make all arrangements for harvesting the crop.

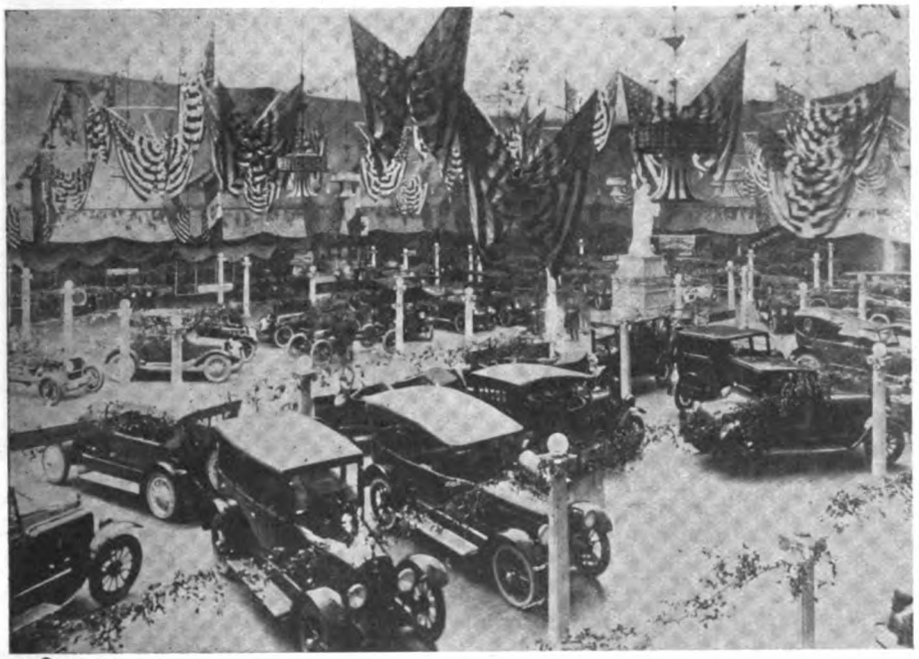
Hartford Re-elects Officers

HARTFORD, April 5—At the annual meeting of the Hartford Automobile Dealers' Association, Inc., all the old officers were re-elected unanimously. L. H. Elmer, proprietor of the Elmer Automobile Co., is president; Edward S. Clark, vice-president; John D. Evans, treasurer, and A. C. Rose, secretary. The old show committee, Ben F. Smith, chairman, and Russell P. Taber and John D. Evans, was reappointed for the ensuing year.

Hartford Dealers Rely Solely on Driveaways

Have Abandoned All Idea of Getting Many of Their Cars by Freight or Express

HARTFORD, April 4—Hartford dealers have practically abandoned all idea of getting many of their cars through by freight or express this season. They will run them over the road instead. The Hartford Motor Car Co., Dodge distributer, has completed arrangements for bringing cars through from Detroit by way of Toledo.



The A. C. Hine Co., Oakland distributer, brought most of its cars overland last year and will do the same this season. George D. Knox plans to bring his Peerless cars overland from Cleveland and will draw some from the New York branch. Russell P. Taber now has on the road a number of Republic trucks. William M. Turnbull, general manager of the Colonial Automobile Co., said he would draw on the New York branch whenever possible this year, but that he would go to Detroit for his cars rather than wait a long time for them.

S. A. Miner regards the run from Buffalo to Hartford as an easy jaunt and is not worried over railroad schedules. The local branch of Willys-Overland, Inc., is more than ordinarily successful in getting cars through the usual channels. The Elmer Automobile Co. usually gets Fords through in several carload lots and will continue to run over the road from Long Island City.

Practically all the Nationals that came through last year were taken from the New York office. The Connecticut Motor Sales Co. runs practically all trucks over the roads from the Middle West. Brown, Thomson & Co., Cadillac distributers, get most of their cars through from Springfield on the New York Central lines, as it appears to be difficult to run them direct to Hartford.

The Thrall-Colton Motor Car Co., Kissel distributer, has been very lucky in getting rail shipments through, but is prepared to go after them if necessary.

The Trenton show was attractively staged. An imitation Statue of Liberty in the center of the armory pleased all the visitors

Racine Dealers Stage Their First Annual Show

RACINE, April 4—The Racine Automobile Dealers' Association, organized several months ago, conducted its first annual show in the Municipal Market building, Geneva and West streets, Racine, on Thursday, Friday and Saturday, March 21, 22 and 23, with excellent results in every way. In former years Racine shows have been conducted under private auspices in the Lakeside Auditorium, and the same promoters intended to hold another exposition late in February.

However, the formation of a dealers' organization, which determined to conduct its own show instead of permitting profits to go to outside interests, made it necessary to call off the "regular" show, which received practically no support.

The new dealers' association was able to procure the services of Bart J. Ruddle, secretary of the national dealers' association and manager of the last eight Milwaukee shows, and under his direction put up a most creditable exhibition.

Fourteen dealers and six accessory and supply houses filled the Market with exhibits. A feature of the Racine show on Friday evening was the appearance of a delegation of twenty Milwaukee distributers and dealers, led by Alton J. March, president of the Milwaukee Automobile Dealers, Inc., who traveled to Racine in a special interurban car to see the exposition.

Maryland Would Boost Truck Fees

BALTIMORE, April 4 — Several amendments have been tacked on to the Automobile Bill that is now in the Senate of the Maryland Legislature, which increase the license tax on both passenger and commercial vehicles. The license was increased to 60 cents per horsepower. The truck fees follow: 1-ton, $20 a year; 2-ton, $40; 3-ton, $60; 4-ton, $100; 5-ton, $150; 6-ton, $300, and 7-ton, $500.

There is strong objection to the high tariff on the commercial vehicles, and the members of the Auto Club of Maryland are going to make a fight to prevent the adoption of the commercial charges, which they say are unfair and extortionate.

The Baltimore Automobile Dealers Association, represented by its executive committee, held a meeting and discussed the situation, and has placed the matter in the hands of the Commercial Vehicle Committee, of which A. H. Bishop, manager of the Autocar Co. here, is chairman. The bill is ready for its third reading in the Senate, and will then go to the House, where the big fight is expected to be made.

Business School to Give Automotive Training Course

KANSAS CITY, April 4—The Pittsburg Business College, P. W. Errebo, owner and manager, is erecting a three-story building, 100 x 180, at a cost of $75,000, the first floor and part of the second floor of which will be used for an automobile and a general automotive training school. The building is now in course of erection.

The school will be equipped to handle not only the owners of cars who wish mechanical instruction but the men who wish to equip themselves for work in garages and machine shops. A considerable proportion of the students now attending the college are girls. Errebo expects that many of the young women of the district will take the automotive course.

Pittsburg is a coal mining center and there is a large population of foreigners in the city and surrounding territory. From these foreign families come many very bright boys and girls, and as the advancing wages of miners improve their living conditions and stimulate their ambition, it is expected that there will be a considerable increase in the number of boys and girls from the families who will enter other lines of work than those traditional.

Errebo is now planning to erect a garage for public service near the business college building, the garage to be on a plot of 65 x 100 ft. The chief function of the garage would be to provide the practical experience on every-day work for the students in the automobile training course.

Close Portland Ford Branch

PORTLAND, ORE., April 4—This week will mark the close of the Portland assembling branch of the Ford Motor Co. probably for the duration of the war. The needs of the Oregon territory will hereafter be filled from the Seattle plant which, for the present, will turn out 75 cars a day, or about three-fourths of its capacity.

Flags made an archway over the long center aisle at the Trenton show

Editorial Observation

Wholesale Only?

NOT a few people these days are taking about "wholesale only" as a policy for the jobber of accessories. It is even suggested that this should be made one of the fundamentals of a jobber's business.

During the past year several jobbers have announced this as their policy, and it is suggested that all good jobbers endorse the idea and incorporate it in their businesses.

At first hand it seems a radical step, but those who claim to know aver that it isn't so radical as it seems. So far as the jobbers are concerned it is held by some that they would be better off without their wholesale departments, and that those who have a big jobbing business can well get along without retail departments. There are, of course, two sides to it.

One man says that some years ago he began an analytical investigation of his business. He was both jobbing and retailing. He discovered that his jobbing business wasn't all he thought it was. He found that much of it was with nearby customers who carried little stock, ran down to his place when they wanted an article to make a sale and bought but a small amount annually. He was virtually carrying the stock for the would-be retailers who should have been carrying it if they were to be worthy of the name.

He decided to drop his wholesale department, put in a fast delivery service, charge retail prices and concentrate intensively on retail selling. He has made more money since so doing.

On the other hand, a few big jobbers have retail departments, and, it is to be assumed, they believe these retail divisions are profitable parts of their businesses. Lacking a real analysis of all cases, it is difficult to state how they look upon the question.

Accessories must be retailed. That goes without saying. It is also safe to assume that nearly all jobbers would rather be the local wholesaler of $100,000 worth a year than to retail $50,000 worth and have that volume represent the total retail business.

Furthermore, if there were a live line of dealers in every locality there would be a much larger sale of accessories than there is now. One of the complaints of the jobbers is that the dealers—who should be getting the business—are not going after it, wherefore the jobber feels compelled to establish a retail department.

This retail department is considered as competition by the dealer. But the jobber says he must sell at retail because the dealer WON'T. It is not an unfounded assertion. Dealers are NOT making the efforts they should to sell accessories.

If all the dealers in all the jobbing towns in the United States were to say: "Here. You quit retailing and we'll do it in a real way," there probably isn't a jobber in the business who wouldn't gladly close his retail store and help the dealers get the retail business that once went to the jobber.

It is one of those situations that are many-sided. It isn't to be expected that the trade is to be turned upside down over night. But it would be a fine thing if the jobber did nothing but job and the dealer became a real merchandiser of accessories.

There would be a greatly increased business in accessories for manufacturer, jobber and dealer. All would make more money than they are making now.

The Only Way Out

ONE big point is made plain by the Chicago Exchanged Car Show and the developments connected therewith.

The point is this: There is only one solution to the so-called used car problem, and that is to handle the thing in a business-like way, take hold of it as a real business department, handle it the same as any other part of the business is handled and make it register a break-even or a profit.

This requires a little stiffening of the backbone—but this stiffening is noticeable everywhere and especially in Chicago.

One man asked: Is there any tendency towards eliminating trading?

The answer is that the tendency is not so much towards eliminating trading as towards eliminating long trading.

There are a few dealers who have eliminated trading entirely. They will take a man's used car in and sell it for him, applying to the purchase price of the new car whatever is secured for the old car—sometimes exacting a commission for the work.

A few dealers do not trade at all, but they are the exception.

Trading is often 70 or 80 per cent of the dealer's business. It could be 100 per cent and the dealer could still make money if he went at it right.

It is just as easy to figure out

(*Continued on page 49*)

Letters from Readers

THIS page is for the use of MOTOR WORLD readers with something to say. Letters on subjects of interest to dealers, garagemen, repairmen and jobbers are always welcome.—EDITOR.

Size of Propeller for 30-Hp. Studebaker Engine

Editor Motor World: Will you please let me know what size propeller I will require for a 30 hp. Studebaker engine, 4½ in. bore and 5 in. stroke, four cylinders? The former is going to be installed in a 21-foot V-bottom boat, 4 ft. 10 in. beam with a 7 in. draft.—Galvon Hampton, St. John, N. B.

Answer—We have no record of any Studebaker motor, 4½ in. bore by 5 in. stroke. In 1907, the Studebaker car was equipped with a four-cylinder motor, 4 3-8 in. bore by 4 3-4 in. stroke. As far as we know this is the largest four-cylinder motor which they produced. The present size of the Studebaker motor of the four-cylinder model is 3 7-8 in. bore by 5 in. stroke.

Assuming that you have given the correct size in your inquiry, this motor should develop about 35 hp. at 1200 r. p. m. When installed with exhaust pipe and muffler, according to marine practice, it should drive your boat about 20 to 22 miles an hour and should be equipped with a propeller 17 in. diameter, 24 in. pitch, having three blades, each 5 in. wide.

If the motor is of the 1907 model, 4 3-8 in. bore by 4 3-4 in. stroke, it will develop under marine conditions about 30 to 32 hp., giving your boat a speed of 19 to 20 miles an hour and the propeller should be 16 in. diameter, 22 in. pitch, having three blades, each 5 1-2 in. wide.

If the motor is of the later model, 3 7-8 in. bore by 5 in. stroke, it will develop about 28 hp. at 1200 r. p. m., giving the boat a speed of 18 miles an hour and a suitable propeller is 16 in. diameter, 20 in. pitch, having three blades, each 5 1-2 in. wide.

Cement Floor for Repairshop

Editor Motor World: We are having some occasion to discuss the use of cement floors in our repairshop and machine room in our new building which we expect to occupy April 1.

Our present building has always had wood floors and some of our men object to working on cement. Will you please give us any information along this line which will assist us in going into the point further?—R. A. Hubbard, Independent Garage, Battle Creek, Mich.

Answer—You should use a wood floor by all means, mainly because it is healthier than concrete. The latter is cold and also sometimes damp, with the result that when it is necessary to lie on it, the workman frequently catches cold, develops rheumatism, etc.

Maple makes an excellent material for flooring. So does yellow pine, although it is not as hard as maple nor as tough, and there is the disadvantage that it splinters.

The flooring may be laid directly on wooden scantlings embedded in the concrete.

Combination Sled and Motorcycle

Editor Motor World: One of your representatives happened in my shop and saw this sled and he took a fancy to it and asked me if I wouldn't send you a photo so you could put it in your Motor World.

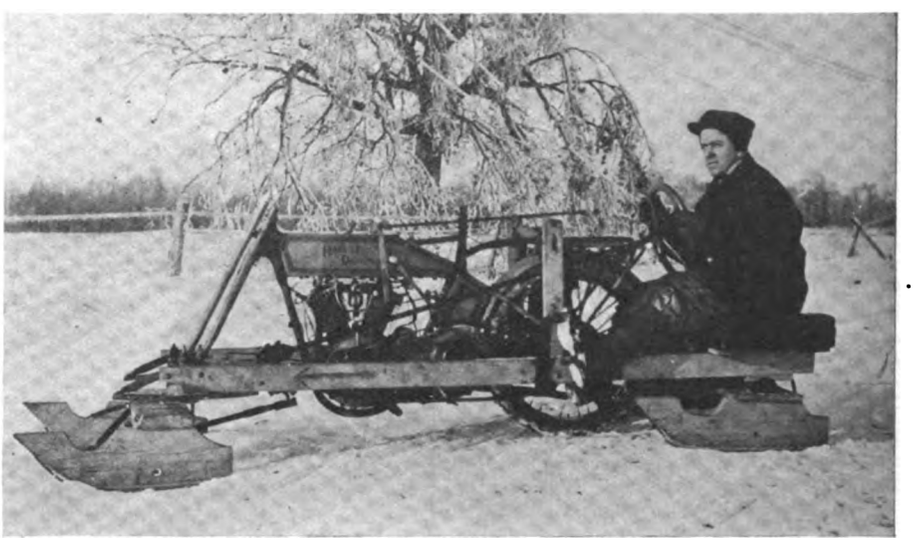
This sled is driven with a 3-speed Harley-Davidson motorcycle. The front end of the motorcycle rests on the front bobs while the back wheel runs on the snow. It is so arranged that two large coil springs help to hold down on the motorcycle to give it traction on the snow; these springs are arranged so the tension can be adjusted from 3 to 800 lb., as the roads may require.

The sled is steered by the front runners, by means of an automobile steering device. This sled will go over snowy roads where automobiles cannot and where sledding is good a speed of 40 m.p.h. is easily made and about 65 on ice.

The brake is applied on the back wheel through a foot lever. The clutch is released with the left hand, the gear shift by the right hand, the throttle by the right foot or hand. The runners are on the hinge type so when they run over a high place they can rock and not run the nose in the snow.

The rear wheel is provided with a chain and so arranged that the motorcycle can rise or lower so the wheel can always be on the snow.

This is my third sled, the first one in 1913 and the second one in 1915, the third one Jan. 10, 1918. I do believe from what I have seen and read of motor sleds, this one is among the best. The motor is easily taken apart in 30 minutes ready for summer use and put back in about the same time.—Hagan Brothers, Rochester, Indiana.



A Frank Opinion

Editor Motor World: Your cartoon and editorial dealing with the trade acceptance question were timely, coming through just as Cincinnati merchants adopted the Trade Acceptance as an improvement over the old method.

The next move for you is to assist the thousands of poor and medium class car dealers in illuminating S/D. B/L. terms and especially the binding contract of manufacturers, requiring dealers to accept cars contracted for (their contract), which dealers haven't or cannot sell due to present as well as normal conditions.

These very manufacturers, that sell for cash before delivery, buy entirely on open account, all or nearly all raw materials that go into the car—and at terms that protect them against non-delivery and price raises. This shows you that the car manufacturers are worse than even sharks because they can break the dealer before he has a chance to secure necessary funds.

The manufacturer might say this will retard the car sales. My answer to this

Sled driven by a three-speed Harley-Davidson motorcycle

Digitized by Google

is: Better dealers financially, as there won't be so many people going into the car business and there will be less unknown car makers to compete with.

Let a manufacturer either open his own a la Overland account, i.e., cars, or select responsible agents, and sell on 30 to 60 days terms or consign the cars to those furnishing bonds!

This will also eliminate so many new models each year, which is a farce, as proven by Ford's own words. Make something to please the masses. The rich now buy Fords!

Then the manufacturers should or could force their agents to sell only one brand of cars. (A fine comb instead of a rake.)

The foregoing is based on 13 years of automobile experience in several parts of the country and on the latest news from many Ohio dealers complaining that banks are refusing loans. This is liable to cause a wholesale breaking up of many car agencies.

My present employers are complaining now of so many accounts running from 3 to 5 months, due to lack of funds from banks.

Just recently all Youngstown dealers announced in the Vindicater that all repairs, parts, etc., will be cash. Why?

Perhaps you are afraid to make a cartoon and editorial affecting manufacturers, but remember you are working for dealers of cars and accessories.

I have made it my business to listen to dealers' tales of woe on money matters, and have had their opinion on the subject referred to, which is the real basis from which I secured my information.

The jobbers could stand a good write-up also in such localities where they do a retail and wholesale business, even though there are exclusive retailers doing business in the same town.

Have had experience along this line and will say the educational ads run by the jobbers' association should be centered on the reasons why they sell at retail and at the same time try to secure wholesale business from dealers who also sell supplies retail. Such conditions prevailed in Detroit till E. A. Bowman closed his doors to retail trade, and then certain other Detroit jobbers decided to do likewise, which I hope they have done by now. (They agreed to it being effective 4 months later.)

The party in charge of the advertising campaign of the jobbers' association is a member jobber, selling retail accessories, popular cars, and spoke of operating a retail service station when I saw him about 6 months ago. He admitted to me that he realized they didn't sell dealers locally, no doubt due to their retail policy.

I haven't any scores to settle with jobber or manufacturer, but I believe jobbers could secure more co-operation from dealers if they confined their efforts to wholesale only. Proof of this can be had from such jobbers as now sell wholesale and who are now in a fairly prosperous condition due to my suggested policy.

14 Days Longer

And then it will be here—

The Summer Merchandising Number of Motor World.

It will tell you how you may meet the NEW conditions of business.

It will tell how others have done some of the things you may want to do.

It will give you ideas.

It will make money for you.

Watch for it!

Order your extra copies NOW.

Think why Simmons Hardware Co. or Butler Bros. are so large and national in size.—A. E. Rosenberg, Youngstown, Ohio.

Some Electrical Troubles

Editor Motor World: What makes an ammeter show "charge" when the car runs below 20 m.p.h. and discharge when it runs above that speed?

How should a storage battery be connected up on the car? Should the plus or the minus side be grounded, and does this make a difference with different systems?

I would like to receive full information on magneto recharging. Can a magneto recharger be hurt by connecting it to a 220-volt alternating current circuit?

What is a good rule to go by in testing out a magneto before and after charging?

How should a coil be tested for weakness?

How many dry cells should be used to charge a magneto and should the magneto be hammered while on the recharge?

Should the current be on the recharger steadily or should it be snapped on and off?

Schedule of Commissions Paid by the A. W. Haile Co., Studebaker Dealer, Buffalo, N. Y.

	Per Cent
Big six, clean deal	6
Big six, trade	5
Little six, clean deal	5
Little six, trade	4
Four, clean deal	4
Four, trade	3
Trucks, clean deal	7
Trucks, trade	5
Used cars, clean deal	7
Used cars, trade	6

The commission is based on the amount of cash or notes involved in the deal; in other words a salesman is not paid a commission on the list price of the car unless it is a clean deal.

What is wrong when the car runs nicely on dry cells and misfires and explodes in the muffler as soon as switched on a low-tension magneto?—Berhow & Olson, Huxley, Iowa.

Answer—The only reason that we can give for the ammeter showing "charge" at low speed and "discharge" at high speed is that it is connected the wrong way around. This should be corrected by reversing the connections. With some types of ammeter it does not make any difference which way they are connected, but others, based on a different principle, must be connected in a particular way.

When a storage battery is removed from the car for any reason and replaced, it is, of course, absolutely necessary, if the ground return wiring system is used, that the same side of the battery be grounded as previously. The Society of Automotive Engineers recommends that in grounded systems the positive side of the battery should be grounded, but, of course, it is quite possible to design systems with the negative side grounded.

Whether a magneto charger can be injured by connecting it to a 220-volt alternating circuit depends entirely upon what voltage the recharger was wound for. Of course, a recharger can be operated successfully only with direct current. If it had been designed for 220-volt direct current, it would not be injured by connecting it with alternating circuits of the same voltage for a short period. However, practically all rechargers are of such design that if they are connected to a circuit of the voltage for which they are intended any great length of time, they will over-heat. The circuit should remain closed only for a few seconds, as the magneto attains its full strength almost instantly and leaving the current on longer does no good.

We know of no simple test for a magneto to determine the strength of its magnets except by throttling the engine way down and noting at about what speed the engine begins to miss. If the magneto is very strong, the engine can be throttled down further than if the magneto is weak.

The best test for a coil is that of replacement. If you suspect a coil to be in bad shape, substitute for it another one of the same type and if that obviates the engine trouble, it shows that a coil is at fault.

If you want to recharge magneto magnets by means of dry cells the number of cells to use depends entirely upon the voltage for which the recharger is wound. In order to recharge the magnets you have to take them off the magneto and apply them to the poles of the recharger. Some people believe that tapping the magnets while the current is on makes them stronger, but whether this is so or not is difficult to say. At any rate, the current should not be left on for any great length of time, as this is apt to hurt the recharger.

When a car runs well on dry cells and misfires when switched over to a low-tension magneto it is a very good sign that the magneto is weak.

The RETAIL NEWS

EAST

The Stability Motors Co., Philadelphia, has been formed to handle Atlas, Atterbury and Old Reliable trucks, and United tractors and trailers. Offices have been opened at 1408 Walnut St., and a service station at 333 South Broad St. A building will be erected for the company at Twenty-second and Market Sts., three-fourths of which will be used for a service station and the remainder for showrooms.

The Apgar Garage, Philadelphia, has moved to temporary quarters at 7 South Twenty-second St., while its old building at Race and Twenty-second Sts., is repaired and remodeled.

The Atlantic Refining Co. is building two large service stations in Philadelphia.

The Bearings Service Co., Philadelphia, has moved to larger quarters at 721 North Broad St.

The Truxton Sales Co., Philadelphia, has leased the store at 1714 North Broad St. as a showroom and service station for the Commercial Car Unit Co.

The Star Tire Co., Inc., New York, has moved from Broadway and Seventy-sixth St. to larger quarters at 226 West Fifty-second St.

New Garage

S. I. Stein.....North Broad St., Philadelphia

MOUNTAIN

The Mountain Motors Co., Denver (used car department), has moved to larger quarters at 1166 Broadway.

The Tabb-Collin Co., Rupert, Idaho, Liberty distributer, has changed its corporate style to H. E. Tabb & Co.

New Garage

W. S. Withers .....Boulder, Col.

SOUTHWEST

The Green Motor Car Co., Little Rock, has installed a repairshop.

L. Atherton, Augusta, Kan., has bought the Augusta Vulcanizing Co.

Carey & Reed, Belleville, Kan., is remodeling his garage.

G. E. McCarthy, Blue Rapids, Kan., has taken over additional quarters.

Archie Crosby, Cedar, Kan., has sold the machinery in his garage to L. D. Wenger, Portis, Kan.

Wm. Hoover, Eureka, Kan., has bought the garage business of E. L. Cook.

H. C. Fuller, Hays City, Kan., has sold the Golden Belt Garage to Frank and Ralph Bassler.

Finley Thompson, Holton, Kan., has opened a storage battery station.

Kincaid Garage & Livery Co., Kincaid, Kan., L. B. Shepard, proprietor, has moved to new quarters.

G. C. Willis, Lawrence, Kan., has opened a branch company.

Walter M. Halpin, Leavenworth, has opened the Grant Light Six Motor Car Co.

The Hodgson Tire & Supply Co., Little River, Kan., has opened.

Fred Maas, Manhattan, Kan., has sold his garage and repairshop to Lou Bardwell and Byron Blake.

Chas. H. Drashner, Munden, Kan., has bought the Munden Garage from W. N. Leshovsky.

R. H. Reed, Ottawa, Kan., formerly a member of the Hempy-Reed Motor Co., has sold his interest to George W. Early of Marceline, Mo.

Selders Bros., Ottawa, Kan., have bought the garage of Haskin Bros.

Tom French, Russell, Kan., has bought Joe Witt's interest in the Gorham Garage.

F. H. Borland, Smith Center, Kan., has bought the garage of Chatelle & Hershey.

Orsen & Hamilton, Soldier, Kan., have opened a battery, ignition and vulcanizing establishment.

McGinty, McAnulty, Sturgis, DeLappe & Duff, Pittsburg, Kan., have bought the garage and automobile business of L. H. Billings.

Callaway-Montgomery Motor Co., Fulton, Mo., has opened salesrooms.

W. V. Riggs and **J. Mott Douglass,** Kennett, Mo., have bought the Riggs Motor Co.

John F. Uptogrove, Middleton, Mo., has opened salesrooms for the Oldsmobile and Buick cars.

Meeker-Sutterer Auto Co., Perryville, Mo., has bought the Killian & Fassold Garage.

Checotah Auto Supply Co., Checotah, Okla., will erect a new building for its supply business.

Ray Buckles, Collinsville, Okla., has installed a vulcanizing department in his garage.

J. T. Ross, Frederick, Okla., has bought the garage of A. L. Burnham.

The Wright Motor Car Co., Okmulgee, Okla., Wright & Mitchell, proprietors, has opened for business.

E. W. James, Okmulgee, Okla., has opened the E. W. James Motor Co.

F. A. Mosher, Sentinel, Okla., has opened quarters.

L. H. Lee, Corsicana, Tex., has moved to the new Cookney Bldg.

The Southern Motor Co. of El Paso has opened a branch office at 337-341 West Washington St., Phoenix, Ariz., for Republic trucks. C. E. Stromberg is in charge of the Phoenix office.

W. A. Whatley, Haskell, Tex., manager of the Texas Garage, has installed a vulcanizing plant.

The Citizens Auto Co., Seguin, Tex., has purchased the machinery and equipment of the Boyle Garage and moved into the building occupied by the latter.

The Standard Vulcanizing Co., Seguin, Tex., has moved to a new building on Austin St.

The Tyler Vulcanizing Co., Tyler, Tex., has opened a new plant in the Carton Bldg.

PACIFIC COAST

F. E. Smith, Modesto, Cal., has bought and remodeled the Mires Garage.

Fargo & Herron are now operating Lacharias' Garage, Modesto, Cal.

Marion Moorehead, Modesto, has opened a vulcanizing plant styled Moorehead's Rubber Works.

Remo Zamon has opened the Class "A" Auto Repairshop in Modesto, Cal.

J. A. Anderson has purchased a half interest in the garage and agency of the Modesto Motor Co., Modesto, Cal.

Bob Foster has purchased the 13th Street Garage, Modesto, Cal.

Sapp & Peterson, Modesto, Cal., will open a Liberty salesroom with a service department adjoining the showrooms.

L. H. Peterson Co., Modesto, Cal., has moved to a new building at 819 Eleventh st.

The Beckman Machine Works, Oakland, has added an accessory department.

The National Tire & Rubber Co. has opened quarters at 305 Market St., San Francisco.

Stoesser & Stewart, San Francisco, have purchased the San Francisco Auto Repair Shop, 33 Shotwell St.

The Little Giant Truck Co., San Francisco, has moved to new quarters at 627 Howard St.

The Brown Truck Corp. has enlarged its quarters at 1222 Mission St., San Francisco.

The Double Seal Ring Co. has moved to new quarters at 1124 Polk St., San Francisco.

McDuffie & McBride, San Francisco, have moved to a new building in Modesto, Cal.

The W. J. Benson Co., San Jose, has opened a branch salesroom at Modesto, Cal.

Hamblen & O'Neill have purchased the Central Garage, Sonora, Cal.

Charles A. Richmond, Colfax, Wash., and **Oscar Hill**, Pullman, Wash., have formed a partnership and opened quarters at Pullman. The firm, which will be styled Richmond & Hill, will handle Saxon, Westcott and Paige cars and Truxton truck attachments in Latah County, Idaho, and Whitman County, Wash.

J. E. Goodfellow and **G. M. Holmes**, Seattle, have formed a partnership to handle used cars. A building is being erected on East Madison St.

Dirks Motor Supply Co., Spokane, has leased a new storeroom at 826 Second Ave., which will increase the floor space 50 per cent.

Western Truck & Tractor Co., Spokane, has moved to new quarters at 1201 Sprague Ave.

Heath & Seeds, Tacoma, are remodeling their garage and service station for Studebaker, Chalmers, Chandler and Hudson cars.

The Tacoma Battery Supply Co., Tacoma, has moved to new quarters at 112 South Eighth St.

H. Seifried .....Riverbank, Cal.
Warren's Garage (addition), Wenatchee, Wash.
A. E. Nicholls.....Wilson Creek, Wash.
A. A. Weaver & Son....Wilson Creek, Wash.

These Men Are Strong for the "Cash Basis"

"No Credit" Becoming the Slogan in Colorado

THE cash basis program is winning strong support in Colorado, New Mexico and Wyoming, and tradesmen who have already adopted it predict a further substantial growth in the next few months.

The Denver and the Rocky Mountain automobile trades associations have been enthusiastic in urging all branches of the trade to take this better-business step without delay, and their activity thus far has brought substantial results in this direction.

The seventeen members of the battery division of the Denver body have established the cash basis by unanimous agreement and so notified their customers, while plans are under way to line up all the divisions as rapidly as possible. Several individual members of practically all branches have already started the new system independently.

Through the influence of these largest two organizations the cash basis has been recently adopted by seventeen trades in the three states represented in the Rocky Mountain Automobile Trades Association and comprising the main territory supplied by Denver distributers. In state groups, these cash-basis organizations are:

Colorado: Automobile Trades Association of Pueblo; Colorado Springs Automobile Trades Association; Arkansas Valley Garagemen's Association, Pueblo; Weld County Auto Trades Association, Greeley; Logan County Auto Trades Association, Sterling; and the Trinidad, Boulder, Longmont, Fort Collins, Greeley and Fort Morgan Auto Trades Associations.

New Mexico: The Albuquerque, Las Vegas and Raton Auto Trades Associations.

FRED L. GREEN
President, Denver Automobile Trade Association

FRANK C. FARQUHARSON
President, Rocky Mountain Automobile Trade Association

HARRY G. MOOCK
Secretary, Rocky Mountain Automobile Trade Association

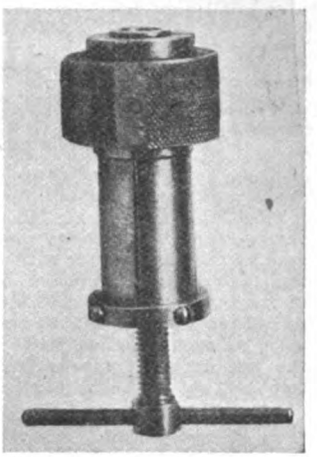
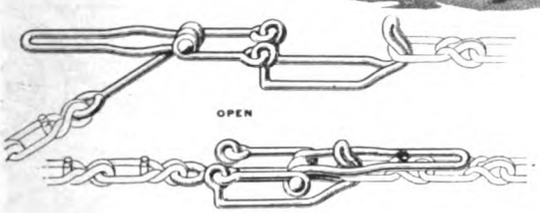
Accessories

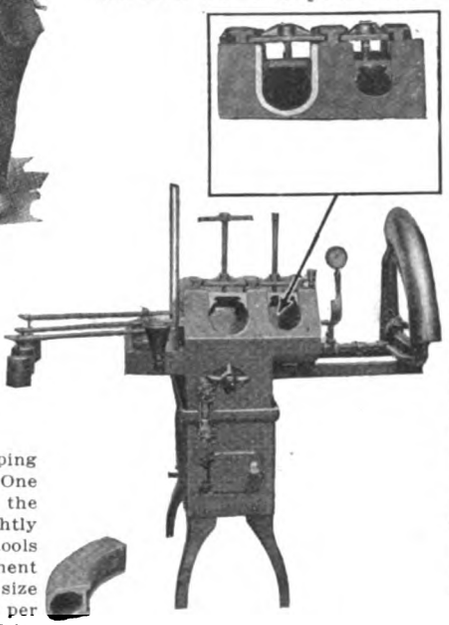


U-SEE FILLING STATION

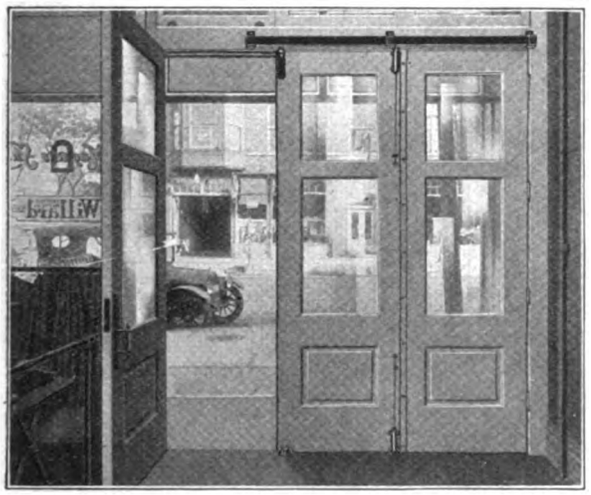


In this gasoline filling station the gasoline which goes into the customer's car is in full view in the twin 5-gallon bottles. If the customer asks for 5 gallons, one of the bottles is emptied directly into his car tank through a hose by opening a cock. If the customer desires 10 gallons, both bottles are emptied. Should a quantity less than 5 gallons be desired, the bottles are graduated, and just the right quantity can be let out. The bottles are refilled by opening another cock which controls the vacuum. The filling process automatically shuts off when the bottle is full. There is no pressure on the storage tank when drawing from or filling the bottles, and no auxiliary pressure tank is required.—U-See Mfg. Co., Springfield, Ill.

BEARING AND RACE EXTRACTOR



The Campbell combination bearing puller and race extractor is intended for pulling magneto and electric generator bearings and others of this type. It is adjustable to different sizes of bearings without difficulty and is used without any other tools. It can be purchased complete, at $15, or the outer race extractor can be purchased alone at $5. The bearing puller alone is $10.—Campbell Auto Works, Stockton, Cal.



EZYTITE TIRE CHAIN ADJUSTER

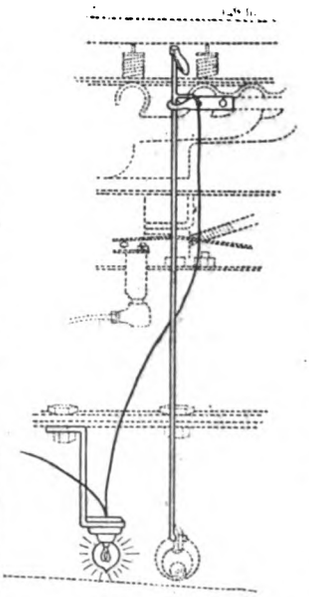
A chain locking device consisting of a heavy steel wire rust-proofed link with a clamping lever, on which is pivoted a connecting piece with an eyelet for fastening the adjuster to the side chains. The hook locks the chain and the clamping lever locks the hook. One throw of the lever releases the chain or adjusts it as tightly or loosely as desired. No tools are required and the adjustment is made in a moment. One size fits all chains. Price, $1.50 per set of four.—Cox Specialties Mfg. Co., Bridgeport, Conn.

AKRON MOLDS IMPROVED

The type F vulcanizing equipment has been improved by increasing the 2½-3 in. cavity to 3½-4 in. and providing it with a reducing shell to take 2½-3 in., thus permitting two popular sized tires to be cured at once. The other cavity remains 4½-5 as before. There are an inside patch attachment 3½-4 in. and a set of bead molds either straight side or quick detachable in one-fifth circle. Sizes are 2½-3 in., 3½-4 in., 4½-5 in. Price $180.—Akron Rubber Mold & Machine Co., Akron.

GARAGE DOOR HARDWARE

Slidetite garage door equipment is made for three to six-door openings in widths from 8 to 16 ft. The doors fold and slide inside the building. Four doors hinged together in pairs may be used, one pair folding to each side of the opening. Doors fit tight, are weatherproof and do not sag. Four door outfit consists of two hangers, two center brackets, two end brackets, two intermediate brackets, hinges, track, bow handles, center guide, four bumper shoes and two top and bottom bolts, with which are included keepers.



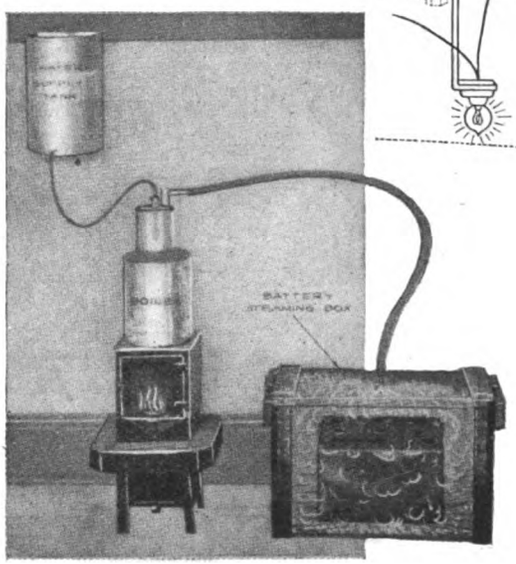
Other outfits vary in the number of articles furnished and minor details. Hardware can be fitted to any doors, new or old, if they come within the required sizes. Prices range from $11 to $46.—Richards-Wilcox Mfg. Co., Aurora, Ill.

Digitized by Google

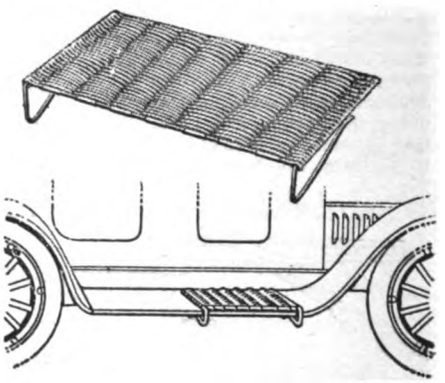
OMC DISPLAY CASE

This cabinet is for use with OMC individual containers for ignition contact parts and generator and starter brushes. The cabinet has a glass front so that customers can see the goods, and the back is fitted with hinged doors. Goods are well displayed, and it is an easy matter to look for short stock. One of these cases will be furnished free of charge with an order of parts and brushes amounting to $100, or the cases will be sold separately.—Otter Mfg. Co., 243 West Seventeenth Street, New York City.

LAMCO OIL SIGHT



The Lamco oil sight is for Buicks and consists of a special bracket attached to the frame and carries a socket and a small electric light bulb. A convenient handle switches on the light for inspecting the oil level gage. It can be installed in 15 min. Price $3.75.—Limpp & Agee Mfg. Co., King City, Mo.

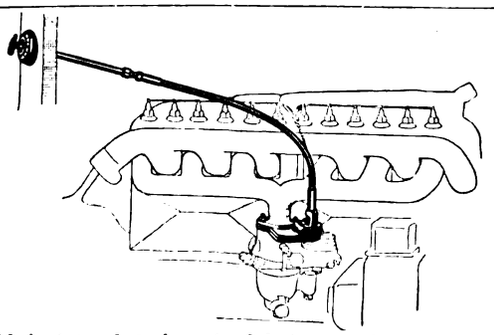


BAILEY'S REVERSIBLE MAT

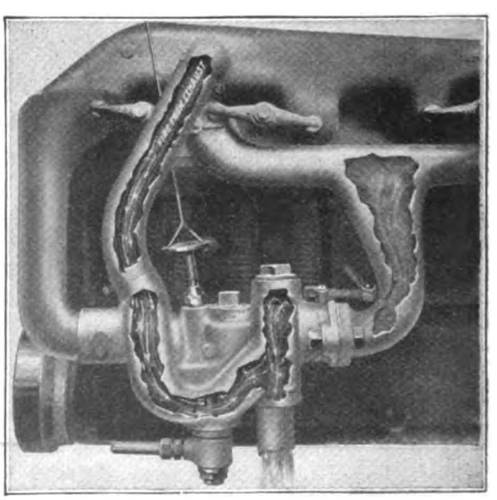
This is a reversible step mat, constructed with a frame of galvanized iron with transverse straps, woven between which are cord. Being thin, it is easy to keep clean and sanitary, it is easily dried, and is light and durable. It is made in two colors and sells at $1 for single mats, $8 in lots of a dozen, and $36 in half-gross quantities. — M. B. Bailey, 217 West 125th Street, New York City.

PEERS BATTERY STEAMER

This is a time- and labor-saving device for the garage man and is intended for softening the sealing compound on starting and lighting batteries by steam, so that the battery may be easily opened without the use of gas flame or blow torch. The apparatus consists of the steam generator, the steaming box and the water supply tank. When a battery is to be opened, the connectors are removed and the battery placed in the steaming box, where it remains for 15 minutes to soften the compound. The generator is heavy galvanized iron. Water enters through the cover and is connected to the water supply by a rubber hose. The amount of water in the generator is controlled by an automatic float valve. The generator is set on an oil or gasoline stove and steam is generated in a short time. The supply tank is galvanized iron and is connected to the generator by a small hose. The steaming box is wood with a connection for introducing the steam from the generator. It is acid-proof inside and out. Price $25.—American Bureau of Engineering, Inc., Chicago.



KORK TRED LINING

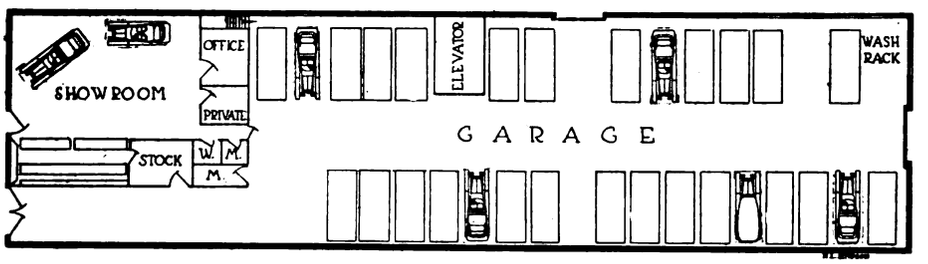


This consists of a standard high-grade transmission lining which has cork inserts used in a new way. The feature is an air-retaining cup which is riveted into the lining and holds the cork. A pocket of air is trapped between the cork disk and the bottom of the cup, the cork disk engaging the drum first as pressure is applied. This compresses the air in the cup, forcing the corks flush with the lining so that part of the wear comes on the lining. When the pressure is released the corks again protrude. The lining is sold only through jobbers and retails at $2.50 a set.—Howe Mfg. Co., Chicago.

COMCO CARBURETER LOCK

This consists of a sliding valve, which is fitted between the carbureter and the intake manifold and shuts off the gas from the engine. The valve is operated by a Bowdoin wire control terminating in a combination dial on the dash. The combination may be changed at the will of the car owner. The complete lock is readily installed on any make of car without the use of special tools or equipment. Price $10.—Combination Auto Lock Co., St. Louis.

GILSON FIRESTONE CARBURETER



A carbureter that will burn gasoline, kerosene, distillate or alcohol. Constructed of copper to hold heat, has but two moving parts and but one change of adjustment, the needle valve. Starts on gasoline till warm and without change in needle valve, is switched to kerosene by a three-way valve. Exhaust manifold is tapped and part of hot gas is piped to go through mixing chamber and around fuel pin, which is heated to 450 deg. Fahr. Results claimed are dry mixture, no dilution of lubricant, no carbon, more power, more speed and more mileage. Especially suited to Ford, Maxwell, Chevrolet, Grant and Saxon cars. Outfit No. 1 (for kerosene) includes three-way valve with dash rod, 1 gal. tank with copper tubing for gasoline and water circulating pump, and is sold at $30, with $5 allowance for old carbureter. Outfit No. 2 (for half gasoline and half kerosene) is $22.50, and includes three-way valve with dash rod and 1 gal. tank with tubing. Outfit No. 3 (for gasoline only) is the same as No. 2. —Gilson Firestone Carbureter Co., 1806 South Michigan Boulevard, Chicago.

SCIENTIFIC CONSTRUCTION

GARAGES *SHOWROOMS* *REPAIRSHOPS*

We shall be glad to draw a plan for you or give you any other aid in your building, free of charge. But be sure to send full details, including a sketch of the plot, showing position of streets

Floor plan for remodeling a structure to accommodate a garage and showroom. The building runs south for 190 ft. The front of the building is 50 x 100 ft., two stories in height; the remainder is one story

Suggested Plan for Garage and Showroom

Editor Motor World: I am enclosing the floor plan of the building which will be remodeled to suit my convenience, and I will appreciate it very much if you will make suggestions as to the plans. It is needless for me to say that I wish the arrangements to be such as will meet my requirements, being just as convenient and as accessible to the various departments as possible.

The building faces north, frontage being 50 ft. There is a street on the east side of the building and the building runs south 190 ft., the street being on the south side, the west side being brick buildings. The front part of the building, 50 by 100 ft., is a two-story structure and the balance of the building is only one story.

I desire to have as large a salesroom on the northeast corner of the building as I can and wish an entrance from the north side to the garage in the rear. Also desire to put in an elevator and have my repairing done upstairs, and desire a stairway into the upper story. Also plan to have an entrance into the one story structure from the east side and the south side.

My storage for customers' cars is to be in the one-story structure in the rear. My greatest desire is to arrange my salesroom for cars, accessories, parts and office to look nice and be convenient. There will be a plate-glass front and two large plate glasses in the front of the building facing the street on the east.

The salesroom should be modern. Please suggest the kind of floor for the salesroom, and wall decorations. The floor to the upstairs room is a double floor, and would it be necessary to have anything done to it to eliminate the noise above? Please make suggestions as to a toilet for ladies (customers), a toilet for the workmen upstairs, also one for the workmen downstairs.—H. L. Simpson, Gainesville, Tex.

Answer—The plan which we are sending you herewith is drawn according to your specifications, but we believe you are making a mistake in having a driveway from the front street to the garage. It is a waste of space and cuts down the display front, cramping showroom and accessory store. At the same time any added convenience obtained by having this driveway is not worth the disadvantages it brings.

You have a very large building and it has been difficult for us to decide just how much space you will need for the shop, store and showroom. If you find that the spaces we have apportioned are not suitable we shall be glad to draw another plan if you will give us further information on this point.

Probably tile will make you the most satisfactory flooring, but it may be too expensive for you. Be careful to select a pattern which has white for its predominating color, so that the showroom will be as bright as possible.

Linoleum or cork composition floors are also excellent. These are floor coverings laid over wood. The former is cheaper, but not so desirable nor durable as the latter.

If you decide to use a wood floor be sure to stain it so that it may look as attractive as possible. At the same time the stain prevents the floor from becoming spotted with dirt. This may seem an unimportant point, but actual observation shows that it is one which is frequently overlooked.

It is suggested that great care be taken in selecting the color scheme. It is impossible for us to do it at this distance, for everything depends on the exact harmony of the particular shades selected. In general, use a light color scheme in order to save light and have your cars show up most effectively.

Pittsburgh Motor Car Show

PITTSBURG, KAN., April 4—The motor car dealers of Pittsburg, Kan., are making a drive to get the motor cars out to the customers who really need them this summer; as one means to this end, they held a motor car show the week of March 20. This was the second show held in Pittsburgh. The first was held under the auspices of a local newspaper, this one being arranged by the commercial club, of which all the motor car dealers are members. Cars, trucks and a few tractors are being shown, but the emphasis is on motor cars. The trade for the past 2 months has been extraordinary. It is likely that many motor car dealers in Pittsburg will be looking for truck and even for tractor lines to handle. Only a few of the dealers handle trucks now and a smaller number tractors. While the territory is not now considered strictly agricultural, the mining industries predominating, still a casual inquiry reveals a considerable possibility in truck and tractor sales to farmers, as well as in truck sales to business men in the city and in the territory.

Chicago-St. Louis Airplane Mail Service

CHICAGO, April 4—Airplane mail service between this city and St. Louis has been arranged for at a conference of the postmasters of the two cities. The plan has been under consideration for some time, and is certain of fulfillment, although no details as to time schedules, the number of planes to be used, etc., have been decided on yet.

Paige Not to Buy Signal

DETROIT, April 4—The Signal Motor Truck Co. has declined the offer of the Paige-Detroit Motor Car Co. to purchase its plant and assets. The sum of $100,000 will be immediately available with which to carry on the business of the Signal and increase its production schedule. It is planned to make 1200 to 1500 during the year.

The Home *of* MOTOR WORLD

THIS is the home of MOTOR WORLD, and of the other papers published by the Class Journal Co.—*Automotive Industries, Commercial Vehicle, Motor Boat, El Automovil Americano, Tire Rate Book* and *Transfer & Storage. Motor Age*, also published by the Class Journal Co., has its home in Chicago.

The offices which are pictured on these four pages occupy the entire eleventh floor of a building, the controlling interest in which late last year was acquired by the United Publishers Corp., which owns the Class Journal Co. and in its turn publishes twelve other papers in the dry goods, boot and shoe, hardware, iron and steel, architectural, metal working and plumbing and building fields.

The building is at 231-249 West Thirty-ninth Street and covers a plot measuring 194 by 90 ft., and is entirely occupied by publishing interests. The location is ideal, being within easy access of both Grand Central and Pennsylvania terminals and three blocks from Times Square, which is the famous Broadway and Forty-second Street.

The first floor is occupied by the Times Square Post Office; three floors are occupied by the Federal Printing Co., which is the printing department of the United Publishers Corp.; and four other floors are occupied by the publishing offices of the United Publishers Corp. itself.

MOTOR WORLD will be 18 years old in October of this year. The first issue was published on Oct. 4, 1900, from the Tribune Building in the heart of the daily newspaper publishing section of New York. Six years ago the home of MOTOR WORLD was moved to Broadway and Forty-ninth Street, and four years ago it was moved to the building it now occupies. Late last year the Class Journal Co. took possession of the floor which is illustrated, giving MOTOR WORLD and the other Class Journal papers one of the most thoroughly modern and efficient publishing offices in the country.

MOTOR WORLD is on the eleventh floor of the U. P. C. building. There is a post office on the street floor. The basement and three floors are used by the printing and binding plant. Papers are edited, printed, bound, addressed, wrapped and shot right into the mail trucks in one progressive operation

Visitors to the Class Journal Co. offices step first into a spacious entrance lobby, where they are met by a young lady whose duty it is to see that they are directed as quickly as possible to the department or person with whom they have business. The latest copies of Class Journal papers are at the hand of those who must wait a few minutes

New Parrett Company Takes Over the Old

Claire L. Barnes and Vincent Bendix, Starter Drive Inventor, Reorganize Farm Tractor Company

NEW YORK, April 8—The Parrett Tractor Co. of Delaware has been organized with a capital of $3,000,000 fully paid in and has acquired the assets and plant of the Parrett Tractor Co. of Illinois, which has been producing farm tractors since 1912. Among the principal movers behind the new company, which is now producing 50 tractors a day and proposes to build 5000 during the present year, are Claire L. Barnes, for several years personal representative of John N. Willeys, and Vincent Bendix, inventor of the Bendix drive for electric starters. Barnes and Bendix have been associated in arranging for the financing of the new company, final arrangemets for which were completed through the banking firm of McClure, Jones & Reed of New York.

Dent Parrett is president of the new company and associated with him are vice-president and general manager Claire L. Barnes; vice-president Robert Barbour, who is also chairman of the board of directors and president of the Barbour Flax Spinning Co., Paterson, N. J., and director in a number of other nationally known enterprises; secretary Warren Barbour, president of the Linen Thread Co. of America; treasurer Arthur Gardner, formerly vice-president of the Central Locomotive and Car Co., Chicago; works manager Robert C. Webster.

The present plant of the Parrett company at Chicago Heights, Ill., has a capacity of 7500 to 10,000 tractors a year; over 200 tractors were shipped during March. The company is now behind immediate shipping orders and will increase production as rapidly as possible. The officers and Henry A. Rudkin, of McClure, Jones & Reed form the board of directors.

Garford Truck Men Convene

BOSTON, April 6—The sales and service men of the New England branch of the Garford Motor Truck Co. held their spring conference this week, at which they planned for a new campaign to take in the early summer.

Extract Teeth of Hewitt Bill

NEW YORK, April 8—The teeth of the Hewitt "Highways Protective Measure" have been extracted. As originally introduced the measure would have barred from the New York State highways all commercial vehicles which with their loads weighed in excess of ten tons. Following protests by members of the National Automobile Chamber of Commerce, dealers all over the state and the Motor Truck Club, Senator Hewitt and the highway department have agreed to raise the limit to 25.000 lb. The amended bill is to be introduced to-day and in all probability will pass with this limit. This means that the bill no longer has the sting which it had. In other words it will not bar five-ton trucks fully loaded, which apparently was the original intention, and will prevent the passage of only a limited number of very heavy loads, such as might be moved by contractors using trailers or semi-trailers.

First Ford "Eagle" Launched in June

DETROIT, April 5—The first Henry Ford "Eagle" submarine destroyer, will be launched at Detroit in June, according to an announcement made by Secretary of the Navy Daniels.

Landman Heads Maxwell Distributers

TOLEDO, April 4—Charles P. Landman was elected to the presidency of the Maxwell Distributers' Association of the central East. This association is an organization consisting of the big Maxwell distributers in the district that includes western New York, western Pennsylvania, Virginia, West Virginia, Michigan, Ohio and Indiana, known as the Cleveland zone. The object of the organization is to work out ideas and cooperative features for the betterment of the Maxwell business in its district, and to work in the closest harmony with the distributers, dealers and factory men. It is probable that Toledo will be the headquarters for the association.

William J. Harvey Dead

RACINE, April 6—William J. Harvey, founder and president of the Harvey Spring & Forging Co., Racine, Wis., died last week from cerebral injuries sustained several days previously when he was run down by a motor truck in front of his home. Mr. Harvey was born in Leeds, Yorkshire, Eng., on June 11, 1846, and came to America in 1849. In 1889 he founded the Harvey Spring Co. to manufacture vehicle springs, and later enlarged the business to include a general line of motor car and truck forgings, the name being changed to Harvey Spring & Forging Co., which to-day is one of the largest and best known concerns of its kind in the country. Three sons of Mr. Harvey, William T., Richard and Edward, were associated with him in the business and will continue the operation of the plant and affairs as heretofore.

Women Drive Trucks Overland

LANSING, April 4—Attired in regulation army uniforms, nine young women, members of the National League for Women's Service, left Lansing April 2, each driving a ¾-ton Reo truck laden with government supplies to Atlanta, in command of Captain R. T. Harrington. For the past 8 months women have rendered valuable service in Atlanta and other cities in transporting government and Red Cross supplies. To demonstrate their proficiency as expert drivers and automobile mechanics, each member will be held responsible for the conditions of her own truck for the whole distance of slightly over 1000 miles.

National Dealer Body Quashes Embargo Rumor

Finds No Bar Against Shipments West of Missouri—Botterill a Vice-President

ST. LOUIS, April 8—The National Automobile Dealers' Association found another field of practical usefulness last week, when an appeal came from Denver to take action against an embargo that dealers there had heard had been declared against shipments of motor cars west of the Missouri River. President Vesper and Assistant Secretary Hoelke immediately began an inquiry and the same day they notified the Rocky Mountain Auto Trades Association and inquiring dealers that there was no embargo, but that the report was due to a misunderstanding that occurred in a long distance telephone conversation between the Nash factory and a Colorado dealer. The association has received thanks from Colorado dealers for the prompt handling of the complaints.

The association also has received letters from the Governor of Pennsylvania and the Mayor of York, Pa., acknowledging that a serious injustice was done to the New York dealer who was fined $720 in York because of unlicensed cars passing through York. Both officials promised investigation, adjustment and an elimination of the cause for such complaints.

President Vesper has named Tom Botterill of Denver as the vice-president for Colorado. President Vesper was the guest of the Chicago Auto Trades Association Friday at the first "war dinner." Secretary Ruddle of the association joined him there. The first issue of the N. A. D. A. Bulletin is almost ready for the printer and will be mailed to members this week. The flow of memberships came last week from Colorado and Georgia. Texas promises a large number of applications this week as a result of President Vesper's visit to that state. The Texas Automobile Dealers' Association has adopted a resolution advising every member to join the N. A. D. A.

Ford Parts Prices Up

DETROIT, April 4—Contrary to the rumors that the Ford Motor Co. contemplates the decreasing of prices of parts, it is stated by the company that prices have advanced on a dozen different units. The price increase became effective April 1.

Ford Plant Bars Visitors

DETROIT, April 4—The Ford Motor Co. has barred visitors from its plant, under rigid orders from the government. It formerly was the practice of the Ford organization to maintain a courtesy department which furnished schooled guides who were familiar with all phases of the industry to anyone who desired to go through the plant.

Kansas City Dealers Driving 85% of Cars

Only 15% of Cars Reaching Territory by Railroad—Buyers Drive Home

KANSAS CITY, April 8—Drive-outs from Kansas City to surrounding territory have been very extensive this spring, the weather being remarkably open and roads in fine condition. Not more than 15 per cent of the cars going into Kansas City territory from Kansas City warehouses have been sent by freight.

A largely increasing number of cars are coming into Kansas City overland from Chicago or from the factories. During the past two weeks several managers of Kansas City branch houses and distributing agencies have gone into the subject of drive-outs from the factory. Several have made test trips during this period and others are planning them.

One distributer has a definite idea as to the way to find out how to make drive-outs from the factory. He declares that no drive-out under twelve cars can provide adequate information as to the cost and the necessary arrangement. He points to the experience of some branch houses which have bought three or four cars and unfortunately have had to spend an unusual amount of money in fixing them up for sale. He is of the opinion that their experience has been unusual and that a sufficient number of cars must be driven to establish an average cost.

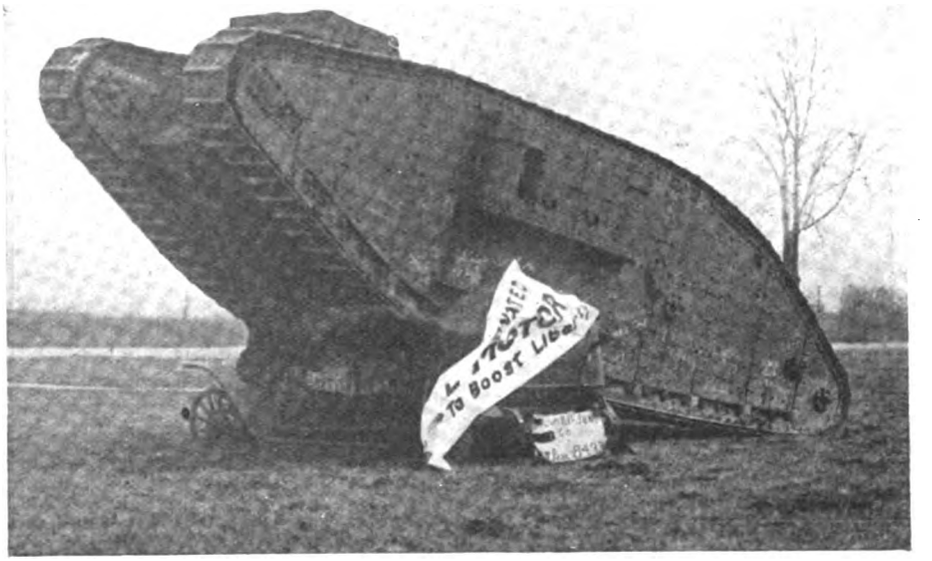
There seems to be a favorable sentiment among prospective buyers with reference to going to the factory to bring cars home. Present owners who have recently driven from the factory are advertising their pleasant experience widely. One man who drove from Syracuse is an especially good publicity agent for the practice.

The chances are that many Kansas City distributers would jump at once into drive-outs from the factory if they had adequate data to guide themselves and to show their customers. They want to sell their cars deliverable at the factory, but are unable to indicate closely just what the cost of the trip to the owner might be, and whether it would much more than offset the saving in freight from the factory to Kansas City.

Truck companies are also planning drive-outs from factories. and most of the sales now in the territory are being delivered overland.

St. Louis Writes Its Slate

ST. LOUIS, April 8—The following tickets have been nominated for the annual election of the Automobile Manufacturers' and Dealers' Association:



For president—Joseph A. Schlecht and F. H. Fahrenkrog.

Vice-presidents—J. D. P. Lewis and P. H. Brockman.

Treasurer—H. L. Schmure and D. Donnelly.

Directors (six to be elected)—F. W. A. Vesper, F. R. Tate, I. G. McNiece, W. L. Johnson, W. S. Roberts, G. R. Frampton, James E. Newell, George Weber, S. S. Primm, F. W. Wolffe, W. M. Colburn and Edward Weber.

The nominations were made by each member indicating his choice for each office on a list of members and the nomination committee selecting the two highest. The election will be at the April meeting this week. Mr. Schlecht is the retiring president.

ARTHUR STANLEY ZELL, president of the Zell Motor Car Co., Baltimore, Peerless and Chalmers distributer, did his bit for Liberty Loans, and obtained a lot of good advertising before more than 10,000 people, and also helped to entertain the vast multitude when he donated an automobile for the Tank Britannia to smash up at Pimlico, as one of the features of the "Over There" exhibition, which is creating advance stimulus here to the Third Liberty Loan Campaign. Incidentally the Zell company sold the wreck for $200 to the junk man before the smash, and the junk man lost more than Zell because the machine was ground to bits and ploughed into the ground. Here it is shown, the tank passing over the car for the first time. A big sign, "Donated by the Zell Motor Car Co. to boost the Liberty Loan," was placed on the car. The placarded sign was driven about the city for several hours before it was ground up and also aided in bringing out the crowd.

Green Bay Holds Its Show

GREEN BAY, April 8—The second annual show conducted by the Brown County Automobile Trade Association in the Armory at Green Bay, Wis., on April 5, 6, 7 and 8, probably was the largest and best attended of all of the sectional shows held in Wisconsin this year under the sponsorship of the Milwaukee Automobile Dealers Inc. During the progress of the show, the Brown county association published the series of full-page advertisements originated for the purposes of the tenth annual Milwaukee show, Jan. 17 to 26, by E. LeRoy Pelletier, Detroit.

Bart J. Ruddle, secretary of the National Automobile Dealers' Association, and assistant secretary and manager of the Milwaukee Automobile Dealers, Inc., assisted the Brown County association in the management of the show. Mr. Ruddle gave the same service to dealers' associations in Racine, Eau Claire, La Crosse, Madison, Janesville and other large cities of Wisconsin during the 1918 show season.

Bemb Heads Detroit Dealers

DETROIT, April 4—The Detroit Automobile Dealers' Association held its annual meeting last night, and the following officers were elected: President, Walter J. Bemb; vice-president, George W. Franklin; secretary, H. S. Quinn; assistant secretary, Harold Shuart; treasurer, A. L. Zeckendorf; director, Jule C. Ayers. The reports of the various committees and the report of the eighteenth annual show, which was conducted the last week in January, was made to the members. The D. A. D. A. has enjoyed a successful year under the administration of President Baker.

Scrap Metal Prices

NEW YORK, April 6—Prices paid for scrap metals by New York dealers during the past week, as quoted by *Iron Age*, follow:

	Cents Per lb.
Copper, heavy and crucible	23.50
Copper, heavy and wire	23.50
Copper, light and bottoms	21.00 to 21.50
Brass, heavy	16.25 to 16.50
Brass, light	12.25 to 12.50
Heavy machine composition	23.75 to 24.00
No. 1 yellow rod brass turnings	13.50 to 14.00
No. 1 red brass or composition turnings	19.00 to 20.00
Lead, heavy	6.62½
Lead, tea	5.75
Zinc	5.87½

A section of the ninety-truck motor transport, that recently broke all records for size and speed, is here shown on the Akron-Cleveland road just before it arrived at the B. F. Goodrich rubber plant in Akron, where it collected a cargo of rubber goods

Freight Car Supply Reduces Drive-aways

Many Makers Getting Transportation—Dealers Must Drive Short Distances

DETROIT, April 6—Many manufacturers have been fortunate in securing a greater number of freight cars of late. This has reduced the percentage of drive-aways somewhat, but manufacturers less fortunate have been increasing their drive-aways considerably. Very few manufacturers, however, are using freight equipment for transportation to nearby cities. Usually dealers within a 300-mile radius of the factory are forced to drive away cars, releasing equipment for more distant points.

The average number of cars driven from the Briscoe plant is fifteen daily. The biggest drive-away from this plant went to Memphis. This consisted of thirty cars, fourteen of which were driven by colored men.

The Reo Motor Car Co. of Lansing is forcing all dealers to drive away its trucks. Most of the Eastern dealers are working on a schedule. As soon as they arrive at their home towns with a train of vehicles they immediately take a train back to the factory and start again with another. An Atlanta dealer took away 50 trucks from the factory and a train of 20 went to San Antonio the past week. Thirty drove to Oklahoma City. A novel incident at the plant was the arrival of ten uniformed women belonging to the National League for Women's Service of Atlanta to take away trucks for an Atlanta dealer.

The Willys-Overland Co. averages 300 cars a day on its drive-aways. The past week the most notable events were the departure of a fleet of 107 cars for North Carolina and one of 30 cars to Parsons, Kan.

The Denby Motor Truck Co. has a weekly schedule with New York, Washington, Boston and other Eastern points. Some of the trucks are loaded to capacity with government supplies. The average daily drive-away is 6 trucks.

Of the Cadillac production 40 per cent is driven away. In making big drive-aways from the Hupp Motor Car Corp. it is found advisable to divide the train into groups of ten men each with a captain for each team, who is responsible for its safe arrival. A coating of vaseline is given the cars before they depart, which protects the finish.

HE'S INTRODUCING TRACTORS

Bliven, of Baltimore, Takes Advantage of the Home Garden Movement

BALTIMORE, April 6—F. S. Bliven, manager of the Standard Motor Co., distributor for the Cleveland tractor, and other lines is doing his bit in helping to grow more crops and at the same time introduce his tractor right in the city. Mr. Bliven it will be recalled made use of the snowstorm to demonstrate the Cleveland tractor during a farmer's convention in Baltimore and now he has loaned his tractor to the Home Garden Committee of Baltimore so that grounds in back yards, large lawns and other vacant spots may be ploughed up quickly for seed planting. The Home Garden Committee jumped at the opportunity and Bliven thus receives another big boost for his tractor while at the same time doing a service for his country. In this way by keeping the tractor operating he is in a position to take prospects, who come to town direct to the machine in operation.

Wolverine Tractor Gets Plant

SAGINAW, April 4—The Wolverine Tractor Co., which was organized in Detroit about 2 years ago with a capital stock of $300,000, has acquired a tract of land of approximately 40 acres, on which it is planned to erect a large plant for the manufacture of tractors on a large scale. The principal stockholder is W. E. Wood, head of the W. E. Wood Construction Co. of Detroit, which built all of the big plants for the Ford, Chevrolet and Buick companies.

Many Car Dealers Are Adding Farm Tractors

Dozen Dort Men in Kansas City Round Out Lines—Tractors Precede Trucks

KANSAS CITY, April 8—C. B. Magill, manager of the Dort Sales Co. of Kansas City, says that a dozen or more of his dealers have been adding tractors to their line. In most cases these dealers are well equipped for service and are wide-awake to the opportunities for filling in the possible shortage in deliveries of motor cars.

"In Kansas, at least in several of the districts," said Magill, "the tractor seems to be a necessary prelude to the introduction of the truck. The time does not seem to be ripe in these districts for the truck, but after a year or so of tractors they will be in demand and easy sales."

This comment is in line with the suggestion of a Panhandle Texas ranchman that in his country there is no use trying to sell trucks until the power end of the farm operations is motorized, until the men who work on the farm become mechanics through having to use the tractor in place of horses, until mechanics are substituted for the horse-users horses must be employed in pulling the loads on the road.

In view of the economic demand for better transportation of farm products, and with the improvement of highways, it has been suggested that an immediate real need is for the development from the city end of the combination of motor truck transportation. If the farmers are going to buy trucks this year somebody in the town must send the trucks out to the farmer to gather his produce.

Dort Gets Government Order

FLINT, April 5—The Dort Motor Car Co. has received an order for 1700 trailers of two-wheel type. It is expected that delivery will start May 1.

Goodyear Expands Its Overland Truck Line

Adds Four Solid-Tired Trucks to the Present Fleet of Seven on Pneumatics

CLEVELAND, OHIO, April 6—Motor truck dealers should follow closely the introduction of four 3½-ton solid-tired trucks by the Goodyear Tire & Rubber Co., Akron, Ohio, to deliver tires between Akron and the eastern seaboard. Although the Goodyear company has been operating seven large-capacity motor trucks mounted on giant pneumatic tires since April, 1917, the introduction of these new solid-tired trucks marks the beginning of the development of overland haulage by the Goodyear company which will eventually handle all of the company's outbound shipments to all points of the Mississippi River.

The four 3½-ton solid-tired trucks will leave Akron with a shipment of tires for the Newark, N. J., branch of the Goodyear company. It is expected the trucks will make the 500-mile trip in slightly under 4 days and that they will bring back crude rubber to the Akron plant.

These trucks have been hired especially for the purpose and are distinct from the fleet of seven Goodyear pneumatic-tired trucks which the company has been operating between Akron and Boston for some time. The introduction of the solid-tired trucks marks the first steps in the proposed plan of the Goodyear company to ship all of its goods to the eastern seaboard and as far west as the Mississippi River by motor trucks as was first intimated in a recent article on the Goodyear company's Akron to Boston run published in Motor World. It is intended later to employ other trucks to carry tires from Akron to Cincinnati, where they will be loaded on the Mississippi River boats for distribution in the south.

This increase in the Goodyear company's delivery fleet is but the first step in a great development of the service, for the Goodyear traffic officials see no relief from the present railroad congestion for at least 5 years.

The trucks are 3½-ton Packards owned by the Cleveland, Akron and Canton Transfer Co., Akron, Ohio. The same company has been operating a fleet of twenty-one trucks in overland haulage throughout the state of Ohio since May, 1917. The trucks will be under the supervision of C. H. Smith, the superintendent of the company, who plans to make the trip over the Lincoln Highway route in 50 hours.

The trucks will leave Akron at dawn on April 10 and will be driven 16 hours a day. As there are about 14 hours of daylight a day at this time of the year, the 16-hour continuous run will mean only 2 hours of night driving daily. It is expected that the trucks will average 10 miles an hour, which with 16 hours running a day, would make the total running time 3 days, 2 hours. It is expected that the trucks will deliver the goods at very nearly the express rates between Akron and Newark, N. J. These rates are $1.90 per 100 pounds. The trucks will carry a load of 9000 lb. so that if the cost is at the express rates, the charge for each truck for the run will be approximately $171.

The run of the trucks to Newark and return will be somewhat in the way of an experiment to determine the cost of overland truck transportation under commercial conditions as contrasted with the experimental conditions in which the Goodyear company's own motor trucks with giant pneumatic tires have been run. It is also expected that the data secured from the trip will give some very interesting comparisons with the cost of doing the same work by these large pneumatic-tired trucks.

Quick Sales York Show

Farmers Prosperous and Late Season Loosens Purse Strings

YORK, PA., April 7—Exhibitors feel that the third annual exhibition of the York County Automobile Dealers' Association during the past week as an advertising proposition surpassed all previous exhibits in this city. Not only were as many prospects secured, but the number of car sales also exceeded those of last year. The lateness of the season resulted in quick sales. York County farmers, in the midst of their spring farm work, the opening of the third Liberty loan campaign, the smallpox epidemic existing in York County, and other issues helped to detract from the show. The attendance, which numbered about 10,000 persons, was considerably below last year.

The exhibits of the 23 dealers, manufacturers and accessory men completely filled every bit of the 40,000 sq. ft. of floor space in the tabernacle, the amount of space given to exhibitors being the same as last year. The display of trucks was a feature of the show this year. About 15 per cent of the floor space was devoted to trucks, and 15 different makes were on display.

One hundred and seventy-five cars, representing 50 different makes, were included in the display. This is practically the same number of makes of cars as on exhibition last year.

Dealers were optimistic over the outlook of future business, and reported that retail sales were up to the average of last year. With the earnings of the large majority of persons greatly increased they feel that the present spring and summer business will show a substantial gain over that of 1917. A few unfilled orders are on hand at this time.

Owing to the seriousness of the fuel situation the show was postponed from Feb. 2 last in compliance with local Fuel Administrator Robert E. Gephart. An exhibit of Cleveland tractors by the Harrisburg Auto Co. was a feature, and attracted the attention of the show visitors. The Harrisburg company recently furnished to the state five Cleveland tractors for rental to farmers, and about 10 days ago delivered two other machines to purchasers on York County farms.

The income of the majority of residents of York County is derived from the important industries in this city and the rich farms in this section of the state. Within the past year the income of car purchasers has increased at least 25 per cent, and dealers feel that judging from the interest manifested the 1918 season will be a record breaker. Cars selling between $1,200 and $1,500 are principally in demand. Three per cent on all car sales and ticket sales will be required to be paid to the Government as income tax.

Accessory dealers at the show expressed themselves as being pleased with the results of the show, and anticipate a bigger business than ever this coming spring and summer. Dealers of the association who were at first not in favor of holding the show owing to unsettled conditions brought about by the war, have since changed their minds and made converts to the idea of more aggressive business.

Brisk Used Car Trade Is Developing in West

Cars Moving Rapidly in Business Centers with Good Demand from the Country

KANSAS CITY, April 8—An unusually large trade is developing in used cars in the Kansas City territory. For the past few weeks Kansas City dealers have been moving used cars very rapidly in local trade, and very recently there have been many dealers in from the surrounding country buying up whatever cars they profitably can handle. One Kansas City dealer sold about $9,000 worth of used cars to one of these Kansas garagemen. A Kansas City distributer who is not able to supply new cars to his dealers is advising them to pick up all the cars they can get hold of that can be fixed up into serviceable vehicles.

The first effect of this distribution of used cars is to increase their price. Price level is very generally now where it means a profit to the handler, even where he previously has not figured on such a profit. An effect which is expected shortly is that the allowances for used cars may be increased.

"We don't intend to increase the allowances for used cars in making our sales of new cars," said one Kansas City dealer. "But we do expect that we will make a little bit more money on them now."

Several of the most successful Kansas City distributers are carefully advising their dealers to be sure to put the used cars in good condition before selling them. They are pointing out that the profit is greater when a car can be sold in good shape to run and looking right, and that the satisfaction of the customer is an important asset in view of the possibility of further sales later when new cars are more easily available.

Prominent Tradesmen Assume New Duties

Resignations and Promotions Place Workers in New Places

J. F. Richman, factory manager of the Cole Motor Car Co.,, Indianapolis, has resigned to accept the position of manufacturing manager of the Allen Motor Co., Fostoria, O.

L. E. Wood, who was a designer for the Cadillac Motor Car Co., Detroit, has been appointed assistant chief engineer of the Mitchell Motors Co., Racine, Wis.

Stephen D'Orlow has been appointed research engineer of the Republic Motor Truck Co., Alma, Mich. He was formerly chief engineer of the Oak Manufacturing Co. of the same city.

W. E. Dunston, formerly chief engineer of the Standard Parts Co., Cleveland, has accepted a position with the Crown Hardware Mfg. Co., Dayton.

Thomas P. Myers, who for the past year and a half has been vice-president and sales director of the General Engineering Co. and the Doble-Detroit Steam Motors Co., Detroit, has resigned and will probably take up government work.

Langdon A. Smith has been appointed assistant director of sales for the Maxwell Motor Co., Inc., Detroit. He was recently general eastern supervisor of the Maxwell company, with headquarters in New York City.

John D. Wilson has been appointed assistant chief engineer of the carriage division of the Packard Motor Car Co., Detroit, succeeding G. H. Brodie, who has been transferred to the aircraft engineering staff. Wilson has been assistant carriage chassis engineer.

M. A. Hoolinshead has been appointed to take charge of the advertising for the Saxon Motor Car Co., Detroit.

W. O. Duntley has resigned as president of the Chicago Pneumatic Tool Co., Chicago, manufacturer of the Little Giant truck. The reason given is his desire to be relieved from active management in order to devote more time to private business. Duntley's successor has not been announced.

Herman S. Helander, assistant branch manager of the Kelly-Springfield Tire Sales Co., Hartford, Conn., has been promoted manager of the Stamford branch of E. J. Todd. Todd operates a string of stores in Connecticut and Massachusetts.

G. A. House has resigned as sales manager of the Auto Wheel Co., Lansing, Mich., to assume similar duties for the Hayes Wheel Co. of Jackson, Mich.

F. H. Rees of the Willys-Overland branch in Springfield, Mass., has been transferred to the New York City branch.

H. J. Brockman, recently with the National Brewing Co., St. Louis, has been named manager of the tire department the Moerschell Electric Co. is opening in St. Louis.

F. M. Hoagland of the Sterling Tire Co. is opening a branch for that company at 2824 Locust Street, St. Louis.

J. E. Eckenrode has been appointed central district sales manager of Fuller & Sons Manufacturing Co., Kalamazoo, with headquarters in Detroit, succeeding Gould Allen, who resigned April 1 to become manager of the Detroit office of the Wetzell-Hall Co.

L. C. Reynolds, formerly manufacturing superintendent of the General Vehicle Co. of Long Island City, has joined the forces of the General Motors Corp. in Detroit.

T. W. Wilson, Jr., has formed the Wilson-Nash Motor Co. at 138 West Mt. Royal Avenue, Baltimore. Wilson formerly headed in Baltimore the Wilson Motor Co., Maxwell and Mitchell distributer, and was also for a number of years with the Locomobile Co.

J. W. Bayard, for a number of years representative of the United States Motor Truck Co. and who was in charge of the sales for Riordan Brothers, Baltimore distributers for the line, has resigned from the concern. He has not decided upon his future course.

Addison DeGoll, one of the Baltimore pioneer truck salesmen and who has been in charge of the truck department for the United Auto Sales Co., Garford distributers, has become assistant to W. W. Smith, sales manager of the Garford Co., Lima.

Donald Anthony, manager of the Baltimore branch of the Locomobile Co., has resigned and joined the aviation corps. F. B. Wilson will arrive in Baltimore to succeed him in charge of the branch.

Nicholas J. Poehlman, who was the Baltimore manager of the Pathfinder Sales Co., is in aviation training at Kelly Field, Tex.

W. E. Duck, Jr., son of W. E. Duck, Baltimore Winton manager, and who was one of the truck tire salesmen for the Baltimore Firestone branch and who is at Borden Field, Canada, learning aviation, is ill from scarlet fever and mumps.

J. S. Hochheimer, formerly in charge of the used car department of the United Auto Sales Co., is serving Uncle Sam in the Commissary Department at a New Jersey camp.

R. W. Sykes, Jr., has joined Diuguid Brothers, Brooklyn, N. Y., distributers in that territory for the Hupmobile and Liberty.

G. Hilton Gantert, for fourteen years in the automobile trade and well known as the distributer of Stearns and Oldsmobile in Philadelphia, has been appointed to the sales organization of the Stability Motors Co., the new agency in the Bellevue Court Building, Philadelphia, whose head is E. J. Berlet. This agency handles the Atlas, Atterbury and Old Reliable trucks and United tractors.

H. W. Bundy, formerly factory manager of the Diamond Mfg. Co. before its consolidation with the Motor Products Corp., Detroit, and who since has been manager in charge of the stamping division of the latter company, has resigned. He has not yet announced his future plans.

Fred R. White, formerly first vice-president of the Baker R. & L. Co., Cleveland, has been elected president, succeeding Charles L. F. Wieber, who was elected chairman of the board of directors, retiring from active participation in the business. **E. J. Bartlett** has been elected first vice-president and general manager to fill the place vacated by White.

Shontz Buys Splitdorf Battery Business

NEW YORK, April 4—The Splitdorf Electrical Co. of New York is to withdraw from the storage battery field. It has been manufacturing Apelco batteries but will discontinue this branch of its business. The H. B. Shontz Co., 157 West Fifty-fourth Street, New York, distributer and Central Service Station for U. S. L. batteries, has purchased the entire battery stock and equipment of the Splitdorf company and hereafter will distribute all parts for Apelco batteries used for ignition and lighting and starting.

War Service Committee To Meet

ST. LOUIS, April 8—A meeting of the War Service Committee of the National Automobile Dealers' Association has been called by President Vesper at the Congress Hotel April 11. This meeting is called on request from Washington authorities, and will be held in connection with the sixth annual meeting of the Chamber of Commerce of the United States. April 11 will be devoted to work of the "war service group," and President Vesper is chairman of the committee selected to represent the various automobile dealers' associations.

At the request of the American Academy of Political and Social Science the following motor car dealers were named by President Vesper to attend the annual meeting of that body in Philadelphia April 26 and 27: A. E. Maltby, Philadelphia; J. H. Johnson, Boston, and G. A. Forster, Cleveland.

J.-M. Moves Youngstown Office

NEW YORK, April 8—The H. W. Johns-Manville Co. has removed its Youngstown, Ohio, office to 520 Market Street.

Hartford Mixes Cars, Trucks and Tractors

Good Crops of "the Filthy Weed" Are Going to Help Sell a Lot of Cars in Connecticut

HARTFORD, April 6—Fourteen makes of fours, twenty-three of sixes, five of eight and two of twelve-cylinder passenger cars were displayed in the eleventh annual automobile show of the Hartford Automobile Dealers' Association, Inc., which concluded this evening at the state armory on Broad Street. The show, generally accepted as the best ever given by the Hartford Dealers' Association, brought out 31 exhibitors of passenger cars. Twenty-one makes of trucks were displayed. Three tractors and one trailer were shown.

It was the first year for tractors. And the tractor representatives passed up a wonderfully good opportunity to demonstrate. The expansive east parade ground of the state militia which used to be a well-kept green lawn is now bare ground due to the presence at mobilization of the state troops, who wore down the grass. The armory authorities were willing that the tractors show should plow up this ground and harrow it.

There is no denying the fact that far greater benefits would have been derived had the tractors been so employed, for they would have attracted the attention of many who did not visit the show and would have gained publicity not to be had in any other way. As it was the tractors reposed restfully in their respective quarters.

Show Manager Ben F. Smith said this evening that as near as the show committee was able to determine attendance during the week would approximate between 25,000 and 30,000. This is about the same as last year, it was said.

The association had to pay a tax to the Government, but how much was not stated. On all admission tickets a war tax of 3 cents was imposed. The admission was 25 cents.

The show committee did not state just what the income will be this year as compared with a year ago other than to assert it will be about the same. The attendance was light until Thursday. The British tank Britannia was demonstrated at Pope Park at noon and after noon got out thousands of people. There was an automobile parade in the evening. At 8 o'clock there were very few people in the armory. At 9 o'clock there was hardly standing room.

Some retail sales were made at the show. However, most sales were closed outside the show and in the salesrooms. Every dealer had a sizable display at his salesroom. Prospects were taken back to the home quarters.

An opinion frequently expressed was that the show was held too late. Factory representatives who had followed the circuit this season referred to the local display as one of the very best layouts this year.

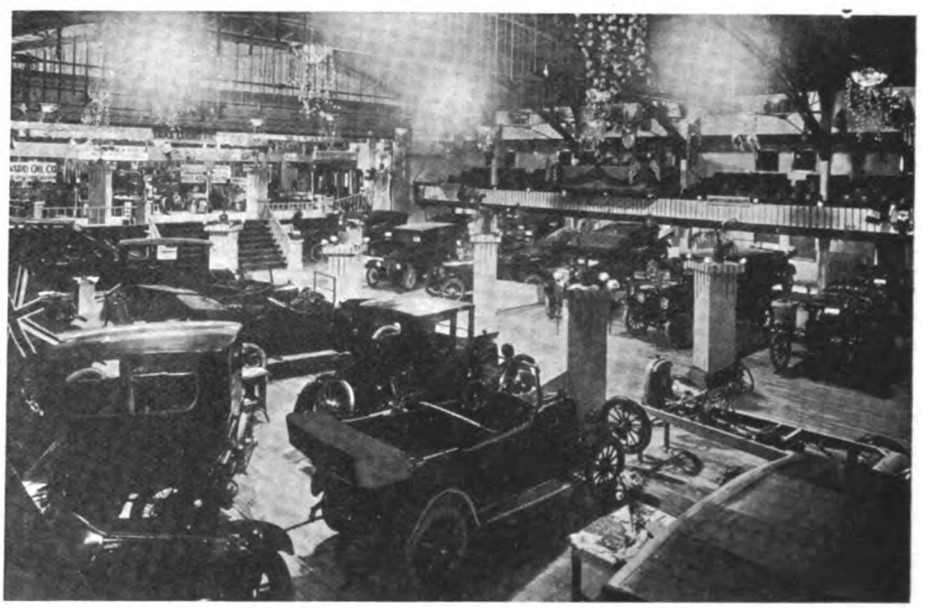
Nearly all of the dealers have unfilled orders. The difficulties presented are in getting cars rather than in selling them. Every dealer has arranged to run cars over the road. A startling instance of this is the engagement by Russell P. Taber, Inc., Reo, Duplex and Republic distributer, of practically entire sleeping car accommodations on the Wolverine out of Springfield every Sunday night for the next twelve weeks. All of Taber's cars will come overland.

The outlook for business throughout this territory, and when the term territory is used all of Hartford County is implied, is very good. Tobacco farmers throughout the county cleaned up on their crops in royal fashion. Every dealer regards a farmer as his best prospect. There are very few farmers in the county to-day but that can afford a car. Packards are not uncommon among the tobacco growers. Hartford is a rich city, the logical mart for practically all of Hartford County. Shopmen are making big wages. Many are buying the lower-priced cars.

The truck situation was never better than right now. Long hauls are very frequent. Hauling by motor truck has become the accepted method.

There was much opposition to a show this season. One faction desired to eliminate it altogether because it was deemed a backward season, also because of the likelihood of a big drive in Europe about show time as well as a third Liberty Loan drive. The drive panned out as predicted and the Liberty Loan drive started in the last day of the show.

The dealers appointed a committee with Fred W. Dart as head chairman. Every car in the show bore a Liberty Bell. A booth was arranged for the sale of bonds and negotiations entered into with the Dime Savings Bank to finance the proposition. Good results followed. Saturday evening Major E. Alexander Powell, who is stationed at the Springfield, Mass., armory, spoke on the war in Europe and brought out a crowd. So, all things considered, the opposition hardly prevailed.



E. C. Bowman, general manager of the Hartford branch of Willys-Overland, Inc., gave a dinner to twenty-eight Overland distributers in celebration of the biggest month's business in the history of the concern. The dinner was given at the Hotel Heublein.

A Packard dinner was given at the Bond Thursday evening in honor of E. S. Hare, president of the Packard Motor Car Co. of New York, and Roger J. Gilmore, vice-president of the same concern.

A number of sub-dealers were appointed at the show. A new truck agency, that of the International Harvester Co. line, was placed with the Hartford Buick Co.

New Ruling on 3 Per Cent Tax

WASHINGTON, April 3—A new ruling has been handed down by the Treasury Department at Washington with regard to the 3 per cent tax on motor cars. The ruling is that branch houses shall be treated as factories so that when a branch house sells a car it will have to pay the 3 per cent tax on the retail price the car is sold at. This new ruling is directly opposed to the earlier understanding of the law and is considered very unjust by the N. A. C. C. The ruling has come from the deputy commissioner at the Treasury Department in Washington, and is being protested by the N. A. C. C.

Who says the small town can't hold a successful show? Witness the exhibition put on by Holdrege, Neb., which has a population of 4000. The first night 7000 visitors thronged the show. Where did they come from?

Distribute Fordson Tractors Direct

1000 Machines to Be Sold to Farmers Who Must Agree to Use Them Efficiently

THE 1000 Fordson tractors which the Michigan War Preparedness Board will distribute to Michigan farmers are being sold direct to the farmers by the state at a uniform spot cash price of $750, f.o.b. Dearborn. Orders are being taken and tractors are being distributed by county agricultural agents and by chairmen of local War Preparedness Boards. These officials look also after the collection of the purchase price, which ultimately reaches Henry Ford & Son through the Central War Preparedness Board at Lansing. The Oliver tractor plows which complete the equipment are being distributed through the local retail implement dealers at points of tractor distribution at a uniform spot cash price of $125 delivered.

An important feature of the plan, one which appealed strongly to both Ford and to Governor Sleeper, and one which inspired both to undertake the experiment, was the community co-operation idea. The form of order which the farmer signs for his tractor binds him to lend his tractor at a reasonable price for the benefit of his neighbors whenever he can spare it from his own needs.

This obligation which the farmer assumes is more moral than legal in its force, since it will be impossible to enforce it, but it will have force nevertheless. Compliance with it will be increased by the activities of the officials who have charge of the distribution of the tractors, since they will interest themselves to the extent of watching opportunity to keep the machines constantly in use. Without any doubt many more acres will feel the good effects of tractor tillage through this provision in the contract than would otherwise have been the case. Thus in a measure at least this ideal of community use will have been attained.

The new Oliver No. 7 tractor two-bottom gang plow was designed originally for use with the Ford tractor in England and Canada. As a matter of fact, several thousand of them have been shipped abroad and 1000 are going into Canada. Inasmuch as the Oliver company had no dealer organization to protect in England, and as all service responsibility ceased as soon as the plows were delivered to the transportation company at South Bend, Ind., the Oliver company made a price to the English government of $97.50, f.o.b. South Bend. The same price and terms applied to the Canadian consignment.

The Oliver plows will not accompany the tractors from the Ford factory, but will be shipped from South Bend directly to retail implement dealers at the points where the tractors were to be distributed. According to the original sales plan on this special plow worked out by the Oliver Chilled Plow Works it was to have been sold to the dealer at $125.

As a protection to their dealer organization in Michigan, where they have some 600 agents, the Oliver Chilled Plow Works insisted that no lower price would be considered or sanctioned. However, as a special concession in the Michigan deal and as a compromise proposition to the Governor, the company agreed that the price to the farmer on these 1000 plows might be the dealer price of $125, and a special discount of 12½ per cent would be given to the dealer and the freight allowed.

Settlement in cash at the time of delivery was insisted upon by the company so that the dealer should incur no credit risk, and all responsibility for and expense of expert service was assumed by the company. This proposition was acceptable to the Governor, and the Oliver plows are now being delivered in accordance therewith.

The Oliver No. 7 two-bottom gang plow is especially designed for use with the Fordson tractor. By the use of a heat-treated alloy steel the weight of the plow has been reduced 25 per cent below that of any engine gang of similar capacity on the market. It is also exceedingly simple in construction and easy of operation. The lifting device and the depth regulating feature are new and effective. By an arrangement of the plow levers these are brought within easy reach of the tractor operator, making the outfit strictly a one-man unit.

Collectively the distribution of tractors and plows in Michigan is the biggest thing of the kind ever undertaken in the history of American agriculture and has a significance and importance tremendous in its import. It has furnished the occasion for manufacturing industry, national and state officials and individual interests to demonstrate their patriotic impulses with a spontaneity and with a singleness of purpose never before witnessed. It furnished the opportunity for a manufacturing wizard to put his genius for factory organization and production at the service of his country at a time of imminent emergency.

Liberty Truck Convoy Reaches Baltimore

BALTIMORE, April 3—The first convoy of Liberty trucks arrived here at noon March 29 from Lima, Ohio. Twenty trucks and 3 passenger cars with a company of 42 men comprised the convoy. An additional 10 trucks left Lima with the convoy, but turned from the Eastern Highway toward Fort Sherman, where they will form a part of the motor transport equipment. The 20 trucks now temporarily stationed at the Mechanical Repair here will go forward within a day or two to Camp Devens, Mass., and to Camp Meade, Md., each camp securing 10 of the trucks.

The journey overland was decidedly successful. Owing to a misunderstanding, the trucks were cleared from Lima without extra repair parts, but the trip was negotiated successfully despite this. Each truck weighed 10,570 lbs. and sixteen of them carried an average of 17,000 additional pounds in the form of 50 tons of cases of Garford spare parts. These were originally scheduled for freight shipment to the Baltimore repair depot, but owing to freight troubles it was decided to send them on with the convoy.

The entire journey took 8 days, the convoy leaving Lima Thursday noon, March 21, covering practically 600 miles at an average of 70 miles per day. No serious troubles developed on the trip. Some minor adjustments were necessary, such as cleaning of a carbureter, changing of spark plugs and so forth, but no serious fault in the mechanism developed.

The men of the Liberty truck company did their work before retiring, thus making ready for early morning starts, while the men of the Michigan company worked early in the morning at cleaning, adjusting and so forth and thus lost time.

The trucks averaged 4 miles per gallon except in a stretch of heavy mud, where the consumption was cut to slightly below 3 miles per gallon.

One of the trucks was used as a mess wagon and carried the stove and eating utensils that provided meals for the men when it was not possible to reach a town at meal time. The Red Cross provided excellent food in most of the cities and each night as the convoy made its stop the city selected turned over the town hall or some other large quarters.

The cities used for night stops on the journey included in the order named: Fremont, Ohio; Bedford, Canfield, Darlington, Greensburg, Pa.; Stoyestown, Everett, Chambersburg, Baltimore. The trip from Chambersburg to Baltimore, through Gettysburg and Westminster, to the camp at Baltimore, a distance of 100 miles, was made between 3 a. m. and 1:30 p. m.

Low speed was never resorted to in the entire journey, second sufficing in all instances to make the grades. The chief trouble was with stiff engines, all of the trucks when first leaving Lima displaying such stiffness that towing was resorted to.

Demand for Vehicles Increases in the South

Cars, Trucks and Tractors All in Great Favor—Dealers Optimistic for 1918

GREENSBORO, N. C., April 4—Dealers report continued interest and activity in motor vehicles. This applies to passenger and utility cars as well as to farm tractors and trucks. There is an especially lively demand for the smaller cars on the part of professional men.

It is now apparent that the action of the Government in curtailing transportation facilities is going to result in the sale of large numbers of cars.

All roads leading to the army encampment cities in the South are becoming choked with automobiles carrying relatives and friends to see the soldiers.

Probably never before in the history of the South has there been as much travel and contemplated travel over the dirt roads at any season, and certainly nothing to approximate it in the summer time, which is usually the season when the tourists are turning their eyes in the other direction.

It is already recognized by the dealers that in all probability there will not be enough cars during the balance of the summer and the early fall to meet the demand, not only because the manufacturers are turning their plants into the making of munitions and cars for the Government, but because the cars cannot be delivered by the railroads even if they are available at the manufacturing centers.

Because of these conditions a considerable impetus has recently been given to the trade in used cars. Anything that can stand on its wheels and run is salable, and usually fairly good prices are to be secured. A number of dealers are beginning to specialize in used cars and a brisk business is being developed.

Farmers continue in the field as purchasers of trucks and tractors. Labor conditions in the South are forcing them to the use of mechanical power in place of the usual negro labor, which is becoming more and more unsatisfactory, besides being hard to obtain.

The draft has, of course, taken a large percentage of the able-bodied white boys from the country districts, with the result that the farmer had to depend exclusively upon the negroes for the necessary farm work. And when the negroes on their part deserted him, he was forced to turn his attention to mechanical power; and when these machines have once been purchased and demonstrated he will not put himself again in the hands of so unstable a quantity as the average black man.

Trucks and tractors are selling freely, and many of the purchasers are also buying automobiles for the use of their wives and daughters. These will come into town in the future to do their purchasing in these cars instead of in the old family dray or spring wagon as heretofore.

Dealers in the South are not complaining at the state of the automobile industry as much as at the state of the railroads. If the automobiles could be manufactured and transported, it is probable that the South would experience the biggest year in its history in the matter of automobiles. Dealers are satisfied that they will have no trouble in disposing of all the cars they can get.

New Names for Old Colors

THE Ditzler Color Co., Detroit, Mich., is issuing its 1918 colors with new names. Most of them are war names. For instance, there is infantry blue, khaki brown, misto'marne, cavalry yellow, and all sorts of names like that. While some of the colors seem to be new shades the man who has been painting automobiles will be inclined to believe that he has seen some of these colors before. Nevertheless the new names are fine advertising and fit in well with the work of the man who is trying to tell people that they ought to have their old cars repainted.

Price on Parts Being Labeled

BROCK GARAGE, Trenton, N. J., has on the label on each bin in its parts stockroom the price of the part. The man who takes a part out of stock does not have to look in the catalogue or anywhere else to know the figure at which he should invoice it to the customer. The figure is right there in front of him when he picks the part out.

Liberty Trucks to Parade

WASHINGTON, April 4—Two full companies of Liberty trucks and National Army soldiers will enter the Liberty Loan parade at Cleveland on April 6.

Preston Cars and Trucks From Birmingham

New Company Is Manufacturing ¾-Ton Truck to Sell for $1,000 and $600 Light Car

BIRMINGHAM, ALA., April 5—Within 60 days the Preston Motor Car Co., organized in Birmingham and financed largely by Alabama, Mississippi and Florida capitalists, will begin the manufacture of light cars and ¾-ton trucks in this city. Inside of twelve months, officers of the company state, they will be giving employment to between 4000 and 5000 skilled laborers. A 7-acre tract, formerly the property of the Birmingham Boiler Works, has just been acquired for $30,000.

Parts of the first Preston car are now being manufactured at the plant of the Sandusky Forging Co., Sandusky, Ohio, but the first car will not be put together until the Birmingham plant has been made ready for its assemblage.

The passenger car will sell for $600 f.o.b. Birmingham, and was designed by W. H. Tarpley of Newark, N. J. The truck will sell for $1,000.

Officers of the company are: Charles E. Dexter, president; P. L. Sturkey, vice-president; E. E. Cobb, secretary; Niles G. Parker, treasurer, and Judge C. C. Smith, general counsel.

The directors are: E. S. Hugger, Montgomery; J. B. Fielder, president of the Bank of Opelika; R. M. Addison, Montgomery; E. A. Copeland, president of the Citizens' Exchange Bank of State Line, Miss.; Judge W. W. Brandon, Tuscaloosa; H. E. Graper, president of the Citizens' Bank of Lexington, Tenn.; E. C. Mainous, cashier of Peoples' Bank, Appalachia, Va.; G. E. Lindsey, Elba, Ala.; D. R. King, Hosford, Fla.; E. E. Cobb, Niles G. Parker, W. L. Sturkey and Charles E. Dexter.

IN order to secure publicity at a time when the need for labor was being emphasized in Worcester, Mass., Sales Manager F. G. Parker of the Studebaker branch in that city fitted up a Studebaker commercial car with a nice grinding machine and took it out to a lumber camp where it ground axes for lumbermen who were engaged in cutting wood for fuel and other purposes. The stunt secured a lot of publicity in the newspapers for the Studebaker car.

5000 Draft Registrants Called for Air Service

Men from Middle West to Receive Thorough Mechanical Training Before Assignment to Duty

WASHINGTON, April 4—Five thousand draft registrants were called this week to assist in the maintenance of America's air fleet. A call for men was made on Illinois, Minnesota, Iowa and Indiana. A thorough training course in woodworking and gas engine operation and repair will be given these men at 14 educational institutions selected by the Government. Voluntary induction will be tried, but where the states fail to produce the required quotas men will be conscripted.

Registrants must have at least a grammar school education to their credit. Assignments to duty will be made according to ability shown. The schools and quotas of each state are as follows: Minnesota, 300 men to Carnegie School of Technology, Pittsburgh; 500 men to University of Cincinnati, 500 to University of Minnesota, 189 to Pennsylvania State College and 330 to University of Pittsburgh; Illinois, 100 men to University of Chicago, 200 to Lewis Institute, 100 to Northwestern University, 300 to Bradley Polytechnic Institute; Iowa, 100 to New York University, 400 to Wisconsin University, 500 to the Auto and Tractor School, Kansas City, and 500 to the Sweeney Auto School, Kansas City; Indiana, 500 men to Purdue University. The above schools have been selected following thorough investigation of the country's educational institutions by the Federal Vocational Board.

St. Paul Dealers to Aid Red Cross

ST. PAUL, April 5—Leroy Eschner, president of the St. Paul Automobile Trade Association, at a recent meeting urged that all automobile dealers and garagemen cooperate in every way possible with the Red Cross Salvage Bureau, by converting into cash old tires, broken parts, etc. After two weeks' trial the results were fine.

"It would be a glood plan," states Eschner, "for all dealers and garage associations throughout the country to cooperate and assist the Red Cross in this manner. The St. Paul Automobile Trade Association will be pleased to furnish any information which will be of assistance to any organization desiring to convert junk into cash."

Ohio Pushing Organization

CLEVELAND, April 4—The Ohio Automobile Trade Association is conducting a membership campaign in northern Ohio. Quite a number in this section have joined. An organization of garagemen has been formed in Cleveland and an effort is to be made to secure the affiliation of all interests.

The Only Way Out

(*Continued from page* 28)

trades so that money will not be lost as it is to figure out any other part of the business. The only way is to find what the car will sell for when fixed up and then take it in at such a figure that it can be fixed and resold at anything but a loss.

Some dealers plan to resell the old car at a profit. Most of them still plan only to break even.

If there is any tendency towards any particular method it might be said that it is towards selling used cars at a profit instead of a break-even. There is every reason why the used car department should be made to pay a profit, small though it may be at first. It is something that CAN be done—as has been demonstrated by the few who are doing it.

All that is required is a firm determination to do it—and a little business planning plus salesmanship.

Texas Dealers Meet in Second Convention

Session Held in San Antonio—F. A. Winerich Elected President for 1918

SAN ANTONIO, April 5—The second annual convention of the Texas Automobile Dealers' Association, which came to a close here last week, elected the following officers for the ensuing year:

President: F. A. Winerich, San Antonio; vice-presidents, Roy Munger, Dallas; H. H. Bryant, San Antonio; George Conant, Houston; treasurer, W. F. Rose, Dallas; directors: W. G. Langley, Dallas; Hob Diggs, Fort Worth; H. L. Miller, San Antonio, and P. G. Stokes, Big Springs.

Resolutions were adopted heartily indorsing bills passed by the special session of the Texas legislature amending the highway law providing for quarterly instead of semi-annual state automobile license fees; also providing for collection of automobile fees by county tax collectors and delivery by them of certificates of renewal and reports by them of new numbers.

Houston was selected as the place for holding the next annual meeting.

The convention was largely attended by dealers from all over the State. The opening session on March 26 was called to order by Chairman Frank A. Winerich of the local entertainment committee, who introduced President B. R. Webb, of the San Antonio Dealers' Association. Webb spoke briefly and then called on Mayor Sam C. Bell, who formally welcomed the convention to the city.

Nominating Committee Appointed

Closing his official report, president J. E. Butler appointed the nominating and resolutions committee, which went into session immediately at the adjourment of the morning meeting, and reported at the afternoon session. Frank A. Winerich headed the nominating committee, with H. L. Robertson of Houston, J. E. Osborne of Paris, W. T. Herrick of Waco, and C. E. Bancroft of Corpus Christi as committee members. On the resolutions committee were J. R. Murkeson, D. T. Reed and W. T. Herrick. Committees appointed, the president called for the secretary's and treasurer's reports.

C. L. Zutavern of Dallas, state secretary, made other reports, speaking also for W. R. Rose of Dallas, treasurer. The expenditure of five hundred dollars last fall for a Liberty Bond was the outstanding feature of the treasurer's official report.

At the second day's session F. W. A. Vesper, president of the National Auto Dealers' Association and chairman of the War Service Board with relation to the motor car industry, told at length the accomplishments of the latter body in Washington and of its present work and future plans.

Sweeney Training First Section of Army Mechanics

KANSAS CITY, April 4—H. J. Rahe and E. J. Sweeney, proprietors of the two large automotive training schools in Kansas City, on April 1 received the first contingent of National Army men who are to receive special training in their schools. Those who come to Sweeney's school will probably be cared for in his own building both as to instruction and residence. The Rahe contingent will be given instruction in the Rumely building, North Kansas City, Mo., which has been leased for the purpose. This is a five-story building 130 ft. x 380 ft., where fully 2000 students can be handled if necessary. The Rumely building is situated in North Kansas City near the field where the Rahe school gives outdoor practice on tractors to its students. The Rahe school will provide recreation grounds for the National Army men, with possibly a beach at the Missouri River, a short distance from the Rumely building. Fred E. Roberts, the personal service man with the Rahe school, will have charge of the welfare work for the Y. M. C. A. in connection with the presence of the National Army men in Kansas City.

Ghosts That Are Unemployed

(*Continued from page* 16)

"You can have an influence all the time in the man's home, which is something you can't do by any personal work you may undertake. This is well illustrated by the way your own mind is influenced on national and international topics. You read certain things in the newspapers over and over again for a great many years, and eventually you come to believe those things are true.

"That is the way a great deal of this German propaganda has been put across. Things have been persistently printed about the high character of the German people until, when the war started, a lot of us were inclined to sympathize with them and believe that perhaps England was wrong and the German people were being done a great injustice in many cases. It has taken months and months of actual facts to tear down this belief in our minds.

"You can do the same thing with a man who is going to buy a car. You can keep this unseen influence working on him and working on him and beat down whatever resistance he may have until you can go to him and find him almost ready to buy.

"You should always bear in mind also the influence that has been worked upon him by your letters. If you have sent him eight or ten letters featuring the comfort and riding qualities of the Sennett car, you don't need to go into any exceedingly long discussion of that point. He probably has this well impressed upon him already. The things you say in your letters are nothing but a part of your personal sales talk; they are the things you would like to say and have impressed upon the man. It is just as though you were talking to him all the time over a period of weeks. Every few days you say something else or you repeat with greater emphasis something you have already said before. You keep drumming it and drilling it into his mind and finally it sticks.

"If you could hire a lot of real capable ghosts or spirits to hang around the man all the time and keep telling him what a fine car you have and why he should buy it, it would be worth a lot of money to you. Well, you can do this same thing with your form letters. They stick right behind him all the time and then some day, perhaps, they may shoo him into your place of business, get him down at your desk, make him take hold of a pen and push his arm while he writes his name on the dotted line.

"It's a bet, Miller, that you can't afford to pass up. It's one of the easiest ways I know of increasing sales at a minimum of expense."

An Important Matter

Another important matter is to read the trade papers. Keep posted on what the automobile industry is doing. Read the articles that are written by merchants expert in the handling of accessories. *Take out subscriptions so that each one of your men will receive a trade paper at home.* Possibly they do not think of buying trade papers, or just buy one once in a while. Every salesman is trying to better himself and he will find automobile trade papers a great help.—ALBERT CHAMPION *in an address before the New England jobbers during the Boston show.*

Garagemen Saving Junk

KANSAS CITY, April 4—Men buying broken parts as junk and metals from garagemen are said to be finding a growing tendency among garagemen to save the junk. But the garagemen do not save it for the manufacturer. They are giving it to the customer, who has the part repaired or replaced.

Supply of Chrome Steel Assured by California

WASHINGTON, April 4—There will be no shortage of chrome steel for some time to come, if at any time. This announcement can be made following investigations by industries interested, which reveal:

Eighty thousand tons of chrome has been stored away which has been owned by a huge metallurgical concern, hoping by its storage to increase prices.

Thousands of tons of chrome ore have been found in California mines.

After six months of deliberation and waste of time Washington officials have ordered electrodes supplied to the California mines, which means that the chrome ore mined in this country will be refined and supplied for use.

Some idea of the value of the 80,000 tons of chrome that has been hidden away may be had from the fact that in past years we have only imported 28,000 tons of chrome per year. In other words, a three-year supply of chrome was stored away.

Aldrich Gets the Kissel in New England

BOSTON, April 6—One of the biggest deals in the Boston motor colony was announced to-day when the Kissel Motor Car Co. turned over to William F. Aldrich practically the whole New England territory. Aldrich came here from Providence some time ago and acquired an interest in the New England Velie Co. He still retains it. The Hinchcliffe Motor Car Co. that handled the Kissel and now handles the Jordan gave up the Kissel some time ago. Aldrich has moved his headquarters to the Kissel building, and appointed William B. Taylor sales manager.

Belmont Park Airplane Mail Terminal

WASHINGTON, April 8—The Post Office department has selected Belmont Park, Long Island, as one terminal of the airplane mail route between Washington and New York. The property is a square mile, is flanked by the Long Island Railroad, and is within 25 minutes of the Pennsylvania Station in New York. Construction of hangars will begin at once.

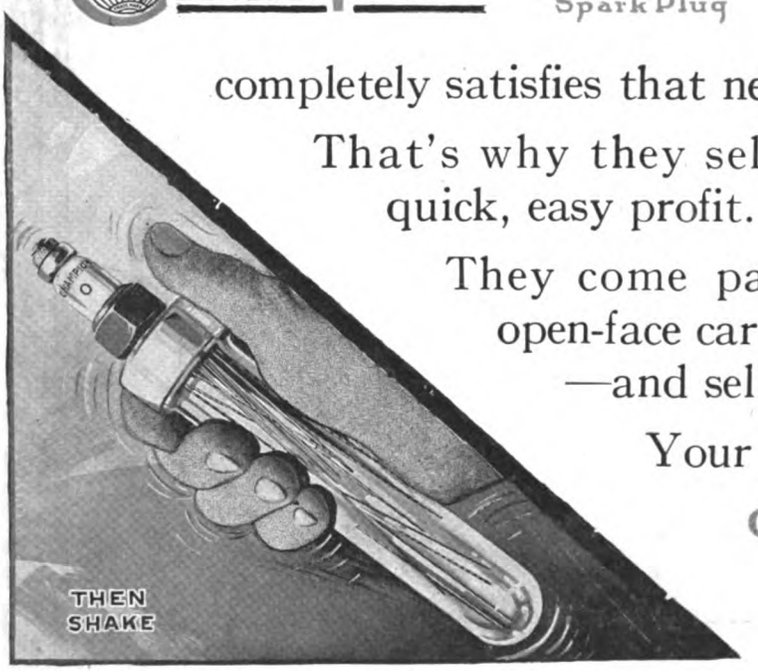
How to Make Money

THE never failing way is to find a big need and the thing that satisfies it.

A quick, clean way to do a long, mean job —the cleaning of spark plugs—was a big need.

Champion "Minute" Spark Plug Cleaner



completely satisfies that need.

That's why they sell so fast and yield such a quick, easy profit.

They come packed ten in an easel-back, open-face carton ready for counter display —and sell on sight.

Your jobber will supply you.

Easy to Install on Your Ford—The

CORBIN-BROWN SPEEDOMETER

One of the most attractive points about the Corbin-Brown Ford Special speedometer is that anyone can install it quickly and easily to obtain perfect results. The driving mechanism is extremely simple and strong.

The large road wheel gear is properly spaced for the screw holes already in the hub. The gear bracket is fitted positively and accurately into its place by simply moving and tightening a nut. The swivel gear brings the small and road gears into correct alignment.

The swivel drive gear section of the Corbin-Brown is especially strong. The gears are in one piece with the shaft to which the cables are attached, and are hardened and cut to mesh perfectly. A big, sturdy collar holds the gears in position and insures proper meshing under all conditions of roadwork.

The simplicity and strength of the driving mechanism are featured in all the other details of the Corbin-Brown Ford Special speedometer. It is pre-eminently an instrument for hard service and lasting reliability.

"Greater Love Hath No Man—"

WE were going to start this by saying: "Have you bought a Liberty Bond?" or "Crush the Kaiser!" or some such thing as that, but then it seemed that those things have been said so many times that maybe they don't mean much to some folks.

They have been said over and over and over again until it seems there isn't much use saying them any more, because the man or woman who hasn't yet got the big idea must be rather hard to move.

And then we thought of that old verse in the Bible that we used to hear years ago about how "Greater love hath no man than this, that he lay down his life——" and that's about all we can remember of it, but it seemed to be something worth thinking about.

The other day we were up in Canada and on the street corners the city had placed benches on the sunny side of the street and on these benches were some pretty tired-looking men in khaki uniforms. Most of them will never again know the joy of sitting on a bench with one foot over the other knee—for the other foot and most of the leg is somewhere else.

Their crutches were leaned up against the benches and their empty pants legs were pinned up behind. You know, it's an odd study, this matter of how a one-legged soldier handles his empty pants legs. Some day you may have a chance to study it in your own home town, and you'll find that they all pin them up the back, not up the front.

The soldier probably figures he looks better that way. He's still trying to make the best of things.

And then we thought of that uncompleted verse about "Greater love hath no man——" and we thought of what these men—who once had two legs—gave for the rest of us, just as our own boys are now offering themselves for those they leave behind. It made it seem that what the rest of us do is such a little thing.

Right now our country is trying to get machinery and ammunition and other things so it won't be necessary for so many men to be sacrificed needlessly, and is asking for the loan of some of our money for ten years so it can buy what it needs. Some day when he reads the "honor roll" from his home town and finds that some of his boyhood playmates won't be back, even when it's over over there, the man who didn't buy a bond—when he could—is going to feel rather cheap.

Some of these people who don't buy bonds don't have to look very far to see office boys, and day workers, and janitors and others buying bonds, and there is so much done by people who don't seem able that it ought to make some folks think twice.

The biggest thing a man can do is give himself. "Greater love hath no man——"

Let's not have it all onesided. Let's make it so that the man who is willing to give his life won't have to throw it away because he didn't have enough backing from the folks at home and——

Have YOU bought any bonds?

Digitized by Google

The Ford plant in Long Island City, N. Y., produced this tank for Liberty Loan purposes. It is nothing but a common every-day Ford with the tank shell, of light material, built over it. The idea has been used in several other cities. It gives the loan idea big publicity

Put It Over Big

Do a Job You'll Be Proud Of

Additional news of what dealers are doing on the 3d Liberty Loan will be found on pages 44 and 45

ALL over the country the dealers are making themselves felt as a power in putting over the Third Liberty Loan.

They are doing a job they can look back at and be proud of—which is what all should do.

In some cities the quota has been divided so much to each trade. In other cities the Liberty Loan Committee has not accepted a division on this basis, despite the fact that the trade campaigns on the second loan went over big.

This may cause feeling on the part of some of the tradesmen who would like to have a chance to show what the motor car trade can do. But let's not get sore about it. We can't all be right all the time and there probably are reasons on both sides. So let's all fly at it, regardless of what the basis of organization is and do all we can. The result, not the method, is all that counts at the finish.

In Chicago the trade is working as a trade. In Minneapolis the dealers, who did more than well as a trade on the second loan, are asked to work with the city committee—and are doing it. In Kansas City the dealers are not working as a trade, but are co-operating to the limit with the city committee. And so it goes.

The Kansas City Motor Car Dealers Association is using loan advertising and is putting all its available cash into bonds. Cars are being donated for the use of speakers.

Kansas City and several other towns have taken up the matter of contributions from branch houses. They are asking the factories to let some of the factory contributions come through the branch houses and be credited to the territory from which the branch derives its profit. It is the right idea. The dealers and branches work side by side in business and should do likewise in the loan.

In New York the work is going nicely. The trade expects to put it over big. Indianapolis is contributing cars and men, but is not working alone. However, A. H. Smith, Ford manager, is chairman of the factory speakers committee; E. W. Steinhart, Cadillac, is chairman of city sales; R. V. Law, Hudson, heads the selling of the Hoosier Motor Club; and William Esterly, Firestone, heads a corps that is calling on every motor car man in Marion county.

Every prospect is carded. If he refuses to buy the reason is noted on the card. If it doesn't look like a good reason another call is made by another salesman.

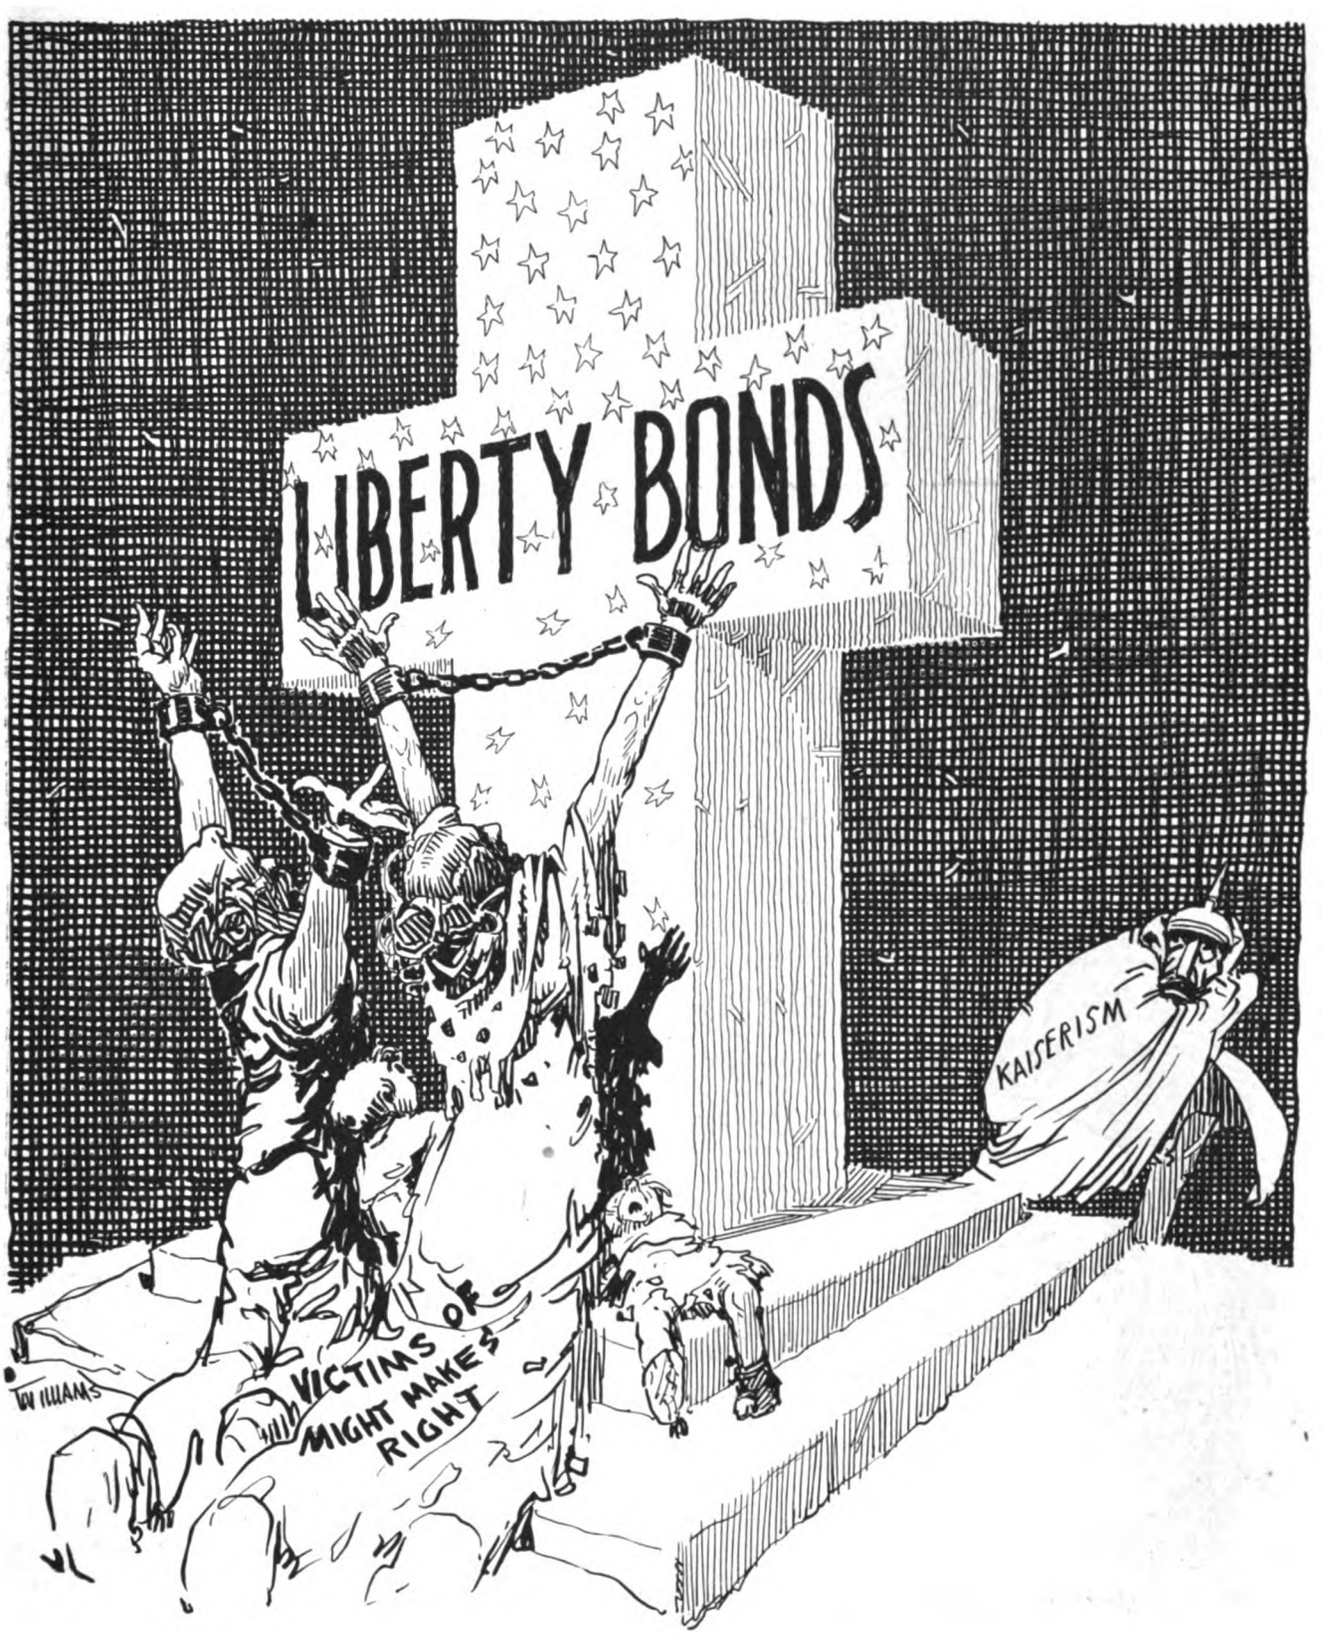
Cars are carrying speakers to 132 speaking points, and the association is buying bonds from its treasury.

In Denver President Fred L. Green of the Denver Automobile Trades Association is chairman of the trade loan committee of 12 members, which is working as one of the teams in the central organization.

Last week Thursday, Mankato, Minn., had a banquet at which a squad of workers from Minneapolis gave instructions to the Mankato people on How to Put Over the Third Liberty Loan.

Last week was told how the cities are pushing the work. They are still at it.

Here are a few suggestions:



1—Make sure every man thinks seriously about this loan.

2—Let some one who KNOWS each prospect's status estimate whether the prospect has bought what he

Would you have the "In" taken out of American "Independence"? The Kaiser would do it with his sword if he could. That is why you should buy a Liberty Bond

THIS is a special message for you. A message that must come home to you in a bigger way than any message has or ever will. It is a message to every man in this country. Right now you are probably sitting at your desk in your office. Not many hours ago, you said good-by to your wife and to your kiddies; you felt Her arms about your neck and Her warm kiss upon your lips. You kissed the kiddies, gave Her a last hug and hurried for the car.

On your way down, you looked over the morning paper. Perhaps you talked with a neighbor. If you did, it was probably about the war, and you both agreed that it is a horrible thing.

Again, you'll feel Her arms about your neck; and you'll hear the kiddies upstairs getting ready for supper and you'll call up to them a cheery "Hello." You'll eat dinner in the quiet of your home, with your whole family about you. You'll romp with the youngsters, and then when they are off to bed, you'll sit down to your paper or a book or a game of bridge. And while you have been doing all this, leading your quiet, every-day life, other men have been going through Hell.

And through Hell, for you and yours.

Other men have lived these hours in dirty, foul, damp trenches, the stink of which would make you—if suddenly thrown into their lives—vomit the food from your stomach.

And they have been doing this for you and yours.

Other men have left their hangars, have gone up into the sky, out over the enemy's lines, that they might learn something of his position. And these men have given no thought to the fact that that day might count them as missing, machine gun fire from an enemy plane having sent them crashing to earth, now a living, breathing man, and now nothing but seared flesh and broken bones.

And these men have done these things for you and yours.

Other men have charged "over the top," many only to go a few yards, when a breaking shell tears them apart. And other men have climbed down into the enemy's trench, there to fall wounded and dying.

And these men have done these things for you and yours.

To protect that home of yours and the loved ones that are so dear to you.

In the car coming down this morning, you said this war was a horrible thing. And you said it as if it were something with which you had nothing to do—something that could never affect you. Something not half as real to you as that awful nightmare that woke you, cold and trembling.

Don't fool yourself; this is your war. This was your war when the Lusitania was sunk.

It was your war when the first Belgian fell to the ground, murdered. It was your war then, and it's your war now. And you have got to do your bit!

If you would hear the thunder of hostile guns at our sea-ports, if you would see our cities in flames and millions of our soldiers beating back the German flood upon our shores, if you would see our women and our children abused and tortured—the same dear woman and the same dear children that you kissed good-by but a few hours ago—if you would see in this country, your country, a repetition of Rheims, Lille and Louvain, if you would see these things, then just sit supinely back in contentment, feeling secure that the other fellow will take care of you and yours.

Don't fool yourself. This is your war and you've got to do your bit!

It's more than a war for democracy—it's a war for humanity. It's a war to make your home, your wife and your children safe. It's a war to protect them from unbelievable rapacity and unbelievable ferocity.

Perhaps you can't enlist and perhaps you can't train at an officers' camp—but you can do your bit.

This country must have money. The war is costing and will continue to cost, millions of dollars every day.

And this country, your country, wants your help.

You have now, on your desk, a letter to answer, an order to enter. Possibly men are waiting to see you. Before you touch a paper or see a man, go to your bank and do your bit.

Subscribe to a Liberty Loan Bond.

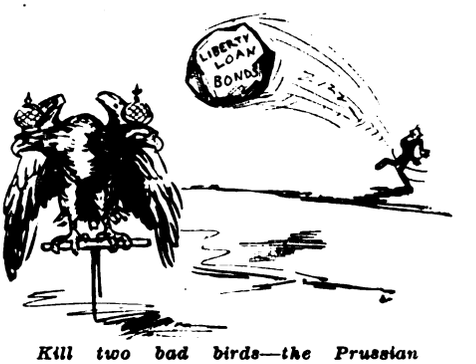
Do it now—right away.

Other matters, never mind how important, are nothing as compared to this. And don't think that the other fellow is going to do it all. Don't think that Wall Street and a few in the big cities are going to do it all. The wealth of the masses is greater than the reserve of the banks.

It's up to you and up to me. If you are an employer of men, arrange so that every man will take at least one Liberty Bond. If you are an office boy, go to the bank and do your bit.

Every Liberty Bond you buy will equip a soldier; buy him a rifle, a bayonet, a scabbard, cartridge belt, one hundred cartridges, gas mask and trench tool.

Every Liberty Bond you buy sends one hundred bullets singing over No Man's Land.



Every Liberty Bond you buy helps to send the Kaiser, and all that he stands for, to everlasting Hell.

Do your bit. Do it to-day.

Buy a Liberty Bond.

Time enough to beat the sword into ploughshares after the Kaiser is beaten into submission. The Third Liberty Loan is an effective weapon against him

Kill two bad birds—the Prussian double eagle—with a Liberty Bond stone

American Methods Sell Garage Service in Peru

Pancorvo Brothers Have Largest and Best-Equipped Garage in South America—Make All Necessary Parts

EFFICIENCY of the first degree marks the activities of the garage owned by Pancorvo Bros. & Co., Lima, Peru. This garage is the largest and best equipped in that country. It is housed in a commodious building, ample enough to take care of all the business received, and its different sections are so arranged as to make for what is so commonly known in the United States as efficiency. It has two stories, with a frontage and depth each about 150 ft. A noticeable feature is the large elevator for conveying cars to the upper story. The only other known elevator in Peru is in a large German department store. A roomy cellar in the front of the building serves admirably as a depository for gasoline, etc.

The main floor has a rectangular arrangement, along three sides of which, in double rows, are asbestos-lined compartments with accommodations for sixty cars. At present, some 100 cars are garaged, thirty-five of which are undergoing repairs. Quick repairing jobs average from fifteen to twenty per week, while big jobs, which entail complete dismantling of cars for thorough cleaning and general overhauling, painting, varnishing, etc., average from twelve to fifteen monthly.

EFFICIENCY is understanding how to do a thing better than some one else. Enterprise is doing what no one else in your immediate business circle has had the courage to do. The combination of the two qualities is a force which will draw to any business the patronage which appreciates and desires genuine service. In this article is described what those two qualities have done for a Latin-American dealer with grit and foresight.

Build New Bodies

An interesting feature of the work is the complete construction of car bodies from raw materials. Motors, and extra parts not easily or economically manufactured, are purchased, usually from catalog, in order to turn out a "new" car. Facilities for duplicating almost any part of any make of machine—in fact, for practically manufacturing entire cars—are afforded by up-to-date equipment in the way of a machine shop, foundry, nickeling plant, etc. In this garage in a country so backward in manufacturing knowledge and experience, one's interest is held fast while observing the various steps in the manufacturing processes whereby raw materials become finished, often complicated parts of automobiles. In short, employing parts of old cars no longer fit for use, buying other parts from catalog, making others in the shops, combined with reconstruction and artistic, tasteful upholstering of carriage interiors, fine looking cars are turned out, which render most satisfactory service.

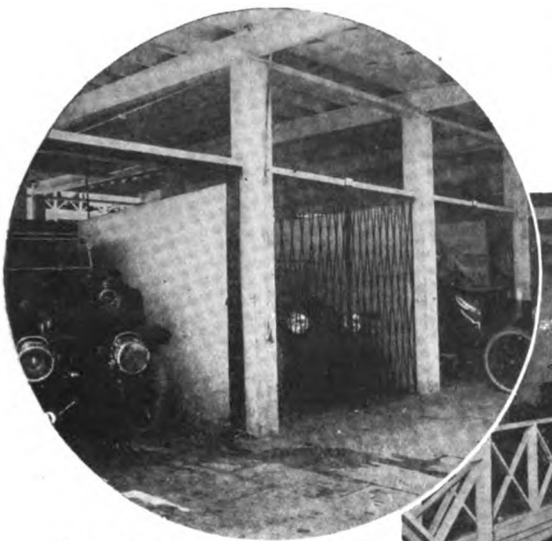
About sixty-five men are employed, distributed as follows: Office, three; machine shop, fifteen, three of them all-night workers, all constantly occupied; electricians, two; making fenders, mud guards and lamp frames, two; vulcanizing tires, two; upholstering carriages, three; painters, five; mechanics, nine, three chief mechanics, each having two helpers; one mechanic with two helpers for Fords exclusively; carpenters, one chief with two helpers; one carpenter for exclusive body work; one carpenter for general work, small jobs; two men for charging lamp batteries, working every day in the week; three in the nickeling plant; car-washers and cleaners, six; janitors, two.

All the equipment is of American manufacture.

Among the cars now garaged are the following: Ford, Cole, Locomobile, Hudson, Studebaker, Chalmers, Rambler, Belleville.
Regal, Renault, Panhard-Levassor, Fiat, Bianchi, Lancia, Minerva and Delaunay-

There are about 500 automobiles in Lima, a fair proportion of which are Renault limousines, of low horsepower, but giving excellent service and of smart appearance. A number of Fords and Hudsons are in evidence. Cadillac cars have recently appeared, and an opening exhibition of Marmon cars, the first imported into Peru, has just been given. There are a few other cars of foreign make, none of them, however, less than perhaps 3 years of age.

Comparatively few motor trucks, only about fifteen, have as yet traversed Lima's streets. Grace & Co. use two 5-ton trucks. Two are used on the Cerro de Pasco Railway, between Talarnioc and Tarma, for carrying passengers. Rocca & Miller, a large importing house of Callao, uses a Chalmers truck. At least one is employed by the Peruvian army. Some of the lightweight variety are used in Lima for transporting passengers. Their wider use is made difficult because of the condition of the city's pavements, which are not strong enough to withstand the wear and tear of such vehicles. It seems that a more extended and vigorous campaign for better street paving will have to be carried out before general motor truck traffic will be in evidence. The Alcalde of Lima in his last annual report discussed at length the need for street paving in Lima.



Improving Peruvian Highways

The last session of the National Congress passed the Road Law, which makes it possible for the National Government of Peru to co-operate with the departmental and municipal governments in assisting property holders to improve the country highways of Peru. Since the passage of this law, the public press of Lima has devoted a great deal of intelligent effort to a campaign for the improvement of old roads and construction of new highways throughout the country. As a result, several new roads have been already opened, notably that connecting the city of Tarma with the railway at

Talarnioc. Several other projects are under investigation by the Highway Division of the Department of Fomento. Property holders along the public highways are co-operating with considerable enthusiasm with the Department of Fomento. The entire movement is gaining headway with increased enthusiasm for motoring and more numerous sales of cars.

Peru has a population variously estimated at from 2,500,000 to 3,000,000. Though the country has been subjected to many wars and controversies over its boundary lines, much progress has been made by its inhabitants. There are about 676,638 sq. miles of land, of which the strip along the Pacific Coast has been rendered fertile by irrigation. Agriculture is the chief source of wealth despite the seeming incompatibility with the arid character of the country and the peculiar condition of its civilization. Sugar is the most important product, with cotton next. The successful development of coffee has been hindered on account of the difficulty of transportation. Much has been done with mining and one of the most important branches of Lima's industrial activities is the smelting works.

Chicago's Cars Get Behind the Loan

Chicago has a Motor Reserve which, in addition to its regular duties, is carrying Liberty Loan speakers. It is here shown lined up for the start

TOLEDO AUTOMOBILE DEALERS' ASS'N.

Per Mechanic

Form 1.

1

THE Toledo Automobile Dealers Association is meeting with success in a used-car appraisal plan it recently adopted. Prospect's car is appraised at an appraisal station, prospect is given a certificate of value good for ten days. The forms show how the work is handled. The appraisal plan is that worked out by Motor World last summer, and is based upon a percentage of value shrinkage for each year of use. These are the various forms that are used.

1—*MECHANIC'S CAR CHECK.—The mechanic will so far as possible determine the condition of the car to be traded by checking each item as appears on this card*

2

No. X 45 Date _____ 19__

This is to certify that John Doe Address 16 Ohio St. City Toledo State Ohio

has presented Sennet Car 1915 No. 4876 for appraisal. In its present condition for a period not to exceed ten days we value this car at ($304) ~~X~~ THREE HUNDRED FOUR ~~X~~ Dollars

General condition	Needs paint
Motor	" overhaul
Rear Axle	O.K.
Transmission	O.K.
Tires	1 poor
Top	O.K.

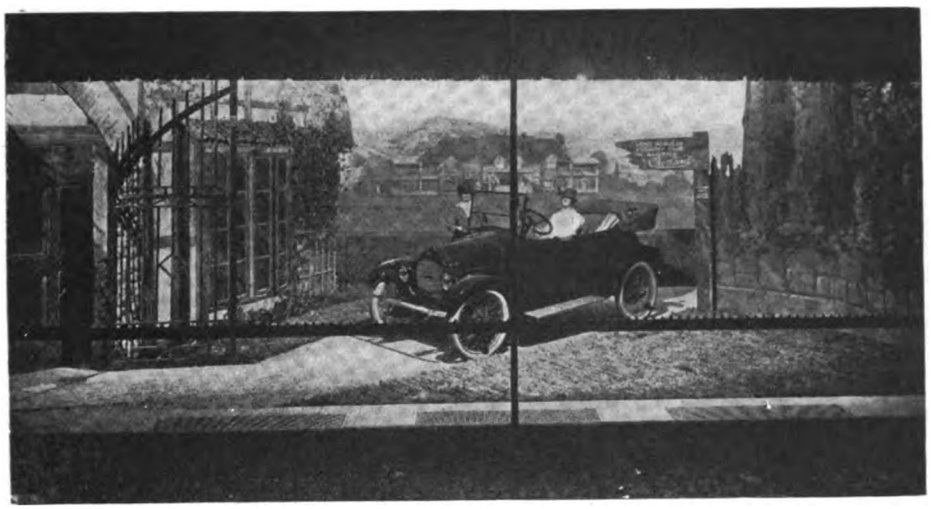
Six Good Windows

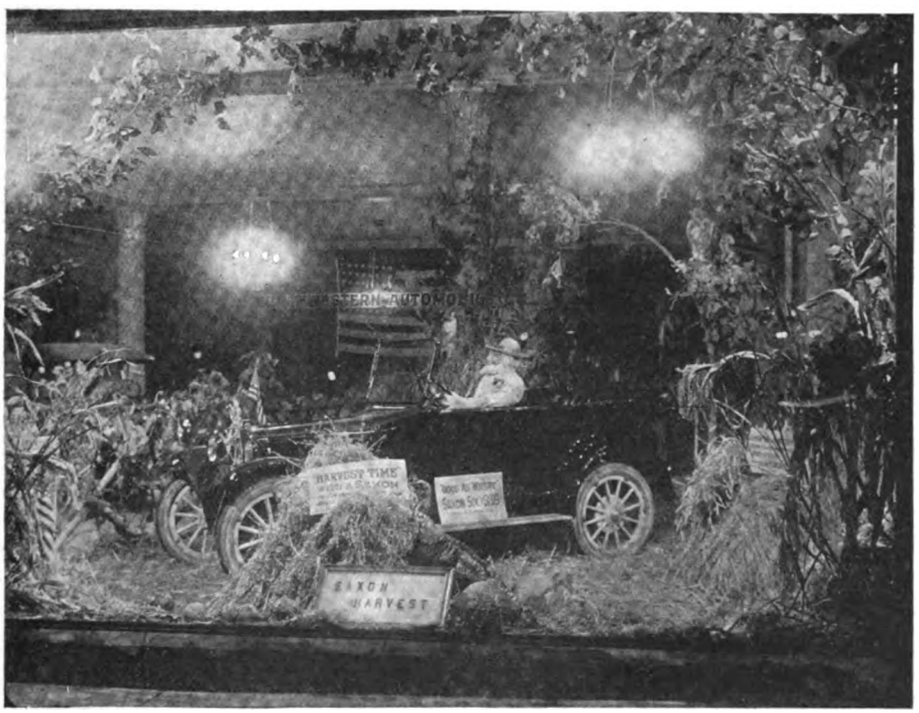
THE window at the left is one of hundreds that have been set up for dealers by the Champion Spark Plug Co., Toledo, which has a dozen or more cars covering the country in this window work. The display is made mostly from materials that any dealer may readily secure from the factory in case one of the window trimming cars doesn't happen to come his way as soon as he would like it. The Champion company states that these displays have helped dealers move goods, stimulating sales in a marked manner



E. H. Smith and T. E. Herlihy of the Maxwell Motor Co., Detroit, did this window for the Cunningham Automobile Co., which handles the Maxwell in that city. It is a striking display and required considerable effort and materials—but it is something any dealer could easily imitate. At the present time, with snow on the ground, what could be better than a Maxwell sedan coming down a snowy road and the sign saying: "When snows blow and the days are cold save time, make speed, be comfortable and gain health in a Maxwell sedan. Come in and sit in it"

WAR displays always catch the eye in war-time—and the Overland man in Los Angeles said a lot when he said that "the battle of life is more easily won if you drive an Overland." That is a thought that can be used in a big way by many dealers. To-day many people have classed the car as a non-essential and they say that, even if a man does use his car for business purposes, he uses it a great deal for luxury purposes. But this sign in the window well expresses the true situation. The use of cars for fresh air purposes helps one win the "battle of life." Cash in on that thought. Use it in your sales talk, for unless we can all win the battle of life our country can't win our war

Digitized by Google



Scenic Effects Count

SCENERY like this isn't easy to get, but the effect is wonderful, isn't it? Window men say there is nothing harder to display than a car, because it is just a car and that's all. But see what was done in this case in the New York Overland establishment. There's a club roadster, a clubhouse and a couple of clubwomen. On the sign post in small letters it says: "Gilman hats across the road," and they are—on the other side of Broadway in a hat store

MC COY used to be with Chanslor & Lyon. Now he is operating for himself. This window shows what his trimmer did with Advance Felt products. Dealers should bear in mind that cartons and boxes are one of the secrets of good window display. They can be made into all sorts of shapes and blocks. Note how the window trimmers in good stores use them. Look at any department store window where small goods are shown. Look at any hardware window—and while you're looking take another look at this McCoy window display. Not bad, is it?

"GOOD as the wheat!" When you've said that in Minnesota you don't need to say any more, so the Northwestern Automobile Co., Minneapolis, used it on a card when it staged a Harvest Window in its salesroom at 1500 Harmon Place, the new motor row. It cost $14 for material and occupies two corner windows. The idea was worked out by L. H. Cary of the sales department. That is not Cary in the car; that is the happy way a wheat grower looks after Cary has convinced him that the Saxon is more essential than the price of 300 or 400 bushels of wheat

The Last of a Series of Six Stories

The Invisible Ink

BY RAY W. SHERMAN

REILLY pulled up in front of the place of Miller, his dealer in Merrylton, just as the latter was having the carpenter put the finishing touches on a runway display cabinet in which Miller proposed to show a lot of accessories to farmers the coming season.

"Well, Miller, that looks fine," said Reilly with enthusiasm. "That's a regular sure-enough layout. It ought to sell you a lot of goods this year."

"It does look fine, doesn't it?" said the carpenter. He stood back and admired his own work.

"I like it," said Miller. "The only thing I can't understand is why I didn't do it long ago. And now I'm going to get a lot of these things out of the stockroom that I bought because jobbers' salesmen told me I could sell them and put 'em in here and see how long it takes for them to move."

"It won't take long," said Reilly.

Then the two walked into Miller's office.

"What I came down to see you about," began Reilly, "is some of those cars that you have scheduled to come through this week. When are you going to take them? I have a shipment coming through from the factory and some of it is here now. Most of them are being driven over the road. I don't think it's possible to have very many of them shipped by freight because we can't get the cars."

"Well," said Miller, "I have been pretty busy. I haven't been able to get down to Callawassa and I don't know whether I will be able to drive any of them away or not. Don't you think it would be possible for you to get a box car and send me one or two that way?"

"No, I don't think so," said Reilly, "it isn't a safe proposition to figure on. If you want the cars, I'm afraid you will have to come down and drive them away and pay for them too."

"Well," parried Miller, "as I said before, I've been pretty busy. You see, I've fixed all these windows you told me about and got this accessory display case fixed up. Then there are all those form letters you made me send out and I've had to go over to the newspaper office and spend money for advertising and—"

"Yes, and all the money you spent for windows and display cabinets, newspaper advertising, form letters and everything else will be money thrown away if you don't come down to Callawassa and get some of those cars and get 'em up here in stock. What's the use of your trying to sell stuff when you haven't anything to sell? You are merely running your legs off for no results.

"The one big essential this year for all the dealers in this territory is to get cars and they're foolish to try to figure on getting them by freight because it's practically an impossibility. I don't see how you're going to be able to do it. I'm figuring on driving a lot of cars from the factory down here and you fellows will have to come in and take 'em away if you want 'em.

"This is just one other occasion in which this action thing comes into the situation. You can sit around here all summer and complain to your customers that you can't get cars. You can lament to me and to the railroads the fact that you can't get box cars, but what good is that going to do you when it comes to putting money in the bank?

"This sales campaign that you have started is a fine thing and you are getting your place of business fixed up in nice shape, but unless you have something to sell all of your effort is gone for nothing. The dealers who have got cars in stock now are going to make some money as soon as the season opens up and people begin to demand them, and the dealers who haven't got any in stock are going to lose some money. Now I don't want you to be one of those that are going to lose money so I want you to come down to Callawassa within the next two or three days and get some of these cars.

"There have been other summer seasons before when it was impossible for the dealers to get cars; sometimes it was because the demand was greater than the supply. This year it is a little of both. There is likely to be a shortage of cars and we certainly know there is going to be a shortage of freight cars, so the dealer who expects to make any money has got to do some pretty tall figuring on getting stuff to sell.

"Right now, I can give you two or three cars and a truck and several trailers, and at the same time you are taking them up, I think it would be a good idea if you went down to Ben Doyno's and picked up enough accessory stock to make a good showing in this fine display case which you have built. See your banker and raise some money.

"Advertising without any distribution has caused many an otherwise good sales campaign to fall down. Sometimes a man who has such a campaign in charge does a lot of advertising, gets the public all excited, and they go into stores and ask for goods and then when they get there the goods haven't arrived yet. Advertising has been ahead of the distribution. The result is that people, having once reached the buying point, are very hard to get back there again. You will find that out for yourself before this summer is over if you don't get those cars.

"Furthermore, the chances are if you should take your entire twenty cars right now, a lot of the dealers around the territory would be only too glad to come up here and take any of them off your hands that you couldn't sell, because some of them aren't going to have all they want,

When Not to Grind Valves

First Try Cleaning the Stems and Guides

By David W. Onan

IN the early days of the motor cars—the days when the cylinder sizes were ranging from 4½ in. to 5 in. (where they now range from 3 in. to 3½ in.), and motors were not called upon to carry the range of speed (from nothing to any speed that might be required)—valve grinding, cylinder reboring and fitting of piston rings was almost an unknown problem.

We had little difficulty in giving the average motorist satisfaction if he was able to drive his car under a load at 10 to 12 miles an hour (and up) and make the grades on intermediate or first speed.

As the cylinder sizes have changed, and in a great many cases dropped down to a 3-in., 3¼-in. and 4-in. bore, with strokes ranging at different points, with the development of carbureters to take care of the larger range, we had gradually worked into a more difficult problem.

This problem was that the motorist wanted a motor to drive anywhere from 2 to 3 miles an hour on high gear up to the maximum speed of the engine, without the slipping of the clutch or the missing of a single cylinder; of course this was to be expected. He paid for a high class automobile, and it should function as perfectly as it did the day he received it.

After spending several years on ignition and the working condition of motors, the writer, through a peculiar circumstance, became keenly interested in valve grinding and its result. For almost 3 years I was called upon to diagnose the trouble in the working condition of engines, not only ignition and carburetion but other working conditions. It happened that during this experience one of the most interesting problems that were encountered were the valves in the two-cylinder, opposed, 4 x 4½ engines, and it was this motor that created the keen interest and afterwards resulted in a very valuable amount of experience and experiments in connection with valves. This also happened at about the time that the oxygen process of removing carbon from cylinders came into vogue.

Work Not Always Necessary

Valve grinding is probably one of the first things that the average automobile mechanic learns after entering the automobile industry, yet I believe that in the minds of a great many, valve grinding is considered and practiced in a great many instances where it is absolutely unnecessary.

When cars were going through this shop at a rate from eight to ten a day, the writer made it a point to see every set of valves removed from any make or model of engine and make a memorandum of the number of motors going through and the condition in which valves were found.

At one time, out of some fifty engines (the larger percentage running four cylinders), the average number of valves to be ground in out of eight valves to the average motor would be two valves.

The balance of them required nothing more than a thorough cleaning, and while the average repairman makes an effort at cleaning the valve seat and grinding it, the smallest amount of difficulty was encountered at this point.

The almost convincing result of this experience is that valves do not carbonize on the seat from any fault of the seat itself or due to carbon formation of foreign materials or other things that might happen to the seat.

Watching these valves closely and experimenting at different times has proven that by removing the valves, thoroughly cleaning the stems and guides, replacing them in the cylinders almost the same results were accomplished as though a great deal of time had been spent in reseating the valves by the ordinary grinding methods.

In all cases where valves had been originally properly fitted they were almost invariably found to be perfect after the carbon deposits had been removed from the valve stem and removed from the guide; when such carbon as might have accumulated on the seat, due to the valve stem and guide holding them from seating properly was removed, the valve functioned absolutely as it did at the time it was installed originally (Fig. 1).

A great many of these motors were sent in for adjustment in the way of ignition and carbureter. They stated in a great many cases the valves had just been ground and the carbon removed, yet the carbureter required some adjustment, and in making a careful test one could immediately discover after allowing the engine to reach an excessive temperature, giving the valves and valve stems a proper chance to expand, that certain cylinders would become lacking both in power and often missing fire and failing to work completely at closed throttle position (Fig. 2).

At times, in testing out these cars before making a decision as to what should be done to them, they would go out and fire properly up to say 18 miles an hour, and continue to do this indefinitely.

BUY LIBERTY BONDS

Digitized by Google

BUY LIBERTY BONDS

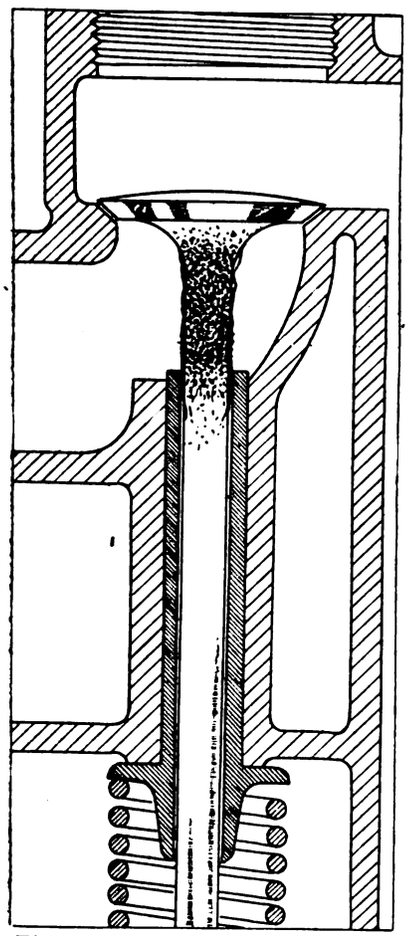

Fig. 1—Heavy deposits of carbon collect on the stem of the exhaust valves, thus preventing the valve from operating freely

Yet immediately on trying to drive the car at a rate of 25 miles an hour, missing would begin to occur and the motor would not function as it should.

The temperature would rise, having an effect on the valve stems and causing the valves to remain further away from the seat at this temperature than they did at slower speeds or lower temperature. This, in almost all cases, was immediately overcome by the cleaning of the valve stems, regardless of the amount of grinding done on the valve seat, and it was found that there was almost a negative amount of grinding necessary to reseat the valve itself when the stem and guide were properly cleaned.

It was noticed that almost a definite conclusion could be drawn as to the working conditions of the engine, due to valve effects, by noticing the condition of the valve stems as they were removed from a car, before making any alterations or cleaning the valve stems, seats or guides.

In removing valves from their places in a motor, it will be always noticed that below the valve head and at the top of the guide running surface of the stem there is always a prominent collection of carbon on the exhaust valve stem.

If you will take an ordinary file or a piece of a hack saw blade and attempt to scrape this, or sandpaper or emery paper, you will find that immediately after making a very thorough cleaning of this with these tools that the valve stem will remain a gun metal color; there is every reason for believing that this color is due to the heated condition under which it has been operated.

If you take a piece of a broken emery wheel and roll the valve stem on it you will immediately find chips of carbon flying from it as you would from scraping any hard surface with a scaly formation.

A valve stem is not clean until it is restored to its original color, just as though it had been machined. With a microscope of suitable strength you will be more than surprised to see some of the valve stems after they have been considered thoroughly cleaned and ready for reinstalling.

Carbon deposits at this point should always be removed completely; the stems should be reamed with a reamer or washed out with kerosene and a steel bristle gun cleaner or other like instrument. This will insure the greatest amount of service from a motor without the regrinding of the valves.

A valve properly machined to fit should not have to be ground over from 1 to 2 minutes to give the proper seat to remain in constant service for an indefinite length of time providing the valve stem and guide are properly cleaned and fitted.

This information pertains almost entirely to the exhaust valves, and little of this experience occurs on the intake. The valve seems to be best seated after it has been in constant use in traveling up and down.

It is always advisable after cleaning valves to allow the tappets to run loose for a period of several days before adjusting them to the minimum amount of space.

We notice that the average user, after once having the valves thoroughly cleaned in this manner—and the other conditions about the motor properly adjusted—is able to run anywhere from 4000 to 5000 miles without the cleaning of a spark plug or a single adjustment. The next time he had any trouble with his motor—providing he had made a run of this length (which we have found a great many of them have done)—he immediately drove in and wanted to know if the motor could not be cleaned up and adjusted the same as it was the last time.

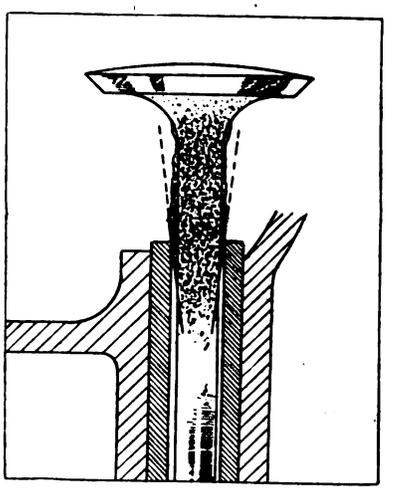

Fig. 2—If carbon is not removed from valve stems it eventually gives a taper effect which prevents the valve from seating properly

The total expense of valve and cylinder cleaning is not great. The largest six-cylinder motors during this period were cleaned (even in their worst condition), all valves removed and thoroughly cleaned, at a fair charge—not in excess of $12; four-cylinder motors, ranging from $6 to $8; yet there was no time lost in adjusting either before taking them down nor did any attention have to be given them other than to start the engine after they had been properly put back together. The adjustment of the carbureter was very readily made, and by properly adjusting the spark plugs, etc., before installing them in the motor, invariably the minimum amount of time was necessary to turn the engine out in absolute working condition.

The cylinder and valve cleaning is something that does not require a first class mechanic; an ordinary helper in the shop with the proper instructions can do this work as accurately and efficiently as the best mechanic.

There is no machine work about it; it is merely a matter of disassembling and assembling, and the results accomplished in this experiment and covering the period heretofore mentioned kept up a keen interest among all of the workmen (the better mechanics as well as the helpers), as valves always furnish problems for thought and interest.

As poppet valves still seem to predominate, and this experience covers over 3 years of constant watching, there is every reason to believe that there are still some things to be learned about valves and carbon deposits in a motor.

NO. 1628—REAMER FOR VALVE SEATS

It was found that the valve seats of an engine had been ground or reamed so low that a ridge was left on the outer edge. A reamer large enough to cut this ridge would not go in the port, so a special reamer was made, consisting of a piece of cold rolled steel squared on one end and threaded on the other, the size just fitting the valve stem guide. This is screwed into a larger piece of cold rolled stock which has a hole bored and tapped to receive the smaller rod. A hard tool-steel cutter ground to the proper shape is held between the two.—W. F. Craig, Franklin, Pa.

NO. 1629—POLISHING HEAD

A polishing head or grundy head is made from a section cut from an old crankshaft, preferably a five-bearing one. Drill through the two main bearing parts of the shaft, fill with babbitt and re-drill for ¾ in. shaft. The bottom of the polishing head is drilled and tapped and then fastened to a gear blank with a bolt. The shaft is turned and threaded on the ends for ½ in. nuts. Lubricators are fitted.—C. E. Bradish, Boston.

NO. 1630—SHELLAC-PRESERVING BOTTLE

A bottle or jar to preserve shellac is made from an ordinary pint or quart fruit jar by drilling two holes in the top and screwing a sawed off brush through these holes so that the brush hangs in the shellac.—C. B. Smith, Nash Agency, Hollywood, Cal.

NO. 1631—HOISTING HOOK FOR FORDS

A hoisting hook for Ford front ends is made from a discarded radius rod by heating the ends, hammering them flat and then bending them to hook shape. It is well to offset them about ½ in. to clear the radiator. The ball can be sawed off so that a link or ring can be slipped on, this going on the hook of the hoist. This device is especially useful on 1917 cars, as there is no chance to lift them by the fender brackets.—W. C. McRae, Peterson & Hoff Garage, Douglas, N. D.

NO. 1632—BUSHING PULLER

A bushing puller is made from a ⅝-in. bolt 5 in. long, threaded pretty well to the head. This passes through into a steel cap which fits over a piece of pipe. A threaded collar with a flange on one end, to fit the bushing, is tapped to fit on the bolt. Pointed pins are put on the under side of the flange. In operation the bolt is turned and the pins go in the bushing, preventing it from turning, and a further tightening of the bolt pulls the bushing out.—H. Wirebaugh, Wilson Motor Co., Canton, Ohio.

NO. 1633—COTTER-PINNING

It was necessary to cotter-pin the end of a rod, but no drill was available to drill the hole, so slots were cut in the opposite sides of the rod with a hack saw and a piece of wire bent into a U-shape fitted in and curled around the end.—W. B. Wheatley, Charlotte, N. C.

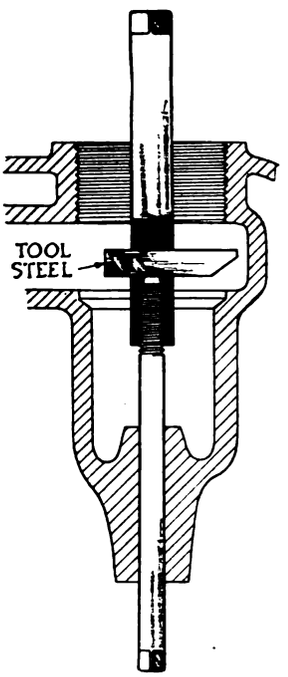
NO. 1634—REMOVING AXLE GEARS

A quick way to remove Ford axle shaft gears is to use two pieces of pipe, one being 1½ in. i.p. size x 6 in. long, and the other being 1¼ in. i.p. size x 36 in. long. Place the short pipe, which just fits inside the gear teeth, and butt it against the anvil till the half-moon keys can be removed. Then put the axle in the long pipe and butt it against the anvil till the gear comes off. A wad of waste in the bottom of the pipe will prevent the ends of the axle from being battered. The same pipes can be used for replacing the gears.—W. C. McRae, Peterson & Hoff Garage, Douglas, N. D.

NO. 1635—LIFTING HOOK FOR ENGINES

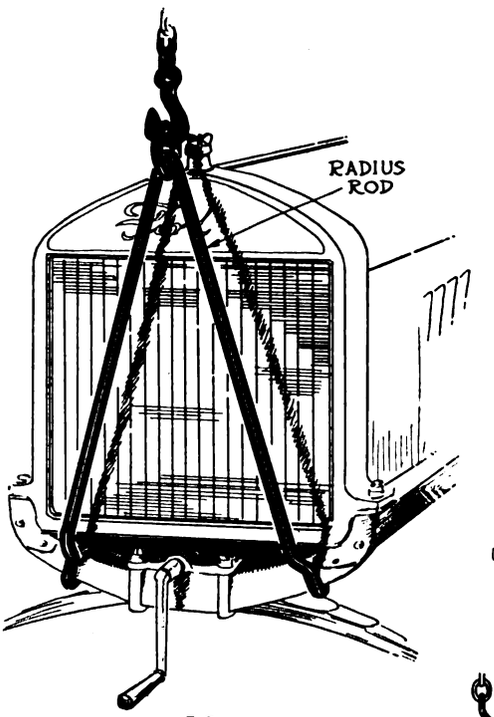
A hook for lifting Dort engines is easily made from steel bar stock by bending one bar to fit under the water jackets and welding another bar to it. This latter bar is to be bent so that it clears the top of the engine and has an eye formed in the end so that it can be lifted with a chain hoist or tackle. This could also be made to fit other makes of engines.—C. C. Spreen, Flint.

NO. 1636—CYLINDER-LAPPING MACHINE



To lap in Ford cylinders an old connecting rod is sawed off near the big end and flattened out and a small universal joint welded onto it. The lapping piston is then put on the rod and the universal joint put in the drill press chuck.—D. E. Jaques, Jaques & Miller Garage, Thorntown, Ind.

$1 a Shortcut



SHOP men are invited to send in the ingenious kinks they have worked out for saving time and labor in their shop. MOTOR WORLD *will pay* $1 *for each Repairshop Shortcut that is accepted for publication. The only requirements are these:* 1—*Describe the shortcut briefly but clearly, in few words.* 2—*Send a sketch, in pencil or pen, no matter how rough; our artists will finish the job.* 3—*Write on ONE side of the paper only.* 4—*Sign your name and initials, the name of the company you are with, and the town. Write plainly. If your name is unusual, or if there might be any doubt as to the spelling of the name, print it in capital letters with your pencil.*

How to Lay Out a Building—I

THIS is the first of a series of articles which will take up in detail the layout and arrangement of buildings for the dealer, garage and repairshop.—Editor.

By Harold F. Blanchard

INTRODUCTION

ANY man can lay out his own building with the aid of this and succeeding articles which will complete a series.

The first few articles will deal with plans for plots of usual size and shape, and the remaining articles will show how these plans may be applied to plots of any shape. So that by saving and using the whole series it will be possible for a man to almost automatically devise a plan to suit nearly any set of conditions.

Provision has been made for showrooms, accessory stores, shops and garages of different sizes so that choice is not restricted in this particular; therefore, almost any specifications may be satisfactorily filled.

The object of the series is not to dispense with the services of an architect, but rather to aid one in producing a plan which the dealer, garageman or repairman, as the case may be, will find satisfactory.

It must be borne in mind that to design a satisfactory building for automobile purposes a man must understand the automobile business, and an architect's knowledge is too limited to be of much use in determining the general layout, although his services are absolutely essential in drawing the details and in writing the specifications.

Most important of all, an architect, and a good one, is necessary to insure the production of an attractive building inside and out. Building fronts are included, however, in this series for those who do not care to be guided entirely by an architect's suggestions.

The principles used in the construction of these plans are all carefully explained in the series, "How to Plan a New Building," which started in the Sept. 12, 1917, issue of MOTOR WORLD, and it would be helpful, although not necessary, to read these articles over in connection with this new series.

Most of the plans are for complete dealer plants, consisting of showroom, accessory store, offices, repairshop and garage.

This does not mean, however, that the series is only of interest to dealers and not to garagemen, repairmen, or accessory storekeepers.

While the showroom layout may not be of use to the garageman and repairman, it should be kept in mind that every plan has a repairshop and garage layout, and these are of just as much importance to these men as the showroom to the dealer.

Separate accessory stores have been designed for the man who does not sell cars, but no showroom has been drawn without including an accessory store in it, inasmuch as every dealer, except perhaps in the larger cities, should have an accessory store.

None of the plans is particularly suitable for large city use, inasmuch as special treatment is usually required; furthermore, a plan of this sort generally does not offer any difficulties which an architect even of limited knowledge of the automobile business cannot satisfactorily meet.

Only one ramp is shown, and this is for a layout which is rather common. Ramps are usually preferable to elevators, but it is next to impossible to standardize a set of plans employing ramps. It is easy to locate an elevator, but the location of the ramp must be carefully fitted to the individual plan under consideration if most efficient results are to be obtained.

Before considering the standard plans it is desirable to explain that each plan is made up of three units: The showroom, garage, and repairshop, Figs. 1 and 2, and it is by combination of these units used in the standard plans that a design for a plot of any shape may be readily effected. Hence the importance of the unit idea.

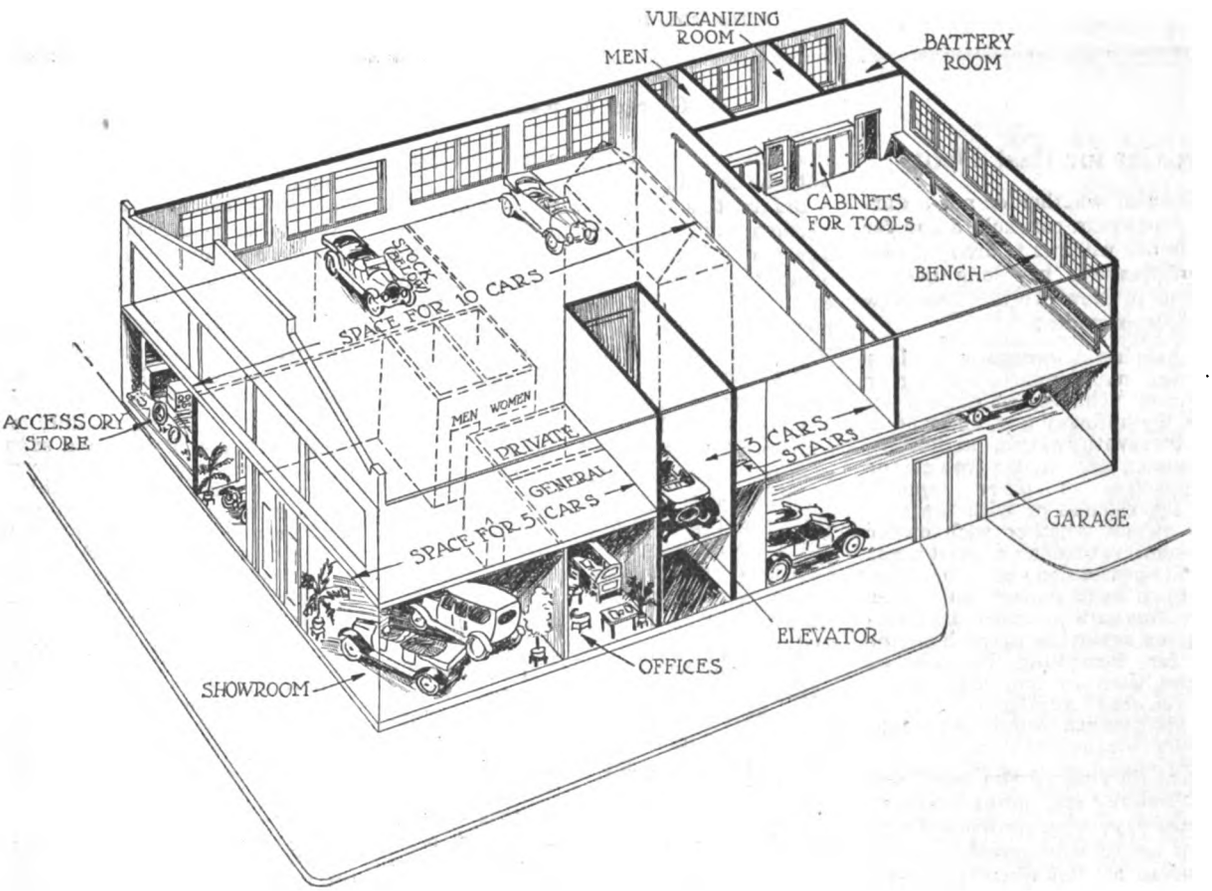
It is the purpose of MOTOR WORLD, in publishing this series of articles, to be of the greatest possible assistance to dealers, garagemen and repairmen in the arrangement of their buildings. We shall be happy to suggest layouts and to give constructive criticism on plans which have been prepared.

Those who write should be careful to furnish all the facts. For example, besides giving the dimensions of the proposed building there should be sent a rough sketch showing its location on the street with relation to other buildings, streets and alleys; also, the makes of cars handled, if any; whether a garage will be operated, whether repair work is to be done, and, if so, how extensive this department will be. We should also like to know whether it is the plan to sell accessories, and any other facts which would help to advise intelligently.

(To be continued)

The Unit Idea in Construction

1—*The showroom unit consists of showroom, accessory store, offices, rest room, accessory stockroom, etc.*



2—*The shop unit consists of the repairshop, including possible subdivisions, such as battery room, vulcanizing room, forge shop, machine-tool room, parts stockroom (unless combined with accessory stockroom), tool room, paint shop, etc.*

3—*The garage unit consists of garage, oil room, etc.*

How to Locate Departments

First Principles in Laying Out a Dealer Building

This perspective view shows a complete dealer-establishment laid out according to the unit idea explained on the opposite page. The accessory store occupies part of the front. Back of it is the stockroom and at the rear of the showroom are the offices and lavatories for men and women. Entrance to the elevator is direct from the street, and alongside it is the stairway. The shop is compactly arranged at the rear of the second floor

1 SHOWROOM 2 REPAIRSHOP
3 GARAGE

The upper sketch shows a one-story building, and the lower a two-story building. Each unit should be an oblong. In both cases, the showroom unit extends across the front of the building. It includes the accessory store, offices, etc. The shop unit occupies a block of space at the rear, having the advantage of good light from the rear windows

This is the first of a series of articles on garage construction. Save all the articles

THE LAW

As It Applies to Dealers, Garagemen, Repairmen

The editor of this department is glad to answer questions. In sending queries, always include copies of contracts, notes, etc., to which you refer

By George F. Kaiser

Lien on Car for Past Debts

The question of whether or not a garageman or repairman can hold a car for an old repair bill when it is brought into his place of business has long been a vexatious one in New York. The New York Lien Law provides:

A person keeping a garage or a place for the storage, maintenance, keeping or repair of motor vehicles, as defined by Article II of the highway law, and who in connection therewith stores, maintains, keeps or repairs any motor vehicle or furnishes gasoline or other supplies therefor at the request or with the consent of the owner, whether such owner be a conditional vendee or a mortgagor remaining in possession or otherwise, has a lien upon such motor vehicle for the sum due for such storing, maintaining, keeping or repairing of such motor vehicle or for furnishing gasoline or other supplies therefor and may detain such motor vehicle at any time it may be lawfully in his possession until such sum is paid.

Time and again dealers who have been unable to collect for storage or repair of motor vehicles have been confronted with the question as to whether they could hold a car of an old bill when the owner of it brought it into their place of business for further repairs. It has been sometimes contended that the dealer had the right to hold the car for the first bill and also for the second bill. On the other hand it has often been contended that the dealer's right of lien only extended to the amount due under the second bill. Unfortunately, up to this time the courts have never passed on this point and the New York statute which gives a lien to dealers has not been legally construed.

Those who contend if a motorist who owed a bill for work done several months ago brought his car to a garageman for further repairs that the garageman would have a lien for the old bill as well as the new, arrive at their decision because of the provision in the lien law which says: "A person keeping a garage, etc., has a lien upon such motor vehicle for the sum due and may retain such motor vehicle AT ANY TIME it may be lawfully in his possession, until such sum is paid."

They contend that the lien law is plain and that it gives a garageman a lien any time the car is lawfully in his possession until he is paid.

Before this statute was enacted, garagemen had a common law lien for storage and repairs, but that lien was lost where the owner was allowed to take the car out. Thus, before the present enactment, garagemen had practically no lien where cars were kept on live storage. It was to remedy this that the law set out above was passed.

Those who claim that under the circumstances outlined above the garageman has a lien only for the new bill say that, although it is true that the law provides a garageman has a lien on a car at any time he may be lawfully in possession of it, this means before the transaction is concluded, that is, during the time a motorist keeps his car in a garage and that the garageman's lien attaches every night that he brings it back to the garage even though he may take it out every day. When the car is finally voluntarily given up by the garageman, however, the transaction is ended and the lien is waived.

Those who uphold the latter view allege that when a lien is once waived it is waived forever and they say that where a car is voluntarily surrendered the provision of the law that a garageman may have a lien at any time a car is in his possession does not apply, because it relates only to a case where the dealings between the owner and garagemen are not terminated.

Examine Your Income Report

Every business man who filed his income tax return on or before April 1 should now examine the copy which he kept to see if everything is correct. Those men who made out their returns in a hurry at the last moment should not fail to do this. Where the return was made out under the supervision of an accountant, bookkeeper or lawyer, it would be a good idea to have the return reviewed by some person other than the one under whose supervision it was made out.

Oftentimes when this is done mistakes will be found which can be more easily corrected now than if they are not discovered until a later date.

The income tax law provides remedies both for those who are assessed a greater amount of tax than they think they should be assessed and for those who pay too large a sum in mistake. Form 46 should be used where there is a claim for refund, that is where too great a sum has been paid. Form 47 should be used where too great a sum is assessed and where the person filing the return thinks that a smaller sum should have been assessed. Form 46 follows:

This deponent being duly sworn according to law deposes and says that the facts stated below with reference to the claim are true and complete:

1. Business engaged in by claimant.....
2. Character of assessment or tax..... (State for or upon what the tax was assessed or the stamps affixed.)
3. Amount of assessment or stamps....
4. Amount now asked to be refunded.. ..... $.....
5. Date of payment of assessment or purchase of stamps.....

Deponent verily believes that the amount stated in Item 4 should be refunded and claimant now asks and demands refund of said amount for the following reasons:

.....

.....

And this deponent further alleges that the said claimant is not indebted to the United States in any amount whatever, and that no claim has heretofore been presented, except as stated herein, for the refunding of the whole or any part of the amount stated in Item 3.

Form 47 Provides:

This deponent being duly sworn according to law, deposes and says that this claim is made on behalf of the claimant named above, and that the facts stated below with reference to said claim are true and complete:

1. Business engaged in by claimant.....
2. Character of assessment or tax.....
3. Amount of assessment.....
4. Amount now asked to be abated.$....

Deponent verily believes that the amount stated in Item 4 should be abated, and claimant now asks and demands abatement of said amount for the following reasons:

.....

.....

Where a tax payer discovers that a mistake has been made in his return he should prepare a new return and file it with a notation to the effect that it is an amended return.

The High Cost of Dealer Turnover

> Every time a manufacturer changes a dealer it costs the manufacturer money. Permanency of dealership is something that is going to be thought of in the future more than it has been thought of in the past.—H. C. Lower.

FOR the past several years the scientists of industry have been studying the question of labor turnover. They have busied their brains with what it costs the business if for a payroll of 1000 men 500 new ones have to be hired every year.

Henry Ford's experts have worked it out to a fine basis. Learned men talk of so-much-per-head and all of that, but, says H. C. Lower, who manages the Goodyear sales in Canada, with headquarters in Toronto, "few people seem to have figured on the high cost of turnover in dealers."

That it costs a manufacturer money if his dealer turnover is big is asserted by Lower, who has been studying the matter for some time. He says manufacturers should aim at permanency of dealers, because, he states, the constant change in agencies is nothing but one way of piling up the cost of selling cars.

Part of the Business

"The permanent dealer," says Lower, "is a part of the business. The manufacturer gets to know the dealer and the dealer learns to know the manufacturer. Each has confidence in the other. The period of adjustment is soon passed and the two get along well together.

"The manufacturer may help build the dealer up and make a good business man of him. This helps make the dealer a permanent institution in his own town and this permanency is reflected upon the product that the dealer sells.

"The dealer can be made a good accountant and business man. He will keep books. From these books the manufacturer can accurately determine what profit there is in retailing his goods. From these figures he is able to determine whether the discount on the goods is sufficient.

"Furthermore, permanency of dealers decreases the manufacturer's selling expense. His salesmen do not have to spend so much time selling the merchandise to the dealer. Bigger bills of goods can be sold and at a less cost.

Helps Distribution

"With permanency of dealers the manufacturer can effect a restriction of distribution. By this I mean that the manufacturer can sell a big volume of goods to a small number of dealers because the dealers will build an ever-increasing business. On the other hand, if the dealers are constantly changing their sales do not reach a maximum and the manufacturer has to carry more dealer accounts on his books to sell an equal volume of goods. Also, each dealer will make more money, which, in turn, builds the permanency element still more strongly.

"Permanency of dealerships tends to establish a headquarters for the purchaser when he has a preference for a certain article. For instance, if a customer likes Goodyear tires he is more likely to keep on buying Goodyear tires if he always finds them sold by the same dealer. The same applies to cars. If the public learns that the headquarters for a certain car are in a certain location and if the sign over the door is impressed upon him by having seen it many times the customer is more likely to buy that car than if the agency were constantly changing hands. The local standing of the permanent agency is highly important.

"In car selling, if a dealer jumps from one line to another he may carry over to the new line some damaging prejudices he acquired while he was competing with that line. This may injure the sales of the manufacturer of that particular car, even though the damage may not be such that it can be traced to its last ramification and set down on paper.

Car Owners Like Permanency

"A car owner hates to take a car into a repairshop, for sometimes when he comes out his trouble has only begun. If a dealer represents the same car year after year he becomes acquainted with all its little idiosyncrasies (sic) and can often take some little kink out of it by a small adjustment, whereas, where he is new to the line, he might run up a big bill on the owner and create a lot of ill-will.

"If dealers are premanent it relieves the manufacturer of the constantly growing burden of educational work. For instance, a tire dealer may learn that his tire should carry a certain pressure for a certain size and load. Or he may learn that the misalignment of front wheels causes trouble.

"If the dealer changes the manufacturer has to go all through this educational work again.

"More important still in educational work is the education of the dealer to the point where he will educate his customers. The dealer who has acquired the habit of teaching his customers what they should know is a valuable dealer, and if a new dealer is acquired a big asset is lost.

"If customers are not taught all the many little things they should know about the goods the manufacturer and dealer are both damaged, for the customer may hold ill-will against the goods merely because of some little thing he didn't know about them.

Feel Themselves Part of Organization

"Permanent dealers also come to feel themselves a part of the organization. They get into the habit of fitting in. They answer letters. They assent to factory requests. If the factory wants data on a certain subject it can write to the dealer with the assurance that an intelligent opinion and answer will be forthcoming.

"There has been a lot of dealer change in the whole motor car and accessory trade during recent years. It has caused a lot of comment and some dissatisfaction. It is a subject to which the manufacturers, especially of accessories, are going to pay considerable attention to during the next few years. In 'the States' our own company no longer issues a new contract every year. It merely mails out a renewal blank, the return of which, signed, constitutes a renewal of the contract."

Toledo Offers Automobile Courses

TOLEDO, April 12—The Toledo University is now offering courses in gasoline engine and automobile work. One of the motives of the university is to supply the industrial need at home which has been created by the large number of men taken for war work.

The university is ready to give to men who have had some experience in gasoline engines and automobiles instruction in engine repairing, efficient battery, self starters and generator work, tire repairing and oxyacetylene welding. The instruction is given in short units. The university has good equipment and instructors.

The educational plan is utilized from 7:30 a. m. until 10 p. m., and a large number of students are desired so that the plan is to be kept busy. It is possible for students to take instruction at odd hours to their convenience. The course is just beginning.

Salesman vs. Order-taker

AN EDITORIAL

By C. R. Pierson, Salineville, Ohio

EDITOR MOTOR WORLD: You are certainly doing more than the average in spreading "Optimism" throughout the automotive industry. It seems that each new number of MOTOR WORLD is better than the last one. If there were just one person in each garage, salesroom, repairshop and accessory store reading MOTOR WORLD and spreading the information, we would hear considerably less pessimistic chatter.

We are doing what we can here to combat all pessimism and scatter all gloom. We are driving through all cars we can get. We are sold up into April and still hustling for more sales.

We are preparing for the biggest summer business we have ever had.

We have the entire county for a medium-priced truck and have a chassis coming which we expect to demonstrate through all our territory. We also handle the Ford truck in immediate territory and are sold out till summer.

We have an agency for a tractor, but cannot get any—have had numberless inquiries about them from our country trade. We will sell all we can get.

Now for a dig at some of the so-called salesmen.

What Constitutes a Salesman?

What constitutes a salesman?

After reading the series of articles on salesmanship which have been published in MOTOR WORLD, one would not expect to find such a lack of ability along this line as I found on a recent trip to Cleveland.

I spent a whole day at the automobile show, in hotel lobbies and salesrooms, looking over new models. It was a tour of inspection and education which I make annually. During the coming year I will be asked by many prospects for my advice on all makes from the "Hunk-o-Tin" to the "Palace on Wheels." It has been my aim to be so well posted that my advice is considered valuable.

In most instances I was courteously treated and given the information which I desired. The one exception is the cause for this article.

This particular car is equipped with a motor which has been thoroughly tested for several years in racing cars. It is small, compact, very accessible and very powerful. I had been asked about this motor so many times that I particularly desired to examine it.

As it was not exhibited at the show I spent much time locating it. When I finally found it the *salesman* (?) in charge treated me as though I were a Boche. I asked to see the car, and inquired if it had the D—— motor. He answered that he did not know and turned away indifferently. I felt like turning Everett True loose upon him. The poor, ignorant chump was a disgrace to the word salesman.

Lack of Common Sense

I wonder what the management of that agency meant by having such a brainless nonentity in charge of their exhibit? The name of that car will be odious to me forever, because of the association.

From all I have read regarding this motor which I wished to see, it is the best one yet. And from my present outlook I can afford a car of that price by next year. But I'll never buy a B——. I'll wait till some other manufacturer adopts this particular motor. And I'll never be able to recommend the B—— car to any prospective purchaser.

Accessory salesman, know your goods.

Along this line I wish to call attention to many of the accessory salesmen. Among the many who call at our garage just one knows *his* goods and *our* needs. He knows the width and thickness of brake-lining for every make and model of car, also the length it takes for outside and inside linings. He knows the weight hammer best suited to our needs, etc. He is a *salesman*—the rest are mere order-takers.

Now! Why do jobbers send out order-takers? There are many mechanics who could double the business of these order-takers in six months. My idea of real accessory selling is—

First—Know your own goods.

Second—Know what the garage man needs.

Third and last—Show him his needs, and then *sell him* intelligently.

Optimistically yours,

C. R. PIERSON,
Foreman Hart Motor Co.

Salineville, Ohio.

"Over the Top" in Business

"The man at home must go over the top just as truly as the man in the trenches.

"There are as many business slackers as there are war slackers—and it takes as much courage to stay at home and fight business battles as it does to go to the trenches and fight the Hun, and both are essential."

HERE are two statements made by Guy W. Ellis, sales manager of the L. J. Robinson Co., Maxwell and Chalmers distributer, Detroit, in an address to the Detroit Adcraft Club:

Along in the summer sales began to drop off—as they did with everybody. The people living in the $25,000 homes, formerly the best purchasers, began to feel the effects of decreased stock values. Their money became tied up, and they decided to make the old car do. The well-to-do young man had doubts as to the future, and did not care to invest his money in a car. But the L. J. Robinson Co. knew that there were several classes that were getting money from the new conditions, where they had no money before, and here is how it found who those people were.

The city was divided into districts and each salesman given a part to cover, house to house. At each they were to ask:

Getting Real Dope

1. Whether a car was owned or not.
2. If so, what car was owned.
3. The nature of the business the person was engaged in.

And here is what they found:

That on Michigan Avenue, one of the busiest streets in the city, in the residence section, out of 250 numbers, two sedans and one used car were owned. And in another section, out of ten dealers in second hand clothes, etc., nine owned cars, and every one of these cost over $1,000. It was found that a drug store proprietor was absolutely removed from the prospect list, unless controlling several chain stores or employing clerks. The druggist's hours are too long to permit him to have a car, and it is of little use to him in his business.

Having determined the people that were purchasing automobiles, the next problem was to reach them and sell them a Chalmers or Maxwell. The machinist and the small retailer are not of the type that comes to the salesroom to buy a car. These are divided in two class—the one that can afford a car now, and could not last year, and those that could afford a car last year and didn't buy one. Industrial prosperity, etc., has brought them in surplus cash, and though still living in the same quarters as formerly, and with about the same living expenses, are now willing to buy a car.

It was found that people of this class were constant readers of the newspaper advertisements, and in their conversation with the visiting salesman "talked like the ad." Hence, it was found necessary to make every salesman familiar with all the advertisements published, so they too could talk like the advertisements.

Keep on Advertising

And here is an important point. The first place that many dealers cut down is in their newspaper advertising, and in this they lose their point of contact with many prospects. Newspaper advertising of itself tends to build up confidence and good will, and while the returns can not be measured, the decrease in sales resistence merits the investment.

In closing Ellis said: "If business goes to Hell, go to Hell and get business." This means more intense work, but there is less competition, and the dealer that survives is stronger than ever before.

Here is the result of one or two canvasses which will give some of the information obtained on a secondary business street in an outlying district. Altogether 102 new calls were made on retail merchants, and on all of these two more return calls were made on the first call (by "call" is meant only where a salesman secured an interview); out of this number four very live prospects were secured and eleven possible prospects, which were followed up. Three sales have resulted so far and two more are likely in the near future.

Locating Car Owners

In this particular canvass definite information was secured as to the percentage of automobile owners and the price class predominating in the various trades. A partial list follows, showing what makes of cars were the most popular in the different price classes:

Business	Percentage of Owners	Price Class Predominating
Bakers	15	Low
Butchers	90	Medium and low
Confectioners	1	Low
Dentists	80	Medium
Doctors	85	Medium
Hardware	95	Medium
Milliners	5	Medium
Tinsmiths	100	Medium and low
Undertakers	100	Medium and low

Another canvass in an entirely different section of the city, but also in an outlying business street, resulted as follows:

Number of calls	89
Very live prospects	3
Possible prospects	28
Result of canvass in sales with several more still on the fire.	3

Percentage of classified owners and price class predominating:

Business	Percentage of Owners	Price Class Predominating		
		High	Medium	Low
Bakers	37	0	12	25
Butchers	55	0	18	37
Confectioners	15	0	0	15
Dentists	33	0	0	33

Plumbers	0	0	0	0
Paper hangers	50	0	50	0
Saloon keepers	43	0	28	15
Shoes	50	0	50	0
Tailors	0	0	0	0
Undertakers	100	34	33	33
Gents' furnishings	33	0	33	0

Another canvass of an outlying business street does not show as complete records. Two hundred and fifty street numbers were canvassed. (This does not mean 250 calls.) This canvass resulted as follows:

Number of Sales	Kind	Price
2	Sedans	$1,850 each
1	7-passenger special	1,500 each

These sales were directly responsible for two additional sales a little later.

Another canvass which was very interesting was conducted by a comparatively new man in the automobile business—a young fellow 20 years old who had had no previous selling experience. After a week or 10 days' schooling he was sent up into Hamtramck, north of the railroad, to canvass a business street. He worked only 3 weeks before enlisting in the navy, but the result of those three weeks' canvass was three sales closed and two more which are very likely.

Receiver's Sale of Ross Motor Car

CHICAGO, April 13—The entire stock and equipment of the Ross Motor Car Co., Detroit, has been ordered sold May 14, by B. F. Evers, receiver. The inventory value is given as $150,000, and the sale will be conducted in Detroit by Samuel L. Winternitz & Co., Chicago auctioneers.

Editorial Observation

Drive-Away Possibilities

IT is said that last year the motor cars of this country carried more passengers than the railroads. At that, there probably was a lot of motor car capacity that wasn't used.

This year there is a great deal of motor car capacity that isn't being used, and it opens a wide field for thought. First thing you know a big idea is going to flash out of the sky and the world will be still further startled at what an important element the gasoline vehicle is in national life.

One point is this: Daily there are being driven from the motor car factories great trains of motor cars. They go to points near and far, from Detroit to Chicago, Cincinnati, St. Louis, Kansas City and San Antonio. The distance is being extended daily.

These cars generally carry the driver and that is about all. Therefore, here is a big carrying capacity going to waste. What can be done to use it?

Let us first ask: What is there going in these directions that needs to be carried?

There are passengers and freight. Passengers perhaps would not care to make excessively long trips by motor car, but for certain distances and especially during the summer months, and depending on the speed the passenger wished to make, there are trips on which these cars could carry passengers.

There are also parts, tires and accessories going out from the Central West area to distributing points. For instance, the Overland and the Akron tire factories are not far apart. Running to Akron for tires, or having Akron deliver the tires to the drive-away man in Toledo, or in Detroit for that matter, would not be difficult.

These cars could then carry parts, tires and similar products to the final destination or to intermediate points. There would be some systematizing and planning necessary to get the thing in working order, but it could be done. It would relieve the railroads of freight, would insure delivery of the merchandise and should make the goods cheaper to the dealer, provided the freight is now figured as part of his cost.

Right away some drivers will have visions of an armful of tires jolting around and ruining the tonneau of a new car. If looosely put in, that might happen, but, as we said before, there would be some planning needed and this applies to both passengers and freight.

Perhaps there is some article that could not be advantageously carried. There are many points to be worked out, but a standard crating that would fit the floor of a tonneau and cost little should be easy to make.

Perhaps some dealer could buy trailers in the manufacturing centers, hitch them to his new cars and draw goods overland that way. Selling trailers is something dealers should be looking into anyway.

It is not to be understood from what is said here that every dealer who drives cars from the factory should forthwith rush headlong into the matter to the damage of his cars and himself. But he should seriously consider the subject. He should consider if there are ways in which the unused capacity of these cars can be utilized to some purpose.

Maybe a central bureau operated in Detroit may some day be an actuality, with an office staff and a multitude of tasks performed annually.

Once some one points the way the rest will gladly follow. It is something to think about.

The National Automobile Dealers' Association

THE National Automobile Dealers' Association, which was formed about a year ago in a more or less troubled atmosphere, seems to have gotten away to a good start with possibilities of becoming the trade factor of which every one has been dreaming for many years.

There have been associations and associations and funerals and funerals. The number of funerals has generally depended upon the number of associations formed.

No one had much enthusiasm in the weeks immediately following the formation of the new National last summer. There were hopes—but reduced to paper and actual facts they didn't make a very imposing array.

Within the last few months, however, the National has begun to make progress. It has taken in members. It has grasped various situations in a manful way and done a few things. It has been working instead of wishing.

A great deal of the result has been due to one factor—the association's president—who has done a lot of work. After all association success has been analyzed it generally simmers down to the single fact that somebody did a lot of work.

President Vesper has attended many meetings, sometimes traveling hundreds of miles for the privilege of making a 20-minute speech, and has given a lot of time to the job. If he receives the co-operation that his effort warrants the trade should acquire the organization it has needed for so long but never had.

Letters from Readers

THIS page is for the use of MOTOR WORLD readers with something to say. Letters on subjects of interest to dealers, garagemen, repairmen and jobbers are always welcome.—EDITOR.

Brewer Stages a Car Show

Editor Motor World: We had a very pleasant evening last night, and conducted what is known as Brewer's Automobile Show and Reception. First of all, we had a big parade of cars sold by the Brewer Motor Car Company, and were able to get fifty-five cars in line. The line of march led over the principal streets of Spokane, and we first loaded a good band of union musicians on a large truck, which made things more interesting.

During the evening we gave a continuous band concert, and had the following displays: The new Aero-8 Cole, the Cole 8 touring car, the Cole 8 roadster special, the Saxon Six touring car, Saxon Six touring car special, Saxon Six chummy roadster, Saxon Six Sedan, Westcott Six 1918 model seven passenger touring car, the Cole Eight Toursedan, Indiana truck, Truxtun truck attachment,

The Goodyear people put on a "Conservation Evening," giving lectures on tire conservation, and a nice display. The B. F. Goodrich Company gave away road maps and souvenirs. We also had a large display of accessories.

One of the main features of the evening was five different kegs labeled as different oils, from which cider was drawn and given to the crowd. This seemed to make quite a hit, although there was very little kick in it. The cider went over a counter, known as "Brewer's Bar."

This Automobile Show and Reception was our second annual affair, and was well attended. We expect to make it an annual affair, and look forward to it always with pleasure. Our place was very well decorated, both inside and out, flags of our nation and the Allies predominating. Also our floral decorations were very profuse.

I think this idea is a splendid one, and can say from experience that it works out. Particularly the parade feature is to be desired, because it gives the community an idea that there is something doing.

In order to get our owners interested in the parade, we present them either with a set of pennants, a watch fob or something similar, for their participation in the parade. Another thing, many of our owners are very, very loyal and they do this little thing for us largely on account of the good feeling they bear toward the Brewer Motor Car Company.

On the 18th of April I start a series of six lectures on automobile construction and care, giving one every Thursday evening. The class will be limited to 100 members, and a large number have already enrolled for the course. I find this another very good advertising feature. The lectures will be given at the garage.—C. P. Brewer, President Brewer Motor Car Company, Spokane.

Has Orders for 3500—Not 220—Cars

Editor Motor World: In your March 27 issue, on page 52, you quote our company as having orders on hand for 220 of our new cars. We wish to correct this statement by advising that we have signed orders on hand for 3500 of our new six cylinder cars, our output at the present time being 20 cars per day. This will, however, be increased within the next two weeks to between 30 and 40 cars per day.

We are continuing to manufacture the four cylinder roadster, but with many improvements over last year's model. We are also continuing to manufacture the eight cylinder, four-passenger car and eight cylinder chummy.—Scripps-Booth Corp., Detroit.

"Could Not Do Without It"

Editor Motor World: I have been a very attentive reader of your paper for about 2 years and find that I could not do without it and run a garage.

I wish to express my appreciation of your journal in the page of "What Others Think" by telling of some of the things it has done for me and will do for others if they will try it as I have done.

Running a garage successfully is an art and a person must be up-to-date or there can be no success.

In reading the columns of The World you will find many ideas and plans which will benefit all of us if we use them.

The best that I have gotten from your journal was system, I also have adopted "Cash Only." I sent my customers notices and used the same as was printed in early issue; it works fine. I would not go back to the credit system again.

I believe that the sooner the garages get on the cash basis the better it will be for them and for their customers. I believe that goods can be sold cheaper and that anyone successful in crediting can be more successful by doing a strictly cash business.—E. C. Dafforn, Zenda, Kansas.

Good Idea

Editor Motor World: War work is calling so heavily for automobile repairmen and mechanics that the shortage of this kind of help is going to cause quite a problem, and I believe that if your publication could start a campaign that would tend to produce more repairmen and mechanics it would be doing the trade a great deal of good.

In a great many towns there are automobile schools. In our Toledo University we have an automobile class, and I think this is going to be a mighty good thing. I believe you will agree with me that something must be done in the way of replacing the repairmen who go to the front. The Government is making organized efforts to get the men, and the trade ought to make organized efforts to replace them. What would you think of starting a campaign along that line?—Stanley Roberts.

Tractors Run on Kerosene

Editor Motor World: In the Motor World of Feb. 20 appeared an article in regard to fuel for tractors, stating that there is no tractor built that will run long on kerosene.

I have an 8-16 Avery, only used two weeks. After reading said article, I wrote to the Avery company, asking them what experience they had had with kerosene, and how long some of their tractors have been run on kerosene; also told them I'd rather pay the difference in gasoline and kerosene if they thought the latter would harm the motor.

I am enclosing their answer, hoping

JUST 7 DAYS MORE AND THEN

The Summer Merchandising Number of Motor World will be here.

It will be just what its name indicates.

It will contain a lot of ideas for getting summer business.

It will discuss our NEW business conditions.

It will tell you a lot of things you'll be glad to know. Watch for It!

Order your extra copies NOW.

Digitized by Google

to hear from you what you think about burning kerosene in an Avery 8-16; also state whether you think it necessary to have an air filterer on the hot air pipe on the Avery.—Alfred Klein, Lomira, Wis.

Mr. Alfred D. Klein, Lomira, Wis.

We are in receipt of your favor of the 4th, and, without referring particularly to other makes of tractors, will say that we know of no reason at this time why our 8-16 tractor using kerosene will not prove as durable as used with any other fuel.

The main reason why many other makes of tractors cannot use kerosene successfully is because they cannot burn all the fuel. Kerosene is much heavier than gasoline and a certain proportion of the fuel is apt to pass into the cylinders without being vaporized.

This works by the piston rings into the crank case, has a tendency to thin the lubricating oil and, of course, the lubricating oil in that condition will not answer the purpose for which it is being used, as it does not possess lubricating qualities when mixed with kerosene that it does when used as pure oil. The result is the cutting out of the cylinder and piston rings.

The tractor that you have, however, is equipped with what we call a gasifier. The fuel is thoroughly vaporized before going into the cylinder and is burned completely. This is clearly shown by the fact that there is scarcely any smoke from the smoke stack.

Quite naturally, a company building a tractor that cannot burn kerosene successfully and in which the burning of kerosene is apt to result in damage to cylinders and rings will try and present some argument as to why some other fuel should be used, but if they will equip their tractor for burning kerosene properly, the objections they make cannot be sustained. You need have no fears whatever in regard to burning kerosene in your tractor.—Avery Co., Peoria, Ill.

Accessory Jobbers' Show

Editor Motor World: Regarding the proposed accessory show to be held in the fall by the National Association of Automobile Accessory Jobbers, we ourselves are extremely glad that this proposition has come to a head, very largely on account of the fact that we are seriously handicapped at the present time by refusal of manufacturers to prepare their proposition for the jobber until the time of the New York and Chicago shows. Having to wait for this information makes our spring catalogs very late, particularly under present conditions.

Much business is therefore lost both for us and the manufacturers, as dealers put off ordering until the new catalogs come out.

By getting our information in October or November, we shall be able to get our catalogs out in January and February instead of April and May. We are heartily in favor of the project.—The Canadian Fairbanks Morse Co., Ltd., A. J. Hopkins, General Head, Accessory Dept.

Philadelphia Garagemen Plan Atlantic City Trip

Will Go in July—This Outing to Be Annual Affair for Garage Association

PHILADELPHIA, April 12—The Philadelphia Garage Association is looking forward to the big motor car run it is intended to make to Atlantic City in July. It will be the first event of the kind in the organization's history and it is planned to make this outing an annual affair. Each car will be decorated with appropriate banners and streamers announcing the identity of the organization, and headquarters for the event probably will be at one of the big beach-front hotels.

Another matter occupying the attention of the garage owners is that of the increasing number of elaborate service stations erected by the large oil companies. A rapidly increasing number of these is being built at great expense and they are well advertised. This, it is claimed by the garage owners, is equivalent to allowing the garagemen to act as salesmen for the oil concerns, which promptly, in effect, bids against them with all its might in these service stations, which sell at the same figure as the garagemen. Here, again, it is felt some concession should be made to the garage owners. At present, it is claimed, there is no profit in handling oil and gasoline in Philadelphia on that basis.

Labor is high in this city, and 60 cents an hour is demanded by repairmen, who are scarce, owing to the demand at the shipyards and munition plants along the Delaware and at Hog Island.

The Philadelphia Garage Association is considering making the Hotel Adelphia its permanent headquarters, instead of its present hall at 2156 North Broad Street. The subject probably will be brought up at the next meeting.

An Enterprising Car Show

Editor Motor World: We have just had an automobile show as an opening for our new garage. It was such a success I am passing a sample of our advertising along to you.

[This event was well advertised and was the best sort of a success, as the letter from Maudlin shows].

There were 446 people registered and looked over our salesroom on our opening day and we had about 800 at our show in the evening, all the hall would hold.

One ticket was good for a family or anyone they wished to bring with them. —Maudlin Motor Co., By Bert Maudlin.

Navy Has 80 Liberty Planes

WASHINGTON, April 12—Announcement has been made here that the Navy Department now has more than 80 airplanes equipped with Liberty engines, and that a large number of the Liberty engines have already been shipped to Great Britain and France. It was also announced that an airplane equipped with a Liberty engine recently attained a height of 21,500 ft., thereby breaking previous records. Announcement was made that General Pershing now has well over 100 combat airplanes in his organization.

Tests of Non-Shatterable Glass

WASHINGTON, April 12—Tests have been made by the Bureau of Standards on two types of non-shatterable glass intended to protect the eyes from splinters when accidents occur which fracture the glass used in spectacles, aviators' goggles, face masks, windshields, etc. One of the glasses tested, designated the A type, has one side covered with a layer of celluloid, while the other, the B type, has a layer of celluloid sandwiched between two layers of glass.

Comparative values of the dynamic strength and shatterability of the glasses were obtained by subjecting the glasses to sudden shock or impact either by dropping a steel ball on the glasses or by shooting a bullet at them. Concerning the B type, which is the glass known as Resistal, made by Straus & Buegeleisen of New York, the report says that when subjected to the dropping steel ball test, in general it lost no splinters from the rear side until the front was completely shattered and the steel ball struck the intervening layer of celluloid. When a 30-caliber bullet was fired at the glass from a distance of 25 yd., with a muzzle velocity of 2700 ft. p.s., it made a clean-cut hole and produced numerous irregular cracks in each of the sheets of glass separated by the celluloid. These cracks were confined to a circular area of about 2 in. radius, and the remainder of the 4 by 10-in. plate was firmly held against rubber strips on a target. All the glass except a small area immediately around the bullet hole was firmly held by the celluloid.

Montreal Considers Continuing

MONTREAL, April 12—A very important meeting of the Automobile and Allied Traders of the Island of Montreal is being called at an early date by the directors of the Montreal Automobile Trade Association for the purpose of considering the future policy of the association.

Although it was practically decided at the annual meeting to suspend active operations until after the war on account of there being little possibility of the annual motor show being held in January, 1919, it is felt by a large number of members that it would be very bad business policy to close down, and in view of this feeling the association's offices are being kept open and the executive staff fulfilling their duties as usual.

Women in Garages

WILMINGTON, DEL., April 12—Because of the scarcity of male help, some of the smaller garages in Wilmington are employing women to help out.

Try This in Your Own Shop

DES MOINES, April 12—The Sears Auto Co. believes the daylight saving law was made for the benefit of the food producer, and to back up this patriotic move Manager C. O. Hart has planned an elaborate gardening contest for his employees.

A prize of $25 will be given for the best garden which is produced by June 1. The gardens are to be judged on five different points: 1—Percentage of ground used; 2—general appearance; 3—practicability; 4—general condition of the plants themselves, and 5—the assortment.

The employees by the rules of the contest must receive help from only one person in his immediate family, outside of the work entailed in plowing the ground.

In case employees do not have funds to purchase the seed Hart will furnish it, and will reimburse himself by paying market prices for the vegetables when they are ready for the market.

The contest is meeting a ready response and a spirited friendly rivalry is being shown.

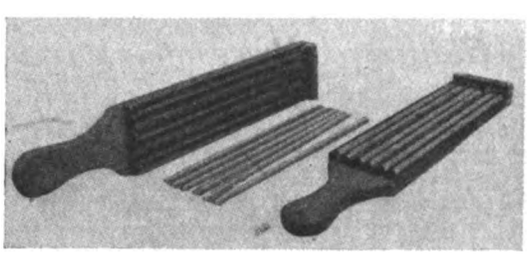
Accessories

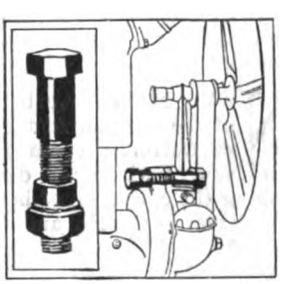
REVOLVING AMERICAN FLAG

This is a radiator ornament, making use of an optical illusion so that the appearance is one of a full size flag unfurled, whether viewed from front, back or sides. The breeze causes the device to rotate. Constructed of sheet steel with metal stem revolving in tube on ball bearing. A holder to fasten to radiator cap is furnished, and when soiled the ornament can be cleaned. Price $1.—Reliable Safe & Lock Co., Inc., Covington, Ky.

GEMCO TIRE DISPLAY STAND



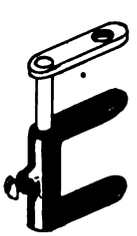
A black enameled and inexpensive stand holds tires in position in window displays. The two brackets which comprise the stand are hinged together, forming the jaws for holding the tire, allowing tires from 3 to 6 in. to be held. Weight 5½ lbs. Price $2.30, subject to dealer's discount.—Gemco Mfg. Co., Milwaukee.



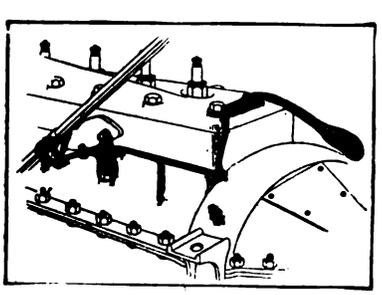
COMBINATION FORD DEVICE

"Hold 'Em in the Road" is a combination radius rod brace, anti-rattler, axle support and steering device for Fords. It stiffens the front radius rod by acting as a third member, the spring tension prevents the tie rods from rattling and the spring tends to keep the wheels straight.—Cooper Auto Supply Co., Thomasville, Ga.

PEERS BURNING LEAD MOLD



This device is used for saving lead from post drillings, old connecting straps and old plates and turning the metal into new burning lead. The molds are of sheet iron held in wooden handles which are protected by asbestos. There are six grooves and the bars turned out are 15 in. long, 5/16 in. thick, ⅜ in. wide at the top and ¼ in. wide at the bottom. Shipping weight 5 lbs. Price $2.25 per pair.—American Bureau of Engineering, Inc., 1018½ South Wabash Avenue, Chicago.

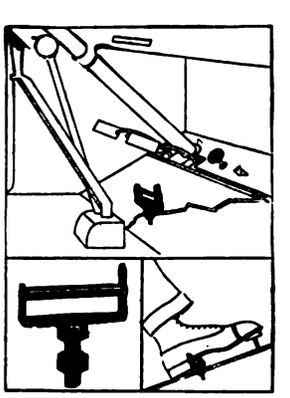


HUMBOLDT FAN BELT GUIDE

A device to keep a Ford fan belt in line with the pulleys. Attaches to bolt on front cover of engine and is adjustable by means of a set screw. Packed in standard cartons containing fifty pieces. Price 20 cents.—Humboldt Machine & Stamping Co., Long Island City, N. Y.

HUMBOLDT ADJUSTABLE FAN BOLT

A Ford fan bolt which consists of a special extra long bolt, lock nut, washer and bushing which fits in the place of the bolt regularly furnished with the Ford. It can be tightened as required, and is easily installed with the use of a wrench, no drilling being necessary. Packed in crates containing fifty sets, each set in an individual box. Price 50 cents.—Humboldt Machine & Stamping Co., Long Island City, N. Y.

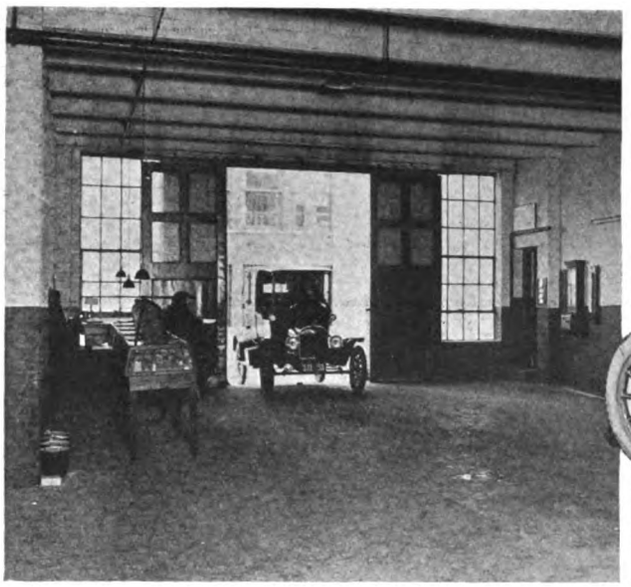


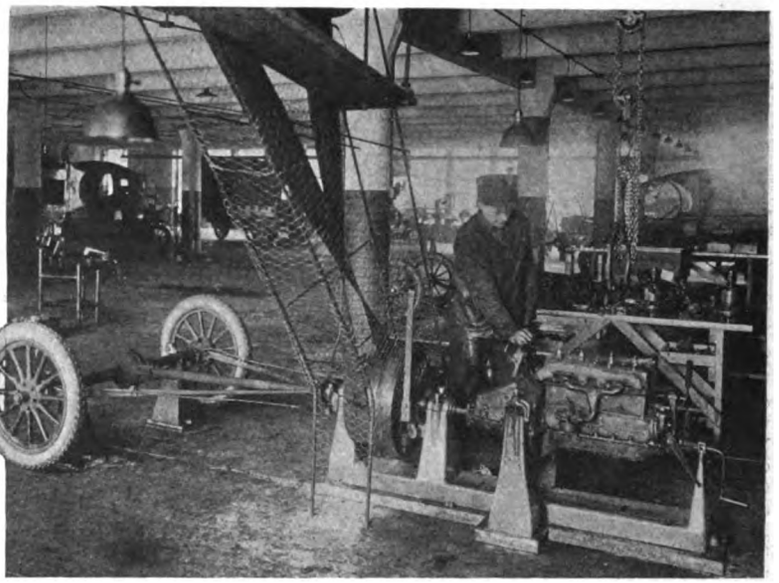
HUMBOLDT FOOT ACCELERATOR

A simple and easily attached foot accelerator for Fords. Can be quickly installed and floorboards can be removed without disturbing it. Does not interfere with the hand throttle. Price $1.—Humboldt Machine & Stamping Co., Long Island City, N. Y.

HUMBOLDT HEEL REST

A device to rest the heel when operating the foot throttle. Can be applied to any car by drilling a ½-in. hole in the floorboard. Made of cold-rolled steel, nickel finish, and packed in crates containing 25 pieces, each packed in an individual box. Price 75 cents.—Humboldt Machine & Stamping Co., Long Island City, N. Y.





HOBART 2-KW. CHARGER

In the description of the 2-kw. 32 battery capacity charging outfit manufactured by Hobart Brothers Co., Troy, O., which appeared in the March 13 issue of Motor World, the price was given as $175. This, however, is the price of the ½-kw. outfit, the 2-kw. outfit selling for $57 cash and ten monthly payments of $30 each.

Ford Methods Make Money for Dealer

Hollander Motors, Ltd., Imitates Its Daddy in Detroit and Has Standard Prices for Parts and Jobs

NEW YORK, April 17—Imitation of the methods of the Ford factory at Detroit are making money for one New York Ford dealer and are making the operation of business smooth. The dealer is the Hollander Motors, Ltd., and the methods are used mostly in the service station at 438 West 55th Street, a six-story fireproof building.

The station is one of "one-man-jobs." All of the shop employees are former Ford men, that is, they have previously worked either at the Detroit factory or at the assembling plant in Long Island City. Each man is an expert in the handling of all parts of Ford cars.

It is possible that a car coming to the service station for a complete overhaul passes through the hands of seven or eight men in the course of the completion of the work. A minor repair may call for the services of two or three men. Where it is necessary there are "rear axle" men, "front axle" men, "transmission" men, "motor" men, "motor testing" men, etc., each assigned to special work.

In this connection there is a distinction between "motor" and "motor testing" men, the former being experts on tearing down and assembling the Ford engine, while to the "motor testing" men get the jobs of putting the engines through their final paces before O.K.ing them.

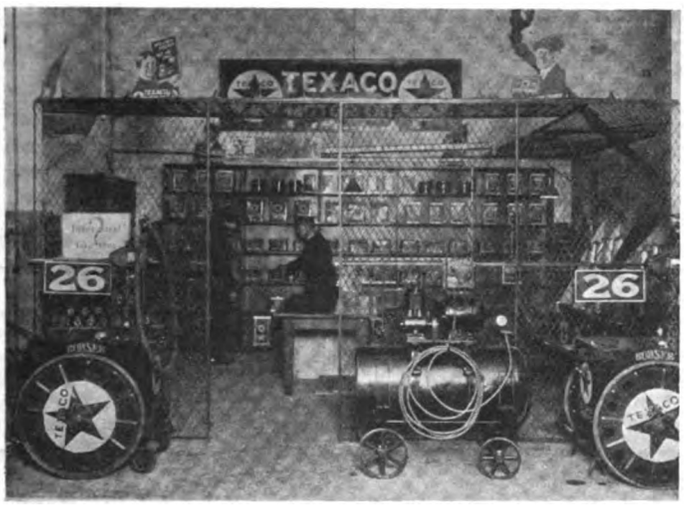
While some garage and repairshop men may look upon this method as one of lost motion, it has been found to be the best system of handling quantity repair work of this kind. Special machinery has been installed and the hand tools also have been especially designed for high speed work on Ford cars.

The second floor of the new service station is devoted to the handling of motor and rear axle repair jobs. Just as soon as a car comes to this floor it is placed along the south end of the floor which is lighted by large windows. It is a comparatively simple matter for the engine to be detached from the chassis, gripped with special tongs and pushed, suspended from an overhead rail, to the motor disassembling stand—all the work of one man, the "motor" man. With special speed wrenches this man can do in about an hour what it would take close to four hours to complete with ordinary wrenches.

There are special stands for front and rear axles which are designed to facilitate work on these parts and in all cases the tools used by the workmen also have been especially made for this particular work. An arbor press will push out a bushing in half a minute, a job that it would take a man with a hammer and maul one hour to do. Another machine burns in a bearing with a saving of six hours in labor over the method used in the average repairshop. There is another machine for boring and reaming.

Road testing is a thing of the past as far as this station is concerned; testing machines make it possible to put the engine or rear axle through its paces before it is placed back in the car. The axle testing machine clearly brings to light any defect in the bearings or differential. There is also an engine testing block.

Valve grinding and other valve work are done by electric valve grinders which cut down by two-thirds the time of the hand job.



The big white brick building is six stories high and provides a floor space of 55,000 sq. ft., the first floor having 10,000 sq. ft. and the other five 9000 each. Every foot of the space that has been pressed into service at this date is being used to the best advantage. There is no lost motion in the completion of a repair job nor is there any space that is not fully utilized.

From the time that the owner of a Ford drives his car into the station for some minor adjustment or a complete overhaul until he drives it out again with the work completed every operation it passes through has been previously arranged for. The system of this station starts at the entrance, where the arrival of the car is recorded in a day book by a clerk stationed at the door. The owner turns his car over to the station at the door and there ends his worry about it being properly attended to. He is notified when it will be ready for his use and he can return knowing that it has come through the shop on schedule time.

On the main floor are the head tester and his two assistants who inspect every car that enters the establishment. When an owner brings his car in for repairs it is turned over to one of these three men, who inspects and tests it on the first floor. Before the owner leaves the premises the tester makes out on a repair order a detailed statement of the work necessary to put the car in good condition.

This order, which is made out in tripli-

There is an oil room, shown at the left, and there are, but not shown here, stock rooms that are stocked on the Ford factory system. The picture at the right gives an idea of the building construction and how the shop looks

cate form, is signed by the owner. In the event that a chauffeur brings the car to the station, a copy of the order is sent to the owner accompanied by an authorization card, postal card size. No work is done on the job until this card is signed and returned to the service station by the owner. In this way possible disputes over authorization for the work in question are eliminated.

The third copy of the repair order is on a heavy stock card board, the left-hand edge of which is perforated and serves as a receipt for the owner. After the owner gets his receipt the remainder of the triplicate, containing the instructions, is placed in a celluloid faced leather envelope and attached to the car. It remains with the car until the entire job is finished. The obverse side of the original and duplicate of this order in addition to providing for the recording of details as to the owner's name and address, motor number, type, etc., of the car, carries the itemized charges for labor on the job. On the reverse side are recorded a description and the prices of all parts and materials used in the completion of the work.

Just as the actual mechanical work is standardized, so are the charges for labor and parts determined on a fixed schedule. The charges for parts, of course, are those that are published in the parts book issued by the Ford Motor Company. The labor operations have been studied so that it is possible to determine in advance just what it will cost for the repair of any part of a Ford car. These prices range from 75 cents for cleaning a gasoline line or fixing a tail light bracket to $25 for motor and transmission overhaul.

The original copy of the repair order is retained by the office, while the duplicate is the customer's copy. The latter has to be presented to the watchman at the door, who detaches a stub if the bill has been marked paid.

A complete check is kept on the number and class of parts required on each job. The main stock room on the second floor only carries at one time enough stock to carry it over for a short period, the supply being replenished regularly from the big stock room of the Hollander Motors, Ltd., at 1721 Broadway. The main and the auxiliary stock room in the service station are so arranged that all parts for which there is a heavier call are most readily reached. The stock is arranged in the order in which the various items are classified in the Ford parts book.

Before a repairman can obtain a new part for a car he is required to present the old part to the foreman. These parts are recorded on the repair order by the order and stock man. For sales of parts outside the repairshop a special type of order is used, made out in triplicate form, either for cash sales or charge accounts.

The first floor of the building is devoted to the testing department and for adjustments only. Here also is located, at the entrance, a completely stocked accessory department where all devices and attachments for Ford cars are handled. On the other side of the entrance is the Texas Oil Station, which is distinct from the service station management, but conducted for the convenience of its patrons. The service station itself has two 550-gallon gasoline tanks and the fuel is distributed throughout the building by the Allen pressure system. There also are six lines of compressed air leading to all floors.

On the second floor are the stock room, the ladies' waiting room and the manager's office. Also on this floor is the motor and rear axle repair department. On the sixth floor it is planned to establish an accessory department, wherein will be installed new accessories and the repair of old ones. Here also will be located the body and painting departments. Two large elevators, each capable of holding two cars at a time, are other features. The service station has a capacity for handling 100 jobs a day with a force of 75 men.

The manager is at all times in close touch with the work being done in the building and through a card system in which he records every repair job done he co-operates with the sales office in the sale of new cars. In this card file is kept a record of customer's name, address, telephone number as well as the work done on his car, the charges for the same, and the date upon which it was done. In this way it is possible for him to tell just about when a customer is likely to be in the market for a new car. This information is conveyed to the sales office and used as a lead for future sales. It also acts as a guide in the event of a complaint about the quality of the work done.

This unusual station precahes the gospel of true service—the elimination of serious and expensive repair jobs through the owner giving proper attention to the adjustment of his car and to the quick repair of minor troubles. All of its customers are encouraged to send their cars to the station every week or so for inspection and adjustment. There is no charge for this service and in the letters that are sent to owners urging them to take advantage of these regular visits it is emphasized that this work will only require a few minutes.

The dealer runs a service car that helps out owners

Finding What It Costs to Make a Sale

The Renstrom Company Goes Into Its Figures in an Analytic Way and Knows Just What Sales and Salesmen Show Greatest Profits

THE Frank O. Renstrom Co., which sells the Grant and Nash in San Francisco, has worked out a sales analysis plan that tells it everything it ought to know about its sales.

The forms shown here are used in the plan. A salesman's prospect, in order to qualify as a prospect, must be turned in on a report sheet, shown on this page, and all the data required must be filled in so far as possible. If, in the judgment of Sales Manager A. M. Field, this report is strong enough to show that the salesman has an intelligent grasp of the situation as regards the prospect, the prospect is placed on the prospect map and accredited to the salesman.

Each of the questions asked on these blanks is of vital importance at some point in the sale, and are frequently of great value when the sale has hung fire for some time.

After each visit the salesman is required to fill in the result of his visit, each of which must show some constructive work. Useless calls are not tolerated. The assistant sales manager makes notations at the bottom of the report, and these are of great assistance.

On the back of the card, shown on the opposite page, the costs are recorded. These are entered after each demonstration, and if the sale is not made, these costs go under a net loss balance, and at the end of the month influence the net result of the salesman's work reduced to dollars and cents. These figures tell whether a salesman is a source of profit or loss.

At the end of the month the assistant sales manager makes out a report, showing how many calls each man has made, how many first calls, how many second calls, how many third calls, and how many fourth calls. A recapitulation sheet accompanies the report, showing the total calls for each salesman, the cost of demonstrations, the number of cars sold, commissions paid, profit on cars sold, cost on cars sold, net loss and net profit and balance.

The salesman's efforts are thus reduced to FACTS, and it all works out automatically with little care after the salesmen are familiar with the system.

The retail sales department is in charge of two men, one in charge of trucks and the other passenger cars. All reports go to these two managers, who are as fully posted on each sale as the salesman himself.

The work of the salesmen is visualized by use of a city map. On this each salesman's prospects are represented by tacks of a different color and different colors represent the salesman's progress with the prospect.

Thus: One salesman has a yellow solid color for his prospects. After the sale has progressed sufficiently well, this tack is exchanged for a yellow tack with a white dotted head. Further progress brings a yellow tack with a white dash, and when the sale is made, a yellow tack with a white cross is used. This remains permanently on the map. A glance at the map shows by the predominance of colors and characters the work of each man.

REMARKS

The key to this sale will be to satisfy his wife and sell his mechanical friend.

The form at the left is the prospect card of the Frank O. Renstrom Co., which sells the Grant and Nash in San Francisco. It covers accurately each prospect, all the work done on him, all the facts regarding him and tells the story of the calls that have been made on him

Wooden Bells Save His Nerves

Did the jangling of telephone bells ever get on your nerves, especially when the bells were right beside you, not more than two feet away?

If they did, try the stunt of C. P. Rockwell, the Nash distributer in Boston, who put on a pair of wooden bells. They are solid blocks of wood, shaped like bells. He says the telephone company sells them.

They make a click like a modest telegraph instrument and are a real office comfort.

Michigan School Adds Trucks

DETROIT, April 15—The Michigan Automobile School, which has been specializing in passenger car construction and repairing for the past seven years, has now added a thoroughly equipped truck department. The Federal, Signal, GMC, Maxwell and Ford are numbered in their fleet of trucks.

Digitized by Google

Here's a Worthy Curtailment Idea

Taber's Salesmen Will Make Their Calls in Used Cars, Thus Saving the New Ones for Demonstration

THERE will be fewer new demonstrating cars freely used by Hartford (Conn.) salesmen this season. Russell P. Taber, Inc., Reo distributer, will hereafter send his men out to call in used Reos and when prospects desire demonstrations they will be arranged for in new cars. The cost of up-keep for demonstrators, including all expenses, was in the neighborhood of $6,000 with Taber last season. It will not be as much this season. All Overland salesmen have to use their own cars in making calls. The prospects are brought to the down town salesroom and given demonstrations in the cars that most appeal to them. The salesman has to have a requisition for the car and has to render a report on his return as to where he has been together with other information in reference to the demonstration. This arrangement while not necessarily pleasing to the salesmen, does, it is claimed, result very satisfactorily to the company.

Hartford Dealers Drive Cars Home

HARTFORD, April 15—Brown, Thomson & Co., Hartford County Cadillac distributers, are now running cars over the road from Cleveland pending improvement of the freight situation. Cars are shipped by boat from Detroit to Cleveland. The run to Hartford from Cleveland is approximately 600 miles. The trip requires three days.

The Elmer Automobile Co. is getting cars from the Long Island City Ford branch and running them over the road to Hartford. A crew is sent down on the 6.57 a. m. train and is usually back home in the evening. The Harry Starkie Auto Co. is running Chevrolets over the road this week and The Colonial Automobile Co. has received the Studebaker light sixes in the same manner.

Tulsa Has Trade Meeting

TULSA, OKLA., April 11—The Tulsa Motor Car Dealers' Association held a meeting April 5, attended by many dealers from Muskogee, Oklahoma City and other Oklahoma centers, and was addressed by E. E. Peake, Kansas City, on "The Old Order Changeth." There were 150 dealers present.

Hartford Wants Used Cars

HARTFORD, April 15—The used car market is quite lively at the present time. Inquiry of various Hartford dealers reveals that most of them have better stock of used cars than at any time this season. The automobile show is said to have aroused more than usual interest. Fords sell on sight and but few of them are on the market. Buicks command a good price and Cadillacs are scarce, while Chevrolets are on the waiting list. Time payments figure prominently in sales. The outlook for the sale of used cars of all makes, is, it is asserted by the dealers, better than at the same time in any previous year.

Auction Hal Assets

CHICAGO, April 13—The entire stock of supplies, accessories, machinery, furniture and ten finished cars formerly belonging to the Hal Motor Car Co., Cleveland, will be auctioned by Samuel L. Winternitz & Co., Chicago auctioneers, at Cleveland, April 26. The inventory value of the concern is given as over $200,000.

Harroun Is Awarded War Order

WAYNE, MICH., April 11—The Harroun Motors Corp. has received an order for a large quantity of 155 mm. shells, and is now installing $500,000 worth of new machinery to produce them. Vice-president Ray Harroun is devoting a major share of his personal attention to the consequent revision of plant arrangement, a step which is being taken without interrupting the regular automobile production.

Ogden Looks For Prosperity

OGDEN, UTAH, April 12—The local automobile show closed to-night. This is the fifth annual show held here. Forty dealers from Salt Lake, Ogden and neighboring cities in Utah took part. This section of Utah looks prosperous for the year as the beet growers will get $10 a ton for their product and the labor shortage will be met by automatic machinery which will cut out hand labor in topping beets. An oil boom is also well started and will lead to plenty of sales in tractors for hauling supplies.

?

Anyway, what do you do on rainy Saturdays and during dull hours when time hangs heavy?

All preliminary to a very serious thought—keep posted in your business of being an automobile dealer by finding time for study and improvement.

Are you reading the automobile trade papers regularly?

There is mighty good stuff in them these days.

Alfred Reeves, in a recent talk in Chicago, referred particularly to MOTOR WORLD as a weekly fund of information of great practical benefit to dealers.—*Allen Sales Bulletin*, Allen Motor Car Co., Fostoria, Ohio.

St. Louis Writes Its Slate

ST. LOUIS, MO., April 15—The Motor Accessory Trade Association has made the following nominations for the election next month:

President—John F. Shuford and A. C. Bauer.

Vice-president—William L. Ferrier and Louis Moller, Jr.

Treasurer—A. R. Baxter and W. E. Moerschell.

Sergeant at arms—William D. Clark.

Directors (five to be elected)—E. S. Marvin, W. L. Patterson, E. C. Bartholemew, T. F. Wood, L. E. Allmon, W. F. A. Uhlenhaut L. A. Safford, J. O. Tinsley, William Malone, Jr., R. G. McCurdy.

The meeting heard several patriotic talks, among which was a description by Walter C. Hecker of the Curtis Manufacturing Co., of the making of small shells by that company and some of the improvements made since the war began.

Canadian Imports $8,000,000

MONTREAL, April 12—According to the Canadian department of customs report for the fiscal year 1917, the total importations of automobiles for the fiscal year included 12,037 cars, valued at nearly $8,000,000, or $1 per head for the population of Canada. There was almost as large a sum spent in the importation of parts, but these were largely for the manufacture of new automobiles in Canada—a Canadian industry. If the importation of entire passenger automobiles were prohibited outright, Canada would lose nearly $3,000,000 in duty. The figures for 1917 follow:

	Value	Duty
Passenger automobiles..	$7,981,177	$2,790,256
Freight automobiles	423,824	148,338
Motorcycles, etc.....	177,621	62,071
Motor vehicles, parts...	7,200,017	2,171,723

Wanted—Better Highways

U. S. Chamber of Commerce Urges Need For Good Roads To Help Relieve Railroad Congestion

CHICAGO, April 12—The business men of America went on record yesterday as favoring the adoption of a permanent policy assuring co-ordination of railroads, water rents and highways. They also urged that trunk highways for heavy traffic be immediately completed where they can be useful for relieving railroad congestion.

These two resolutions, were the outcome of a day's discussion of the railroad and highways transportation situation by the United States Chamber of Commerce, at its sixth annual meeting, which ended here to-day. Representing as it does, the organized business interests of this country, the findings of the U. S. Chamber of Commerce carry utmost weight.

Yesterday's session on the transportation situation was divided into two sections: One of them was devoted chiefly to the railroad situation, under the leadership of Harry A. Wheeler, chairman of the committee on railroads of the Chamber of Commerce, and consisted of papers by Alba G. Johnson, president of the Baldwin Locomotive Works, on "Motive Power;" John F. Wallace, chairman of the Chicago Railway Terminal Commission, on "Terminals," and by Samuel O. Dunn, editor, *Railway Age*, on "Car Supply," as well as a talk entitled "Extensions" by Francis H. Sisson, vice-president of the Guaranty Trust Co., New York. It was as a result of the discussion of these, and particularly Mr. Sisson's paper, showing the need of greater inter-relation between our three main transport facilities, the railroad, the waterways and the highways, that the resolution on that subject was made.

Session For Highway Hauling

Highway transportation had a special session, under the leadership of F. A. Seiberling, president of the Goodyear Tire & Rubber Co. and president of the Lincoln Highway association. The meeting was addressed by Roy Chapin, chairman of the Highways Transport committee, Council of National Defense; A. C. Bedford, president of the Standard Oil Co. of New Jersey and chairman of the Petroleum War Service committee, and Secretary Shirley, of the Highways Industries Association, formerly State Highway Engineer of Maryland.

Aside from the resolution advocating a central control of highway policy, the biggest outcome of that meeting was the suggestion by Mr. Bedford that while the production of gasoline so far has been sufficient for all needs, it might be possible, through government action, to limit the supply of motor fuels for passenger car use. He did not say this in so many words, but his attitude seems to have changed somewhat from that of a few weeks ago when he publicly announced that there was no prospect of any necessity of limiting the supply of motor fuel. His statement yesterday was couched in these terms:

"I am hopeful that there will be sufficient gasoline available to provide for all commercial as well as passenger vehicles in operation during 1918. Even should there be a shortage of gasoline, the development of the truck should not be retarded, even though it should become necessary to place restrictions on the use of gasoline by passenger vehicles.

"I must again earnestly urge upon every consumer of gasoline the imperative necessity of conservation. When in July of last year I issued a statement upon behalf of the Council of National Defense, I said, 'People should look upon their automobiles as necessities to be used only when needed. Not a gallon of gasoline should be used in the present emergency except for some useful thing.'

"Gentlemen, the warning is more than ever necessary now. The conservation of gasoline may no longer be a matter of choice. It may become necessary to set down definite and drastic regulations to restrict needless consumption of such essential products."

In opening the meeting on Highway transportation, Chairman Seiberling recalled that for a number of years, the tonnage carried over our railroads had doubled each decade, while the additional mileage had decreased, to only 76 mi. per year.

The motor truck sounds the death knell of short line railroads, because it provides its own terminal facilities. The motor truck takes the freight at the point of origin, and delivers it at the door of the consignee.

Hard-surfaced highways capable of carrying the new burden by motor trucks which the railways cannot handle, are a necessity. Of our 2,500,000 mi. of highways, only 10 per cent have been improved, and not all of that improved is capable of carrying trucks all the year round. We are coming to a period of highways with permanent surface, wider track and open to traffic 365 days in the year.

There are over 400,000 motor trucks in service in the country to-day. By the end of the war, we will have 4,000,000 in service. The postal department shows a deficit of $3,000,000 in its parcel post. Through the rapid introduction of motor post, this deficit will be converted into a profit, when well-surfaced highways have been extended. In good time, our great task on the other side will be completed, and we must think of activity after the war, and plan for a sound, safe program of highway development.

Roy Chapin told of the governmental recognition of the fact that the highways must play their part through the establishment of the Highways Transport committee of the Council of National Defense, outlined the systems of inter-city motor transports in this country and in England, told of its rapid recent development, of the return loads bureau, of the methods of handling freight terminal congestion by motor truck, etc.

Mr. Shirley explained how the city of Baltimore, through its organization of business men, had overcome the terminal freight congestion in that city, by using the motor truck for short hauls, by unloading the cars in the yards into trucks, instead of at the terminals, etc.

The consideration of highways and railroad transportation is only one of a number of different angles that were taken up by the United States Chamber of Commerce. The shipbuilding situation occupied a great deal of thought of the business men. Likewise, did the consideration of the relation between industries and war work. The finance during war times was given much discussion. Trade acceptances were the subject of a whole day's consideration by one section of the meeting. The convention was addressed by such men as Secretary of the Interior Lane; Secretary of the Navy, Daniels; Hon. Edward M. Hurley, chairman of the United States shipping board; Charles A. Hinch, president of the American Bankers' Association, and others.

Harry A. Wheeler, food administrator for Illinois, was elected president of the Chamber of Commerce. Mr. Wheeler was the first president of the chamber and was re-elected at the suggestion of Joseph H. De Frees of Chicago, who at the same time was re-elected to his position as vice-president for the north central states. With few exceptions all the old officers were re-elected.

Washes His Cellar Once a Week

H. W. SKINNER, of the H. W. Skinner Motor Car Co., Utica, selling the Dodge and Packard, found that his basement became dusty from his heating plant. He now flushes the entire floor, ceiling and side walls and everything else in sight with a hose once a week. The first time he did this it created a lot of mud, but future washings developed little muddiness and the cellar is now in the best of condition at all times.

Republic Trucks Changes Personnel

ALMA, MICH., April 15—The Republic Motor Truck Co. has made several changes in its personnel: M. E. Holmes, general sales manager, has resigned; F. W. Gargott, advertising manager, and Cecil Taylor, chief engineer, have also tendered their resignations. C. A. Miller, assistant general sales manager, has taken Holmes' place.

Tractor Demonstration Scheduled for South

Each Congressional District in Georgia to Have Two-Day Test — Auspices of State

ALBANY, GA., April 15—A series of tractor demonstrations, the first of which will be held at Albany, Ga., May 7 and 8, has been arranged for by the State Council of Defense of Georgia. It is planned to give a demonstration in each of the congressional districts of the state. Each demonstration will continue for two days, the first day being devoted to plowing with a demonstration of night work with search lights, and the second day to the final preparation of the seed bed.

Olds Eight to Cost More

NEW YORK, April 15—The Olds Motor Works, Lansing, will on May 1 increase the price of its eight-cylinder open models. The present price is $1,495; this will be increased to $1,550. Prices of six-cylinder models probably will remain unchanged, the open models listing at $1,195, the coupe at $1,595 and the sedan at $1,695.

Ask Aid for Roads

LITTLE ROCK, ARK., April 15—Need of federal recognition of immediate necessity of highway improvement in this country as a war measure will be the message of the United States Good Roads Association convention here this week if the opening session this afternoon is a criterion. In extending the welcome of his State to the delegates, Governor C. H. Brough of Arkansas voiced the sentiment of the 225 delegates from 21 States when he asked the convention to send to President Wilson and Director General McAdoo a resolution asking the Federal Reserve Board to approve at once necessary bond issues for the improvement of all the national highways, as all are of immediate importance to our prosecution of the war.

He pointed out that the first 10 miles of the journey of a ton of grain to the trenches is as important as the last 10. The convention will be in session to-day, to-morrow and Wednesday and will be addressed by Senator Bankhead, its president and father of the Federal Reserve Board and State Highway Engineers. Thursday and Friday will see a convention of the Bankhead National Highway Association which is boosting a transcontinental highway through the Southern States.

GEORGE FRITZ
Field Secretary of the National Association of Automobile Accessory Jobbers

Peoria Chooses Directors

PEORIA, ILL., April 16—The Peoria Automobile and Accessory Dealers Association has chosen directors for the coming year. They are: Theodore Bass, National E. & A. Supply Co.; Robert Fitch, Fitch Auto Supply Co.; W. E. Johnston, Johnston-Moody Co. It is planned to invite women to the monthly gatherings of the organization.

Chicago to Beat Quota

CHICAGO, April 15—The third Liberty Loan campaign of the Chicago Automobile Trade Association shows every indication of surpassing the mark of the second, and already over $500,000 has been subscribed by motor car dealers, employees, garage men, motor cycle men, etc. Twenty-five salesmen are calling on 450 garage men, the same number of liverymen and some 800 other concerns representing the industry. The association is providing speakers with its salesmen who work singly, in pairs, or in groups should the concern called upon employ several hundred persons.

Would License Tractors

HARTFORD, CONN., April 15—Increasing use of tractors in the state of Connecticut has convinced Robbins B. Stockel, commissioner of motor vehicles, of the necessity of a special form of license permitting operation over the state roads. The commissioner now has the matter under advisement, but has not decided just what form of license will be issued but will make a decision within the next few days.

Chicago Used Car Men Propose Organization

To Form Division Under Auspices of Trade Association—Would Work for Better Conditions

CHICAGO, April 15—The used car managers of the Chicago dealers, who held an informal dinner meeting Saturday night of the recent exchanged car show, met this evening at Kuntz-Remmler's to consider permanent organization. They decided to form the Chicago Automobile Trade Association Technical Committee provided the move is endorsed by the parent body. This organization would meet regularly and discuss used car questions and assist the dealers in arriving at better used car conditions. If the plan is approved the organization will be perfected and officers elected at a meeting April 29.

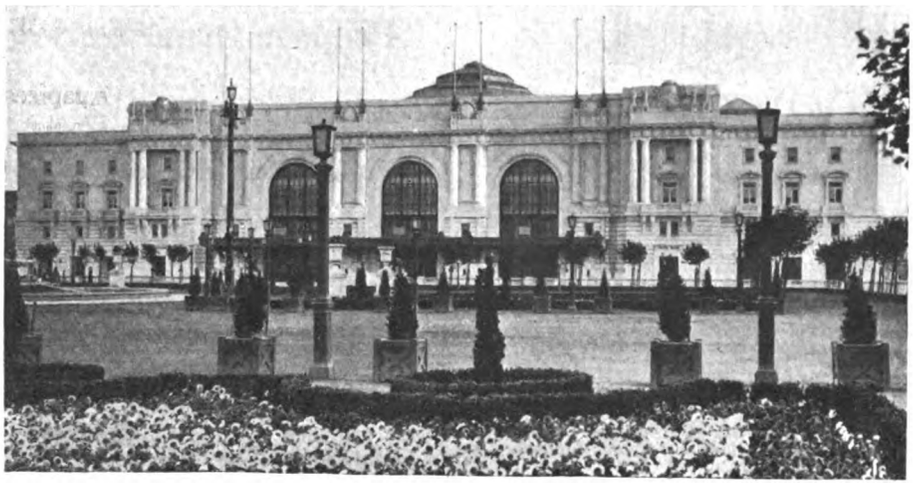
Reliance Completes Organization

APPLETON, WIS., April 13—The Reliance Motor Truck Co., formerly the Racine Motor Truck Co., Racine, Wis., has completed the reorganization of its board of directors to provide representation for new capital entering the concern since its removal to Appleton, Wis., where a large factory is now nearing completion. Ira L. Miller continues as president and general manager. A. K. Ellis has been elected vice-president; Thomas M. Purtell, secretary-treasurer, and F. W. Grogan, G. P. McGillan, W. Harvey Kelly and George B. Barlow, directors. The new plant, which will cost about $100,000 complete, is expected to be under roof by May 1, and actual production will commence June 1.

Studebaker Prices Increased

DETROIT, April 15—The Studebaker Corp. increased the factory prices of its models to-day as follows:

Model	New Price	Old Price
4-cylinder:		
Touring	$995	$895
6-cylinder:		
Light touring	1,395	1,295
Big Six touring	1,795	1,695
4-pass. roadster	1,550	1,450
Chassis	1,295	1,200



Shelby Starts Production

SHELBY, OHIO, April 15—The Shelby Tractor & Truck Co., formerly the Standard Mfg. Co., has started production on a ¾-ton truck and a two-plow tractor. The company has been experimenting and developing these models for 2 years.

Not many show managers are fortunate enough to get a building as beautiful as this one which housed the Portland, Ore., show. The lower picture shows a part of the truck exhibit

Plenty of Rubber Is Coming Into Country

But Transportation Overland Is Causing Some Worry—Imports Steadily Increase

NEW YORK, April 15—More rubber arrived in the United States during the first three months of 1918 than in the same period of 1917; the exact increase was 4779 tons. There have been some difficulties with transportation, however, which may have caused the circulation of rumors, not based on fact, that there exists a shortage of rubber.

During the first three months of 1917, imports of rubber totaled 41,574 tons as against 46,453 tons for the first three months of 1918. January and February both show substantial increases over the same months last year, though imports fell off slightly in March. Following are the statistics, as compiled by the Rubber Association of America:

Month	1917, Tons	1918, Tons
January	12,788	16,084
February	10,162	13,108
March	18,624	17,161
Total	41,574	46,353

During the entire year of 1917 a total of 167,062 tons of rubber was imported. This represents an increase of 43 per cent over the importations for the year 1916.

Although there is plenty of rubber coming into the country, its transportation in the United States is causing slight worry. Most of the Akron rubber mills, for example, receive their shipments of rubber at a Pacific Coast port of entry. This means shipment across the continent by freight and it is here that the delay occurs. It is stated that it is not uncommon for shipments to be en route for two or three months and in one case a shipment which left the Pacific Coast last November has not yet reached its destination. It is hoped that some of the transportation troubles will be smoothed away with the coming of better weather.

Select Landing Places for Airplane Mail Route

Belmont Park, Long Island, to Be Terminal in Washington-New York Service

WASHINGTON, April 12—The three landing places for aero mail service between Washington and New York have been selected. The fields are being prepared and hangars erected speedily. The service will be in operation not later than May 15, and possibly much sooner. The three landing fields selected are: Potomac Park, Washington; Bustleton, North Philadelphia; Belmont Park, New York. The hangars at Potomac Park are in course of construction, and will be soon started also at Bustleton and Belmont Park. Extensive rolling and grading of the Philadelphia field will be done this month.

Assuming that the airplanes leave New York at noon for Washington and leave at the same hour from Washington for New York, rail connection for destinations beyond these cities and Philadelphia will be made which would otherwise be impossible. This plan is going to be placed in operation.

In addition to saving much time in the delivery of letters addressed to New York, Philadelphia and Washington, there will be considerable time saved through making these connections for earlier trains beyond the terminals.

An airplane leaving New York at 12 o'clock noon, arriving at Philadelphia at 1:30 and at Washington at 3:30, will make connection with trains several hours earlier than present connection for many cities in New Jersey, Pennsylvania, Delaware and Maryland.

At the same time the mail reaching Washington at 3:30 will make connection with numerous trains leaving Washington at 4 o'clock for many points in the South and Southwest. The post office estimates that at least 8 hours will be saved by the airplane route.

The airplanes leaving Washington on the noon schedule will arrive at New York at 3:30, and their mail will be delivered in New York in the late afternoon city delivery over the entire city. To make this delivery by train letters now have to be mailed at the railroad terminal in Washington before 9 a. m.

Olds Delivers by Trolley

LANSING, MICH., April 12—The Olds Motor Works is shipping cars out by trolley, using the lines of the Michigan Railways Co. By these means the company reaches Detroit in one direction and Kalamazoo in the other, thus much facilitating the prompt movement of its product. As the cars of the Michigan

Digitized by Google

Railways Company are short, a strong stanchion is erected about one-third of the length of the car from one end, and upon this the front wheels of one automobile are elevated. Two additional automobiles then are loaded on the bed of the flat, the middle car extending underneath the one elevated on the stanchion. By the employment of this ingenious contrivance the Olds company succeeds in loading three automobiles on the trolley flats.

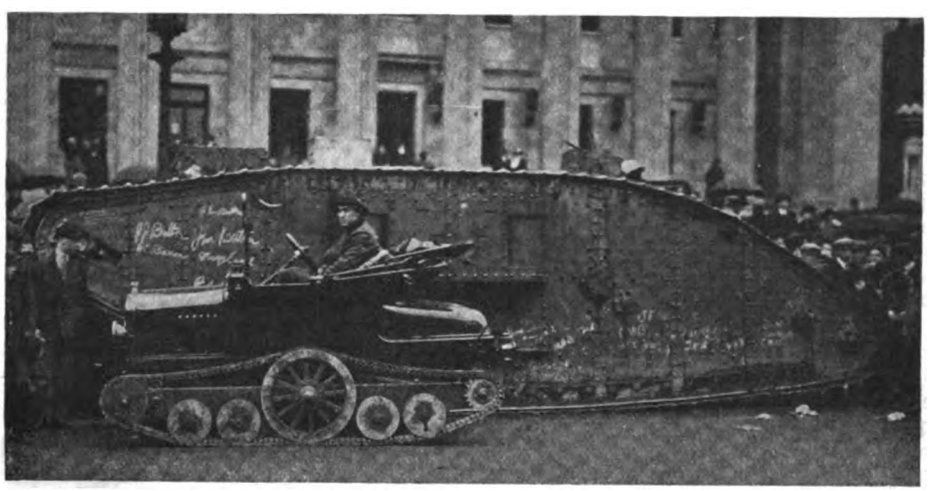
Vesper to Address Dealers

COLUMBUS, OHIO, April 15—F. W. A. Vesper of St. Louis, president of the National Automobile Dealers' Association, will be the principal speaker at a special meeting of the Columbus Automobile Trade Association, scheduled to be held at the Chittenden Hotel, Columbus, April 23. He will talk on "The Dealer in the War." Secretary of State Fulton will also speak on "The State's Interest in the Automobile Business."

Ford Two-Man Tank Puts In Appearance

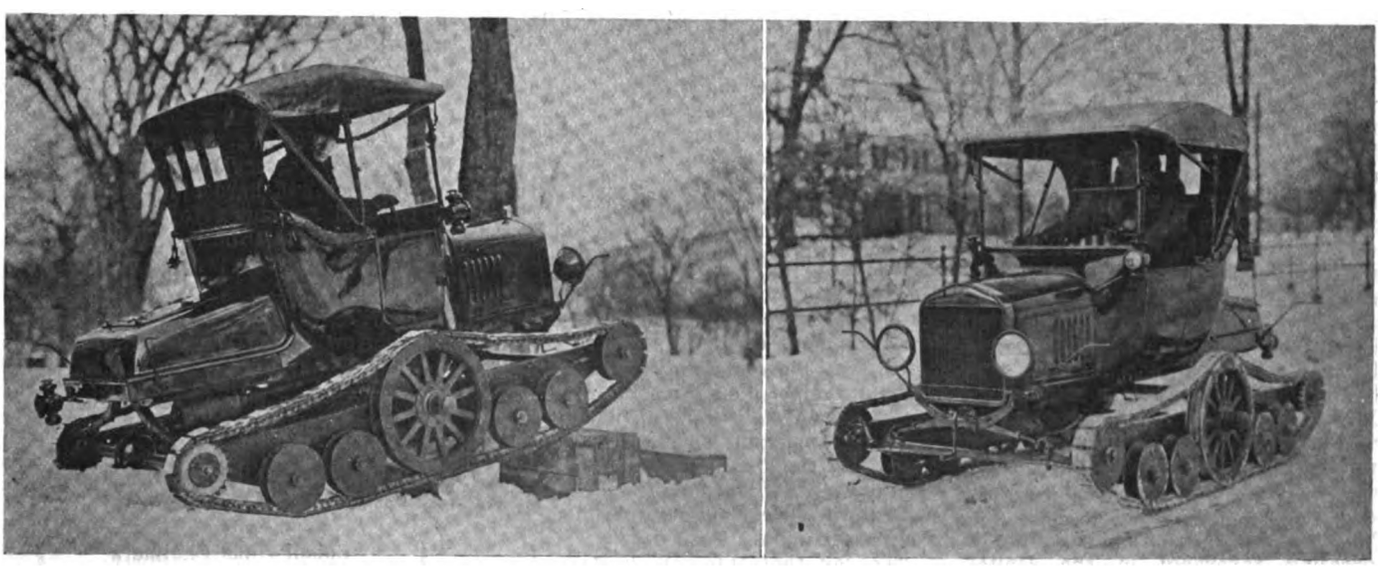
Will Travel 12 M.P.H., Carry Two Men and Two Machine Guns—Three Building

NEW YORK, April 10—The first model of what is understood to be the Ford "Two-man Tank," numbers of which will be produced by the Ford Motor Co. if tests prove satisfactory, was revealed to public gaze at Springfield, Mass., yesterday and is illustrated herewith. Experimental work on the tank has been progressing for some time under the supervision of C. H. Martin of the Martin Rocking Fifth Wheel Co., Springfield, its inventor, and it is understood that three machines are now being constructed for the Ordnance Department and Quartermaster Corps, and will be tested by these divisions.



Neither armor nor armament is shown and it is understood that details have not been decided as yet. It is likely, however, that the tank when in fighting trim will carry about 1200 lb. of armor and two machine guns. It is to be manned by two men and its speed will be about 12 m.p.h. on smooth going, and slightly less on rough going.

In construction, all the essential elements of the Ford chassis are retained with the exception of the running gear. In place of wheels there are two endless belts running over a series of idler pulleys and driven through sprockets which in turn are driven off the Ford rear axle. The method of steering and other details are not disclosed.



It is stated that the little tank will do practically anything its big brother will do in the way of climbing obstacles in proportion to its size and that it will successfully negotiate almost any kind of bad going.

Louisville Dealers Incorporate

LOUISVILLE, April 12—With a view of better promoting the motor car industry, the Louisville Automobile Dealers' Association has filed articles of incorporation, with a capital stock of $7,500. The incorporators are Prince Wells, W. A. Thomas and P. S. Longest. The organization has been in existence for many years and ten exhibitions have been held under the auspices of the association.

The Ford "Two-Man Tank" retains all the essential elements of the Ford chassis except the running gear, which is replaced by two endless belts driven from sprockets from the Ford rear axle

THE TEXAS AUTOMOBILE DEALERS' ASSOCIATION recently held a convention in San Antonio. It took up various trade matters and, in addition, endorsed the National Automobile Dealers' Association at the request of President F. W. A. Vesper, of St. Louis. Vesper is the man in the circle in the center of the group

Urge One Head for Aviation

Senate Committee Says Lack of Centralized Authority Is Holding Up Program

WASHINGTON, April 12—The Senate Military Affairs Committee, which has been investigating the delay in the aviation program, last week made public the report of its findings. The report states that the delay has been due to "ignorance of the art and to failure to organize effort in such a way as to centralize authority and bring about quick decisions."

In consequence, the committee has recommended that entire production plans be divorced from the supervision of the Signal Corps and placed in the hands of a single responsible executive.

Official data filed with the report state that three foreign engines, the Gnome, La Rhone and the Hispana-Suiza, are being manufactured here, that 965 have been completed and are being used for advance training.

Five Combat Types

Five types of combat machines have been adopted at different times. Of these two have been abandoned and the three which are now being made are: The Handley-Page, to carry six men and eight machine guns and a very heavy load of bombs, and to be driven by two Liberty engines; the De Haviland, to carry two men, four machine guns and a moderate bomb load, to be driven by one Liberty engine, and the Bristol, which is the lightest and fastest, and will carry two men, one machine gun and be driven by one Liberty engine.

The report states that 22,500 Liberty engines have been ordered; 122 have been completed for the army and 142 for the navy. Four engines have been shipped abroad.

The training of American aviators is progressing favorably in the United States. Last year some 1200 cadets were sent to England, France and Italy to receive training, but inasmuch as there has been delay in providing them with training planes, the Signal Corps is seriously considering the advisability of bringing them back here to be trained. Of the 1200 sent abroad, 450 are reported as having completed the primary training.

At the time of filing the report, a minority report was also filed, and this, in addition to stating that the progress made to date, if not entirely satisfactory, is at least praiseworthy, goes into great detail in reciting the obstacles which had to be overcome.

For example, it is pointed out that when war broke out, the United States Government had purchased altogether less than 200 airplanes in its entire history, and that of the few airplane factories in the country probably not one was making over five or six a month.

The report says, "It is hardly possible to grasp the magnitude of the task, the factories, contracting to make the 11,500 combat planes, found before them. New plants had been constructed, old ones fundamentally changed, special tools for the making of the planes had to be devised and manufactured, and mechanics had to be trained to make the tools and also to make the planes after the tools had been completed."

What a Plane Carries

Some idea of the intricate construction of a modern battle plane is indicated by the equipment which it carries. The report says, "every fighting plane must have machine guns, synchronizing devices, special telescope airplane sights, wireless apparatus, cameras of special type, electric heating devices for clothing, oxygen apparatus, altometers, speed indicators, special gages, chronometers, compasses and so forth.

"To say that this complicated equipment is in steady and adequate production," says the report, "and that the factories are now about in shape for quantity production of combat planes, and have about completed the foundation of what is as difficult and responsible a task as has ever fallen to the brain of man, is to state the truth and at the same time to recite an achievement unparalleled in all history for so short a time."

St. Louis After Car Thieves

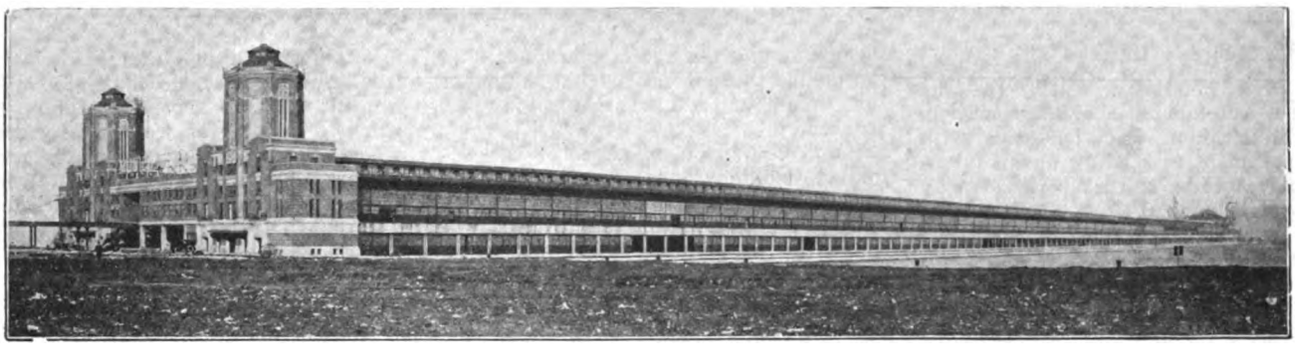
ST. LOUIS, April 15—The vigilance committee, composed of members of automobile and business institutions to stop motor car thefts, has decided that it will recommend a much more drastic law be passed by the legislature in January. The Missouri law is very weak, compared with other states, says Frank R. Tate, Dodge distributer, who is chairman of the committee.

The committee is planning to have the cases of thieves more closely watched while passing through the courts and after conviction, as it is openly charged that the thieves have so strong protection that real punishment is only seldom administered.

Cleveland Production 10,000 Tractors

CLEVELAND, April 12—The Cleveland Tractor Co. anticipates a production of 10,000 machines during the present year. The first Cleveland tractor was produced in the fall of 1916, and in January, 1917, began the manufacture of them in a building, 60 x 250 ft. An addition, 60 by 300 ft., was erected during 1917; a new factory building, 60 by 460 ft.; a boiler and hardening room, 80 by 90 ft., and an annex to this of 90 by 200 ft., were also built. The company made 1032 tractors from April to Dec. 31, 1917.

New Dodge Business Car



DETROIT, April 13—Dodge Brothers is putting out a new panel business car which will sell for $935. Dealers have already been supplied with sample cars, and production will be increasing from day to day.

Lobell Adds Chalmers

NEW YORK, April 15—The Lobell-Aborn Co., which for the past two years has been handling the used-car department for the Maxwell Motor Sales Corp., has taken over also the used-car department for the Chalmers company.

Where "Automotive and Accessories Show" Will Be Held

THE Automotive and Accessories Show, which is the outgrowth of the Ford Accessory Show in Chicago last fall, is to be held this year the week beginning Sept. 14 in Chicago's Municipal Pier, a building to gladden the heart of a show manager, for there are two floors, each 2352 ft. long and 68 ft. wide, an area of 319,872 sq. ft. It is planned now to use but one floor unless demands require both. To the exhibition will be admitted trucks, tractors, motorcycles and accessories. In the pier is an auditorium seating 4000 in which it is planned to hold a trade educational convention during the show. A speedway event may be held in Chicago at the same time. There are also in the pier a restaurant, lunch counters and other typical pier adjuncts. The city's street cars run into the pier for the whole length of each exhibit room, with doors all along the sides of the rooms. The pier is within easy access of the Loop and hotel section.

Jobbers Enthuse at Idea of Fall Show

Way Things Look Now Official Endorsement Will Be Only a Formality

CHICAGO, April 16—If the letters that are being sent to the headquarters office in this city are to be taken as an indication the official endorsement of a fall show by the National Association of Automobile Accessory Jobbers will be only a formality.

Since the idea was suggested by Commissioner William M. Webster many jobbers and manufacturers have written to him stating with enthusiasm that the idea is good, all of which looks as though the Hot Springs convention in June may endorse the idea without much adverse discussion.

No building has been selected as yet, but applications for space are being received. The show will be held at the end of October in Chicago in conjunction with a meeting of the association.

General Electric To Enter Bijur

NEW YORK, April 15—It now appears certain that the reorganization of the Bijur Motor Lighting Co., Hoboken, and the entry of General Electric interests into the company will be effected. The Bijur company was placed in the hands of a receiver last January. The creditors' committee has been looking toward a reorganization or a liquidation of the affairs of the company. Liquidation was made impossible by the fact that the government had requisitioned the Hoboken building and that it required starters, made under Bijur patents, for airplanes and motor trucks now building. The General Electric Co. has proposed to take over the management, control and assets of the Bijur company, either through acquiring stock in the company or forming a new company, and will contribute at once as working capital $300,000 cash and $200,000 additional as required. Creditors will receive notes of the Bijur company, or its successor, for the full amount of their claims, the notes to bear interest at seven per cent and run for ten years. Of these notes $50,000 will be retired each year.

Here's the Automotive Supply Dealer

THE Automotive Supply Co. has been organized in Kansas City by W. E. Smith for wholesale distribution of automotive supplies. The name was selected primarily because of the business which will develop in tractor supplies as that automotive item gets larger distribution in the territory, and as the parts for the tractor are standardized. Smith was for several years special representative on bicycle tires and accessories in nine western states for the B. F. Goodrich Rubber Co. The new company has two men on the road and is now preparing a catalog. It will do a wholesale business only. The company probably will incorporate shortly for $25,000, Mr. Smith to be president of the company.

Bronx Elects Officers

NEW YORK CITY, April 15—The Bronx Automobile Dealers' Assn. has elected the following officers: Homer Waltermyre, president; John B. Elsey, vice-president; F. J. Bowman, secretary and L. R. Fitts, treasurer.

N.A.D.A. Gets After Drive-Away Hold-Ups

National Body Fights Prosecution of Dealers by Overzealous Constables

ST. LOUIS, April 15—The prosecution of dealers conducting drive-aways from Detroit continues to hold the attention of the National Automobile Dealers' Association. This week Assistant Secretary Hoelke has been investigating reports of a thriving industry between Monroe, Mich., and Toledo. He learned that six motorcycle constables were on guard there watching for machines without license. One Buick dealer was forced to pay $147.50, and several other fines were assessed and much time lost by forcing the drivers to return to Monroe. This situation was taken up with the state officials and the National Council of Defense is being urged to hasten action regarding it.

Colorado led in the flow of members this week, the Rocky Mountain Automobile Trade Association raising its total of membership close to the 100 mark. E. B. Wilson, a Buick dealer at Memphis, led in the personal work last week, sending in a dozen applications and promising to interest the rest of his subdealers.

Tom Botterill, vice-president for Colorado, was strong on personal work. The sales managers for the Peerless, Duplex and Nash companies took up the membership work. New Jersey sent in more applications than have previously come from that state. President Vesper was in Chicago all week attending various national meetings.

News of The Liberty Loan Drive

Montana Hard at It

HELENA, MONT., April 16—The Montana Automobile Show Association, Great Falls, Mont., is co-operating with the government in putting on an intensified drive of the third Liberty loan by loaning its manager, A. J. Breitenstein, to act as state secretary to raise nine million dollars in subscriptions in Montana, and he has already opened an office here and brought about a good organization in the 43 counties of that state.

Montana, like so many other states, has made a most wonderful record in securing Liberty loan subscriptions. In the first campaign an allotment of $7,500,000 was specified but over $15,000,000 was raised. In the second drive $15,000,000 was the quota set, but when the drive was over the state had a total of within a few dollars of $20,000,000. In the third campaign Montana is asked to subscribe $9,000,000.

The automobile plays a very important part in the success of a Liberty loan drive in a state like Montana, which is the third largest in the Union, and has a great deal of inland territory that must be covered. County chairmen in conducting their campaigns use the automobile squads to more quickly and easily reach the citizens of the rural or outlying districts.

Secretary Breitenstein, who is well known to the automobile trade of the state, has sent personal appeals to automobile dealers and owners to co-operate and assist all chairmen in conducting their campaigns, and in no part of the state has there been reported an instance where the dealer or distributer has not quickly, gladly and readily put a number of cars at the disposal of those officers "who are in command."

The newly elected officers of the Montana Automotive Trade Association, which was held at Great Falls last month, and who have the placing of the Liberty loan automobiles at the disposal of county chairmen are: George Prentice, president, Great Falls; Frank D. Stoop, first vice-president, Kalispell; C. H. Guthrie, second vice-president, Billings; Edward Haskell, third vice-president, Glendive; A. J. Breitenstein, secretary-treasurer, Great Falls.

Directors — Frank Shoemaker, Missoula; A. P. Heaney, Great Falls; John Shyrock, Helena; C. F. Weaver, Lewistown; A. M. Bennett, Butte; H. D. Sheppard, Havre.

The general offices of the Montana Automotive Trade Association will be at Great Falls.

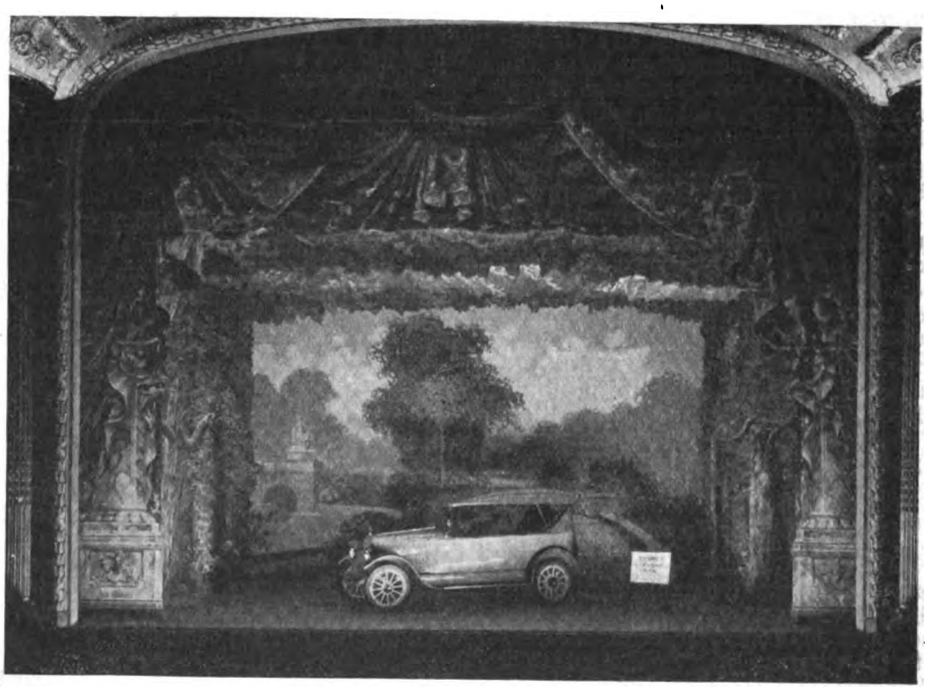
Columbus Put It Over

COLUMBUS, April 12 — Columbus automobile dealers, garagemen and accessory dealers took a prominent part in the Third Liberty Loan drive. Special committees for the sale of bonds were formed among the automobile trade, and it was due to their efforts that the quota for Columbus and central Ohio was reached.

Ralph C. Wilson, manager of the Columbus-Cadillac Co., was chairman of the sales force for all committees of the loan. In that capacity he had in charge the entire sales force, which numbered by the thousands.

O. C. Belt, of the Belt-Franklin Co., was chairman of the division in charge of automobile dealers and garages and manufacturers of automobiles and supplies. George M. Bennet was chairman of the committee to look after accessory and tire dealers.

North Carolina Drives Hard



GREENSBORO, N. C., April 12—The drive in Greensboro and Guilford County in the third Liberty loan campaign was officially launched this week with a monster parade, in which several hundred automobiles, loaned by dealers and by private owners, were used to convey the mothers of North Carolinians who are serving with the colors in France to the campus of the State Normal College, where Charlie Chaplin, the moving picture comedian, began the drive with a speech which resulted in promises sufficient to absorb the Greensboro quota of the loan.

Automobile dealers are taking an unusually active part on behalf of the Government in this drive for funds with which to finance the war. Every dealer in the city was represented in the parade by one or more cars, appropriately decorated in the national colors and bearing placards exhorting the people to invest their savings in Liberty bonds. The dealers are also active in personal subscriptions to the loan, quite a number of them signing up for quite a large amount of bonds.

Boston Is Winning Out

BOSTON, April 13—The Boston motor dealers, garagemen and tire and accessory men are being thoroughly canvassed for the third Liberty loan. At a meeting early in the week at the Hotel Lenox George B. Kimball, chairman of the Liberty loan committee of the automobile trade, announced the names of those who were to canvass the trade. President John H. MacAlman of the Boston Automobile Dealers Association had to leave for the Chamber of Commerce meeting at Chicago, and after introducing Kimball he urged everyone to work hard for the success of the loan.

Following the meeting 19 of the men present turned in pledges for $1,000 each as individuals to give the loan a start. Another $1,000 was added by a

A NOVEL way of introducing to their townsmen and neighbors the new Comet Six Centennial model was inaugurated by the Comet Automobile Co., Decatur, Ill., when during the week of March 10 to 16 one of these cars was shown on the stage of the Lincoln Square Theatre in Decatur at each performance. The car is finished in a light pearl gray color, with upholstery in Spanish gray, and with top made of the same material. Beveled plate glass window is used in the back curtain. Shown in a woodland setting under strong foot and spot lights, the car made a beautiful appearance and made a decided hit with those who viewed it

Digitized by Google

BUY LIBERTY BONDS

few of the others present. They all stated that this was merely a beginning, and did not represent the amounts their companies would turn in. Kimball said that there should be three types of pledges—one by the firms, a second by individual members, and a third by employees. He made it plain that the bonds were to be kept, and not sold, and also that bonds of the earlier issues were not to be thrown on the market to buy the new ones.

On the first day of the canvass Kimball received a pledge of $101,000 from Harry Noyes, the New England wholesale distributer of Buicks. No sum is set for the motor trade this time. On the second loan they put across more than $2,000,000 in a week with teams working. This time each of the 40 committeemen has from eight to ten firms to see, there being more than 300 in the trade in Boston.

The heads of the firms are asked to look after the work in their establishments, and to report to the man who made the canvass, the latter reporting to Kimball. No daily reports are being given out, Mr. Kimball intending to make out weekly statements. By the way, the committeemen are requesting pledge cards in hundred lots every day; it is certain there will be a big total raised. The men do not have to collect any money, merely getting the pledges signed. Those comprising the committee represent all branches of the trade, car and truck dealers, tire, garage and accessory men, as follows:

George B. Kimball, chairman; Day Baker, G. M. Leghorn, F. A. Hinchcliffe, J. J. MacGregor, F. E. Wing, J. L. Judd, Otto A. Lawton, J. S. Donovan, A. L. Danforth, C. E. Fay, A. H. Sowers, C. S. Henshaw, R. P. Page, Jr., J. L. Snow, C. P. Rockwell, J. M. Linscott, W. J. Connell, F. W. Stockbridge, Frank P. Allen, Lester Perrine, Norman Halliday, J. W. Bowman, J. S. Hathaway, L. B. Sanders, I. M. Boles, J. J. Harrington, George Grow, Russell Green, John B. Wilson, John Coward, Wallace Page, A. P. Underhill, Charles Bates, D. W. Palmer, W. H. Stevens, John H. Johnson, George W. Canterbury, J. G. Utterback, D. J. Fleming, Mr. Henderson, Mr. Brackett and Mr. Mitchell.

St. Louis Buys $3,000

ST. LOUIS, April 15—The St. Louis Automobile Manufacturers' and Dealers' Association voted at the April meeting to buy $3,000 of the third Liberty loan for the association. The association has bonds of the previous loans.

President Joseph A. Schlecht, Mound City Buggy & Auto Co., was re-elected president, H. F. Fahrenkrog, nominated as opposing candidate, withdrawing. The following officers were elected: Vice-president, P. H. Brockman, De Luxe Automobile Co.; treasurer, H. L. Schnure, Velie Automobile Co.; directors, F. W. A. Vesper, F. R. Tate, I. G. McNiece, W. L. Johnson, W. S. Roberts, C. R. Frampton.

The association issued a public request that all persons whose cars are stolen aid the association and other bodies working to eliminate car thefts in watching these cases. It is requested that any person noting at any time favors extended to car thieves or their associates at once report the incident to the association's vigilance committee.

F. W. A. Vesper, president of the National Automobile Dealers' Association, reported on progress made by that association in obtaining a general rule to govern the requirements for licenses for cars in drive-aways.

R. C. Frampton, chairman of the used-car show, reported a slight loss on that exhibition. H. W. Spalding, chairman of the annual automobile show, made a more favorable report, but figures are not given out for the present. The firms participating in the used-car show assert that the sales justified the loss at the show.

Kansas City Lined Up

KANSAS CITY, April 12—The Motor Car Dealers' Association of Kansas City is co-operating in the general plans for selling Liberty bonds in Kansas City territory, where this time there is no assignment of industries or lines of business. Each business organization got as many of its members as possible to volunteer for the selling committees of the campaign, which were assigned to six districts. There was one specific "drive," however, one committee being assigned to solicit the branch houses in Kansas City of foreign corporations. W. J. Brace and J. Frank Martin, of the Motor Car Dealers' Association, worked on this committee. The Motor Car Dealers' Association of Kansas City furnished the motor cars for transporting the speakers for the Liberty bond committee the week of the big drive. The secretary of the association arranged with various dealers to supply the cars with chauffeurs, four cars being in constant use each day from morning until midnight.

Liberty Loan Rally for New York

NEW YORK, April 15—New York dealers, represented by their Liberty Loan Committee, will hold a rally on Friday night of this week at the Automobile Club of America. Co-operating with the dealers are the National Automobile Chamber of Commerce, Automobile Club of America, Brooklyn Motor Vehicle Dealers' Association and the Bronx Automobile Dealers' Association. Charles A. Stewart, general manager of the Automobile Dealers' Association, has general charge of the affair The meeting will be addressed by Sergeant Harold Wright of the French Flying Corps and General Manager Alfred Reeves of the N. A. C. C.

Parsons on the Job

PARSONS, KAN., April 12—The Liberty loan is in full sway in Parsons. The quota was $490,000, which was entirely taken over by the four banks, the Parsons Commercial, the First National, State Exchange and Parsons State Bank. The banks are now re-selling the loans. The County Liberty Loan Committee, supported by the State Committee, is now working diligently with wonderful success, and it is expected that the entire amount will be subscribed. From the adjacent towns come flattering reports of over-subscribing from all sources.

Governor Capper was in Parsons April 11 as a guest of the Southeastern Kansas Automobile Association, and he made a very strong and patriotic Liberty loan talk. The people in this state are thoroughly aroused to the absolute necessity of standing solid behind any request of the Government that will help win the war.

How St. Louis Advertises

ST. LOUIS, April 15—The advertising for the third Liberty loan in this city is being done with space donated by the various firms of the city. Among those who are paying for full pages are: McQuay-Norris Manufacturing Co., Newell Motor Car Co., Vesper-Buick Auto Co. and Wagner Electric Manufacturing Co. For the present the drive is being made by the financial and larger business bodies. The drive by the industrial division will not be made until the last week for the clean up.

Put It Over Big

(*Continued from page* 6)

should. If not, let some one talk with him again and see if he couldn't buy a bond or so more. This going-back work nets results in many cases.

3—If there seems every reason why a man should buy and he doesn't, find out why. Don't let any man be a slacker. If necessary bring pressure to bear. Why should any man be permitted to live and laugh and enjoy life without doing his part if he is able?

4—Imagine you are combing the town for car sales—and work just as hard for a bond sale as you would for a car sale.

5—So work that when you get done you can say, "There! That's a good job!"

Prominent Tradesmen Assume New Duties

Resignations and Promotions Place Workers in New Places

James P. Cory, formerly with the Pacific Kissel forces, distributer for the Federal truck on the coast and in the far western states, has been appointed district factory representative of the Federal Motor Truck Co. of Detroit.

George W. Kerr, formerly body engineer of the Reo Motor Car Co., Lansing, Mich., is now manager of the body department of the Mitchell Motors Co., Racine, Wis.

F. A. Bower, former chief engineer of the Weston-Mott Co., Flint, Mich., is now engineer of the Buick Motor Co. in the same city.

E. P. Smith, formerly engineer of the Hercules Motor Co., Canton, Ohio, is now connected with the engineering department of the Garford Motor Truck Co., Lima, Ohio.

H. S. McClellan has been appointed superintendent of Plant 1 of the Buick Motor Co., Flint. He was formerly general superintendent of the Chalmers Motor Co., Detroit.

Edward Maurer has resigned as chief engineer of the Lewis Spring & Axle Co., Chelsea, Mich., to become superintendent of shops of the Solvay Process Co., Detroit.

J. A. Kingsbury, metallurgist, formerly with the Studebaker Corp., South Bend, is now connected with the Trego Motors Corp., New Haven, Conn.

H. H. Heiger, St. Louis, has been made manager of the Used Car Department of the Briscoe Motor Sales Co.

H. J. Detterich, formerly in the advertising department of the Paige-Detroit Motor Car Co., will become advertising manager of the Bearings Service Co., whose main offices are in Detroit, with branches in twenty-two important cities.

John J. Walsh, formerly secretary of The Donegan Auto Body & Specialty Co., Hartford, Conn., has entered the firm of the Hartford Auto Painting Co.

Frederick J. Sharp has joined S. A. Miner, Hartford, Conn., Pierce-Arrow distributer.

A. E. Archer, president of the Detroit Electric Sales Co., St. Louis, has gone to the U. S. Arsenal at Rock Island, Ill., where he has been commissioned a captain in the Ordnance Department. He appointed Frank C. Herschbach as sales manager and Herman C. Wieland as garage and service manager.

C. M. Cunliffe, recently of Dallas, has been made service manager for the Briscoe Motor Sales Co., St. Louis.

James L. Fay, formerly president of the Wade Mining and Milling Co., St. Louis, has taken charge of the Armleder truck sales for the Weber Implement and Automobile Co., St. Louis.

H. J. Detterich has been appointed advertising manager of the Bearings Service Co., Detroit. He was formerly assistant advertising manager of the Paige-Detroit Motor Car Co., and previous to this he was connected with the advertising department of the Studebaker Corp.

Frederick Dickinson has been appointed assistant sales manager of the Hupp Motor Car Corp., succeeding H. E. Westerdale, who is leaving the Hupp organization to join the McCord Manufacturing Co. of Detroit, in charge of a new department, the nature of which will be announced later.

J. D. Maxwell, formerly head of the original Maxwell Motor Co. of Detroit, and for several years living in retirement at Tarrytown, N. Y., will shortly enter into active motor car work again as a member of the automotive products section of the War Industries Board.

George R. Beamer, for the past twelve years connected with the United Gauge Co. of New York as Detroit representative, has added to his duties by becoming Detroit branch manager for the Federal Ball Bearing Co. of Poughkeepsie, N. Y., manufacturer of the Shatz bearing.

H. B. Rector has purchased a half interest in the Oakland, Cal., business of the H. O. Harrison Co., Hudson, Dodge Brothers and Republic truck dealers. The Harrison company has also bought out the Butler-Veitch Co., which held the Hudson and Dodge Brothers agency in Berkley, an adjoining city to Oakland.

Donald Anthony, manager of the Baltimore branch of the Locomobile Co., has resigned and joined the aviation corps. F. B. Wilson will arrive in Baltimore to succeed him in charge of the branch.

Nicholas J. Poehlman, who was the Baltimore manager of the Pathfinder Sales Co., is in aviation training at Kelly Field, Tex.

J. S. Hochheimer, formerly in charge of the used car department of the United Auto Sales Co., is serving Uncle Sam in the Commissary department at a New Jersey camp.

O. E. Child, Moline, Ill., has resigned as credit manager for the Velie Co., Moline, to become office manager of the Motor Appliance Co., East Moline.

Edward Danner, Decatur, Ill., recently elected president of the Pan-American Motors Corp., has resigned from the agricultural machinery company with which he was connected as president, and will devote his entire time to the former concern.

L. L. Barnes, who has been Southern traveling representative for the Chalmers Motor Co., Detroit, resigned April 1.

James Taylor, formerly in the production department of the King Motor Car Co., Detroit, has been appointed chief inspector for the Interstate Tractor Co. of Waterloo, Iowa.

C. F. Baker has been appointed supervisor of agencies of the Templar Motors Corp., Cleveland.

Roy Simning Leaves Minneapolis Dealers

Resigns as Assistant Secretary of Association to Market New Gasoline Substitute

MINNEAPOLIS, April 16—Roy B. Simning, who has been assistant secretary of the Minneapolis Automobile Trade Association for several years, has resigned to become part of the Gasene Motor Fuel Co., which will make and market a fuel that has been invented by Thomas J. Setchell. It is made of kerosene and two mineral ingredients, and has been tested by a number of Twin Cities men and by the University of Minnesota.

Simning's resignation takes effect April 30. He has operated the office of the association at 707 Andrus Building, and has done much of the work in connection with the Twin Cities show. He also was a firm advocate of the present National Automobile Dealers' Association for about two years before the idea finally took definite form and did considerable to pioneer the movement.

Weidely and Cleveland Swap Men

CLEVELAND, April 11—George Weidely, vice-president of the Weidely Motors Co., Indianapolis, has become associate engineer for the Cleveland Tractor Co., Cleveland, thereby establishing a closer relationship between the two companies. The tractor company, on its part, has sent A. F. Knoblock, its general manager, to the Weidely plant as general manager. Each executive spends 2 days a week in the other company. W. H. Knoblock, a brother of A. F., has been made production manager for the Weidely company.

Drive-Aways Popular as Ever with Dealers

Oldsmobile Saves 366 Freight Cars for Government in 3 Weeks – 1,100 Cars Driven Away

DETROIT, April 13—The freight situation here is unchanged and drive-aways are as popular as ever. A few of the manufacturers who have found it easier to get freight equipment the past week have taken advantage of the opportunity and reduced their drive-aways considerably. But those who were less fortunate in obtaining freight cars have increased their drive-aways, making the aggregate about the same as it has been.

Records show that the Olds Motor Works has saved the government 366 freight cars in less than three weeks. In other words, the company, through its drive-away plan, has practically released 366 freight cars for other purposes such as transporting grain, government supplies, etc., 1100 cars having been distributed by the drive-away plan. Many of the drive-aways go to the storage houses the company has established in Detroit, Grand Rapids, Chicago, Toronto and Buffalo. From 60 to 70 per cent of the company's production goes overland, many of the cars traveling 600 to 700 miles.

The Hupp Motor Car Corp. has cut down its percentage of drive-aways. To equalize its distribution the company is giving the dealers only a certain percentage of their quota.

Some Companies Use the Boats

The major portion of the output of the Paige-Detroit Motor Car Co. has gone over the railroad, the company being exceedingly fortunate in obtaining a great number of cars. Only nine cars were sent overland from the plant the past week. The company is making use of boats to take cars to Cleveland andToledo, from which points the dealers can take them to their home towns.

The Federal Motor Truck Co. is freighting its product to the extreme east and west, but nearly all the nearby dealers are taking the trucks by drive-away. The company reports that many trucks are required to handle lumber around the ship building centers and is sending much of its production there.

Fifty cars left the Cadillac Motor Car Co. plant the past week. Most of them went to eastern points. The Scripps-Booth plant averages four or five daily on drive-aways.

A drive-away of 250 cars was arranged recently at a meeting of Overland dealers in which fifty of them will participate. Each dealer will supply the drivers for all the cars allotted to him.

A little bit late because of mail congestion, but here nevertheless—a general view of the show put on by the Syracuse Automobile Dealers' Association

Milwaukee Dealers Postpone Used-Car Show

MILWAUKEE, April 15—The lack of a suitable exposition hall has compelled the Milwaukee Automobile Dealers, Inc., to indefinitely postpone the second annual Used Car Show, which it was planned to hold during the latter part of April. The first show a year ago was a brilliant success and was to have been repeated this year. However, the auditorium is undergoing extensive alterations to provide a new exhibit hall equal in size to the main arena, and this precludes the use of the big building until after June 1. An outdoor show was proposed, but the plan was not deemed feasible. There is consolation in the situation, however, as the work now going on at the auditorium will make it possible for the M. A. D. to stage one of the largest annual shows next January that will be held in the United States during 1919.

Rock Island Out for Cash

ROCK ISLAND, ILL., April 12—Motor car repair work in the three cities of Rock Island, Moline and Davenport will be put upon a strictly cash basis after May 1. This was decided upon at this week's meeting of the Tri-City Automobile Trade Association. The new rule will also apply to supplies of all kinds. Credit customers will be notified of this decision and the newspapers will carry announcements. Shortening of credit is in harmony with the suggestion of the government.

Savannah Trade Elects Sinkler Its President

Cadillac Man Heads Dealer Body—Vinson, Vice-President and Richardson, Secretary

SAVANNAH, April 15—E. B. Sinkler of the Cadillac automobile agency has been elected president of the Savannah Auto Trade Association, which met recently to accept its charter.

Other officers elected were: Vice-president, C. E. Vinson; secretary, E. S. Richardson, and treasurer, S. N. Harris. The board of directors, besides including the president and vice-president, take in the following: T. A. Bryson, L. H. Dimmitt, J. H. Holcomb, J. G. Hardee and R. W. Heard.

T. A. Bryson, C. E. Vinson, G. B. Bache, J. C. Lewis and E. D. Graig were appointed members of a committee to draft by-laws for the association.

It was unanimously voted to give all the net proceeds of the automobile show to be given by the association at the Municipal Auditorium from April 16 to 20 to the Savannah Chapter of the American Red Cross.

Anderson Gets Government Work

SAVANNAH, April 10—Contract has been awarded to the Anderson Motor Co., Rock Hill, S. C., to construct 200 aviation trucks for the federal government at a cost of about $35,000.

Massachusetts Shows Jump in Registrations

First 3 Months of 1918 Gain 14,977 Vehicles—Motor Trucks Increase

BOSTON, April 12—Some idea of the utility of the motor vehicle and the necessity for keeping abreast of the times by use of the modern method of transportation is shown by the figures of the Massachusetts Highway Commission for the first three months of this year compared to the same period of a year ago.

Up to April 1 of 1917 there had been registered 95,798 machines of all descriptions. For the first three months this year the figures are 110,775. That is 14,977 more machines.

An analysis of the figures shows that there was a larger percentage of commercial vehicles registered than passenger cars, proportionately if not numerically. The total passenger cars listed a year ago for this period was 78,439; this year 86,820 or 8381 more.

Commercial vehicles were 17,359 last year and 23,955 this year, or a gain of 6596 in three months. In other words, while the trucks showed a gain comparatively of more than 30 per cent the cars did not show more than 10 per cent.

There are now registered within 3000 of the total commercial machines listed for all last year. So there will be a much greater total for 1918, the only handicap being the getting of machines. More than 60 per cent of the total for last year has been listed now even though Massachusetts has had but a few weeks of good weather.

Financially the motor industry continues to shower its money into the State treasury, there being $132,294.41 more received this year than for the early part of last year, while the total will soon be $1,250,000. Here are the comparative figures:

	Jan. 1 to Mar. 31, 1917	Jan. 1 to Mar. 31, 1918	Increase
Total vehicles	95,798	110,775	14,977
Passenger cars	78,439	86,820	8,381
Trucks	17,359	23,955	6,596
Makers, dealers	3,055	2,233	*822
Motorcycles	3,393	4.024	631
Licenses, Op. Chf.	10,042	8,774	1,268
Renewals	22,024	26,765	4,741
Examinations	3,101	2,942	159

Los Angeles Dealers Convene

LOS ANGELES, April 12—The Los Angeles Motor Car Dealers' Assn. has entered upon a series of salesmens' conventions, at which professional speakers instill advanced ideas of salesmanship and the spirit of aggressiveness. It is recognized here that the present is not the time when the motor car business is "easy money" and real, actual, hard work must be done to maintain the volume of business that is necessary in view of the sums invested in the industry.

The second of these conventions was held last evening and almost 300 men attended it. The principal address was on "Business Getting" by Brooks Fletcher of Marion, Ohio.

There was no hilarity about the gathering. The 300 men were assembled for the purpose of mutual benefit and apparently appreciated the fact. President Arnold proposed a silent toast to the President of the United States, and followed this with a few remarks introductory to the talk by Mr. Fletcher. The declaration was made by President Arnold that apparently the motto of the automobile industry in Los Angeles in the past has been *gain* but now it must be *service*.

St. Louis Has An Accessory Show

ST. LOUIS, April 12—The Famous & Barr Co., a department store here, last week staged in their store what was advertised as a special "motor car accessory show," in which they had the assistance of special manufacturers' representatives of a dozen concerns, including Vesta Battery & Equipment Co., J. B. Sickles Saddlery Co., Indian Refining Co., Binz-Bennett Supply Co., Wizard Arc Spark Plug Co., Hamilton Rubber Co., Megue Rubber Co., Adams & Elthing Co.

The feature of the advertising was cut prices. Some of the prices advertised were: Pyrene outfit, $7.85; Champion X spark plug, 42c.; Century Bar Tread tires, 30 x 3½, $18.95; Havoline oil, $1.98 a gallon. The Havoline oil prices were progressive in their cutting. The first price was $2.15, and some of the downtown hardware stores advertised at that price in competition. Later in the week the Famous & Barr Co. made another cut, and their $1.98 price was printed in some papers next to the hardware ads at $2.15. Most of the prices offered were about the ordinary jobbers' prices. The regular accessory dealers ignored the prices.

Martin Airplane Plant Nearly Ready

CLEVELAND, April 12—The 5-acre plant being completed for the Glenn L. Martin Airplane Co. is rapidly approaching completion, and it is expected that the Martin company will be in production in about 60 days. The formation of this company marks the entrance into the airplane industry of a concern which not only intends to build war products, but which will probably be an important factor in the commercial airplane developments which will follow the war.

The concern is incorporated for $2,000,000 and has erected its plant on a 55-acre field, which is sufficient not only to give plenty of room for expansion purposes of the factory, but also to allow a landing and experimental field for the planes manufactured. It is only in a few instances that airplane factories have been able to secure flying accommodations in close proximity to the manufacturing plant.

Maryland Dealers Plan to Continue Driveaways

Many Go to Factories to Make Arrangements for Getting Cars to Agencies

BALTIMORE, April 12—A number of dealers are at factories arranging driveaways. Herbert M. Hartman, vice-president and general manager of the Zell Motor Car Co., is at the Peerless factory, Cleveland, and will next week drive a score of cars down, with more than a dozen owners at the wheels of their own machines.

Earle Williams, general manager of the Packard Motor Car Co., of Baltimore, and B. F. Baker, sales manager of the Passenger Car Department for the same firm are at the Packard factory, Detroit, making arrangements for a big driveaway of passenger cars and trucks.

Harry A. Mayer, vice-president and general manager of the United Auto Sales Co., Studebaker and Garford distributer has just completed plans and brought in a lot of Studebakers and Garfords over the road. This company will hold a private show of the new Studebaker line during the coming week, the first showing of the new line in the city.

But there is one big problem that the dealers are facing. It is in their shops. Some of the shops are working with as low as 25 per cent of their regular force of mechanics and this is not due to lack of paying wages demanded. There is some talk of attempting to train women in some of the shops for male help appears to be unobtainable. Whether women will be put in the shops is a question that is being seriously debated at this time and it is possible that this step will have to be taken.

Overland Drive-Away Reaches York

YORK, PA., April 12—One hundred and thirty-five drivers sent out by the Overland Harrisburg Co., with headquarters in Harrisburg and this city, have returned overland with that many Overland cars. One hundred of the drivers were from York and 35 from this city. H. Schroeder is the manager of the Overland Harrisburg company. Twenty-four men from the J. W. Richley Auto Co. left to-day for Detroit, where they will get two dozen Buick cars and drive them over the road from that city. The concern, which also has the agencies for the Dodge and Nash cars, has driven at least 250 Buick and Dodge cars over the road this spring.

Kaenjay Enters Jobbing Field

NEW YORK, April 12—The Kaenjay Sales Co., manufacturers' representative, has entered the general jobbing business and is traveling three men covering New England, New York, Pennsylvania, New Jersey, Delaware and Maryland.

Would Limit Speed for Driveaways to 30 Miles

Letter Being Sent to Manufacturers Asking Them to Caution Drivers to Use Greater Care on Road

DETROIT, April 12—A joint letter is being prepared by the Detroit Automobile Club, the Monroe Chamber of Commerce and the Toledo Automobile Club to be sent all the automobile manufacturers in this territory asking them to caution all drivers taking cars from the factory overland to stay within a speed of 30 m.p.h.

Although nearly all the manufacturers are now cautioning drivers to limit themselves to a speed of 18 m.p.h. complaints are being made that many of the driveaways exceed a speed of 40 miles. This is not only harmful to the car but proves dangerous to the drivers as well as those of other vehicles.

It is reported that many men that are brought to the factories to drive-away cars indulge in liquor while en route or before they start, making for unsafe driving on the highways. It is pointed out that dealers should use care in selecting capable and reliable men for drive-aways. Illustrating what can happen on a drive-away where a high speed is attained, an instance is cited. A train of sixteen cars were running at a speed over 40 m.p.h., cars being only 4 or 5 ft. apart. The leader suddenly stopped at a railroad crossing, causing all of the following cars to jam their radiators. Drivers are very often inclined to appropriate the road at dangerous speeds. One driver stayed on the same path until he nearly touched an approaching car. The latter to avoid an accident swung into the ditch and the factory driver escaped with little injury when his car turned over.

Deere Buys Waterloo Engine

MOLINE, ILL., April 12—Deere & Co. have bought the entire business of the Waterloo Gasoline Engine Co., Waterloo, Iowa. The consideration is said to have been $2,000,000. L. W. Witrey, vice-president and superintendent, and J. E. Johnson, secretary and treasurer of the old company, are retained to direct the business of the gasoline engine and tractor plant.

The Waterloo Gasoline Engine Co. was established in 1885 for the manufacture of gasoline engines. About four years ago the company came out with a tractor which has won deserved renown as the Waterloo Boy. The business grew so rapidly after the tractor was produced that extensive additions to the plant were necessitated. It now covers ten acres and has a capacity of fifty tractors and 100 gasoline engines per day. By the purchase of the Waterloo business Deere & Co. enter the tractor field with a product with an established reputation and consequently are enabled to assume an important position in the tractor industry at once.

What Your $50 Liberty Bond Will Do

It will protect 1000 soldiers from smallpox and 666 from typhoid. It will assure the safety of 139 wounded soldiers from lockjaw, the germs of which swarm in Belgian soil.

It will render painless 400 operations, supply 2 miles of bandages—enough to bandage 555 wounds.

It will care for 160 injuries in the way of "first-aid packets."

It will furnish adhesive plaster and surgical gauze enough to benefit thousands of wounded soldiers.

$18,000 invested in Liberty Bonds will equip an infantry battalion with rifles.

$50,000 will construct a base hospital with 500 beds, or equip an infantry brigade with pistols.

$100,000 will buy five combat airplanes, or pistols, rifles, and half a million rounds of ammunition for an infantry regiment.

Extra Catalog for Changes

WHEN Hyslop Bros., Ltd., Toronto, prints its catalog, Advertising Manager Martin has several printed in which there is a blank ruled leaf bound in between every pair of pages. On these any changes are recorded, so that the data are at hand when the next issue is printed. For example, a blank sheet is between pages 94 and 95. If changes occur in the goods on page 95 they are entered on the facing blank page. On the front page of the book is kept an index in pencil of the pages on which changes have been entered.

Spring Boosts Philadelphia Sales

PHILADELPHIA, April 12 — Spring weather has been stimulating sales of both new and used cars, and indications point to unusually heavy sales. In a campaign to sell used cars, some of the dealers are making a special effort to get out attractive window posters emphasizing that each price is marked in plain numbers on the cars for sale, and that under no consideration will there be any deviation from those prices. Others, representing large manufacturers, make a point of announcing in show window placards that no other concern's cars are handled, as sales of cars that can be vouched for only will be made. These two points being stressed at present are new phases of the Row's activities.

St. Louis Campaign to Stop Motor Car Thefts

Value of Stolen Cars Five Times as Great as All Other Property Stolen in the City

ST. LOUIS, April 12—A campaign to stop thefts of motor cars has been undertaken by a conference committee representing the Automobile Manufacturers' and Dealers' Assn., the St. Louis Automobile Club, Chamber of Commerce and the Municipal Legislative Committee. The first step was to order an attorney retained to watch the prosecution of all motor car thieves and to oppose any move for pardon or other leniency after conviction.

The Conference Committee met last Wednesday at the Marquette Hotel, and was told by the automobile dealers present, led by Frank R. Tate, that this city was the worst motor car theft center in the country. The committee was informed that any person wishing to buy a stolen car could order it in advance, giving the description, and that the thieves were so organized that the buyer would be protected from annoyance.

M. W. Doyle, a motor car insurance man, submitted statistics to show that the value of stolen cars was five times that of all other stolen property in the city, and that the police department assigned only five detectives to this work and 125 to other thefts. He submitted statistics to show why the rate was raised recently. The stolen machines not recovered were: For 1913, one; 1914, two; 1915, eight; 1916, thirty-two; 1917, 283.

The reasons for the popularity of thefts here, it was stated, is the failure to get convictions of thieves and the light sentences or paroles when conviction could not be evaded.

Recently independent detectives working in St. Louis recovered nine St. Louis machines in one Illinois town, and found there 18 other stolen cars. In another town seven were found that had been taken from St. Louis. Some arrests were made, but Frank R. Tate, a dealer, says that the right man has not been reached. Tate says that his car has been stolen three times, and each time he got it back by communicating with a certain man downtown. He said that each time a tire was missing or other toll was taken.

Canton Garagemen Organize

CANTON, April 12—Garage owners of Canton, Ill., have formed the Canton Garage Owners' Association and elected the following officers: President, A. R. Street; treasurer, Meade McClatchey; secretary, J. T. Jelly. Chas. L. Turner, president of the Illinois Garage Owners and Dealers Association, was present and assisted in the organization.

BUY LIBERTY BONDS

Sentiment Favors Cash Business

WATERLOO, IOWA, April 12—In order to ascertain the sentiment of the dealers surrounding Waterloo as to the cash basis for a business, the Repass Automobile Co. sent a letter to its dealers. The replies received indicated that the dealers had found credit accounts difficult to handle, and nearly all of them said they were in favor of the cash basis. Some of them said they anticipated difficulty in getting the new plans started, but all indicated that they were going to try it.

The Invisible Ink

(*Continued from page* 16)

especially those who wait too long.

"Furthermore, you've got to have at least a demonstrator or you can't very well sell anything. It's all right to talk to these farmers about what a fine car you have, but until you take it up and show it to them, it doesn't really get home to them what you talk to them about.

"Furthermore, someone of them may take a notion some day that he wants a car right hot off the bat and then he's got to have it right then or maybe he isn't going to buy it at all. It may cost you a little interest money to carry a small stock of these Sennetts, but what does that small interest money amount to compared with the possibility of making or losing a sale because you haven't the stock?"

"Well, I'll think about it," said Miller. "I'll come down to take one anyway and maybe I can get one of the boys to come down with me and drive another one back. You see, it spoils almost a whole day for us to go down there and drive cars away with the roads as bad as they are now. You have to go pretty slow. Of course, it doesn't damage the cars much, if you're careful, but it takes a lot of time."

"That's all very true, but on the other hand, the car that has been driven from Callawassa to Merrylton and incidentally from the factory to Callawassa is a much better car than it was before it was driven. The man who buys one of those knows that the car has been tested out and there can't be any bugs in it. The car that has been driven away contains sales points that are not contained in a new car and you want to take advantage of these points.

"Your desk is full of contracts right now that you want prospects to come in and sign. As long as they are in the condition they are now, they aren't worth anything to you. They are written in invisible ink and the ink never will show through unless you rub something on it that will bring it out. One of the things that you've got to have to bring it out is cars and the only way you can get 'em that I can see, is to drive 'em away and have a stock."

BOOKS RECEIVED

"How to Run a Retail Automobile Business at a Profit," A. W. Shaw Co., Chicago; publisher of "System." The book takes up ways to reduce selling costs, cutting down overhead expense and better profits despite higher costs. It goes into cost analysis and cites examples of how dealers and garagemen have figured ways of reducing expenses and increasing profit. One of its best features is the indication of the percentages that different expenses should be to the gross business. There are 218 pages. Motor World was among those who assisted the A. W. Shaw Co. in compiling the information in this book.

CATALOGS RECEIVED

The U. S. Ball Bearing Mfg. Co., Chicago, has compiled a pamphlet, of formulae and calculations necessary to determine the loads on ball bearings resulting from various types of power-transmitting elements. These include the calculation of bearing loads from belt, rope, chain, spur gear, helical gear, bevel gear, helical bevel gear and worm gear drives.

—

The Greenfield Tap & Die Corp., Greenfield, Mass., has issued a revised edition of Catalog No. 38, showing the complete line of pipe tools made by the various divisions of the company. The pamphlet also contains a history of the organization, and miscellaneous tables of information such as drill sizes for pipe taps, standard dimensions, conduit sizes and wire specifications.

—

In a booklet, S. C. Johnson & Son, Racine, Wis., give brief descriptions of all the Johnson products and their uses.

—

The first number of the house organ of Julius Andrae & Sons Co., Milwaukee, has been published. It is styled "Jasco Reminder" and contains news of the company, personal notes, a collection of some of the jokes told by some members of the organization, as well as detailed descriptions of the products of the company.

New Quarters For Onguard

DETROIT, April 12—The Onguard Auto Necessities Co. has moved from its old location at 982 Woodward Ave. to new quarters in the office of the Hayes Mfg. Co., at 458 Maybury Grand Ave., Detroit.

Studebaker Dealers Gather

BOSTON, April 12—The annual conference of New England Studebaker dealers took place this week at the Hotel Brunswick, and there were nearly 100 of them on hand from all over the territory.

Rainier Price Increase

NEW YORK, April 12—The Rainier Motor Corp. has advanced the prices of its truck models as follows: The price of the 1¾-ton chassis remains $1,350.

Chassis Model	Old Price	New Price	Increase
½-ton.....	$995	$1,150	$155
¾-ton.....	1,150	1,250	100

Overland Dealers Gather

BOSTON, April 13—The annual conference and banquet of the Connell & McKone salesforce and dealers handling the Overland and Willys-Knight lines for Eastern Massachusetts took place last night. There was a dinner at the Hotel Lenox and remarks were made between the courses by both Connell and McKone, and some of the dealers from other cities. Then the entire party motored to a theatre where they enjoyed a show, the entire expense being borne by the Connell & McKone Company.

Boston Dealer Adds Truck

BOSTON, April 13—The Connell & McKone Co. has taken on the distribution of Bethlehem trucks for New England. The truck will be marketed through subdealers in conjunction with the Overland and Willys-Knight products. It was formerly sold by the C. S. Ransom Co. that has the Truxton unit.

Standard Crucible Foundry Addition

MILWAUKEE, WIS., April 15—The Standard Crucible Steel Co. of Milwaukee is erecting a foundry addition, 40 x 50 feet, to increase its casting production to the point required by its unfilled orders. The additional facilities will be available about May 15.

Twenty-five cents a copy
Two dollars a year

Now, Automobile Dealers—Here's a New Angle!

Your best mechanics have gone into the military service.

Your repair force is all shot. Have you thought how you are going to do all the repair work that is coming to you this year in addition to keeping up the service on the new cars you sell?

It's a big problem. More than one dealer has worried over its possibilities.

The worry is greatest among those who sell cars that call for a great deal of service attention to keep them running.

Naturally, the easiest way out of such an inevitable difficulty is to sell cars that don't call for such service.

Buyers much prefer cars that seldom have to go into the service station. They would rather have such a car than to have any car that needs such attention no matter how inexpensive and how easily obtained such service might be.

The 50,000 Hudson Super-Sixes in service and the records that Hudsons have made are the proofs of its endurance.

The Super-Six was built from the first to be one that would call for the minimum amount of service attention. Every car built has shown us ways by which the endurance of later cars could be lengthened. The present series express the attainment of an ideal in endurance we never dreamed possible when the first Super-Six was put out. And you who have watched the performance of automobiles know how much superior in the matter of endurance even the first Super-Sixes were to other cars, regardless of their selling price.

There is a remote possibility that you are in business in a territory not now represented by Hudson. Or perhaps you are the very dealer we have had our eyes on for some time. At any rate, why not write us if you are interested? Even if nothing comes of it, it won't do any harm for us to get acquainted with each other. You and we are going to be in business for a long time. Who knows what might result from a note from you that you are interested!

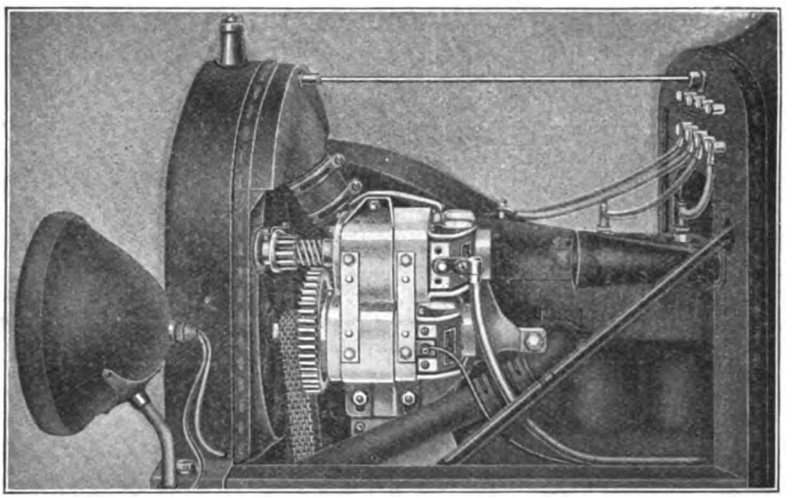
"NORMA"
PRECISION
BALL BEARINGS
(PATENTED)

As the success of an organization rests upon the capacity of the men comprising it, so does the success of a machine depend upon the integrity of its parts. To sacrifice quality for price in any part of a machine, is as fatal as to place an incapable man in an efficient organization. There can be no more short-sighted fallacy.



Day-in-and-day-out dependability has uniformly been the distinguishing characteristic of the high-grade ignition apparatus and lighting generators in which "NORMA" Precision Bearings have been the standard bearings. Their record is not one of days or months, but of years.

Be *Sure*. See That your Electrical Accessories are "NORMA" Equipped

Scatter Sunshine and Gather Dollars

Let's Go

MAYBE it would be a good idea right here to say a word about why this issue is now in your hands—why it was printed.

It was published to "get over" a big idea—an idea which will do us all good if we only get hold of it with both hands.

Let us say right here that the issue isn't going to talk about the war. You were talking about the war before you opened the book, you will talk about it after you close the book, you will read it in the newspapers to-day, you will pay a war tax several times to-day, you will buy and help sell Liberty Bonds and War Savings Stamps, and you will live and think and talk war, so this issue is merely going to discuss Summer Merchandising as it exists in 1918.

Of course, one of the big factors in 1918 conditions IS the war, but it is a cause and a result, with Summer Merchandising in between as the all-important issue of the day so far as motor tradespeople are concerned.

You know, the war tends to make us sad—and tense. It makes us think—which is proper and right. It is said that we Americans don't think about it enough, but there comes a time when this continuous thought makes us morbid and gloomy, and if we don't check up with a jerk at that point we pass the high point of efficiency and our war thoughts bear us down into despond and uselessness.

So this issue is, if anything, a CHEER-UP issue. It is a call to MEN to smile in adversity, to be super-civilized beings, to fight the big fight with beaming faces, and to swing into business with the smile that turns a loser into a winner.

In this issue there are many ideas for Summer Merchandising. Each one of them is a good thought, filled with the possibilities of bigger business than you had even in 1917 and 1916, when things were different.

All that is necessary—and it is necessary—is that you put yourself in the right frame of mind right here as you read this page. Say to yourself:

"I know my country is at war. I know it is a serious thing. I know I must do all I can to help win. But I also know that if I don't put my shoulder behind my business harder than ever before, I am not going to be much use in any way.

"I know I feel blue at times. I wonder if the war will ever end. I get pessimistic and in a blue funk. But I'm not going to wonder about the end of the present situation, and I'm not going to get blue. I'm going to cock my chin just a little higher, smile as only a real man can smile when things go hard, and buckle into 1918 business.

"I'm going to get all the good ideas I can. I'm going to do things I never did before. I'm going to efficiencyize my business along the lines of which I have thought for months.

"I'm going to cheer up myself and everybody else. I'm going to make some money. And I'm going to pass it around, too. I'm going to make things hum.

"Let's go!"

Digitized by Google

HANS FOOLISH

THE PROPAGANDA MAN

HAVE you heard the song of Hans Foolish, the man who believes business should be stopped?

Have you heard him sing his latest ditty about how people should stop spending money and stop all their activity?

Have you seen him in his latest sketch entitled: "How Does Father Do It? The Factory's Stopped Running, but the Old Man's Getting Fat?"

The other night Hans Foolish gave an interesting dissertation on the hard time the Poor Working Girl has getting along because of the high cost of living, and at the same time he blatted considerably about how people ought to stop spending money in the stores where the Poor Working Girl earns the eight per with which she buys her eats.

Hans also wrote an interesting—but very phony—article on how every one should cheer up and win the war, and in the same breath he said they should stop buying motor cars and going to Coney Island because that was pure pleasure and an extravagance. He probably figured the same amount of amusement could be got out of a funeral and that this would be cheaper because no admission is charged.

And maybe he figures that people can be kept cheerful by pulling out their finger nails or knocking their teeth with a tack hammer.

He's a smart fellow, this Hans Foolish. We don't pretend to be smart enough to keep up with him.

One thing we will admit, and that is that he is smart enough to make a lot of people believe the same way he does. Maybe you've been listening to him.

We'd like to ask him a few questions however. Here they are:

In America's factories are countless workmen who have homes, partly or wholly paid for, and who have families, with kids in school. If the factories stop what are these people going to do?

Supposing there were a job at a shipyard or somewhere else for the Old Man. How could he pull up and move there? And between the time the factory shut down and he got his other job, how could he live?

And how could he pay for his Liberty Bonds, which the factory is financing for him?

Supposing people stopped buying in stores. What would the store girls do? Where would they go for jobs?

And what would become of the companies that run the stores?

And the companies that own the store buildings and have to rent them or else go into bankruptcy?

And the banks that handle the stores' money?

And the men and women who work in them?

And the men and women who work in the factories that make goods for the stores?

And the raw materials businesses that supply the factories?

And all the workers all along the line?

Only a few can take part in the real work of war. The rest must back up the front line men and finance them. And without industrial and merchandising activity there can be no financing.

If no more motor cars were made what would become of the thousands of workers who would be thrown out of work in factories, garages, salesrooms and service stations?

What would happen to the people who depend on motor vehicles for transportation in our great transportation emergency? And even the people who use cars for recreation purposes in order that they may be more efficient for business purposes?

Hans says everybody should do nothing but WAR WORK. That's all right, Hans, but it can't be done. We haven't room here to figure it out for you but——

The real American to-day is he who wreaths a smile around gritted teeth and becomes two men where last year he was only one.

Make This Summer *Better Than* Last Summer

UP in Vermont is an old farmer named Si.

Si raises buckwheat.

One year he had a whale of a crop.

He tried it the following year.

The crop was not so good.

"Not so good this year as it was last year, is it, Si?" remarked a neighbor.

"No," speculated Si, "it ain't as good as I expected, but I didn't expect it would be."

TO say, "Make this summer better than last summer" sounds a bit bombastic, doesn't it?

But is it?

Let's talk it over.

Your major business is selling cars. Right now the demand is good. People are buying. You are driving cars from the factory probably. You are selling all you can get.

But the factories are not making as many as they did last summer. So, no matter how good the demand is, you won't sell as many as you sold last summer unless you are a favored dealer and get a bigger percentage of cars than you would get in normal times. Isn't that about right?

Now, then, how are you going to make this summer better than last summer?

"It can't be done!"

Wait a minute, Si! Wait a minute! Let's figure a little bit.

Could you make this summer better than last summer if your volume of business were greater and the overhead no heavier?

Surely.

Very well, then. Our problem is to figure out a greater volume of business without adding too much to the overhead.

Make Money on Used Cars

So—let's take up as a starter the question of used cars. Heretofore you may have considered used cars a necessary evil. You may have been satisfied if you could trade and not lose too much money. Why not trade and make some money this year.

It CAN be done, because some dealers are already doing it. It is simple to say and not so hard to do: Trade at a right price, fix the car up, sell it at a price that covers the allowance, repair cost, cost of handling and commission for the salesman.

This is being done. Why not do it? All that is needed is a PLAN for handling the business and ADHERENCE TO THE PLAN. Used cars should NOT be sold in poor condition. It hurts your entire business. Fix them up. Sell them at a profit.

If you trade on every eight sales you make you handle 18 cars. If you make a profit on 18 cars instead of a profit on 10 and a break-even on eight you have almost doubled your business this summer, haven't you?

There is the demand this summer for these rebuilt cars. If you can't get new cars why not sell used cars? What do you care, so long as it's good business and you make money at it?

Sell a Truck

And now, you've got a salesroom with plenty of room. You have a service station, sales organization, office force, and all those things that are necessary to selling. Let's make them do more work.

Let's sell a truck. Every dealer can't get an agency right away and sell a lot of trucks this summer, but every dealer can TRY. Look over the truck field. Pick a good one. Read the truck sales information farther back in this issue of Motor World and see if you can't dispose of some trucks.

You get a prospect list, make calls, work just the same as on new car sales, with some variations, and the truck business fits in nicely.

This increase in gross volume does not begin to make a proportionate increase in your overhead. Even if you are a big dealer with a big sale of cars why not get a little more business?

Money in Accessories

IF somebody came and dumped an armful of money into your cash register without any effort on your part you would call that a pretty good increase in volume, wouldn't you? Well, here's how it's done.

The force that is going to dump this money in your cash register is one that is puttering around the place every day—doing nothing. It is the desire for accessories of the car owners who frequent your place of business.

Car owners want accessories. They will buy a few from the hardware man or you or the department store or whoever sells them, but they will buy MORE from you if you make an effort to sell them, for the car owner is accustomed to buying things from you. Furthermore, he is in your place all the time and you always have him to work on. He goes to hardware and other stores seldom. You see him every day.

Therefore, get a showcase or a runway cabinet, about which there are ideas farther back in Motor World this week. This cabinet will cost very little and it will do a lot of sales work at no cost at all.

Make part of your place into an accessory store. Make it look like a store. Arrange for some one to sell accessories. Make a business of it. Instead of letting a man buy five gallons of gas and drive out, wiggle a windshield cleaner around on his windshield and get some more of his money.

Digitized by Google

Campaign NOW for Leadership THEN

The discount on accessories is almost twice what it is on cars—and there is no service.

Some of America's biggest dealers have found a source of hidden profit in accessories. It applies to the biggest dealer and the smallest garageman.

This added volume of business adds almost nothing to the overhead.

Sell Trailers

Take a look out the window and see the number of horses delivering groceries, laundry and other things. And think of the number of grocers and laundrymen you know who have cars standing idle all the week. Little trailers hitched to these cars would make the cars trucks by day and passenger cars outside of business hours.

Furthermore, there are many small business men who would buy a used car and a trailer and provide themselves with a passenger and delivery vehicle. There would be a double sales argument for the combination. The uses of the trailer are manifold. A little figuring by a good salesman would reveal great possibilities for business. And there would be no service attached.

And the Farm Tractor

No matter where you are located you should not imagine that there is nothing for you in the farm tractor. On other pages of Motor World are stories relating to this new form of dealer activity.

To sell the tractor you select an agency, ignoring the great cry raised by some that tractors are not standardized and that dealers should wait to see what is going to happen. What will happen to those who wait is that the business will be sewed up by those who started right NOW.

No great additional overhead is required for handling the farm tractor. Some development or expansion of your sales department may be necessary, but the increased cost will more than be taken care of by the added profit.

New England bought a thousand last year. The East needs them as much as the West. The sales work is not so expensive as new-car sales work, because the wear and tear of excessive demonstrating is eliminated and there is no trading and costly service.

Now, if you can sell 20 or 30 tractors in a year, listing at $1,000 each, and net $100 on each, that $2,000 or $3,000 would figure in nicely, wouldn't it? You see, this matter of volume is not impossible.

Sell Farm Lighting Systems

And here's another added—the farm lighting system. It consists of a gasoline motor, a generator, set of batteries, switches, etc. They sell for about $400. Every farmer ought to have one.

Of course, this is not exactly in the line with motor cars, but it is gasoline apparatus, and the motor-car dealer is a logical man to sell it. Dealers are taking them in in some sections and find them a profitable business.

The principal expense is one or two demonstrating outfits, which should cost about $1,000—maybe less. Thereafter it is mostly a question of personal effort.

In case your present organization has leeway enough to handle these outfits your overhead is increased not at all; but, in any event, the increase will not be at all in proportion to the profits of this business.

In considering these points we nearly forgot to mention the principal part of your business, which is new-car sales. Maybe you could get a few more cars and sell a few more cars by expending a little more effort and operating a trifle more intensively along sales lines.

Every dealer should do this. If he sent out a few sales letters last year he should send out more this year. He should more thoroughly scrutinize his prospect lists and get every last dollar there is in his new-car business.

Garaging the Transient

There is going to be touring this summer. Every tourist who stops over night in your garage is that much added revenue.

Road signs are a cheap form of getting business, and they are very effective.

Careful attention to tourist trade, which means personal attention rather than the spending of money, will build added profits on this side of the business.

Price Cutting

There is no excuse this year for price-cutting. There never was any GOOD excuse, and this year there is none at all. People want more goods than there are, so why should any dealer shave a price?

Every dollar you DON'T cut is equal to more than one dollar earned.

And in many departments of your business there are ways you can save money. You can cut down in many directions. Make a study of this.

More Business in 1918

Don't you think that the employment of some or all of these means of getting greater volume will make this summer better than last summer?

Expect it will be good and make it better than you expected. What you WILL you will get.

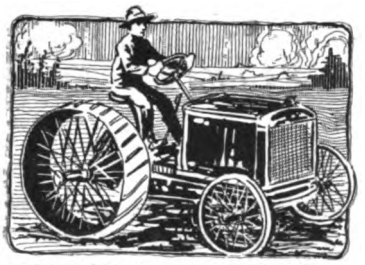
Don't you still believe you should hold to the sale of cars only just because that has been your custom in the past?

Don't you see that the dealer who gets on this automotive basis NOW is going to be ready to assume big leadership when things go back to normal?

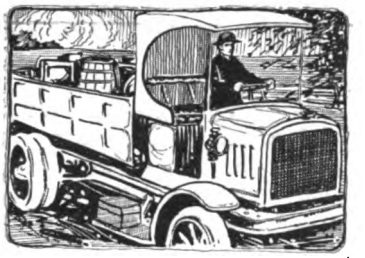
Not only will he have kept his business to its normal volume and better during the present, but he will have provided a foundation on which he can build bigger than he may have dreamed.

Campaign NOW for leadership THEN.

We Don't Care



WHEN Motor World gets out its special numbers and prints its various extra features our readers often write in and tell us how they liked this, or that, or the whole number, or make some other comment.



Sometimes they sort of apologize for taking the liberty of writing on such a subject, but if they knew how pleased a publication—which, after all, is very human—is to receive letters from its friends they would drop all apologies and make all the comments they please, both adverse and favorable.

The whole trade has aided in getting out this issue. It is as much yours as it is ours. Therefore, if you like it you have a right to say so, and—you may rest assured—we shall be glad to hear about it.

So—if you find something that appeals to you as worthy of comment, or if the idea of the whole issue appeals to you, let's hear about it. We won't mind a bit.

The

Automotive Dealer

and the

Motorized Farm

What They Mean To One Another

WHAT does the motorized farm mean to the automotive dealer?

Profits! Bigger business! A widened field of activity.

What does the automotive dealer mean to the farmer?

Profits! Bigger Business! A widened field of activity! More joy in life! Comfort! Better health! Happiness! The solution of the farm help problem and the problem of why boys leave the farm.

Who must make the first step in establishing this relationship that is so profitable to both?

The dealer, for he is the man with the goods to sell. If the dealer doesn't take the first step the farmer may—later on—DEMAND these goods of some other dealer in some other trade, and then some one other than the motor car dealer will reap the profits that the automobile man can have if he will only go after them NOW.

This all sounds like a catechism, doesn't it? It isn't. It is just a plain way of stating facts.

The facts are these: An era of better living and better work is opening up on America's farms. The rural man has seen the beginnings. Eventually he will step into line without being urged. He will step into line much sooner if an aggregation of live dealers gets after him and sells him the things he ought to have. Then the farmer will thank the dealer and there will have been established a firm friendship that will bring the dealer future business.

Time was when a farm home was a house—and that's about all. There was poor heat. To-day farmers have furnaces and steam heat.

They used to get to town once a week in the summer and often not at all in the winter. To-day they have trolleys by the door and cheap cars—and good ones, too—that make the city only a few minutes away.

Communication was difficult. To-day there are networks of telephones that enable one housewife to gossip with another. The barriers are broken down.

Living conveniences were not conveniences at all. To-day there are bathrooms and hot water. These make for better health and greater cheerfulness. Thousands of farms have heat these chilly spring days when thousands of New York apartment dwellers are shivering because the steam has been turned off for the summer.

The housewife used to break her back over a washtub. To-day she has an electric laundry in the basement.

Illumination used to be by smelly, weak, kerosene lamps. To day there are electric lights, run by the farm lighting systems that *the farmer will buy from some one else if the motor-car dealer doesn't sell them.*

Water used to be pumped from a cistern or well by hand. Now, in the evening, when the lighting outfit is in operation, a lofty supply tank is pumped full for the next day's business. Note that the farmer says "next day's BUSINESS" and not *"work."*

The farmer used to have to go to town to get repairs made. To-day he has a repairshop with more machinery than there is in some garages, all run from the same engine that pumps the water and lights his house.

He used to carry a feeble kerosene lantern to the barn. Now he snaps a button and the farm yards and barns are instantaneously lighted.

Churns were once great exercisers. Now they require only looking at once in a while to see if the butter has come.

Cream used to be skimmed from the tops of pans that had set in the pantry. To-day a power-driven separator takes the cream out without delay.

Buck saws have been replaced by power saws.

All the farm appliances—corn shellers, fanning mills, ensilage cutters, etc.—are run by power.

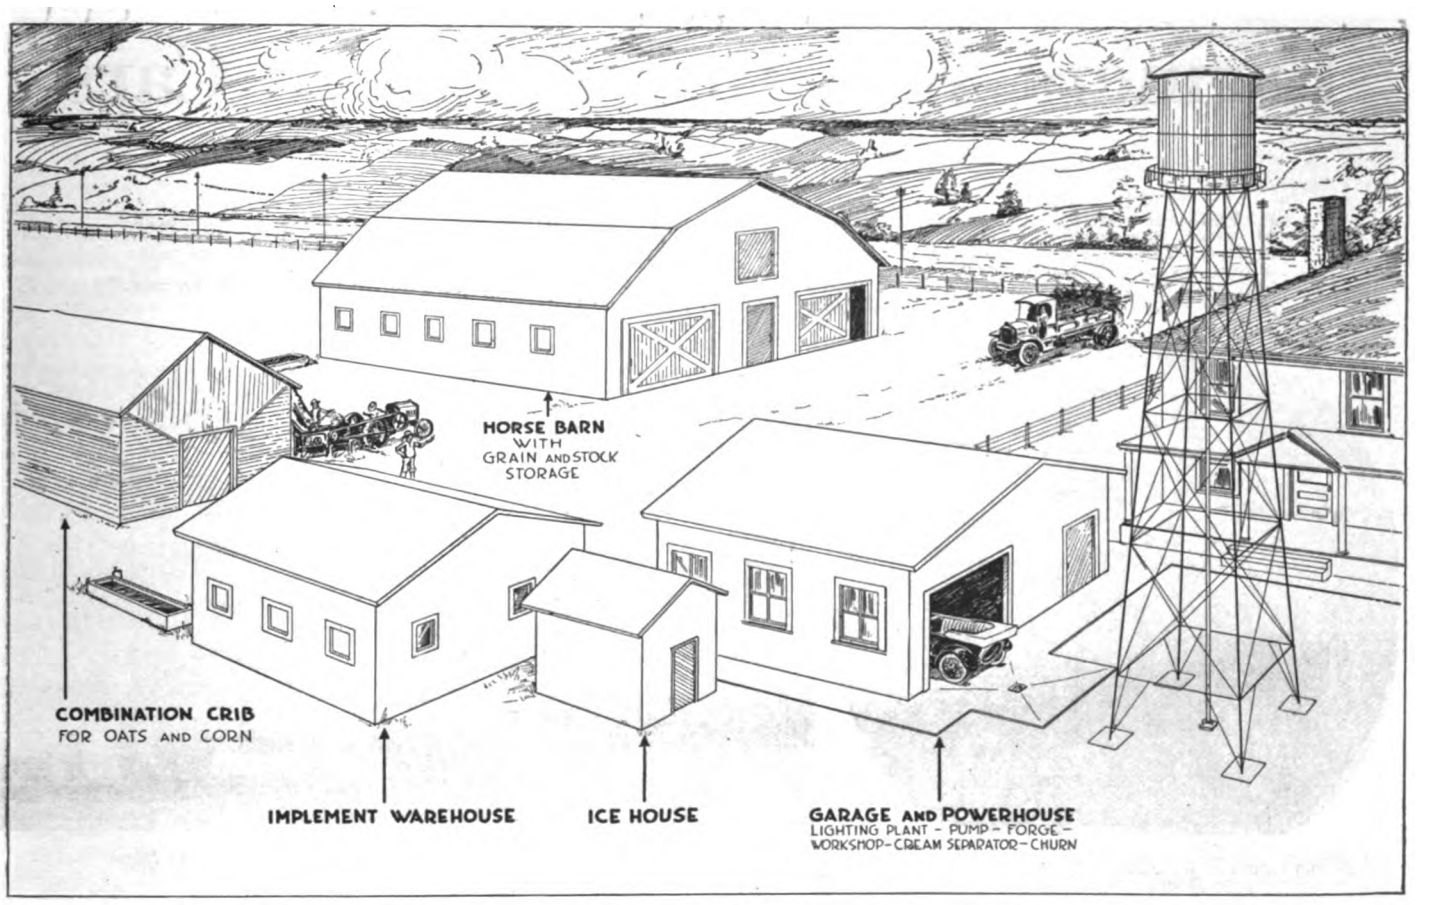
Instead of plodding after a plow the farmer drives a tractor.

The same tractor cuts his grain and harvests his crops.

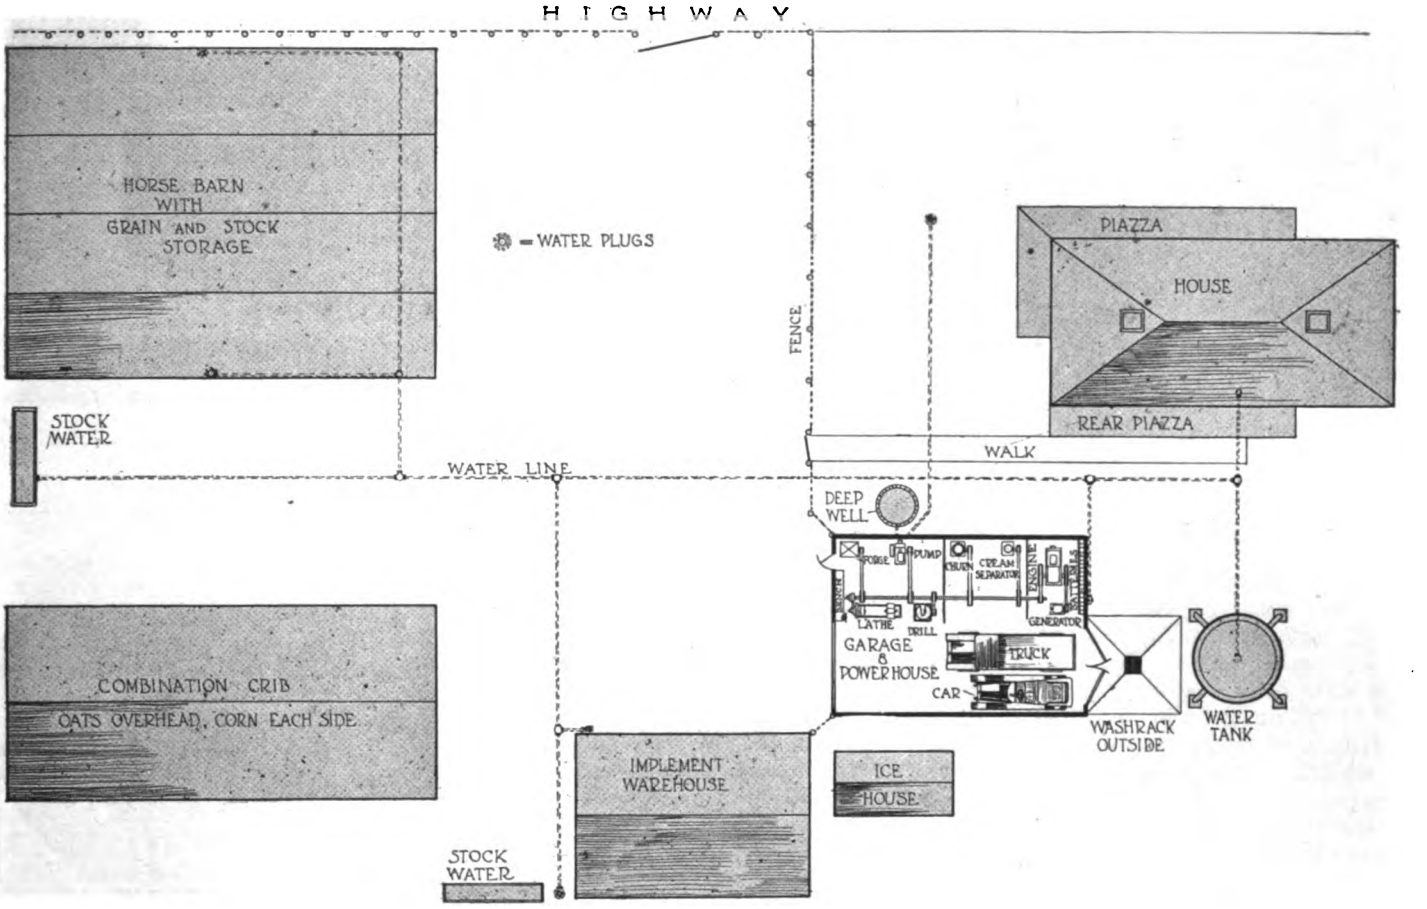
And when there is anything to be taken to town the farmer makes the trip in a fraction of the time with his motor truck. And he saves by using the truck. Hogs won't lose so much weight while riding to town in a truck as they will if carried in a wagon.

When the farmer gets through work at night he has a daily paper which he reads by electric light.

And in the cool of the evening he takes himself and the family out for a ride in his motor car. Or he runs to town on an errand, which is also a recreation trip.



The old days are passing. They will pass more rapidly. *The farmer will NOT be without these things that make life more livable and that let him do the work of several men with less effort in less time and at a smaller cost.*



All that has been said is more or less a composite picture, made up of points taken from many farms. Few farms have ALL the good things mentioned here, but the farmer who HASN'T them is a prospect for *all that he has not.*

The important point is this: Get busy NOW and become a motorized comfort merchant before the farmer needs things so badly that he goes to somebody else for the goods you may sell him IF YOU ONLY WILL.

This picture is written with the thought of building profits for YOU.

Digitized by Google

This motorized farm is located in Illinois. One engine supplies power for all the equipment in the tool room and for the farm lighting plant. An electrically operated laundry is in the basement of the house. A cream separator, churn, etc., are in the power house. The house, garage and all the barns are electrically lighted.

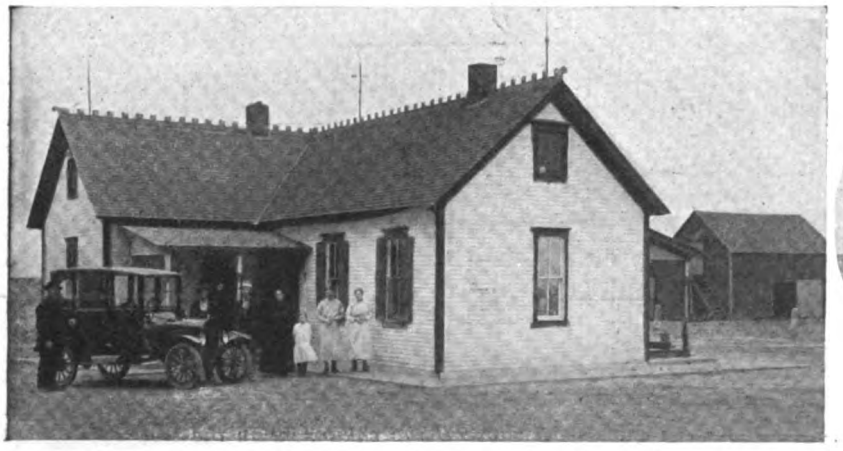
Farmers Will Buy Enclosed Cars

These Pictures Prove It

LATELY the trade has been speculating as to whether enclosed cars can be sold to farmers. This page ends the argument. They can. Here are six farm homes with their sedans—and there are several more we didn't have room to show. These are all Fords—but if a farmer will buy a Ford sedan isn't it probable he will buy any other sedan if you try to sell him? Furthermore, we have letters from the men who own these cars, and they all say they're so solid on the enclosed car idea they'll never be without one. No wind, no rain, no dust, no dirt, no cold, no heat—just comfort. Here are the pictures, and the names of the dealers who sold the cars.

Owner—James Renshaw. Dealer—F. H. Hagel, Rochester, Minn.



Owner—Joseph Kraft. Dealer—G. L. Baker, Holyrood, Kan.

Owner—Gus H. Henson. Dealer—Auto Service & Sales Co., Kiowa, Kan.

Owner—John Wamhoff. Dealer—G. L. Baker, Holyrood, Kan.

Owner—Christ Legleiter. Dealer—A. G. Shiney, La Crosse, Kan.

Owner—Hugh Moran, Nekoma, Kan. Dealer—A. G. Shiney, Rush Center, Kan.

Sales Ideas of Successful Men

They Offer You Their Skill

HOW often have you seen a salesman who is able to "put 'em over" when they seem hard to you? You wonder how he does it. He has little "tricks" of his own. He has worked out sales moves that "get 'em." And here they are. MOTOR WORLD asked a large number of successful salesmen for tips on their methods, and each man gladly told his best methods, so that his fellow salesmen might be helped in selling. On the following pages are scores of these ideas—for you. You should study every one of them. Some single one of them may be the turning point in your career as a dealer or salesman.

Fundamentals of Your Sales Plan

1—Determine to study selling and to use every good idea you can get hold of.

2—Study your goods. Know what you're selling.

3—Determine to plan your sales work.

4—Acquire a prospect list. Names will be secured from people who call, from a review of your territory, from lists of cars of other competing or near-competing makes in your territory, from newspaper stories, probate court records, club lists, etc.

5—Plan a series of mailings, made up of letters, booklets, literature and anything you can get or write that helps influence the prospect.

6—Keep a careful check on your prospect list. When one of your letters gets a rise out of a prospect see that the card has proper handling. If a man has already returned one of your return postal cards don't send him another by mistake or the sale may be killed. Keeping a careful record on the cards is time well spent.

7—Operate the personal sales work of the salesmen under the guidance of a manager. Management is necessary if effort is to be co-ordinated. The sales force should work as a unit and not as independent individuals for best results.

8—Put the right atmosphere into your salesroom. Make it look as well as the cars you sell.

9—Hold sales meetings once a day.

Here Are the Ideas

Studied Medicine to Sell "Doc"

A prominent surgeon refused to show interest in a car I was trying to sell him. I learned he was deeply concerned about the welfare of a patient who was to undergo a very serious operation. I had another physician friend, so I borrowed his books on the subject and got him to give me all the pointers he would. Thereafter when visiting my prospect I talked surgery. After the operation had been performed I called and congratulated him upon his success. He asked me if I ever had studied to be a physician. I told him "no", but that I became convinced I would have to become interested in it in order to get him interested in the car I desired to sell him. He saw my position and bought the car. "Doc" is my nickname, so this time I capitalized on it—M. H. Green, sales manager, Ralph Hamlin, Los Angeles.

"Come On; Have It Over With"

When it comes right down to the point of finishing up the deal or letting it run on, I'll say something about like this: "Well, now, you've been looking at automobiles for quite a while, devoted considerable time to it and done some worrying; now, why not get all this off your mind and settle it by signing this contract?"—S. G. Buckner, Earl V. Armstrong, Inc., Los Angeles.

Digitized by Google

Know Status Beforehand

If I go out after a prospect, I don't give him a chance to plead that he can't afford a car. I get a line on whether he needs a car and can afford one before I go to see him.—W. W. Barnett, Denver.

Let Prospect Talk First

While my approach varies, I usually get the prospect to talking first. If a man looks as if he would be slighted by my waiting, I start asking a bunch of questions about where he is from, kind of car he drives, etc.—H. M. Sayer, Carter Motor Co., Denver, King and Dort.

"Saves You Time"

If a prospect says he can't afford a car, I bring out the value of his time.—H. M. Sayer, Carter Motor Co., Denver.

Scientific Co-operation

If two or more members of a family are looking at cars and one gets wandering away, I get another salesman to round him up and keep him interested in something while I handle those that pay attention.—H. M. Sayer, Carter Motor Co., Denver.

Let's Him Go

If a prospect declines to give us any encouragement after one ride —to give him a comfort impression —we let him alone and go after another prospect.—J. B. Irving, S. B. I. Motor Sales Co., Denver, Hupmobile.

That First 10 Seconds

My best sales move is a straightforward, pleasing approach that influences a prospect to start expressing his views without my asking what he wants. I give approach the most vital importance next to actually getting the order signed up.—R. C. Peete, Cadillac Motor Co. of Denver.

Hurry 'Em Up

My strongest line of approach is to jolt prospects with the idea that car prices are likely to increase further in a short time, and that there is hardly any chance for a drop.—A. M. Platt, Platt-Fawcett Motor Co., Denver, Paige.

Can't Afford It

If a prospect says he can't afford a car, I don't dispute his word—there are too many prospects that can afford one and don't hesitate to admit it.—A. Tom Botterill, salesman, Denver.

Take the Hard Spots Out of Selling

"That Other Car——"

If a prospect wants to talk about some other car, I handle the subject so that I show him I don't pretend to keep posted on any car we don't sell, but that I know our own line thoroughly and believe in it absolutely.—A. Tom Botterill, salesman, Denver.

Price Is High

If a prospect objects to the price of a car, I show him actual figures on gas mileage, tire mileage, etc., and impress upon him the comfort and service he gets at low operating and upkeep cost.—A. Tom Botterill, salesman, Denver, Pierce, Hudson and Dodge.

Pay as You Ride

If a prospect says he can't afford a car, but I believe he can and that he needs one in his business, I just say, "Don't let that bother you any—pay as you ride." That usually starts questions about terms and gives me the chance I need—E. J. Johnson, Denver, Chalmers.

Sell the Greater Value

If a prospect objects to price, I just show him where the car is worth more than I'm asking.—F. C. Goff, Linger-Goff Motor & Supply Co., Denver, Mitchell.

Sell Low Upkeep

If a prospect talks high price of car, I show him low cost of upkeep.—John Graham, Colorado Motor Co., Denver, Reo.

Meeting Style Arguments

If a prospect objects to any feature of appearance, I tell him car is built for durability, and show him definite points.—John Graham, Colorado Motor Co., Denver.

Car Is Too Heavy

If a prospect says car is too heavy, I take him back to the stockroom, show him heavy parts and explain why they are made heavy for his benefit. I sell as many cars there as in the salesroom.—C. E. Ward, Colorado Motor Co., Denver.

He Said He'd Bought

My prospect said, "No use talking to me! I've bought." I asked him courteously what his choice had been. "Well, it's between a ——— and a ———." I ventured the thought, "Then let *us* get together." We did, and I sold him a Chandler sedan within fifteen minutes. I struck the psychological moment.—W. B. Christie, Achen Motor Car Co., Milwaukee.

Learn the Use

It pays to find out something about the specific use to which a prospect intends to put the car. In competition with a 4-cylinder car listing at $350 less than our six, I won out because I showed my prospect that our car was better for his principal purpose than the other, even at the higher cost. I proposed a trip to his summer home and back, nearly 120 miles, but the car sold itself, so to speak, before we were half way out. He forgot all about the other car.—W. B. Christie, Achen Motor Car Co., Milwaukee.

Didn't Say "Job"

In seven lengthy sales arguments with my prospect, I studiously avoided the use of the word "job" because I once overheard him mention his utter disgust with the term, and when he handed over his check, he told me that was one of the reasons why he bought from me.—Edward V. Oehler, Hoppe-Hatter Motor Car Co., Milwaukee.

Know P.'s Financial Status

A good friend of mine is at the head of a credit investigating organization of high standing and I casually learned that Mr. So-and-So, my prospect, might find it difficult to make a full cash payment if I should sell him, but was "good as gold" for the balance. In closing him, he started to get away from me on the plea of buying a less expensive car, but I used my credit information to such good advantage without embarrassing him that he was tickled to death to take advantage of my deferred payment proposition after it was suggested to him.—(Doesn't want name used.)

Dressed Up the Service Manager

My suggestion to our general manager that the superintendent of our service department might profitably be taken out of his greasy overalls and dress in a business suit, with a white collar

Digitized by Google

every day made a big hit with our patrons and brought many new ones. It also discontinued the practice of most of the old customers of over-running the office for attention, only to be referred to the overalled foreman. There was a new feeling of respect all around, including the workmen in the shop, which paid big dividends on the investment.—H. A. F., Milwaukee.

Meeting War Arguments

Questions now come up whether the prospect should spend his money for an automobile these times and then again the question comes up if the purchaser will be able to buy gasoline. So we now have to present a lot of facts and figures on the gasoline supply in order to induce the prospect to buy a car. It is often necessary to argue that every one should spend money these days in order to keep labor employed and in order to keep business going.—I. R. Madden, Capital Motor Car Co., Columbus.

Talks Low Upkeep

Low maintenance cost is the best feature that I use in the sale of cars these days. With the country at war and every dollar required to do its full share toward winning the war the best selling idea at this time is to convince the prospect of the low cost of maintenance. So I put that idea to the fore in selling cars. We often heard earlier in the season of the expected gasoline scarcity, but we hear very little of that now.—Wilbur Winders, Winders Motor Car Co., Columbus.

Meeting the Pessimist

My idea in selling an automobile is to have an answer ready for each objection or reason a prospect gives for not buying. In other words, if a prospect says that since we are in war he does not know whether he should spend the money for a car, I sit down with him and say, "Now, if you do not believe that you should buy a car now we don't want to sell it to you." Then I go ahead and show him why he needs a car now even worse than if we were not in war. I show him how bad transportation is and how much better he can look after his business by means of an automobile.—O. C. Belt, Belt-Franklin Co., Columbus.

Clinching the Mechanic

When the prospect is a machanic employed at a large factory, I always call attention to his knowledge of a gas engine and say, "I knew just as soon as you raised the hood on my car the sale was clinched," and the name is then secured to the contract.—H. K. Dobson, president, Everet Motor Car Co., Columbus.

Use the Ideas of Successful Salesmen

Ride as You Pay

I find that the plan "ride as you pay," which was originated by myself, has been quite a stimulus to the sale of motor cars. It is the pride in the purchaser that will make him meet the payments, even if he has to forego many things in his home. He will not let his neighbors see that his car is taken away and thus our losses are held at a minimum.—H. K. Dobson, president, Everet Motor Car Co., Columbus.

Don't Let Him Wander

I keep my mind on my business and also on the prospect, and don't encourage him to let his mind wander.—Frank L. Paxson, salesman, Auto Sales Corp., Denver, Franklin.

Analyzes Failures

I do not analyze my prospects. I analyze my mistakes in losing them if a sale is lost. Confidence is vital. If I am unable to obtain the confidence of a prospect, a sale is impossible. I do not know of any set rule other than to attract favorable attention and then inspire confidence.—T. S. Bunn, Bloomington, Ill.

Assume the Affirmative

In the endeavor to interest a prospect, assume the affirmative. Give the impression that the prospect is in the market for the car and that you know it. Never approach him negatively. He may deny that he has ever thought of such a thing but he will feel more or less flattered by the assumption.—D. U. Smith, Bloomington,

Study Each Prospect

I study my prospect closely and am careful not to antagonize him if I find that his mood is not just right, but bide my time when confident that he will not buy until later. Most men are governed to a considerable extent by the preference of their wives. Once her favorable attention is secured, it is usually less difficult to win over the husband.—Owen E. Pattison, Bloomington, Ill.

Ride His Hobby, Too

Every car buyer has some weakness, some hobby, some point, which if known or discovered through physical or mental analysis, helps to bring the contract and the buyer's signature into juxtaposition.—W. L. Hinkle, Bloomington, Ill.

That Price Objection

If prospect objects to price, I point out the big depreciation loss of buying a cheaper car and then trading it in, and show him the general tendency of owners to keep getting into a higher-priced class.—D. P. Hogan, Cole Motor Sales Co., Denver.

Make Him Think

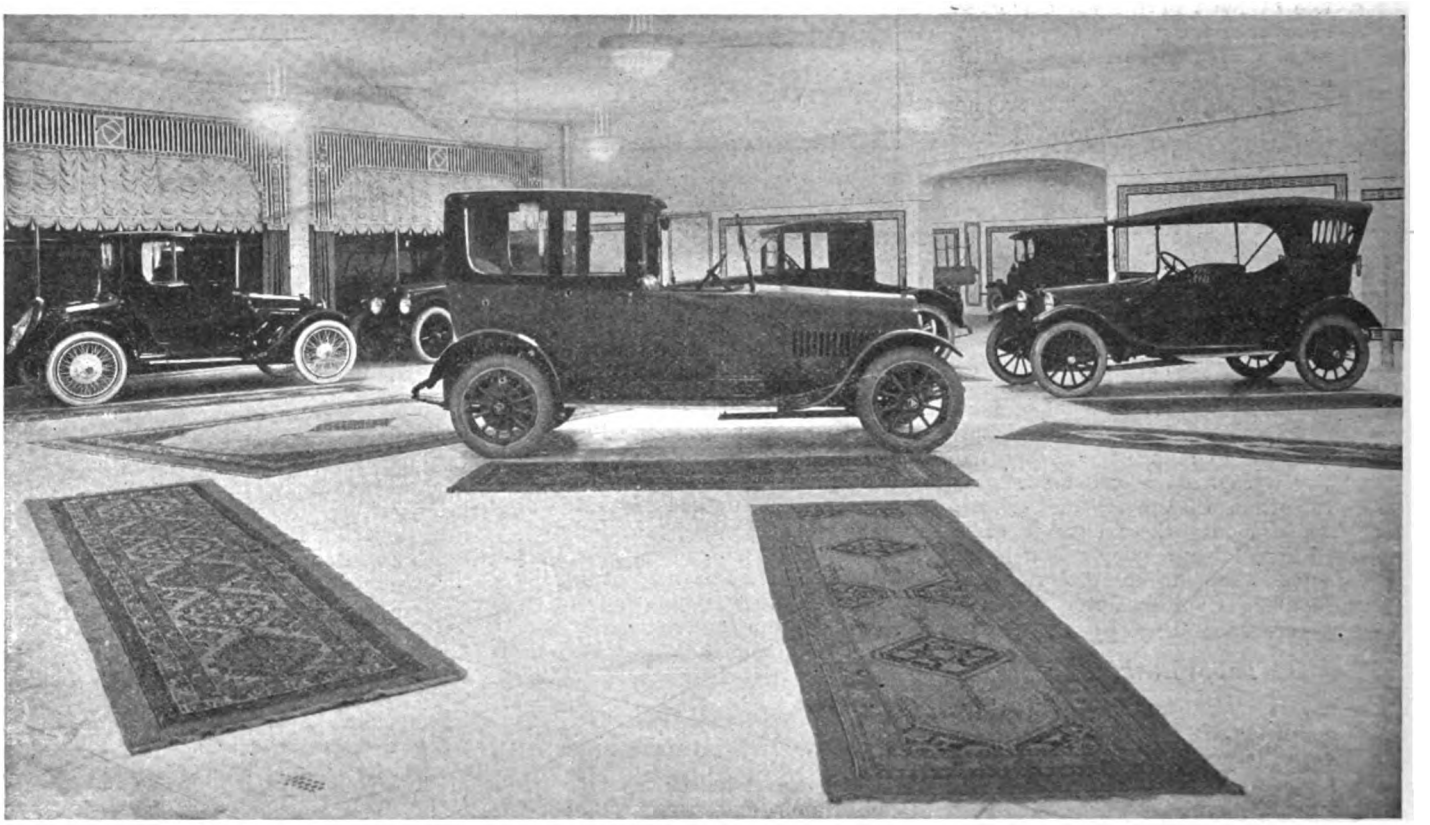
A direct question that compels a prospect to think in order to answer gets his attention back where I want it. I usually ask him what car he is driving.—D. P. Hogan, Cole Motor Sales Co., Denver.

When His Mind Wanders

If a prospect lets his attention wander, I say, "I know you're not paying any attention to me, but I'm going to go right ahead and tell you about that wonderful feature of the factory, anyway." And he usually comes back with a smile.—A. M. O'Meara, O'Meara-Green Motor Co., Denver, Ford.

Appeal to Emotions

My best way to reach a prospect is to appeal to some emotion—pride, comfort, etc.—rather than to his intellect. I stay away from technical talk as far as possible.—W. J. Haughey, sales manager, MacFarland Auto Co., Denver, Buick.



Prospect an Investor

A strong point to win confidence is a clean record of absolutely one-price dealing. I always treat prospects as business investors and not bargain seekers, and I use this one-price reputation to impress this attitude toward them.—W. J. Haughey, MacFarland Auto Co., Denver.

Make Your Salesroom Look the Part

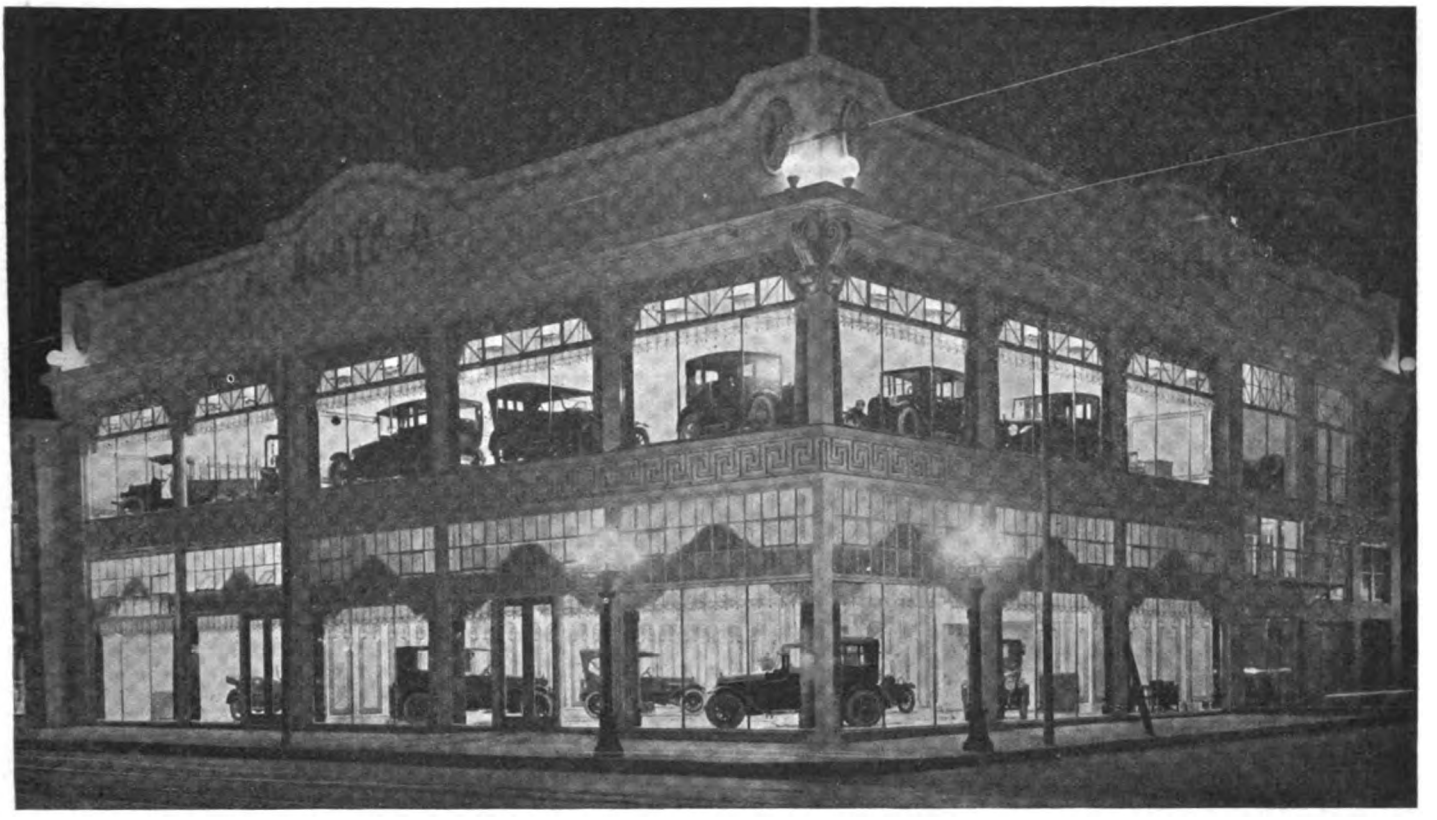
Looks like a ground floor salesroom on Broadway, doesn't it? But it isn't. It is the second floor salesroom where Arnold continues the atmosphere that permeates the whole structure. Trucks are sold in the salesroom shown through the door in the distance, slightly at the right of the center of the picture

Green, orange and black are worked into a wonderful design, supplemented by draperies of gold-brown silk. The building is in the shopping district. Note the busy traffic cop out in front and, diagonally across, a large women's outfitting store

HAROLD L. ARNOLD, Los Angeles, realized his merchandising ideal when he set this car sales building in the middle of the shopping district.

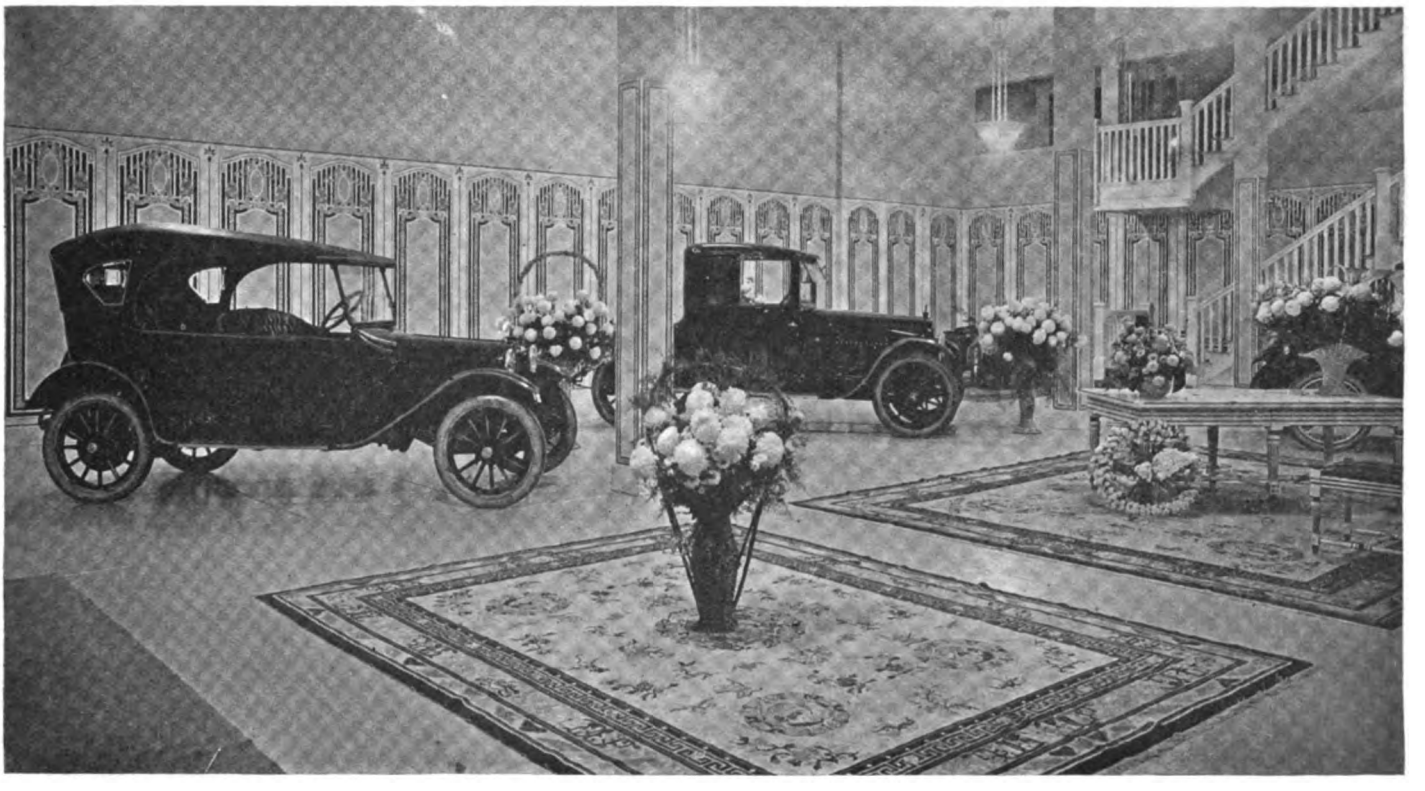
He believes the same principles that apply to other business apply to selling cars. Attractive display is just as essential for cars as for dry goods.

He also believes the successful dealer must meet all the demands of all the prospective purchasers. He must be automotive. Therefore, he sells the Maxwell, Columbia and Hudson and Vim and Republic trucks.



He is a big factor in the California trade, and until he recently severed his relations with the factory was said to be the biggest Dodge distributer in the United States.

Before erecting this building he tested the location for nine months by renting a salesroom across the street and ran a separate sales organization there. It worked. So he opened up the establishment that is illustrated on these pages.



In addition he has used cars, parts and service on Motor Row, giving him all told 75,100 ft. of floor. This building is 100 ft. on Seventh Street and 105 on Grand Avenue.

Digitized by Google

A Good Car Is Worthy of a Good Home

A night view of the Arnold establishment. Everyone looks. No dark corners. There are 15 candlepower for every square foot of floor space. The windows run clear down to the floor. This building was erected as the first step in becoming an automotive dealer. It cost $150,000. He says it's worth it to him

Beautiful oriental rugs are an important feature. They cost money, to be sure. But, starting from four employees and a garage 6 years and 8 months ago, Arnold now has 200 employees and has sold 9034 cars. His methods have brought business. This looks like a high-grade piano store, doesn't it? Well, that's the way Arnold believes cars must be sold

Here Are 26 More

Good Car Sales Ideas

Seldom Raise the Hood

Our plan is to talk as little of the mechanical construction of the car and seldom raise the hood in making sales. We sell the service that the car will give, both in the excellence of its construction and the completeness of our service department.—H. J. Schwartz, president, Standard Motor Car Co., Hudson, Columbus.

Runs Service School

Several big firms in this city have large fleets of trucks. The drivers start out at 7 A. M. Once a month our shop foreman visits the garages of each of these firms, and delivers lectures and gives instruction to the drivers without charge. He invites questions. This is because drivers are frequently changed under present conditions, and green men are often put on. No charge is made for the service, which is in addition to the regular monthly inspection of trucks. The plan has brought in a fine lot of business.—W. M. Clement, W. M. Clement Motor Car Co., Scripps-Booth, Omaha.

Proof of the Pudding

If the prospect is hesitating between my car and that of another make, both of which please him, the other being slightly cheaper in price, I make a test case of it in point of service. We get into my car, drive several miles into the country, taking along catalogues of parts. We alight at a farm house. The prospect telephones my competitor's service department, gives the location and asks for such-and-such parts to be brought out at once. Then he telephones in the same way to my service department. The first one on the spot gets the sale. I have tried it fifty times, and won nearly every time.—George F. Reim, president, George F. Reim Co., Cadillac, Omaha.

Service Before the Sale

A prospect was considering my car and that of another dealer at the same time. He liked them both, and couldn't see much choice between them. But his time was valuable, and when he wanted to see a salesman or demonstrator, that man had to be on the job. We knew nothing of this fact until afterward, but discovered that a big factor in his choice was the assurance he had that when he called us up or came to our place of business there was a man on the job to give him undivided attention. —Lee Huff, Nebraska Buick Automobile Co., Omaha.

Beat the Traffic Problem

It's history now, but this firm was the first to utilize a train of circus cars to carry motor cars from the factory to the distribution point when other freight cars couldn't be had at any price. I found that a circus was wintering at a certain city, and its freight cars idle for a time. I leased the whole train at a day rate, subject to the call of the owners; paid mileage haul to the railroads, of course. But we got an average of 460 cars per month delivered while other distributers were stuck. It paid big.—Lee Huff, Nebraska Buick Co., Omaha.

Gets Every One

The girl out in front gets the license number and description of every car which stops within her range of vision. The name, business and other identification of every man who enters our salesrooms are obtained as fully as possible without giving offense. This is done at the earliest moment, whether a sale is attempted or not. With this information, our catalogues are sent out and followed up by personal calls on the part of salesmen. It pays bigger than one might think.—E. H. Scripps, Victor Motor Co., Omaha, Neb.

Stopped a Long-talker

We found that one of our salesmen didn't know when to stop talking. He operated on the plan that he had to say just so much about his car to sell it, and he said it to the bitter end. He lost more than one customer just that way. We showed him how to stop for breath, and how to watch his man for the proper moment in which to close the sale. He sold twice as many cars with less than one-fifth of the talk.—J. H. De Jong, Apperson Motor Co., Omaha.

Hammers on Reputation

A strong point to win confidence is impressing upon a prospect the responsibility our firm has to make good because it has been established in Denver 60 years, and is bound to make its motor car business live up to its saddlery business reputation.—John P. Heiser, H. H. Heiser Saddlery Co., Denver.

Smile! Smile! Smile!

The best method that I know of to get a man started to buy a car is to meet him with an expression of being the happiest man alive. Take any individual and when he goes out to invest $1,000 or more in a motor car he is doing a lot of thinking. And if he finds gloom all about the place and the salesman he is going to think that after all he may not be doing the best thing. He begins to doubt his own judgment. Make him feel that now he is going to join the progressive ranks, that this is a pretty old world and that it will seem a lot better from the seat of a motor car. There are different ways of doing this, depending upon the salesman, but that is my recipe. And it has been very successful.—Joseph S. Donovan, Studebaker, Boston.

Goes at 'Em Easy

When I talk to a man about a car I aim to get an idea what his needs are and then suggest that he go out and try different models, one after another, on different days, so that he knows I am not trying to get his money in a hurry. He feels satisfied then when he finally makes up his mind what he wants.—John H. MacAlenan, Stearns, Boston.

Fits Salesmen to the Car

I have found that the two requisites for success are to have a car that appeals to the buyer who can afford to pay a high price, comparatively, and to have a sales force that is high grade, giving the men the opportunity to use their own judgment.—John H. MacAlenan, Stearns, Boston.

Gives Own Service

We save money and make money by educating our customers to have all their work—except in emergency cases—done in our shop by our expert mechanics, in order to gain our free service of great value to them. This guards against bungling by imitation mechanics, and insures greater satisfaction in their cars. —J. P. Heiser, H. H. Heiser Co., Denver.

Digitized by Google

Plan the Sales Talk

My plan is to sub-divide the features of our car, and then begin with the first series. Let the customer then ask some questions. Draw him out a bit. He will give you a lead. Then tell him additional features. Give him another lead and again you have a working basis. Of course much depends upon the buyer. I always advise a man to consult the women folks and bring them along, impressing it upon a man that we like to prove we can satisfy the entire family.—George Crettenden, Chandler, Boston.

Built Up His Dealers

We find that in order to make our business a success it is necessary to plan co-operation with our dealers. We place the cards on the table and tell them that no chain is stronger than its weaker link. On that basis we have built up an organization that has endured through dull periods. When necessary we arranged through our banking arrangements at Boston to aid them when they needed money and it was not possible to get it in the smaller towns. By working as a unit we have been successful. And in this way we have done a business that continues to grow, for we are all interested and exchange ideas to help each other.—C. P. Rockwell, Nash, Boston.

Saves Time

In the establishment of Alvan T. Fuller, Packard dealer in Boston, every department has a different colored tag; each tag provides for a series of remarks, and there is abolished forever the old idea of "Bill says do this," "Tom wants this done," "Jim suggests we do that," etc. There is no chance for controversy. The tag tells the story of what is to be done; when it is done; who did it. And they are filed in card systems where they can be reached in a minute. Time, the most precious thing imaginable, is never wasted. Selling and system go hand in hand.

Does Three Things

First—We start out with the idea that there is not a single good reason which can be advanced for prospective purchasers not buying our car.

Second—It is our plan to always say something different at each interview.

Third—Our motto is "Whatever can be conceived can be accomplished."—C. S. Henshaw, Dodge dealer, Boston.

Let Salesmen Specialize

Let each salesman specialize in the sale of but one car. Don't drop prospect either until he buys or dies.—Arthur Geesey, Anderson Motor Company, York, Pa.

Sell Advertised Goods

Always sell advertised goods. In order to establish a car in a new territory use the newspaper columns and tell all about the manufacturer of the car and as to how he has developed the manufacture of automobiles. Continue this until the reputation of the car has become well established.—J. W. Richley, J. W. Richley Auto Co., York, Pa.

Try One Idea a Day Each Week

Getting to a Hard One

One of the men was working on a lawyer for several weeks unable to get an interview because he was too busy. He told me his troubles. I directed him to write a letter saying he would call at 8.30 a. m. Saturday morning, which was not a court day. The salesman protested because he contended that was the time the lawyer opened his mail, but followed instructions. He was at the office ahead of time and when the lawyer came in the clerk told him our man was waiting. He was promptly invited in, given plenty of time to arrange a demonstration—and we sold a car.—R. Milton Norris, sales manager, Standard Motor Co., Cadillac distributer, Baltimore.

Got Wife's Help

A sale had been hanging fire and I got behind the salesman to find out the trouble. He said he couldn't close, but did not know what was wrong. The prospect had held his lips sealed as far as opposing our car was concerned. We knew the time the man left for his office. I sent the salesman to the house to see the wife. She very promptly told where the trouble lay and he arranged to come back at 5.30 and give another demonstration. It was the second trial and we closed the deal.—R. Milton Norris, sales manager, Standard Motor Co., Cadillac distributer, Baltimore.

Learn His Hobby

We have found that getting at a man's hobby when he wants a car often gets him interested in the car. These hobbies can always be learned of from acquaintances, and when a man gets off your line you can bring him back.—R. Milton Norris, sales manager, Standard Motor Co., Cadillac distributer, Baltimore.

Did the Unusual

I obtained the interest of a prospect, although I failed to sell him on that occasion by carrying a part of our car to his office. He was always too busy while seeing me to give his full attention. When I put down the transmission gear on his desk very carefully he was all eyes. I talked away from the subject until his curiosity finally caused him to ask what it was. Then I was able for the first time to get in my sales talk. He told me it was a great piece of work, but was interested thoroughly in another car. However, he helped to get me other prospects and sales resulted.—W. F. Kneip, president of the Franklin Motor Car Co., Baltimore, and president of the Baltimore Automobile Dealers' Association.

Gave Him a Shock

I sold a car to one of the hardest men I ever met because he would never listen to sales talks or talk automobiles, although it was known he was about to buy a car. One day I went to him after having made a number of unsuccessful efforts to get at him and said: "Somebody's being telling a lie about you."

"What's that?" he answered sharply, for the first time giving me full attention.

"They say you are going to buy a car."

He was completely disarmed, thought for a moment, and then said: "It's not exactly a lie. I'm thinking about it."

An hour later he signed a contract.—Charles T. Riley, salesman, United Auto Sales Co., Studebaker and Garford, Baltimore.

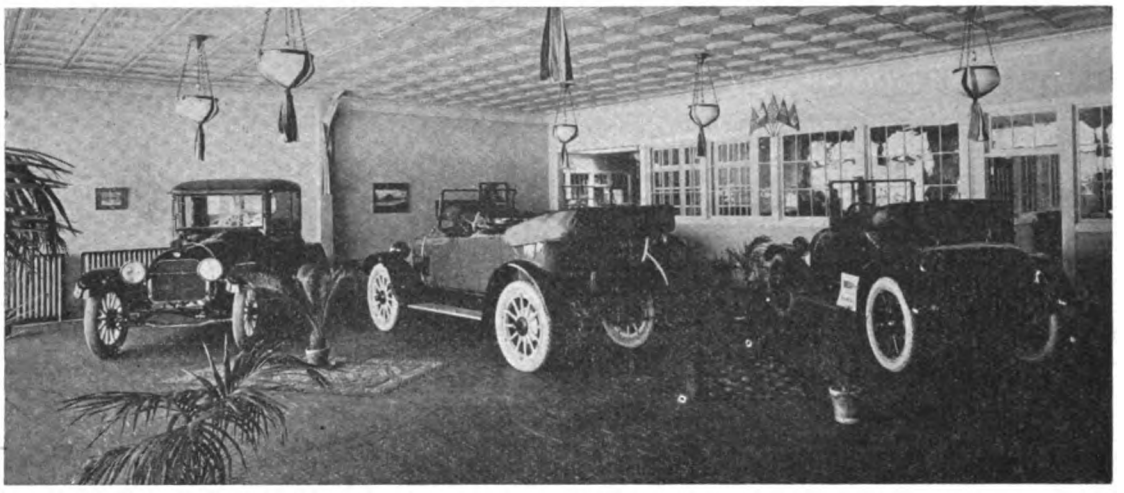
Keep Those You Lose

It pays to go back and see a prospect after he has bought a car of another maker. I found that out. I went back on one occasion, told the man we could still be good friends, and that when he found out he wanted another car or needed any assistance on the car he bought I would be glad to help him. Eight days later he came and bought my car because he was dissatisfied with the service of the car he purchased.—Charles T. Riley, salesman, United Auto Sales Co., Studebaker and Garford distributers, Baltimore.

Mechanics Can Help Sell

Good mechanics are valuable to a firm. This is proven often to us. A few days ago a woman brought her car here for service. Our service superintendent noted her interest in a new model she happened to look at. He notified the sales department. In 20 minutes the woman had bought a new car and, as she handed over a check for the full amount, remarked she never had an idea of buying a new car when she left home.—Arthur Stanley Zell, president of the Zell Motor Car Co., Baltimore, distributer of the Peerless and Chalmers.

Knockers Help the Knocked



Knockers have sold a lot of cars for us. One customer came and bought a car after we had given up hope of selling him because two salesmen from other companies had handed out some strong wallops.—Arthur Stanley Zell, president of Zell Motor Car Co., Peerless and Chalmers distributers, Baltimore.

27 More of Those Good Car Sales IDEAS

Get Them to the Salesroom

MANY a sale has been made on the floor by our salesman bringing the prospect to the showroom. One instance of a man being anxious for a car and not deciding on it was cleaned up promptly when he had him in the showroom and learned just wherein he was dissatisfied.—Arthur Stanley Zell, president Zell Motor Car Co., Peerless and Chalmers distributers, Baltimore.

Let Him Drive

When I cannot close, I know the prospect does not want my car. He is out to sell his old car to the highest bidder. The new car does not interest him so much as getting rid of his old one. The greatest puller is to put the man back of the wheel and let him drive. This will do more in a half hour than if you drove him all day.—A. C. Rose, Brown, Thomson & Co., Cadillac, Hartford, Conn.

Circularizing Pays

The best method of reaching prospects is by circularizing. It is absolutely prolific of good results. Our first campaign covered 800 names weekly. I signed each letter in ink. It had the personal touch and by some was not regarded as a circular at all. We reached people we could never go to because they were so far away. Circularizing is one of the best moves I ever made.—George D. Knox, Peerless, Hartford, Conn.

Analyze His Opposition

When I cannot close a man I analyze. This is the best thing to do if you get stuck. Analyze for a while and subconsciously you will find the weak points. Keep the man interested and you will get his business. Get him back of the wheel. Let him drive the car. This will close the sale. I can influence any prospect in five minutes in this manner. —George D. Knox, Peerless, Hartford, Conn.

Meet Him Half Way

The average automobile salesman has not been in business long enough to be as keen as the man he is trying to sell. The prospective buyer is on the defensive. You must break down his defenses. Meeting the customer half way draws business. At an expense of $12 I rearranged the seat cushions, the steering post and pedals for one customer. He has bought several cars because I met him half way. You must depart from stock material sometimes.—George D. Knox, Peerless, Hartford, Conn.

Get Another to Close

When I get to the point where I cannot close a man I turn him over to another salesman—who may be less experienced than myself yet possess some little tact that I lack which appeals to a certain customer. It is a matter of personality and applies to all sales.—James H. Whaley, Whaley Motor Co., Hartford, Conn.

The Type Determines

If the prospect is of the bulldog type I go after him easy. I never talk to a man longer than to interest him. I gain his confidence, then sell him. I go away back and give him the history of the automobile industry from the bicycle days on. I have the advantage in this knowledge in making comparisons. A thoroughly hard demonstration helps.—Harry Starkie, Chevrolet, Hartford, Conn.

Emergency Selling

Women are sales factors. The man may buy but the woman objects. A show prospect wanted my car. His wife did not like the cushions. I changed the angle of the cushion with a few catalogs. She bought the car. I am always studying human nature and you never can tell. I had a prospect, but thought he could not afford my car. I showed him all the points, had him sit in the car. He bought it. I have never gotten to the point where I could not close.—J. Cerdic Sleeth, Hartford Motor Car Co., Dodge, Hartford, Conn.

Switch and Lead Back

I simply keep after my prospects. I keep them interested until they change their minds. If I see they are slipping I just talk about other things and eventually get back to the main issue. Frequently if a prospect thinks you are disinterested it sharpens his own interest.—William M. Turnbull, Colonial Automobile Co., Studebaker, Hartford, Conn.

Each Case Different

No two men are alike. What to do when a prospect is hard to close depends on the man. You must give some men time; keep after them. If necessary call in help. Personality of the salesman and the prospect count—Ned C. Hopkins, Hartford Motor Car Co., Atterbury truck, Hartford, Conn.

Find the Real Reason

If the prospect is hard to pull across, first find the actual reason. That is what we always do. You haven't any chance of getting him unless you know the exact reason why he does not give you his order. What to do depends upon his reason. He may not have enough money, his wife or family may interfere with him. We always find out the exact reason.—W. H. Vinal, sales manager, Russell P. Taber, Inc., Reo, Republic and Duplex, Hartford, Conn.

Ask Him Why Not

If a man is hard to close, what I would do would depend on whether or not he is really interested in my car. I always make sure that he is interested first. If he is interested it is up to me. If he is not interested, I interest him. I create that essential desire for our car. I determine his reason for balking. I feel the fault is mine because we have the car; then I will say, if I cannot close him, "What is your objection to buying our car?" He will give his reason. I overcome that reason.—Lester Gage, A. C. Hine Co., Oakland, Hartford, Conn.

Parts Stock an Argument

The Sears Auto Co., Des Moines, has sold many a car in the parts stock room. When the salesman has gotten about as far as he can with the prospect, but is unable to close, he takes the prospect into the parts stockroom and gets him interested in the parts, gives him a handful of waste and starts handing him parts to look over. Sometimes the other fellow's parts are handy and comparisons are drawn. It has sold cars for the Sears people.

Cut Loose Once in a While

Sometimes old General Apathy takes complete command of a shop or salesroom. Nothing seems to move and all the salesmen are dead on their feet. Neither salesmen nor prospects are showing any interest. The Sears Auto Co., Des Moines, experienced such a period recently. Then Sales Manager Tom Harter took a Dodge touring car and set it on edge in the window, with the bottom side toward the window. It was labeled "A bug's eye view of a Dodge touring car."

Arrows pointed to the various features, which gave the public a striking view. Immediately great interest was shown by passersby. Passing cars stopped and looked it over. Many people went into the salesrooms to ask questions. As a result dozens of good prospects were secured and some actual sales can be directly traced to this novel advertising.

Play on His Hobby

Make a study of your prospect. Learn his hobbies and weaknesses. Then if you have him well lined up, but all of a sudden he seems to lose interest, forget the sale for that day. Talk to him about his golf, baseball, movies or horse racing, whichever happens to be his hobby.

Digitized by Google

Then come back the next day and take a new start. The big thing is to have made such an acquaintance with the man as to know how to reach him.—Don Laster, Paterson Motor Co., Des Moines.

Talk Facts

The way to close motor car sales is to put the performance of your car into proven tables, so you can talk facts. Put the performance of your competitive car into tables of his own making, and talk facts. If you can't make a showing, get a car that can.—William A. King, Brandle Motors Co., St. Louis.

Combed the Byways

Go after the people others overlook.

Don't wait until the prospect comes in the door.

Ask your customers to give the names of friends who might buy.

Let your office boy or helper in the shop know that it is possible for him to sell a car to a relative or friend.

These are a few of the maxims that have made the Connell & McKone Company big distributers of Overlands in eastern Massachusetts. When W. J. Connell and J. L. McKone formed the company they started out to sell with an idea there were many overlooking the pleasures of motoring. Figuring up the cost they realized that there were a lot of people like school teachers, physicians, state and city employees, getting good salaries, who could afford cars. And they delved into salary lists here and there and found such people who had been overlooked, but who became motorists after being educated to the slight costs and big pleasures; particularly as many of the teachers usually saved up for foreign trips which cost more than a motor car. Of course they sold all classes, but they were not overlooking anyone.

Makes Them Think

We greet a man with the idea that he wants a car for combined necessity and enjoyment, and that first he is doing the right thing by his family when he buys a car, and next that by purchasing an economical machine that will give him adequate service he is doing his family an even greater service by not being extravagant. When a man begins to hesitate we talk along those lines, and it sets him thinking.—Charles E. Fay, Maxwell, Boston.

Make Prospect Sell Himself

One of the first things that we inquire from a prospective customer is whether or not he has any faith in the value of experience. Now every person has faith in that. Then we explain the history of the Reo briefly, and the years we have been handling it. Getting his name, we suggest that he consult Reo owners in his town. In other words we put the burden up to him to justify himself in buying our car. He feels that he has not made a mistake in looking us up then, and as he is in a receptive mood we are able to show him the features that have sold thousands of Reos. Many of our customers have sold the car to themselves.—J. M. Linscott, Reo, Boston.

Let's Give Them a Fair Chance, Boys

Study Sales Work

My salesmen are made to feel that they are doing a man a favor by selling him a car, and they are taught to talk that way. Whenever they seemed to be slipping I drift over and aid them, without seeming to be cutting in.

My men learn to make comparisons without knocking, for I go on the theory that cars that we might knock to-day we might be trying to sell to-morrow. They are taught to be enthusiastic, but within bounds. When a customer starts to argue we try to get him to admit there are some good points in our car. That gives openings to draw him out further. We study resourcefulness and it makes a wonderful difference. At conferences we freely discussed each other and our aims and purposes.—John H. Johnson, Buick-Boston Co., Boston.

Gets Under His Skin

About half my customers are not real sure that they need a car. I have a stock phrase that has served me so well that I cannot abandon it. I say, "We all ought to live as we go along—and the automobile is just as necessary to our modern civilized comfort as the telephone, electric light and bathroom." I believe that has sold more actually doubtful cases than any other phrase I have used.—D. L. Denise, Brisco dealer, Kansas City, Mo.

Tickle His Vanity

Man is vain and by pleasing his vanity many sales have been made by us. Often salesmen have not been able to come to the closing point or get the man to the salesroom. I then make the trip personally with the salesman and tell the prospect how we would like to be honored by listing him as one of our owners and what it means in the way of giving the car prestige. It has proven successful on many occasions.—W. E. Duck, manager of the Baltimore Winton Co.

Plays the Fox

Many appointments have been arranged by the use of the telephone and also audiences arranged. Sometimes we get at hard customers without telling them we are automobile salesmen.—Anonymous.

Takes Him Home at Night

Taking men to their homes after office hours by meeting them at the office door when they leave has been tried with success.—Anonymous.

The Best Is Cheapest

When the prospect is lined up but states that "your price is too high," bring out the time-honored argument that the best is the cheapest. It is as old as salesmanship, but it is as true as gold and in nine times out of ten when conditions are fair, if properly explained will make the sale.—D. S. Kruidenier, Kruidenier-Cadillac Co., Des Moines.

Use Two Salesmen

Sometimes if you can't sell the husband you can slip one over on him by selling his wife. The Sears Auto Co., Des Moines, had a salesman approach a Des Moines capitalist on a Mitchell sale. He was advised that Mr. Prospect wasn't even considering the Mitchell. The next day the sales manager had another salesman take a Mitchell to the residence and give a demonstration for the wife. He made three more trips and sold the car. If the first salesman had gone to the wife after being turned down by the husband he would have aroused trouble, but the "accidental" call by the second salesman put the sale across.

See What You Have

Sell the car you have in stock regardless of body types and other minor features. Don't let the prospect get away to some other dealer because you don't happen to have the particular style he wants in stock. Show him the car in stock is the car he wants. The touring car has been practically universal in Iowa up to the past year. Since restricted production has cut down the deliveries on this car many sales of sedans are being made to the Iowa farmers just because the salesman is persistent and can show to the wealthy farmer that the sedan is what he needs for comfort and service.—Dean Schooler, Ideal Auto Co., Oakland, Des Moines.

Make Him Look Foolish

When a prospect hands me this line: "Well, I'll think it over and let you know," I know if I can't close with him then I lose the sale. So I get him to tell me just why he is hesitating. Usually his reason or reasons for waiting appear foolish when he tells them, and after I have thoroughly convinced him "now is the time to buy" he buys.—(Refused to be quoted.)

Turn Now to Page 26

Potatoes wont pay taxes. And you cannot clothe yourself with a dollar in polite society

¶ Merchandise is not money. Just bear this in mind when you talk with others about what we must do to win the war.

¶ You will notice most people talk about saving money as though money were food and clothes and munitions. And they talk about saving food when they don't mean saving at all. They mean using less. Let us think straight.

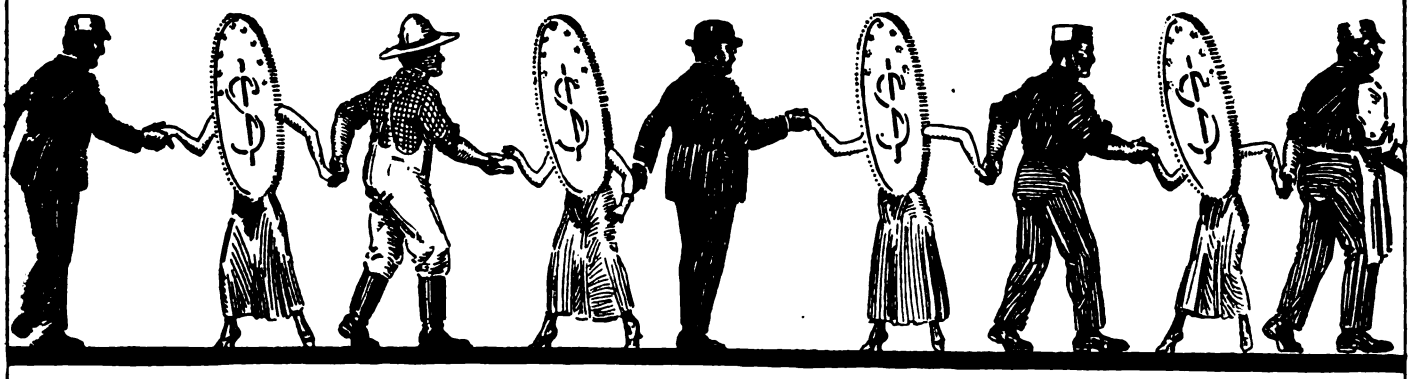
¶ As a matter of Government policy, it is vitally important to turn goods into money—to make and sell goods—as fast as possible. Goods (potatoes) remember, won't buy bonds and pay taxes; only money. If goods are to be sold, money must be spent. But some misguided people think they ought not to spend money for goods. What are the real facts?

¶ Food and clothes and other creature comforts are things which we produce by labor. Since we are shy on labor, it is obviously wise for all of us to consume less of the products of labor—to whatever extent the Government deems necessary.

¶ But, if we go beyond this, we are worse off. We unnecessarily restrict business, which reduces all our earnings, which in turn reduces our ability to finance the war. Business, we know, must be maintained. The question is, what business?

¶ This is being solved by Government control of manufacture and distribution of goods essential to us—control through means of embargoes. Labor is thus being transferred to the essential industries as needed. Scarce goods we are allowed little of.

¶ So get this point clear: what we are still permitted to buy is obviously produced without embarrassment to the Government's production program. And furthermore without embarrassment to the Government's financial program. Otherwise these things would not be available for our purchase.



¶ Patriotic economy to-day is a matter of consuming less food, working more efficiently, earning more money, helping to turn goods into money by spending freely, and saving your excess earnings for Liberty Bonds.

C. H. Foster

President, Cadillac Automobile Company of Illinois

READ this page and you will have a good idea as to why business is necessary for the welfare of the country. C. H. Foster, who writes these, is one of the most successful of America's dealers—and he used to work on Chicago's row for 32 cents an hour.

Digitized by Google

You remember the dancing school circle with its grand right and left. If anybody starts off wrong, or with the wrong hand, or drops out, confusion begins.

¶ The business of the world is a grand right and left. Dollars are the girls and workers are the men.

¶ If a man starts out wrong, or with his left hand, he causes so much confusion that we have laws to straighten him out. If a man tries to hang on to every dollar too long as it goes by, he slows up the circle and spoils others' chances and has to be corrected.

¶ If one man tries to pull his dollar out of the circle, no harm is done—except that the circle must be contracted. But the moment every man tries to seize his dollar, the circle is broken.

¶ That is a fairly good little picture that tells how we must keep dollars circulating. It shows how necessary the dollars are to the movement of the circle and how one or more men cannot be shut out of the circle without causing confusion.

¶ Each man must earn his dollar and then pass it along. As long as he does that, there are enough dollars to go around. That is what makes business.

¶ But the war question is "can we keep these dollars circulating and still buy enough Liberty Bonds?" Ask it the other way: "If we stop these dollars circulating, can we buy enough Liberty Bonds?"

¶ Immediately the answer is "no." We must buy our bonds with the dollars we make. And we make our dollars out of this perpetual grand right and left of money.

¶ Suppose people stopped buying your goods, could you buy bonds? No. Could you and your fellow workers buy others' goods? No. Then could the others buy bonds or goods? No. The circle is broken. Its members would soon be "broke."

¶ How to finance the war is no secret, if we make sure of financing and sustaining business. Then the grand right and left of money will pile up bank balances more than ample for Liberty Loans.

¶ So keeping up the grand right and left is your job and mine—spending freely—saving reasonably—to win the war.

President, Cadillac Automobile Company of Illinois

THE homely idea that is illustrated on this page is one more of a series of eight folders that Foster is distributing. Maybe he has a few left and perhaps he would let you reproduce them or use them as ads. Ask him. His address is 2301 *South Michigan Avenue, Chicago.*

Car Sales Ideas

(Look Also on These Pages 13-14-15-18-19-22-23-27-28)

Go Easy Once in a While

S. J. Penberthy, salesman for the Hudson-Jones Co., Des Moines, believes in having confidence in your customer. If he tells you he is too busy to talk take him at his word and don't try to rush him. Penberthy sold a $2,700 job last week by not bothering the prospect. Two weeks ago the prospect was interviewed, but told Penberthy he was too busy to consider the proposition. The salesman kept away for two weeks. Then he went back and got the check without even making a demonstration. In the meantime two other salesmen had rushed the prospect constantly. The man who was satisfied to bide his time got the business.

Beat His "Patriotism"

I've had a prospect, after he has actually been sold, decide not to take the car, saying he intended to buy Liberty bonds instead. Here is the way I resold him. "You should buy Liberty bonds. It is your patriotic duty. Still a man is entitled to some pleasure in life and here is the thing for you to do. Buy this car and pay the war tax. The war tax, payable to the Government, nearly equals the value of a small Liberty bond. By buying the car and paying the war tax you will have done your duty toward the Government and will have the car besides!" He bought.—D. H. Hotchkin, Summit Motor Car Co., Seattle.

Sell Him the War Tax

I like to have a sale hang on the question of who will pay the war tax. It gives me a chance to sell him patriotism as well as the car. Usually I can sell him war tax easier than I can the car, but after I convince him he should pay the tax, he buys the car.—D. H. Hotchkin, Summit Motor Car Co., Seattle.

The Price Question

When your prospect likes everything about the car except the price, by all means get his mind off the money. Tell him a funny story; talk anything but money. Money talk scares him. Bring out your best selling point—the one you are holding in reserve—and then tell him to "sign here!"—P. E. Sands, Frank Waterhouse & Co., Seattle.

Pull Off His Mask

Some men try to hide behind their wife's skirts when they want a car and still hate to take the leap. Ofttimes their wife is on the other end of the 'phone telling you to sell him. Don't let him get away with that stuff about, "Well, I'll talk it over with the wife, then let you know." Close with him.—(Refused to be quoted.)

Catch Him This Way

When a prospective purchaser tells me he is satisfied with our car and that he would buy if he could afford it, I show him, if he can afford any car, why he can't afford not to buy our machine. A few figures on cost of operation and maintenance usually turn the trick.—E. G. Hoffman, Pacific Sales Co., Inc., Seattle.

First Find Out

We don't figure every prospective automobile purchaser "our prospect." However, we give them the same courteous attention while we are tactfully finding out whether they can afford to buy our car. If we find, after the initial skirmish, that they are a prospect, we exert ourselves to sell them.—E. G. Hoffman, Pacific Sales Co., Inc., Seattle.

The "Third Degree"

When a prospect refuses to sign the dotted line after he has admitted the superiority of our car over other cars he has considered; when he acknowledges the car is exactly what he is looking for, I get him into my private office under some pretext—perhaps it is to show him a photograph—then I give him the "steam roller." When I finish I place my fountain pen in his hand and he invariably signs.

The "steam roller" or "third degree" process is something on this order: "You've bought this car yourself. We didn't sell it to you. You've looked at other cars, lots of them, and finally decided on our car. You are entirely satisfied. You've admitted that. I know what's the matter. You hate to let go of that much money. Isn't that the truth? Now here is what you'll do if you don't buy our car. You'll fool around and let some slicker salesman sell you something you don't want. You'll get beautifully stung."—P. E. Sands, Frank Waterhouse & Co., Seattle.

Appeal to Patriotism

We have found that appealing to a prospect's patriotism ofttimes closes a sale. When he balks on the cost we tell him it is our duty to keep the wheels of industry turning during the war and that we all should be willing to shoulder the additional costs incident to the war. Appealing to a man's patriotism will make sales.—E. G. Hoffman, Pacific Sales Co., Seattle.

Work the Real Ones

Cut down on your prospect lists; comb them down to a fine point. We would rather have a dozen *real* prospects than a file of *prospective* prospects. Concentrate on making a few sales. We would much rather see a salesman sitting down, figuring just how he was going to close a sale with a regular prospect, than have him burning expensive gas on the trail of fifty others who might some time buy. —O. W. Harris, Seattle Automobile Co., Seattle.

Meeting the Price Buyer

When a man hesitates, almost to the point of refusing, because our car is a few hundred dollars more than he intended to pay, I convince him he should pay the additional cost and *safeguard his investment.* I tell him he must figure the yearly cost of owning a car and to forget the initial cost.—O. W. Harris, Seattle Automobile Co., Seattle.

Cut Out the Hot Air

Our salesmen have instructions to cut out the camouflage and hot air. We tell them to stick to facts and to give arguments which can be picked up. A salesman has the reputation of being a hot air vendor, to begin with. It is up to him to "cross up" the prospect by sticking to real facts.—O. W. Harris, Seattle Automobile Co., Seattle.

Real Sales Work

A little business getter that I have worked out has made many sales for me and many friends for the line we are handling. Late Saturday evening, just before the public markets close, I drive in front of one of the stalls and select a likely-looking man and wife and shopping bag to ride out to their home with me. On the way out I show off my car, without letting them know I mean to. They can't help but notice how easy the car picks up, how we climb the hills and how smoothly the machine rides. I make friends for the car every time I do this and have made many sales. One sale will amply repay me for all the trips.—(Refused to be quoted.)

Digitized by Google

Sell on Sentiment

I always get at the bottom of the objection to closing. Generally there is some one person in the family whose health is none too good. *I make it plain that our car is suited to that person.* If you work on their feelings long enough you will get them. I talk on the health proposition. One prospect I worked on five years. Told him to buy another car. He did. I have his respect. He will come back to me.—Fred L. Bragg, the Britton Co., Nash, Hartford, Conn.

Quit Him Cold

If they will not close I talk to them. You never get two people alike, anyway. Last night I had a prospect that would not close. I left him. I had aroused his interest. But he came back later and gave me his order. I made all details plain to him.—S. A. Foster, the Britton Co., Stearns-Knight, Hartford, Conn.

Sells Them Service

When all other things fail I try to sell them service. Impress on their minds that if I should die in the night the big Overland service organization will take care of them. When I get a man sold as far as I can and he still balks, a sensible presentation of the service proposition draws him over because the service is all we claim it—and then some. —W. G. Woodworth, Willys-Overland, Hartford, Conn.

Piles Up Small Admissions

When I cannot close I go right back to the beginning. I find some one point that will catch the prospect. I will get an admission on minor points and if I can get enough decisions on minor points I can sell him. A sufficient number of minor decisions outweigh the big argument.—Russell P. Taber, Reo, Hartford, Conn.

Keeps in Constant Touch

Constant attention to customers, looking after their interests, has assisted materially in the sale of Cadillacs. A. C. Rose, manager of Brown, Thomson & Co., Hartford, Conn., keeps in touch with all owners.

Prompt Attention Wins

Attention to customers when they enter the place is accorded by the Universal Auto Co., Franklin, Hupmobile, Diamond T and Bethlehem distributer, Hartford, Conn. Whoever comes through the door is taken care of promptly. He is not permitted to wander aimlessly about, possibly counting the seconds that it requires someone to see if he really wants something. If he wants service, the service department head is called in, if he wants tires the accessory manager takes care of him, or if he merely wants to browse around he is properly guided and shown the whole institution. Service is the keynote with the Universal Auto Co. It is regarded as one of the biggest assets in business.

THESE IDEAS Will Sell Cars

That Price Thing Again

When a prospect objects to the price of our cars, I point out the saving we offer in upkeep cost, first, through the quality of the car, and, second, through our free and practically unlimited service in expert inspection, testing and adjusting on cars bought from us.—John P. Heiser, general manager, H. H. Heiser Co., Denver, Velie.

An Attention Holder

If a prospect is not paying attention, I talk about something he is interested in and will talk freely about, to show him I believe in being a good mixer and am interested in other people's opinions or experiences.—John P. Heiser, H. H. Heiser Co., Denver.

His Name Helps

One idea worth real money is our coined name, "Heiservice," which gets people to investigate and gives us a chance to tell them what the name on the window means in way of service to Heiser customers.—John P. Heiser, H. H. Heiser Co., Denver.

That Price Objection

If a prospect objects to price I appeal first to his pride and then talk quality and economy of good investment.—L. E. Kelton, Denver, Haynes.

This Is Good

If a prospect seems to lose interest in my sales arguments I get him down under the car on a rug to look at some particular feature of mechanism. This usually stops his mind from wandering and gets him to ask questions. That's my chance.—W. F. Wilkerson, McCormick & Vertrees, Denver.

Dodges Price Query

I keep a prospect's mind away from price as long as possible by showing him what the car has and what it will do. If he asks the price so that I have to answer, I tell him quickly and then go right ahead with quality talk and demonstration. This postpones his chance to object about price.—W. F. Wilkerson, sales manager, McCormick & Vertrees, Denver, Interstate.

How to Gain Confidence

I gain a prospect's interest and confidence by emphasizing the conservative business men at the head of our factory. —W. F. Wilkerson, McCormick & Vertrees, Denver.

Never Says "Best"

I never say to a customer that our car is better than any other car he may mention. I simply show him everything our car has and leave comparisons to his own judgment.—W. F. Wilkerson, McCormick & Vertrees, Denver.

Let Prospect Demonstrate

My best approach to a prospect's check book is through interesting his wife or daughter in my car. The men pay the bills, but the women are usually the real buyers. If they have never driven a car I take them on streets not having enough traffic to make them nervous and teach them to drive. They see how easy it is to handle the car, and selling talk is not necessary. I never do demonstrating except to show special hill stunts, etc., when requested. Let the prospect demonstrate for himself or herself the ease and pleasure of driving.—W. E. Hardy, sales manager, Moore-Hardy Motor Co., Denver, Stephens.

Show First, Talk Later

I don't give prospects a chance to wander away from sales talk—I keep away from sales talk myself till the right time. I find out as quickly as possible whether a prospect is likely to consider a car in our price class, and then take him out and have him drive it himself. I get him to like the car first, and then sell him with as little talk as possible.—W. E. Hardy, Moore-Hardy Motor Co., Denver, Stephens.

Uses Mechanic-Salesman

Figures have shown me that there is no profit in outside work for our shop. We get the best mechanic we can and have him work exclusively for our car customers—with assistants if he needs them. When he is not needed in the shop he can explain mechanical features to prospects in the salesroom. They know that he knows. Service to car customers must come first, and we found that outside repair work led to frequent confusion in the salesroom and sometimes to interference with sales. This new shop system gives better impressions all around.—W. E. Hardy, Moore-Hardy Motor Co., Denver, Stephens.

To Bring Back the Wanderer

To bring a prospect back to the subject, I try to recall the point that first awakened special interest, and bring that up again.—H. R. Harrison, Harrison Motor Car Co., Denver.

Features Long Service

Right now our strongest line of appeal is the idea of a long-service car for economy and efficiency in industry—a big public need. Fitness for use in large business enterprises where dignity means strong influence, combined with low cost of upkeep, transfers a high-priced car from the luxury class to the Better Business class.—Bert Williams, vice-president, Mountain Motors Co., Denver, Packard.

Facts and Fitting

Talk doesn't sell our car. We don't have any spellbinding for a prospect to want to wander away from. We simply show what our car is and has and then have the prospect drive it himself to see how well it fits him.—Bert Williams, Mountain Motors Co., Denver.

Be a Man

I always approach people as a business man and not as a peddler. I try to hammer into my salesmen that selling a man a car is a business transaction of dignity and importance, that a prospect has no right to kill them for approaching him, and that failure to estimate their profession highly enough gives them a disadvantage from the start.—W. F. Doyle, sales manager for Geo. H. Estabrook, Denver.

Keep Close Tabs

Keeping careful tab of all that goes on in the business convinces me that about seven salesmen out of ten take spells of turning in fake prospect addresses—vacant houses, etc. If they confess that they lost their nerve and went joy-riding instead of calling on a prospect, I have a chance to teach them some needed points of salesmanship. Keeping tab this way cuts down lost time and expenses and also helps sales.—W. F. Doyle, sales manager for Geo. H. Estabrook, Denver.

When Interest Lags

If a prospect's interest lags I ask him some direct question, sometimes about his car experience and sometimes about his own line of business. He has to answer or be rude, and most people will answer. Then I make sure of his attention before I say any more about the car I want to sell him.—W. F. Doyle, sales manager for Geo. H. Estabrook, Denver.

Getting Out of a Corner

If cornered, I tell some favorable truth about a competing car. Showing that I'm not afraid of the truth has been worth several times $100 to me. A one-armed prospect once cornered me by asking if anything made my car better for him to handle than half a dozen others he had been looking at. I told him it was not better than all the others, and that I really believed a certain one would be easier for him than mine in respect to steering and handling the shift lever.

Have You Read All These IDEAS?

He bought my car because, he said, "You're the only automobile guy I've talked to that isn't selling a car made expressly for one-armed people." That sale led to three others within a week.—W. F. Doyle, sales manager for Geo. H. Estabrook, Denver.

Let Visitor Explain

When a man comes into the door, he gets a cheery "good-morning" or some other pleasant greeting, cordial in tone and genuinely so. Then I wait for him to talk, *and don't say anything myself until I have to.* I soon learn whether he is a private car owner, a dealer looking for territory, or a prospect looking for his first car, and about what price he considers. This plan paves the way in a smooth, agreeable manner, without any strain or embarrassment on either side.—W. F. Doyle, sales manager for George H. Estabrook, Denver, Briscoe and Hollier.

Overcoming Bad Looks

If a prospect complains because some vital part of the car doesn't look quite so artistic as he wants it to, I show him how he gets greater value in superior service. Good springs, for example, are not built primarily for looks. Cars, like people, can't be fairly judged by only outside appearances, I tell him. Then I talk comfort and practical enjoyment.—W. F. Doyle, sales manager for George H. Estabrook, Denver.

The Price Objector

When a prospect objects to price I tell him there is no argument about there being lots of good cars on the market, ask him how much money he expects to spend for a car and lead him into taking a view of what he will get for his money rather than how low a price he can find.—W. W. Beeson, National Motor Co., Denver.

Profits, Not Sales

We help educate our dealers to be high-class business men. I always pound into them the vital need of setting their aim upon profits they can make through wise management rather than on just the number of cars they can sell in a year.—W. W. Beeson, National Motor Co., Denver, National and Elgin.

Quick Change of Place

When a prospect pays poor attention to what I try to tell him about a car, I plan to show him what it will do without attempting further talk. My usual plan is to tell him I want to see somebody out in the country and suggest that he go along for a nice little ride. Then I take him over Lookout Mountain and make him want the car because it makes hard climbs and gives other practical service so easily.—A. T. Wilson, A. T. Wilson Auto Co., Denver, Standard and Premier.

Not Too Persistent

I've discovered that there are times when it is best to leave entirely alone the man who is to sign the check for the car. When the head of the family says he will sign the check when he gets ready and that he doesn't want anybody to bother him meanwhile, the chances are in favor of the check coming in if he is let alone; that is assuming, of course, that the situation with reference to the other members of the family is satisfactory.—L. C. Hinkle, Premier Motor Co., Kansas City.

He Meets Comparisons

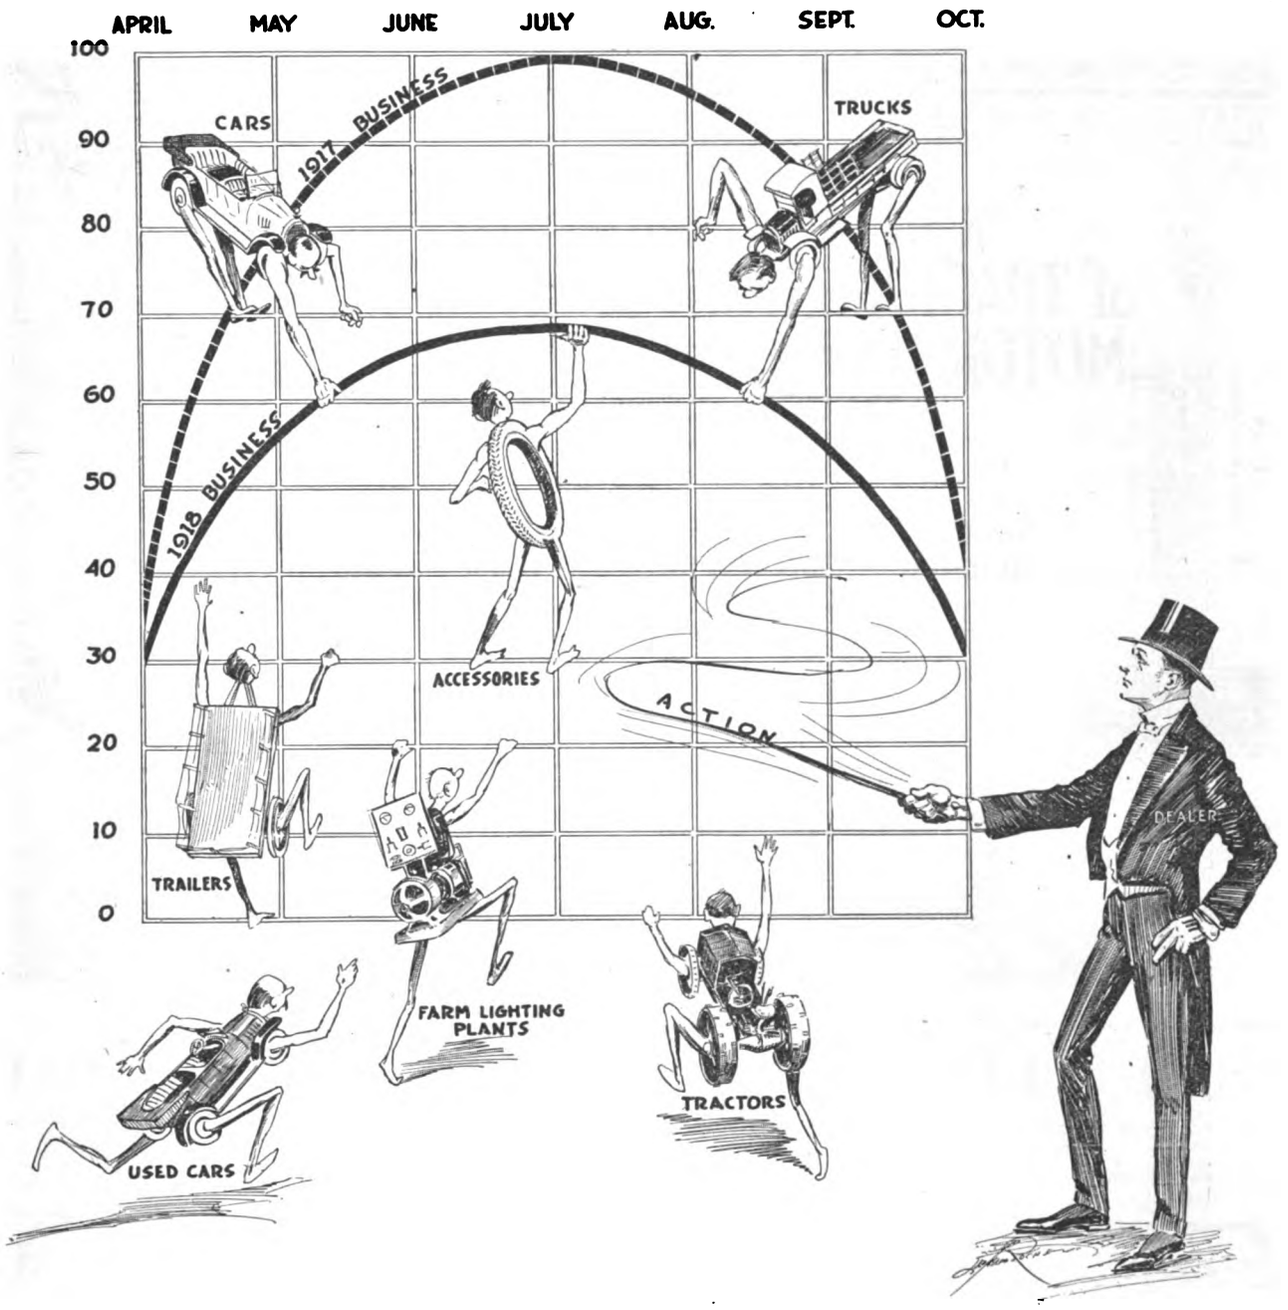
I never make any comparison or disparagement except with reference to two other makes of cars. The only times I mention any other cars is when I say that we are in the class with Marmon and Cadillac and $1,300 cheaper. When the customer mentions any other car, I simply ring in the Marmon and Cadillac and stop there.—L. C. Hinkle, Premier Motor Co., Kansas City.

The Man Is Boss, But——

Nowadays both a man and his wife usually come in to look at a car. I almost always assume that the man is boss and will decide on the purchase; and I maintain this attitude throughout the negotiations. But I invariably find occasion to speak quietly with the wife and work just as hard to sell her on the features that would appeal to her. I don't believe it pays to pick out one member of the family and devote all selling attentions to that one.—L. C. Hinkle, Premier Motor Co., Kansas City.

Everyone's Friend

The boss says my salary rise from $150 to $300 a month in three years was because I can think of so many different ways to make visitors feel friendly to the establishment. It's fun to figure out for every man, woman and child who comes to our salesroom just how to get his business expedited most pleasantly. The other fellows get sore because so many customers ask for me—but I should worry! The boss is satisfied.—(He wouldn't sign his name.)



Admires His Own Car

One salesman has a habit of stopping a few seconds to admire the car that prospects are looking at before he starts to talk to them. Sometimes he makes a general comment on how fine this car is, sometimes he makes no comment—just "registers" admiration.—Anonymous.

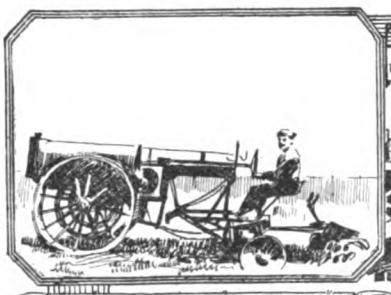
The Ringmaster

Up, Boys! Boost it up!



THE 1918 business curve may not be as high as the 1917 curve unless the dealer makes an effort to FORCE the total volume up. Cars and trucks can't be expected to do it all this year. The way to give a big, strong push is to call upon the other volume boosters —accessories, tractors, farm lighting plants, trailers and used cars sold at a profit. Plot a curve of your 1917 business and of your 1918 business as far as you have gone. See how they compare. Are you going to come through all right?

Be Automotive—Here's the Way

TOLEDO DAILY BLADE Saturday, February 9, 1918

STAR TRACTORS $790 ∞

LALLEY FARM LIGHTING PLANTS $485 ∞

ROBERTS-TOLEDO "WIN THE WAR SHOW" of TRACTORS, FARM LIGHTING PLANTS, MOTOR TRUCKS, ACCESSORIES AND PASSENGER CARS

Will Be Held in Our Spacious Four Story Motor Building, Adams & Thirteenth Sts., Feb. 11 to 16

All together in a mighty win-the-war "push"—

A big year—for you and for the Country—

Do it? Of course you can—and you will—

Take your tip from the great American farmer—he's intensifying his crops—making two stalks grow where one was before—

And you can intensify your territory—

This isn't a "cheer-up" message, it's a "get busy" message.

You're going to sell many Automobiles, but there may be a shortage of cars.

That isn't going to handicap your business.

You're going to be prepared

You're going to do more than that—

You're going to sell other things which will make your total sales even greater—

FARM TRACTORS. FARM LIGHTING PLANTS and MOTOR TRUCKS—there's a big market for them.

That's why we want you to see this big win-the-war Show of ours—

Bring your "prospects," too—

If anything will demonstrate the possibilities of profits for you—this show will convince you—

Get on a win-the-war basis now—

Push yourself into the Big money class—

It's going to be a big year for the man big enough to make it big.

You are! You bet you are!

Come on in Show Week!

Figure Your Used Car Values

On the Motor World Used Car Chart

1918	1917	1916	1915	1914	1913

How to Use the Chart—

1—Place your finger on the years at the bottom of the chart. As you touch "1918" say "one." Count to the right to the year the car is labeled. A 1916 model will therefore be "three." A 1918 model will be "one"—it was made last summer and is now considered by the buyer as one year old.

2—Let us illustrate with a 1916 Hudson. It is now, according to the chart method, three years old. Find where the BLACK LINE crosses the April 1 line in the Third Year. The percentage is about 35.

3—Multiply the present list price of the Hudson, $1950, by 35, and you get $682.50. Let's call it $685, for easy figuring. This is what the car should be worth to you "as is".

NOTE—Note that we have taken today's price instead of the 1916 price. This is because used cars compare with what the new car market is today and not what it was two years ago. In cases of models that have been little changed, as is the Super-Six or the Dodge, this method applies. In case a model has been greatly changed use the list price at the time of sale and add from 5 to 10 per cent, according to the standing of the car in your section. An important fact is that well-known cars of good value which were one year old last year are worth about the same price this year as last year, although they are now one year older.

4—To the $685 add 40, which gives $869. This is what the car will be worth when fixed up properly.

5—Check the car and find what it will cost to fix it up, display it and sell it. Let us say $110.

6—From the $869 subtract the $110, which gives $659. This is what you should allow.

7—Always scan the resale figure arrived at in paragraph 4, the $869. If your judgment tells you—but make it tell the truth—that the car will bring more or less, adjust the figure slightly before deducting the overhaul cost. Generally, however, the figure will hold good for well known cars of good value. In the case of discontinued models play pretty safe. They are risky.

Pads of forms for checking the condition of a car and finding what it will cost to do an overhaul can be bought from Motor World for 50 cents per pad of 100 sheets.

THE TRUCK

Your 1918 Opportunity

Off with the Old Ways, On with the New

THE dealer who hasn't a truck agency is missing a bet. He is running at only a partial per cent of his possibilities.

He is getting a certain amount of business by selling cars. Maybe he has a complete line of cars. If so, he is cashing in more than the man who has only one car. But the man who is cashing in more than all the others is the man who sells a truck along with his passenger cars.

This applies especially to the dealer in all except a few of the big cities. In some of the large towns dealers with only one car get volume enough on that one car to make the business highly profitable, but as the cities get smaller the need becomes greater for a more extensive line of goods.

The Best Ones Do It

Some dealers advance objections to handling trucks at the same time that other dealers are making money on them. Some of the best-known dealers in big cities are handling trucks with profit. The soundness of this combination agency has been demonstrated thoroughly.

One objection is that the car and the truck can't be handled in combination. Perhaps they can't, but it is being done.

Many dealers state that passenger-car salesmen can't sell trucks and cars at the same time. The majority in favor of this idea indicates that it is right, but there are a few dealers whose salesmen sell both and do well at it. Others have tried the combination idea and quit it.

Truck selling requires only the same sound fundamentals that underly car selling. These are brainwork, initiative and action.

The first requisite is to be an agency. There are good trucks and poor trucks. The dealer should have little difficulty in making a selection. The mere fact that a truck is new or not widely known should not be taken as an indication that it is not a good truck. It may be brand new and the best in the world. But the dealer should investigate a little before taking the agency. They say: "Ask the man who owns one," so why should not the dealer "ask the man who sells them." Go to a truck dealer in several nearby towns and ask him how the truck lines up as an agency proposition. Get the facts before you start.

Having secured the agency, add standing to the truck by providing a decent place for its sale. This does not mean that it should be merchandised in a mahogany salesroom on the main street, although a main-street location is desirable. The truck salesroom should be clean and attractive, although somewhat plain in its furnishings. Some truck men say plain furnishings are best because many of the visitors are men who would feel abashed in mahogany surroundings. However, the salesroom should be a salesroom and not the back end of a garage.

After these steps have been taken comes the real sales work. Set aside a certain sum for advertising. Knowing your business, your resources and the business you may expect to do during the season, plan an advertising campaign for a definite period. Lay out a certain space for certain days and carry the campaign through consistently. Don't shoot it all in one ad and quit. It is waste money unless you keep it up.

Then compile a prospect list. Look around town and find three or four lines of business that are using—or could use—trucks of the size you sell. List the people in these trades. You can get their names from the city or telephone directory. Begin mailing them letters and literature at regular intervals.

Begin personal calls—and keep at them. Hard work, in making calls, is one of the greatest factors in car or truck selling. Study the best methods of talking with prospects. Go carefully over the truck-sales ideas on the pages that follow. Learn how successful truck men do their work. Imitation of them will help you.

Remember this: You are selling performance and transportation, not comfort and stream lines. The men who sell your trucks must be, in a way, transportation engineers.

Must Be Cost Men

They must be able to go into a man's business, interest him in what it is costing him to deliver or transport goods or materials, secure his assistance in getting these figures down on paper, and then figure out for him a comparison, showing how the truck will permit him to expand his business and save money.

One of the best plans advanced to date in truck selling is that the truck is not so much a "money saver" as it is a "business expander." The man who puts in motor-delivery can cover more territory at the same cost and can build up his business, and business expansion is one of our greatest needs to-day when national demands are heavier and the workers are fewer.

And some one man connected with your business should devote all or part of his time to the truck business. There should be a truck manager, even though he have other duties. Unless the business is fathered it will not become strong.

To-day dealers are feeling the change in conditions. Conditions will never be the same. Ten years from now dealers will be automotive, handling cars, trucks, tractors and other things. The man who gets a grip on things *NOW* will be miles ahead when the others start.

HOW TO SELL TRUCKS

THERE are right and wrong ways to sell trucks. Those who have been at it for some time can give pointers to those who are new in the field. On these pages are the ideas of some of the smartest men in truck selling. They tell how they have succeeded. Incorporate these ideas in your business and go faster along the road to success in truck selling.

How to Sell Trucks

Everybody who has any hauling to do is to be considered a possible truck purchaser at this or some later time. The more hauling they do, the greater reason why they need trucks. Pick possible users who can afford to buy or those who have not the ready money, and convince them that the truck will increase their business.

The truck you sell is about seven-eighths of the battle, so in starting an agency the chief thing to consider is the truck itself. It is poor truck business to take trades that will strain you to carry them or make terms of such long duration that the vehicle can be seriously damaged while the buyer has but a comparatively small amount invested in it.

Missionary work must be done in truck selling. The public must be taught the need and the advantages to be derived from ownership. In large cities practically everyone has become convinced of truck utility. After the ability of the truck to stand up and deliver the goods has been proved, the next essential to success is looking after the customers in such a way that they regard you as a friend who has done them a favor. This will lead to repeat orders and that, after all, is the real thing, as practically every truck fleet in the country has been built up from a single sale.

The public markets are where many possible truck buyers may be found, the freight houses are another, and, of course, public utilities, manufacturers and supply houses have to have trucks. Very few truck prospects come into the place of business; you must go out and hunt them up.—J. E. Armstrong, Mack Truck Agency, Los Angeles.

In Touch with Things

Joseph V. Lawrence, vice-president of the Henry Paulman Co., Chicago, found that to sell Pierce-Arrow trucks he must be as well posted as the average business man. Therefore, he subscribed to a couple of current topics magazines and a couple of Wall Street newspapers and spends an hour every day reading, generally just before retiring, no matter what the hour may be.

Business in Business Hours

I have found the changing of sales systems a help in getting truck business. First, a man must get his name and the name of his truck before the public, and then he must create a connection between the dealer's name and the name of the commodity being sold.

Circular letters are good, but they must be short and to the point. The best way to sell a truck is to call on the business man at his place of business when he is busy. That is the only time he will talk business and unless a man will talk business you cannot sell a truck.

I never send a truck salesman to see a prospect on Saturday afternoons or on holidays. I instruct my salesman not to remain in the prospect's office on the first call for more than five minutes unless the prospect urges him to remain.

Tell the prospect that you don't want to bother him, hand him your literature on the truck to show a saving in figures, and walk out, telling him that you will call again for the literature. The chances are he will be ready to talk business when the salesman returns and he will experience no difficulty in gaining an audience with the prospect.—A. W. Buck, of the Brown-Rowan & Buck Co., Indianapolis.

Lists All Who Deliver

I make a list of every firm that delivers goods and go after them, prepared with figures to prove economy and efficiency. That is what the average business man wants. When I have him interested I suggest a demonstration. Haphazard statements will not go any more. What I say must be backed up by positive demonstration. Otherwise my time is wasted.—L. J. Malone, Bloomington, Ill.

Must Have the Goods

Truck prospects are usually well posted. They want the best at the lowest figure. If a dealer cannot back up his demonstration promises he is lost. Figures are interesting but the actual work of his truck must prove them true. A salesman must have confidence in his machine and be prepared for any question. Rash statements and exaggeration are quickly detected by the modern truck buyer.—C. U. Williams, Bloomington, Ill.

Keep Truck Cost Figures

Exact figures on cost of truck hauling are powerful both to win attention and to convince a prospect that he can afford a truck the same as other modern equipment in his business.—Cham Norton, Norton-Buick Auto Co., Denver.

Helps His Truck Dealers

"My plan to build up a truck business is to attend personally to getting the best class of dealers, and then helping them close difficult sales."—S. E. Norton, Norton-Buick Co., Denver, G. M. C.

Photos of Trucks at Work

Our truck salesmen win the interest of prospects most often by means of close-up photographs of trucks at work and by telegrams from satisfied owners.—Elmer A. Johnson, Miller-Ray Motor Co., Denver, Kissel.

Scans Car Owner List

The KisselKar Co., 178-180 Seventh Street, Milwaukee, dealer in Kissel trucks, has gained a large amount of business by continually going over its list of passenger car purchasers with a fine tooth comb to determine possible truck requirements.

Team Contracting Helps

M. D. Newald & Co., 201 Broadway, Milwaukee, dealer in Stewart trucks, and the Stoltz & Wright Co., 258 National Avenue, Milwaukee, dealer in the Kelly-Springfield, are two dealers who for many years have been large teaming contractors and still are engaged in this

Digitized by Google

line. The information gained through this business has furnished practically as many truck customers as they have been able to conveniently handle with the number of vehicles allotted to them by their respective factories.

Truck "Sales Engineer"

When the J. H. Ryan Motor Truck Co., 495 Broadway, Milwaukee, dealer in the Diamond T truck, entered the local field, it started to sell trucks purely on performance—applying the "sales engineer" idea to the motor truck business. Sales engineers sell machine tools, cranes and other shop equipment purely on performance—the right machine in the right place for the right purpose, and capable of producing the right amount of results. In this manner the Diamond T truck has worked its way permanently into some of the highest class and most efficient institutions in Milwaukee. It costs sales that might be relatively easy to make, but the net result justifies the sacrifice.

Shows Comparative Figures

I sell trucks by a little common sense talk. I know all the fellows' business, put myself in the other fellow's place, know his costs, show them to him and compare the figures with motor transportation. We use a regular form for getting this information. Any sensible person is open to conviction. I show him the light.—Russell P. Taber, Reo, Republic and Duplex, Hartford, Conn.

System in Truck Service

When a car is inspected, the owner is promptly notified by the office in a written memorandum what work should be done at once, or if none is required. In case of firms with many cars, the request is made that these be sent one at a time for necessary service. When the car arrives, our office record simplifies locating work to be done. As a result, every Autocar truck in Omaha is giving from 12 to 16 hr. of service per day without interruption.—W. M. Clement, president, W. M. Clement Motor Car Co., Omaha, Neb.

Sell Right Size of Truck

Truck selling demands gaining the confidence of a prospective buyer, and then keeping his confidence. If a prospect imagines a one-ton truck will do two-ton work and hold up under it, I tell him frankly that it will not, show him why, tell him I would advise against buying a one-ton truck of my own line, and appeal to his best business judgment from the standpoint of investment. I made such a two-ton sale the other day by weighing an average load hauled in this man's business—after an over-enthusiastic competitor had urged a one-ton truck and merely guessed at the demands the business would make—and encouraged his prospect to guess also and take a chance.—John F. Mauro, sales manager, Swenson Auto Co., Denver, Republic.

Sell Only Where Needed

If a man wants a truck to haul lumber, we tell him we can't guarantee ours to satisfy him. If he wants one for mountain use on steep grades, we study the whole situation before considering a sale. If we see where a man can give his delivery system a re-routing and get along with the lightest of delivery trucks, we tell him so. When he actually needs a truck in our class, he is likely to remember our fairness to him.—H. R. Harrison, Harrison Motor Car Co., Denver.

Sometimes Go Slowly

As to approaching a prospect, I often study his needs and point out the general relation of trucks to his particular line of business for days or weeks before I mention the name of our truck.—H. R. Harrison, Harrison Motor Car Co., Denver.

Learn How Others Do It

Free Inspection Helps

Free truck inspection every two weeks in Denver, and according to specific agreement outside, is a business getter for our truck business. It helps to show how we give customers their deserved money's worth without discounts or trades.—H. R. Harrison, Harrison Motor Car Co., Denver.

Don't Mis-sell

The one safe way to develop a truck business that is a real business is to build for the future—even at the sacrifice of a sale now and then that might easily be made at a risk of reputation cost. I analyze a prospect's business thoroughly. If his drayage doesn't cost more than $150 a month, I tell him he can't make money by using a truck as large as a two-ton unit—and I don't sell him till he needs one that large.—H. R. Harrison, president Harrison Motor Car Co., Denver, Autocar.

Count the Cars

An enormous amount of possible business gets away from dealers and garagemen because they do not know that the business exists. A Firestone traveler recently tried to place a press at Salina, Kan. The garageman approached thought there were five or six trucks around Salina. A brief canvass disclosed the fact that there were sixty trucks in active service within fifty miles of the city.

Foreign Languages Help

Thos. P. Price, president of the Price-Sanmann Motor Co., Kansas City, has found the ability of J. F. Sanmann, a member of the firm, and Harry Lohr, salesman, to speak other languages immensely helpful in selling Wright truck attachments to truck gardeners near Kansas City.

Hired the Factory Man

My success dates from the day the factory man who sold me the contract accepted his present job with me.—Anonymous.

Play Squarely

We do not give one cent discount, and we never promise any. We never misrepresent a single item, and we live up to all promises. Results, more than 50 per cent of our truck orders thus far are repeat orders.—H. R. Harrison, Harrison Motor Car Co., Denver.

Good Partner Helps

Many automobile dealers have found that sales fall into their lap when they stock trucks. One Kansas dealer had sold a few trucks but he didn't get into big business till he took a partner who had some money and who had banking experience. His partner was willing to work in the office getting out parts and the dealer was able to spend all his time on sales efforts, feeling sure that the books would be kept.

Watch Daily Events

One truck dealer who watched local events—a strike—learned that a paving contractor using teams was likely to be embarrassed in securing teamsters, and was about to begin work on a large contract. The truck dealer showed the contractor that two trucks could do the work of eight or ten teams and relieve the possible embarrassment. The contractor bought two trucks at

Digitized by Google

once; before he had finished the contract, he had bought five more.

Seasons for Prospects

J. O. Warner, Indiana truck representative at Kansas City, urges his dealers to make up and keep fresh the lists of prospects by businesses with dates on which they should be solicited. There are seasons when each business is a particularly good prospect; and if the list is frequently reviewed, the dealer, if he is wide-awake, can better keep track of the application of new conditions through the necessities of these businesses with reference to motor trucks. The truck dealer who has such a list would be reminded that while coal dealers ordinarily would be good prospects in late summer, this year they are excellent prospects during April.

Call at the Right Time

Some dealers find it pays in time and effort saved to make a still hunt through various lines of business for the dates on which sales effort should be made so that their attacks may be made close to the time when purchases are likely to be in the minds of the prospects. The useless trips that otherwise they would make on these prospects could be devoted to men who are in immediate need of trucks.

Coal Day for the Coal Men

J. O. Warner, district manager for Indiana trucks in Kansas City, frequently when cooperating with local dealers, devotes special days to special industries. One day they will go after coal men; the next day wholesale grocers; the next day transfer men; and so on. Specializing thus, they have their information on the particular business right at hand, and develop impetus in making the sales talks, objections and responses being fresh in mind.

Hits 'Em Anywhere

When Will Makinney, Pittsburg, Kan., sees a man with a team, either in the city or on his visits to rural districts, and other communities, he goes after him to sell a truck. Makinney sold $189,000 worth of Indiana trucks in 1917, all direct personal sales by himself.

Made Hard Demonstration

The Omaha Sandow Co. learned that the Bell Telephone Co., erecting a new building, was having difficulty finding a transfer man to move some 18-ton steel girders. The truck company offered to move the girders; it did so and found the advertising through the stunt made a considerable number of good sales easy.

Bought Out the Prospect

The Omaha Sandow Co., Omaha, Neb., trying to sell trucks to a transfer company that was not doing extra well with teams, finally had to take 51 per cent of the stock of the transfer company for four trucks. The truck distributer had studied the local opportunities for transfer work, and knew the trucks would make money. They did. Within three months, the original stockholders of the transfer company bought the trucks at retail prices and gave the manager of the Sandow Co. $10,000 to relinquish his 51 per cent of the stock.

Real Constructive Idea

A. L. Coyle, Coffeyville, Kan., approaches team owners, not with the statement that trucks will displace teams, but that trucks will develop new business and new opportunities. The Hastings Transfer Co., at Coffeyville, Kan., was using six teams; the manager knew he needed the teams for his kind of work. Coyle sold the transfer company a 2-ton Sandow March 1; the truck did not displace any of the teams; but the Hastings Transfer Co. bought another 2-ton Sandow and a 1½-ton within three weeks, to take care of the new business developed.

Read These Ideas of Successful Truck Salesmen

Coyle, in the little town of Coffeyville, bought twenty-four trucks during March, including the three for the Hastings Transfer Co.

List the Big Fellows

Excellent lists of prospects are obtained by taking a list of large merchants and manufacturers of a town and making investigation as to their traffic needs.—Milton Koenig, Weber Automobile and Implement Co., St. Louis.

Go After Truck Gardeners

All truck gardeners who send product to market early are prospects for light trucks.—Milton Koenig, Weber Automobile and Implement Co., St. Louis.

Plays "Mine Host"

I suppose I am a bit different from a lot of other dealers in that I like to make a customer feel he is doing business with the head of the house. So I have my office located where my visitor may walk right in. And when a man comes in he is sure to get a cheery greeting from me, or a friendly nod even if a salesman meets him. He is at home at once. Salesmen are instructed to refer customers to me if they are in doubt. Then we start figuring out together like a happy family the needs of a buyer, and from the beginning he is made to feel that unless we can improve his service he will not be encouraged to buy anything. Having won his confidence we never abuse it, for we want customers who will come year after year, not the temporary ones, as our business is built to endure.—John H. Judd, Smith and Gramm-Bernstein, Boston.

Sells Transportation Insurance

When we find buyers of trucks are hesitating about a purchase we explain to them that, in addition to other things, we are selling them TRANSPORTATION INSURANCE. That has clinched a number of sales. And we use it in our advertising.

It works out this way. If a man considers a truck and he is brought to the point of nearly buying we ask him if he knows what transportation insurance is. He does not at first. So we say: Suppose you are told that there is a load of material for your mill or business at New York, Fall River, Providence or some other point miles away, but it cannot be delivered to you.

You own a big truck that is doing its daily hauling in and about Boston delivering your product. Your plant is threatened with a shut-down for lack of materials. All you do is order your truck to go get the things you need to keep the business going. It insures you against interruption in business. Or if you have a contract to deliver a line of goods somewhere and the railroad will not accept them your truck will do it, and you keep on good terms with the buyer. It insures your business. I am surprised that many have not advertised this nationally.—J. W. Maguire, Pierce-Arrow, Boston.

Go to Farmers' Institutes

I visit farmers' institutes in the spring and summer and begin a campaign for truck sales among the farmers. This is an easy method to reach the farmer.—A. H. Geesey, Anderson Motor Co., York, Pa.

Get Into Right Trades

Make a study of the trades that have adopted the motor truck for quick and economical transportation.

24 Ways to Save

A DOLLAR of gross profit may not be profit if expenses eat it up. A dollar saved by efficient management is one dollar added to the profits. On these pages are the "cost and accounting, ideas of many men. They tell leaks they have found and how they have plugged them. Even though you have good bookkeeping in your office your back door may be ajar. Read these ideas and see how many of them remind you of dollar-saving opportunities in your own business.

Lost Minutes at Lunch

The manager of a large accessory supply house in Los Angeles discovered that the time allowed employees for their lunch hour tended to disorganization. Whenever the employee was away from his station, a fellow worker had to do the work of two, and unfamiliarity with stock and details sometimes occasioned loss of trade and always inconvenience. He had to carry one more employee than really was necessary in order to keep a full working force busy at all times. He put into effect the plan of closing the store at 12 o'clock and locking it. All employees took one hour for lunch and the store reopened and continued with a full force at 1 o'clock. He says he has lost practically no trade by this plan and it has saved money by better efficiency.

What the Clock Told

Figures have shown me that a time clock pays for itself in rightly distributing shop costs—Thomas C. Walker, Walker-Plath Motor Co., Denver, Moon.

Time Clock Saved Money

We lost money frequently in the shop until we put in a time clock to record every single job of work.—John Graham, Colorado Motor Co., Denver.

Bins for Parts

An item worth several hundred dollars to the business in time saved, better knowledge of parts needed, etc., is a neat and convenient arrangement of about 1200 bins for parts. Each bin has one tagged part with stock number, model number, etc.—Colorado-Nash Motor Sales Co., Denver.

Returns Parts Promptly

Figures have shown me the importance of keeping a close record of all defective parts and sending them back to the factory without delay. This saves money mainly for our customers, but it pays for itself over and over again in increased satisfaction—A. M. Platt, Platt-Fawcett Motor Co., Denver.

Have the Bills Ready

Until we are able to get on a cash basis (which will be soon), we find that it saves time, trouble and money to have all repair bills ready when car is called for.—A. M. Platt, Platt-Fawcett Motor Co., Denver.

Finding Lost Gasoline

Our gasoline account kept showing on the wrong side of the ledger until we found that gasoline was not being charged to cars by the service department. That experience has increased our vigilance to make absolutely sure about every item of expense.—A. Tom Botterill, accountant, Denver.

Cut Out Cut Prices

The best thing we ever did for our business was to do two years ago the very thing the Government is now requesting retail dry goods, clothing, shoe and women's wear merchants to put into effect—to cut out all special discounts and establish a one-price-to-all system. We admit that we were giving special discounts to certain retail customers pretty freely at that time. These were to friends who grew up with our business. We took the bull by the horns and in sending out our statements on the first of the month, made a rubber-stamp notation that special prices were at an end and thereafter the list price must govern. All but a few of those affected were such true friends of the house that they complimented us on the move and brought in more than enough new patrons to offset the small loss, not counting the addition to our income from getting the legitimate full list price.—Auto Supply Co., Milwaukee.

Hired a Leak-Hunter

When we closed up our books for the year and noted a net loss of more than $2,000 in the operation of our stockrooms, we got to thinking pretty hard. There were so many leaks that it resembled a sieve. To make a long story short, we placed a competent man in charge, put him on his honor to issue nothing without a requisition from the office, made him responsible for his key, and kept but one other key—and that where only the manager could find it. Thereafter every customer paid for what he got in the way of parts, accessories, supplies, etc. Our profit the first year was enough to cover the previous year's loss and to pay the stockroom keeper's annual salary. The stockroom ceased to be a charitable and benevolent institution.—Mitchell Automobile Co., 528-532 Broadway, Milwaukee.

Learned the Truth

"What have figures told us?" First of all, they have told us the truth. They have also told us of the earnings of each department, the losses and gains and the condition of our business at all times. Figures have told us, too, that we have been successful in our business.

We use the Motor World System of Accounting and it has done more toward keeping us in immediate touch with our business than anything else. If the Motor World System is used and the work kept up, any man can tell the condition of his business any hour of the day, any day in the week.

"Figures won't lie," but in our business the Motor World System of Accounting makes them tell the truth more plainly and concisely than any system we have previously used.—Carter Automobile Co., by R. S. Carter, Galveston, Tex.

He Quit Selling

The best business move I ever made was getting out of the car selling business for myself and selling for the other fellow. With insufficient capital it is difficult to meet the incidentals that are always coming up in car selling. Starting without a substantial reserve spells disaster. The garage and repair business can be made to pay. My repairshop is now on a paying basis. We get off a balance every three months. Just about an even split. Sometimes we are in the hole. A weekly balance enables us to catch all the loose ends.—James H. Whaley, Whaley Motor Co., Hartford, Conn.

Digitized by Google

Watch Small Items

Cost analysis showed several departments were costing too much. Overhead was too heavy. Salesmen cost $1,000 more last year than their commissions, because of gasoline, oil and tire expense. Now we check up everything. All ends must be watched closely.—M. J. Bliss, Heublein Garage Co., Hartford, Conn.

Watch Your Purchases

Figures have shown me that it pays to keep a careful, itemized check of everything bought, whether it is later sold or used in the business. This is especially true of oils and greases, which must be charged up in every case, even if used in demonstrator or used car.—L. E. Kelton, Denver.

Profit on Used Cars

One idea I believe will be worth several hundred dollars to me is *demanding a profit on used cars.* It costs something to sell a used car, the same as a new one. So why sell at a practical loss and depend entirely on new car sales for profits? It is surely legitimate to make profits both ways, for a trade-in allowance is practically buying the old car.—L. E. Kelton, Denver.

Avoids Long Demonstrations

Figures have shown me that long demonstration trips average a heavy waste of money and time. If a prospect asks for some long trip into the mountains, I satisfy him first on hill tests and other demonstrations nearby, and then put the proposition squarely up to him whether he will buy if car suits him on the long trip. If he is dissatisfied about the performance of the car or about the price, I figure the time and expense of a half-day long trip can be better invested in working other prospects. The long trip is all right in extraordinary cases where that remains the sole test of a sale.—L. E. Kelton, L. E. Kelton Motor Co., Denver.

Cut Demonstrating Cost

Figures have shown us how to stop a lot of demonstration waste. Besides saving much useless demonstration expense, we now charge demonstration gasoline carefully to every car itself. This saves about 18 per cent in selling cost over the old plan, and also makes our salesmen more careful and businesslike.—R. H. Vertrees, McCormick & Vertrees, Denver.

Watch Your Measures

Our accounting system is aided by careful inspecting and testing. Grease guns often give wrong measure. If overmeasure, we are losing money. If under, we risk making a customer dissatisfied through possible injury to his truck. We have discovered both these and other kinds of leaks in our shop through more rigid inspection.—H. R. Harrison, Harrison Motor Car Co., Denver.

Prices All Jobs

A competitor showed me what bookkeeping meant to a business. My shop was unprofitable and I did not know why until the competitor showed me how he priced his jobs by actual cost of material and time, plus profit. I am adopting his system.—A Ford dealer in St. Louis.

Developed Resourceful Men

I believe that I was one of the first men in Boston to systematize my business. Away back in the old days I saw that there was bound to be a waning of the sales made on froth from the wine bottle, and I began to study to anticipate it. So my clerical force was enlarged and I made inquiries from business friends about various plans.

In this way I picked out the best of a number and put them into operation. My idea was to make the business self-sustaining so that my being absent for a few days on factory trips made no difference. In other words our force was not run on the principle "Wait for the Boss to decide," "Let's telephone to J. L. at his home, or the club." The force learned initiative and they marketed our product so that we could afford to own one of the biggest establishments on one of the leading streets long before many others. I was stepping out a little ahead of the rank and file, but never getting out of step.—John L. Snow, Peerless, Boston.

Saved on Demonstrators

The manager of one of the most successful agencies in Boston became interested in the expenses of his business about a year ago, and very quietly he began to check up on the use of his cars for demonstrations, etc., without letting the fact become generally known. He began to keep tabs on mileage by getting around early, or staying late, and reading the speedometers unobserved. And the mileage did not tally with some of the statements of the men. Then he installed a new system.

Now when a demonstration is booked a check is kept on everything. First, there must be the reason for taking out the car. Next, the gasoline is verified; then, the speedometer. No driver can get gas or oil without an O. K., and he must turn in a statement about the trip, mileage, gasoline used, etc., and they are checked up. It has put an end to promiscuous use of cars, and as no car is ever allowed out on a Sunday without its being for business purposes all excursion parties have been eliminated. And he has saved thousands of dollars by applying business methods. But some of the salesmen are inclined to regard the boss as stingy.

Hired an Auditor

More than a year ago I became interested in the series of stories in Motor World on business methods. At that time I had been running my business on a fairly accurate basis. But some of the stories gave me an idea, and that was that it paid to do things right.

So I advertised for a man who had executive ability, and was also an auditor. To him I turned over the details of the business. *It was a marvel the way he did things.*

Every morning I had a detailed statement telling just where the business stood in dollars and cents, not alone in Boston, but at our branches. That man earned a year's salary in a few months, for he not only systematized the business, but he also helped build it up by letters, etc., leaving me and the salesmen free to market the cars. And we were oversold.

It pays to get a good man; it pays even more to have details taken off your shoulders, for detail work kills more business men annually than ill health, though they do not know it. It will keep you out in the open; out of a sanitarium; out of the premature grave; out of the bankruptcy court.—A. H. Sowers, Jackson car, Fulton truck, and Amesbury Unit, Boston.

Figures told us that old cars and price concessions have put many dealers on the shoals of bankruptcy. We figured that it cost money to sell used cars. Consequently we accept them from purchasers of new cars only on the following basis:

First—We do not, and never have taken, cars in trade. A nominal charge is made if a customer places a used car in our place and if it is removed by him before being sold by us and the new car delivered.

Second—A charge is made to cover the cost of advertising, selling, storage and demonstration after we have disposed of it.

Third—We retain 20 per cent of the sale price of the used car if the order for a new car is not consummated for any reason within six months from date of sale.

Figures prove that the service department should be on a cash basis. It has been that way always.

Every department must pay for itself and monthly statements must show this.—C. S. Henshaw, Dodge dealer, Boston.

Mail Bills Promptly

We have found that the loose leaf book-keeping system, which permits us to make up our bills at the close of each working day and mail them out promptly, has brought us good returns and also brought in more money from both our

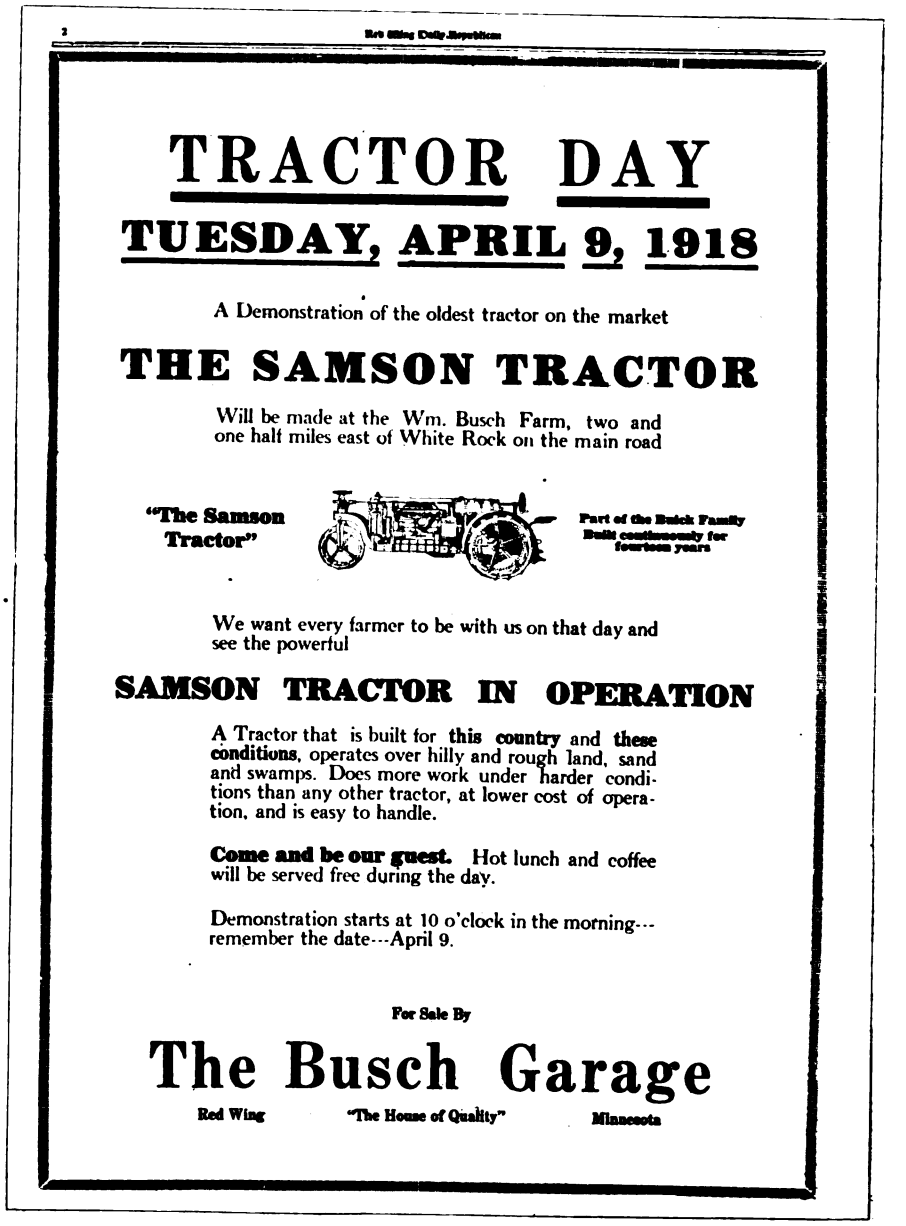
The Tractor

An Extra Source of 1918 Profits

Why is the motor car dealer the best tractor dealer?
What are the things you should watch out for in selling tractors?
What size of tractor should you sell for certain sized farms?
What are the things that will help you make tractor sales?
Read These Stories on the Tractor Situation

WHETHER he be in the East, West, North or South the dealer should investigate the tractor business. It is an opportunity that looms to some as yet but faintly, but which has already been grasped by others, as is borne out by the illustrations on these two pages.



One shows a dealer who is SELLING tractors in a salesroom on Broadway and is placing his wares on the large and small farms in that area that feeds New York City with its garden produce.

The advertisement that is reproduced on this page shows how a car dealer in a 10,000-population town on the Mississippi in southeastern Minnesota, Red Wing, is getting a grip on the tractor business while the business is yet young.

The Busch Garage handles the Buick, Dodge and Chevrolet. The Samson tractor is distributed by the Pence Automobile Co., Minneapolis, which also distributes the Buick over 400,000 sq. miles of the Northwest to 400 dealers. It gives Busch a "line" instead of letting the business be divided among several dealers.

Busch and Sanders, whose story is on the opposite page, both demonstrate on a certain farm and invite the farmers of that vicinity to see the machines work. This is one of the early developed principles of tractor merchandising as done by automobile men. Read the Busch ad.

Dealers who argue that they will wait a few years until tractor design "settles down" should ask themselves where they would be now had they waited 5 and 10 years ago until motor car design "settled down." Don't wait. The tractors of today will plow and do belt work, regardless of what they may be ten years from now. And the dealer who gets in NOW will be an established tractor dealer when the business becomes big. The farmer would rather buy from a dealer who has handled tractors four years than from a dealer who just started in. Get in NOW.

2 Red Wing Daily Republican

TRACTOR DAY

TUESDAY, APRIL 9, 1918

A Demonstration of the oldest tractor on the market

THE SAMSON TRACTOR

Will be made at the Wm. Busch Farm, two and one half miles east of White Rock on the main road

"The Samson Tractor"

Part of the Buick Family Built continuously for fourteen years

We want every farmer to be with us on that day and see the powerful

SAMSON TRACTOR IN OPERATION

A Tractor that is built for **this country** and **these conditions**, operates over hilly and rough land, sand and swamps. Does more work under harder conditions than any other tractor, at lower cost of operation, and is easy to handle.

Come and be our guest. Hot lunch and coffee will be served free during the day.

Demonstration starts at 10 o'clock in the morning---remember the date---April 9.

For Sale By

The Busch Garage

Red Wing "The House of Quality" Minnesota

WHEN the Busch Garage in Red Wing, Minn., wants to demonstrate its tractor it stages a demonstration on some man's farm, invites all the farmers for miles around and serves lunch and hot coffee. Sanders, whose story is on the opposite page, does much the same thing. Try it

Digitized by Google

Get ONE Tractor Running

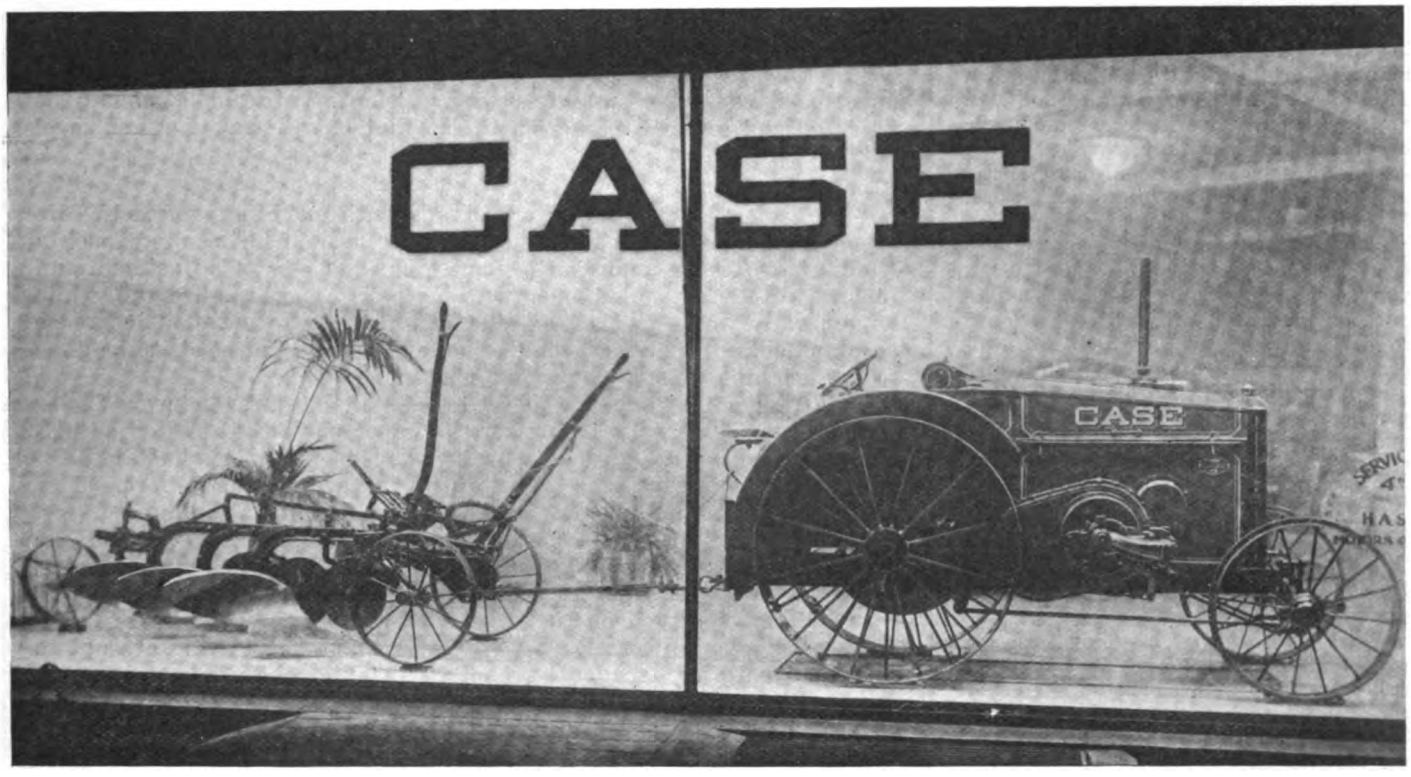
And It Will Sell Others

The Motor Car Dealer Is Best for Tractor Selling

THE car dealer who goes into the selling of tractors has to learn tractor and farm mechanics.

The implement man who takes on tractors has to learn salesmanship.

"But," says W. S. Roberts, Case manager in St. Louis, "it is easier to teach farm mechanics to the dealer than it is to teach salesmanship to the implement man, so the automobile man makes the better dealer if he takes hold of the task and learns those things that he must know."



One of the biggest sales factors for the dealers, says Roberts, is to get one tractor running in a certain farming section. This one tractor is better than any show window and makes sales. Roberts has been a long time in the car and tractor business and has studied it. He says:

"We let our salesmen organize a district. He selects the man he wants as dealer in a favorable neighborhood; then he gets one tractor going there, sees that it is well handled and that the owner understands how many things a tractor can do. That tractor is your exhibit. It beats any show window.

"The selling agency means much, of course. The tractor and its possibilities are new to many men and are comparatively new to salesmen. In selecting our selling agents the choice is between the implement man and the automobile dealer.

"Each has his strong points. The automobile dealer is much the best salesman as a rule, but the implement dealer understands the belt possibilities and the

Sanders Is Selling Tractors on Broadway

WHILE tractors are commonly supposed to be used largely in the West they are being sold in the neighborhood of New York City by the H. A. Sanders Motors Corp., which has a Case tractor and Grand Detour plow on display in its window at 1876 Broadway.

Since the first of the year about 50 tractors have been sold to farmers in Connecticut, Long Island, New Jersey and part of New York State.

The display window, while on the famous Broadway, gets results. Many farmers drive on this street, as do wealthy men who have estates out of town. Manager Neal of the tractor department says about 100 people a day drop in to ask questions about the tractor.

The tractors are sold in some instances by Case car dealers and in other instances by car dealers who have dropped the cars and are concentrating on tractors.

Demonstrating is arranged by the Sanders company. An arrangement will be made to work on a certain farm on Tuesdays and Fridays and the farmers within driving radius will be invited to attend. Many sales are made in this way. About 20 tractors are now being used in this work.

It is said that farms as small as 50 acres are using tractors advantageously in the metropolitan area, doing plowing, other field work and all kinds of belt work. Within the metropolitan area are many farms of this size, the produce of which goes to feed the 10,000,000 in and about New York.

Digitized by Google

other equipment that goes with the tractor.

"Whichever you choose, he must be trained either in selling or in the uses of a tractor. If the automobile dealer will study the tractor and become interested in it, he is preferred. It is easier to train a man efficiently in a mechanical proposition than in salesmanship.

"But if the automobile dealer goes into the tractor business, or the implement dealer into the automobile business, they must departmentize their businesses.

"Tractors and automobiles are not the same proposition in selling or in use."

Roberts wants it understood that in his remarks he is speaking generally and that he does not for a moment disparage the successful selling of tractors by automobile dealers, nor the accomplishments of Sanders on Broadway, New York, nor had he overlooked the implement men who are successfully selling automobiles. He admits that many men are adaptable and that many implement men have grown into a successful automobile business, just as Roberts has here in St. Louis.

The big things, according to Roberts, are to get the dealer interested, to get him to study his new machine and its possibilities, to get one tractor going in the neighborhood in good hands and then to get the owner of the machine to understand and appreciate the power plant that he has bought.

Roberts is an implement man. He began at the beginning and has been manager of the large St. Louis branch for 10 years. He is an organization man and has been active in local automobile organizations since they started.

He supports the various motor shows and is a leader in promotion work. Likewise, he is keen for tractor demonstrations and last winter he conducted a tractor school at the J. I. Case T. M. warerooms for tractor owners throughout his district. This school was open to all present or prospective tractor owners and was well attended. The work laid out daily was a full day's work and was not calculated as an entertainment, and the man who was not interested in tractors for something besides curiosity did not last long.

Roberts says that the school was excellent business policy. He believes in these things as he does in his tractors. He also believes in reserve power of his organization.

This is his theory in going into the education of his dealers so that they not only can sell tractors, but so that they can see to it that the owner gets full benefit of his machine next winter when the belt use is the big thing. It is not the first sale and not the second that bothers Roberts, but the sales next year, and the sale when the man who buys a tractor wears this one out in honest work and is again in the market, unless before that time his tractor has made him so wealthy that he comes in year after next for a half dozen larger tractors than this first one.

The Case organization has some strong ideas as to what an automobile tractor man, must learn.

Tractorgrams for Motor Car Dealers By W. S. Roberts, Case Manager in St. Louis

Know Plowing Conditions

The dealer should remember that a so-called three-plow tractor, capable of pulling three 14-in. plows 7 in. deep on a level with apparent ease, may find difficulty in handling a two-bottom 14-in. plow, cutting at the same depth in a neighbor's field of approximately the same soil, but hilly land.

Know Size to Sell

The automobile dealer who will make a little study of farm tractors and other farming machinery will soon be in position intelligently to recommend to a farmer the size of tractor he requires, should the farmer already have his full equipment—disc harrows, clod crushers, soil packers, grain drills, harvesters, feed cutters, feed mills, etc.

Forget High Speed

It has been found that the most desirable normal speed for farm tractors is from 2¼ to 2½ m.p.h. Practically all tillage tools are designed to operate at approximately this speed and will do the best work when so used; consequently, an automobile dealer seeking a tractor to sell to his farm friends should not get the idea that he can take great pride in telling the prospect "how fast she can go." There seems to be a general impression among automobile dealers that farm tractors should be much more speedy than horse gaits. There is no justification for this expectation and no good reason why a tractor should race down the field with a plow or other equipment, which when used at a speed in excess of the intended rate will soon be wrecked from misuse.

Know Hitching Facts

An automobile dealer should acquaint himself with the best manner of hitching or pulling plows or other tools. To do good work and operate on the least possible power, a plow, for example, should be adjusted and hitched to the tractor so that it will run true and level without side draft.

As to Service

The farmer, as a rule, is quite handy with machinery himself. He is not afraid to tighten up a nut, or to adjust a bearing or to pack a stuffing box for the pump, or do some other odd jobs of adjustment and repairs. He has handled machinery more or less all his life and, while he generally works in overalls, does not hesitate to get a little grease on his fingers or his shirt when he believes something needs to be done to the machine to save damaging some part.

The automobilist depends more or less on the garageman or dealer who sold him the car to look after the important parts. When adjustments are needed the owner generally has this done. Automobile dealers have made themselves very useful in this way to car owners. They are of the opinion that the tractor owner expects a similar service. Much has been written in motor publications suggesting that no one can give Mr. Farmer such genuine helpful service, if he buys a tractor, as the automobile dealer. This is undoubtedly true.

Preaching too much on the subject of service for tractors to farmers, we believe, will easily scare away good prospects who are apt to conclude that if it frequently requires an automobile or motor expert to keep the tractor going, much trouble can be expected or considerable delay will be experienced or both. Most farmers expect expert help only in a case of serious mishap or accident. Some allow, of course, for absolute carelessness on the part of hired help. The average farmer feels that if he or his boys operate the machine scarcely any trouble will be experienced on account of the extra care the machine will receive at their hands.

Preach Care of Machinery

One big thing automobile dealers can do after entering the tractor business is to impress upon every farmer buying a tractor the importance of sheltering his valuable and expensive machine when not in use.

Digitized by Google

What Size Tractor Should You Sell?

On Farms of 80 to 200 Acres *Pulling 3 14-inch bottoms*	8-16 to 12-25
On Farms of 201 to 400 Acres *Pulling 3 to 4 bottoms*	8-16 to 15-30
On Farms of 401 to 800 Acres	10-20 to 30-60
On Farms more than 800 Acres	20-40 to 40-80

THE success which a dealer will attain in the sale of tractors will be measured not so much by the number of tractors he sells as it will be by the number of satisfactory sales he makes. This means, in brief, that the dealer must fit the tractor to the job.

THAT this will depend largely upon him experience proves. The farmer, as a rule, is not competent to judge of the size, style or type which best will meet the conditions to be found on his farm and in a majority of instances the dealer will be called upon to advise.

IT is incumbent upon the latter, therefore, that he know what tractor experience on the farm has been in order that he may be able to advise soundly. His future in the tractor business will depend upon his ability to avoid error in sizing up the individual situation.

Sell the Right Size

DISREGARDING all other factors which might have a bearing upon the determination of the type of tractor which may be most generally adaptable to a particular locality, the first consideration will be the size, the horse power rating, in other words.

Tractors vary in rating from the 5-10 to the 70-120, with all ratings in between those extremes, hence the farmer has a bewildering number to choose from, and unless he knows what experience has determined to be the best size for him he is very likely to go wrong. That this is serious everyone who has had occasion to investigate tractor service knows, because in a large proportion of the cases where tractors have proven to be unsatisfactory the cause assigned is *a mistake in buying one too small or too large for the particular farm.*

This implies that the size of the farm and the size of the tractor which should be upon that farm are related. Generally speaking, this is the fact. Omitting from consideration specialized farming, which calls for specialized tractors, and confining the discussion to general farming under normal conditions, the choice of the proper size of tractor for any given farm narrows down to a few sizes.

Minimum Generally 80 Acres

Few tractors are in use upon farms smaller than eighty acres. Indeed, the tractor is found in very limited numbers on western farms smaller than a quarter section. At the present time the economical minimum seems to be in the neighborhood of 160 acres. Above that there is no limit. Therefore, the western dealer may safely ignore anything under a quarter section in deciding upon the size of the tractor he will recommend for the general trade of his locality.

But tractor experience is establishing an approximate ratio between the size of the farm and the size of the tractor, both as a rule increasing together. The meaning of this fact for the dealer is that he must be guided in the selection of his tractor line by the average size of the farms within his trade territory.

Illustrations drawn from actual farm experience will make this clear. In considering replies received to a questionnaire on tractors sent out recently by Motor World some tendencies and relations are brought out which may be considered to be typical and permanent. Additional validity is lent to this conclusion, because what is revealed by the Motor World questionnaire is confirmed by other and independent investigations, the results of which are available for comparison.

Two hundred and eleven replies from tractor owners were classified as follows:

	Replies
80 to 200 acres	61
201 to 400 acres	80
401 to 800 acres	51
801 and more acres	19
Total replies	211

Some interesting conclusions may be drawn. The 61 who operate tractors on farms from 80 to 200 acres reported 60 tractors and three tractor attachments. Of the tractors 13 are 8-16; two are 9-18; 15 are 10-20; 12 are 12-25; seven are smaller than 8 hp. and 11 are higher than 12 hp.

Evidently on farms of 200 acres and under, and this includes the predominant quarter section type, experience commends tractors rating from 8-16 to 12-25, and pulling three 14-inch bottoms, since 42 out of the 61 in this class own tractors within these limits.

For 201-400 Acre Farms

OF the 80 contained in the class which operates farms from 201 to 400 acres in size, 14 own an 8-16; 22 a 10-20; 26 a 12-25; 10 a 15-30. Four reported sizes below 8 hp. and four sizes above 15 hp. so it appears that 72 out of the 80 in this class selected tractors ranging from 8-16 to 15-30, with the weight of choice leaning toward the higher of these ratings. The number of bottoms pulled by the tractors in this class vary from three to four, with the three-plow gang preponderating. A tendency toward a more powerful tractor, commensurate with the larger size of the farms, is apparent here.

In the next class, with an acreage of 01 to 800 acres, the 51 replies indicate the ownership of 51 tractors and one tractor attachment. Twelve of these are 10-20; three are 12-25; 12 are 15-30; seven are 20-40; three are 25-50 and seven are 30-60. Seven only of the 51 try to farm with a tractor rated less than 10 hp. on the drawbar. The tendency toward a higher powered machine is very marked in this class.

Ninteen tractor owners work farms or ranches above 801 acres in size. Of these, two use a 20-40; two a 22-45; five a 30-60 and four a 40-80. Six only have tractors below 20 hp. Again a progressive increase in the size and power of

What Your Banker Thinks of You

We have all heard a lot about the relations between the dealer and the banker.

Dealers have complained about the banker.

The banker has not always been nice to the dealer.

So Motor World asked a couple of dozen bankers what they thought about dealers.

We asked them if they ever had a dealer who was a "bad risk" and who later became a "good risk," and if so what he did to get from the wrong side to the right side.

Bankers, you know, are rather conservative men, and the majority of them didn't reveal any information worth while. Several, however, returned letters that are of interest—and here they are.

What the Bankers say:

You Want Too Much

Editor Motor World: We have several times in the past refused credit to automobile dealers. We do not remember of any instance where one of these same parties later was extended credit by us.

We find in our experience that a great many individuals with *limited capital* go into the automobile business and expect their bankers to carry not only their new cars on warehouse receipts but also expect them to discount their conditional sale contracts covering both new cars sold and second-hand cars which have been taken as part payment in the sale of their new machines.

In our minds the principal reason why the majority of these dealers are not considered satisfactory credit risks by banks is:

First—that the dealer generally has limited responsibility himself and therefore his endorsement adds little value to the contracts which he endorses.

Second—owing to competition in this line of business many dealers are foolish enough to take in old cars at excessive valuations, resulting in their profits being tied up in unsalable second-hand cars at inflated values.

Third—while there are many reputable and conservative business men engaged in selling automobiles, we have found that there seem to be a great many irresponsible men in the game who could never conduct any business along lines that would make them a desirable credit risk for a bank.

This bank knows among its depositors several automobile concerns to whom we gladly extend large lines of credit both on new cars and on conditional sale contracts for cars sold. We have confidence in the principals in charge of the business and believe that they are conducting their affairs along conservative and legitimate lines and also they have sufficient responsibility so that their endorsement amply protects us against loss on account of defaulted contracts, etc.

We do not favor the sale of automobiles on the partial payment plan, as we believe that this encourages extravagance on the part of a class of people who can ill afford the expense of purchasing and maintaining motor cars.

We request that neither the name of this bank nor the writer be used by your company.—BANKER.

You Are Not a Good Business Man

Editor Motor World: Your letter of the 14th is received and read with some degree of interest. We have a number of automobile dealers to whom we would not lend money. We have several such dealers to whom we do lend money.

To the best of our knowledge and belief the record of this bank does not show that any of the former class *have ever entered the second class.*

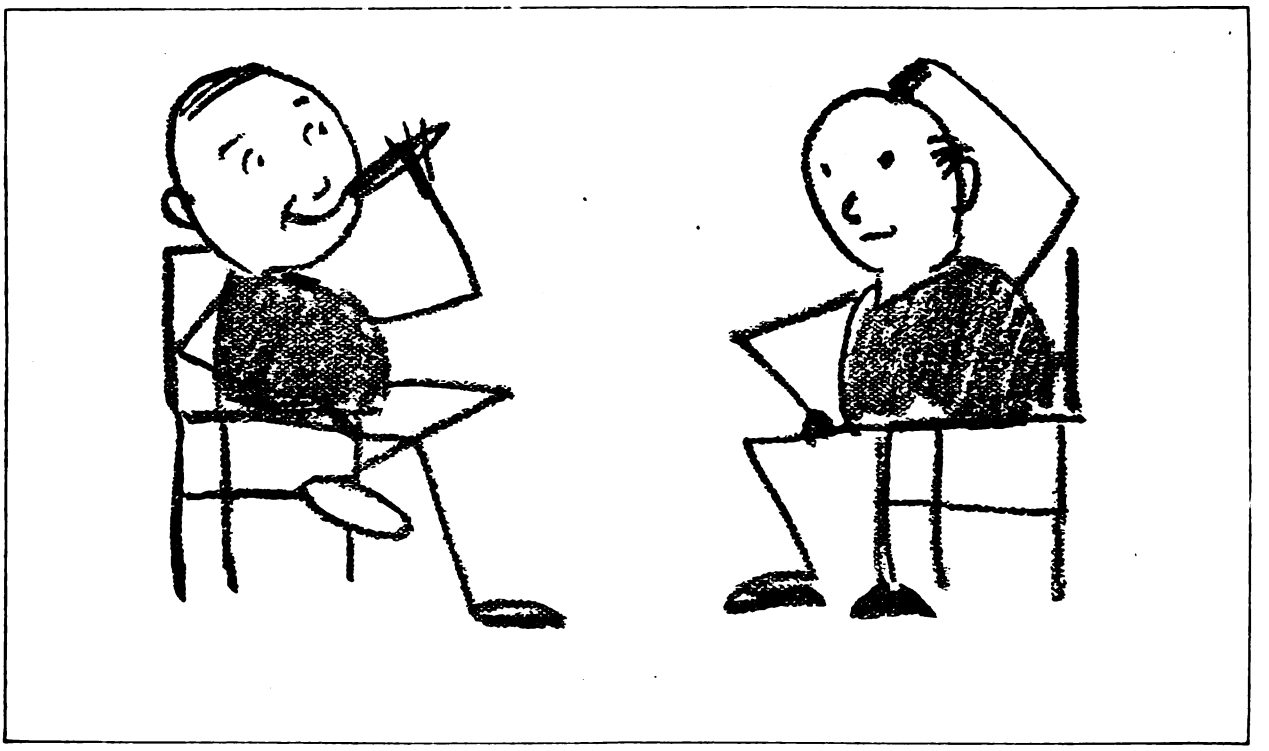
We do not consider that our refusal of loans to the dealers as above stated is because of the class or character of business in which they are engaged, but is based solely upon the strength of their financial statement and their personal previous business record.—BANKER.

Not So Bad

Editor Motor World: We have many automobile dealers as clients of this bank, and we have never had any hesitancy in extending accommodations to them in such amounts as we were justified in doing, the basis for advances being, naturally, on the responsibility of the borrower.

Such business dealings as we have had with automobile dealers we have always found quite satisfactory, and the business as far as this bank is concerned has always proven desirable.—BANKER.

Only Merit Counts



Editor Motor World: We have your favor and in reply would say we have had very little experience in the business outlined in your letter. What applications for loans from automobile dealers we have had have been handled on their merit.—BANKER.

Those Bills of Lading

Editor Motor World: We have had on our list many a dealer to whom we wish we had not lent any money and we have never had the good fortune to have them get in a position where it was an attractive loan.

We are glad, however, if there are any such. Regarding the dealers' complaint of the tightness of bankers, this is no doubt true, for the reason that your dealers' product, being of a particularly hazardous value and good only for its face for a part of one season, and further the automobile dealer generally allowing his profits to be merged into an accumulation of second-hand junk.

Digitized by Google

These are some of the reasons why the history of the business of the automobile dealers is replete with bankruptcy and failures, and then the manufacture of automobiles is practically the only business in the world that is conducted on a cash bill of lading basis, and we ask why should banks be called upon to furnish financial assistance to a dealer when the men who manufacture their product will not extend to him one penny of credit.

I believe the day is not far off when the manufacturer will lend more confidence and interest in the dealer who is so important to the distribution of his product, and I am glad to say that in the last few years the dealers themselves have tightened up on their system of selling and are building on more substantial lines, and withal the industry is rapidly shaping into a more attractive form from a credit standpoint.

I believe that the dealer who is systematic in his collection system, cautious in placing his credits and who refuses to take worthless junk as part of his legitimate profit is having no trouble, however, in obtaining a proper line of credit from his banker.—BANKER.

You Are Under-Capitalized

Editor Motor World: We have always carried a large amount of automobile paper, and found the same satisfactory. Our only criticism is that a large majority of the retail dealers are not sufficiently capitalized and expect banks to loan altogether too much money to them. That would, in my opinion, be the principal reason a dealer is refused credit.—BANKER.

First Time Payment Too Small

Editor Motor World: In special reference to the loan risk, would state that our agents for the most part are responsible financially, and while we have discouraged them in offering customers paper for discount, who have not paid a substantial amount in cash on the purchase price, we have as a rule been quite liberal with them.

Money conditions just at present, however, are such that we have felt warranted in accepting only the best names offered by agents, and those have been confined to instances where a good percentage of cash has been paid in on the purchase price.

There appears to be a tendency on the part of the public in general to acquire automobiles regardless of the cost of maintenance, and frequently the buyers are individuals whose financial condition makes the sale to them of a pleasure car an absolute burden, and in view of the effort now being made by every bank to confine its financing of customers to the essentials, we have felt it expedient to require our agents to exercise more than ordinary conservatism in the conduct of their business, and we have found that for the most part they are willing to do so, in view of existing conditions. —BANKER.

Read This

You expect too much.

Your responsibility is limited.

You pay too much for used cars.

You are a poor business man.

You can't give a financial statement.

Your manufacturer won't give you credit.

You are under-capitalized.

You take too small a first time payment.

Gets Close to Buyers

I found out through close study that buyers of big cars like to get personal attention from the head of the house, and so I planned sales along such lines. For example, we had a man some miles away from Boston who was figuring on a new car, and I had talked with him by telephone. Salesmen from other companies had visited him. Then the man got hurt, and was convalescing. The others laid off figuring he would no longer be interested.

One Sunday, with my family, I drove down to pay him a friendly call to extend my sympathy to him and his wife. I explained it was not a business trip, but that I wanted to see how he was getting along, and if there was anything at Boston I could have attended to for him. He was pleased. As we were driving away he came out and said: "I guess you had better send me that new car I looked at some time ago."

On another occasion I went to New Hampshire and called on a man there who had lots of money, but never had a car. It was summer and I invited him for a ride with his family. I sold him a car and when I asked him why he had never bought a car, he said: "Every dealer hereabouts tried to sell me a Ford or a small machine, and I waited until someone came along and had sense enough to know that what I needed was a big car."—Frank E. Wing, Marmon, Boston.

Accessory Profits Beckon in 1918. Get Yours!

AN address on accessory merchandising delivered in Toronto, Ontario, before the convention of Ontario dealers by Cecil Dixon, sales manager for Hyslop Bros., Ltd., one of Canada's largest jobbers, and distributer of the Cadillac in the Dominion east of Manitoba.

THE automobile accessory business has grown during the past years to such proportions as to cause all but the most careful observers of the business to lose sight of its size and importance. From a pastime of a few years ago it has grown to a full-fledged industry involving millions of capital and employing the services of thousands of men. A portion of this phenomenal business can readily be obtained by every automobile dealer and garageman.

It is generally conceded by those in authority and position to know that the average car owner will spend at least 10 per cent of the purchase price of his car each year in accessories, or a minimum of $60 for each owner. Working on this basis with 200,000 car owners in Canada to-day there is a potential accessory business for 1918 aggregating over $12,000,000, figuring this very conservatively by taking the average price of the car at $600 and that each and every car owner will buy $60 worth of accessories.

$60 to Each Car

This estimate of $60 minimum is, I believe, quite reasonable. For Ontario, with a total of approximately 100,000 car owners, the likely volume of business in accessories on this basis would be $6,000,000. To find out how much business there is in your locality *count the number of cars and multiply by $60 each, also plus additional quantity for summer tourists.*

These figures would not include tires, gasoline and cylinder oil, nor take into consideration the number of cars through new sales this spring. If you do not plan to get this business in 1918 some one else in your town will do so.

Somebody said "The secret of success lies in careful study of yourself and your opportunities." Surely this is the opportunity for automobile dealers to get their portion of the accessory business. The buying public's demands are pretty well confined to three features—cost, usefulness and attractiveness of the accessories—and I think you are well advised in compassing these three features in order to serve the popular demand.

Your easiest profits are those made through keen, judicious buying of the standard articles at fair prices and selling on the same basis and not from the big red headlines "Bargains." To decide the lines of accessories to put in stock, the best guide is to stock accessories for cars that require additional equipment in order to obtain more comfort and ease in operating them.

Such lines as tire chains, brake lining, bumpers, spark plugs, lamp bulbs, tire carriers, jacks, horns, clocks, tool boxes and tools are always good stock. Seat covers are much in demand this season, and my own concern has sold more seat covers to date than any other season, *which would indicate to me that many car owners are dressing up their old cars in lieu of exchanging them for new ones as is customary with many owners.*

It is just possible there may be a shortage of new cars, and an increase in the use of used cars would mean that there is a larger proportion of motor cars in use which will need new equipment. Many of these cars will be overhauled and many new accessories or attachments of some kind added. For these reasons we believe that the sale of accessories will be exceptionally brisk this season.

In the handling of automobile accessories it is absolutely essential that the store be kept in a clean, tidy, up-to-date and well ventilated condition. If your store is not in this condition it should be put in shape at once.

The quantity of stock should be in proportion to the number of each article you sold during the past year, providing you kept such a record or can get it from your invoices. By keeping a simple stock record of the quantities of accessories used during the season you can readily form a basis for the following season and know exactly the quantities to buy at the right time during the touring months. *This suggestion, if followed, will prove of much benefit in gauging the quantity to buy at any time.*

Get Quick Turnover

When buying your stock due consideration should be given to the prospects for selling such an article in your locality and limited to the extent of your ability to make quick turnovers. *Buy for normal requirements only—do not speculate.*

It is advisable to carry an assorted or complete line of accessories, but avoid an over-stock which costs money in the way of interest and discounts and increases the expenses. The greatest volume of business being transacted in the spring and summer, it is necessary that stocks be kept fairly high during these months and *reduced in quantity before the winter sets in.*

The dealer with the goods can do business; without the stock he is handicapped.

A very good gross profit may be obtained from the sale of accessories if the dealer maintains the resale prices, and in almost every case the goods are worth the price that has been fixed and should not be sold at any other. If the price is cut on an article it is difficult to re-establish it, and not only is the profit on that article lost but the profit on other articles as well. Get your profit now and create a reserve for possible lean years. Don't let your customers pick you for a few here and there on purchase of his supplies.

Present conditions demand that you anticipate your needs at least two or three weeks in advance, owing to railroads being so overburdened in handling materials for Government use, and factories handicapped in manufacture and transportation.

Accessory Business Staple

The automobile accessory business is staple and not subject to serious fluctuations as is sometimes the case with cars. I have known cases where car contracts were cancelled with little or no notice, and had it not been for the dealer having a nice volume of business in accessories it would probably have forced him to close or caused a very serious loss.

There is one feature to which I would call your particular attention and that is the danger of special salesmen or manufacturers' agents painting such a rosy picture about some one isolated article that you may over-buy and over-stock. While some of these articles may have merit, the quantity you buy should be gauged entirely on the number that you can sell to the car owners in your immediate locality. Buying a greater quantity than you can turn over in a reasonable time will tie up capital and act as an anchor on the other lines of accessories.

The volume of business in automobile accessories is best built up and increased by stocking *standard lines of well advertised goods and on which there is a reasonable margin of profit.* A good many articles that carry so-called "long profit" cannot be moved in large quantities and

You Should Sell Accessories Because—

YOU should sell accessories for the same reason the drug store sells candy, safety razors and ice cream soda.

For the same reason the grocery store often sells meat.

For the same reason the cigar store sells newspapers.

The reason these businesses operate these "outside" activities is that the customers are in the store anyway and the "outside" activity nets an added profit. The drug store, the grocery man and the cigar store do not depend on their original staples for their business.

Neither should you—no matter whether you be car dealer or garageman.

The customers who need accessories are about your place or business all the time. Why not sell them things they need? Why compel them to go somewhere else and give somebody the profit they would rather give you if you were willing to take it?

The packer uses every last bit of the pig and has developed whole industries out of what used to be a by-product.

Gasoline used to be a by-product of the petroleum business. Today the tail comes somewhere near wagging the dog.

Plants that started as by-products are today making explosives that will help win the war.

Can you as a good business man afford not to use the by-products of YOUR business?

We are all talking about saving on this and conserving on that at the same time that thousands of us are overlooking the by-products of our businesses.

A by-product is something that is produced unavoidably in making something else. Therefore, when you draw to your store people who want motor cars and motor car accessories and sell them nothing but the car you are throwing away a by-product. Can you afford to do it?

You have created a market for additional goods when you sell a car. Why make it necessary for the prospect to go elsewhere to get these additional goods?

You need all the revenue you can get. Why pass up a chance to sell accessories, no matter how much you have believed your business was in cars, in big merchandise, in sales that run into hundreds and thousands of dollars?

At the same time that you work out labor savings in your shop and office, and take on trucks and other things, don't overlook the accessories. Some houses that started with accessories as a side-line are today getting most of their profits from these small item sales.

To Make Money on Accessories You Must—

1—If your place isn't clean and store-like make it so at once, even if you never intend to sell accessories. Blush with us as we read from a hardware trade paper: "The garages carry most of the things I want in an accessory way, but you know how it is in a garage—it isn't like buying in a store. They don't have things displayed much, and instead of clerks you may have to buy from a mechanic whose hands blacken the things he handles, and he probably doesn't like the selling end of the job anyway. The hardware store really has a good deal of advantage when it comes to merchandising supplies and accessories."

Was this man talking about YOUR place of business? Let's take the reputation of grime and dirt and inefficiency off the motor car and garage business. Let's have a trade we can be 100 per cent proud of.

2—Install an accessory department. You probably have accessories now—but maybe they are under the backstairs in a stockroom. Get them out. Set off one corner of your place, put in shelves, a display case and have a real department, even though it be small. Get the goods out where they can be seen.

3—Have a display window. If you haven't one build one. If you have one use it. Here is another chance for saving and conservation by some people—this use of windows for which they are paying good money. Put in attractive displays and change them every week. Make the window a display and not a stockroom. Wash the window every week or oftener if it needs it.

4—Have a runway cabinet. If you haven't one build one. Cut a hole in the wall alongside the driveway, or erect a showcase of some kind, and install invisible lighting at the top. It is a cheap and easy affair to build. Change the display here every week. Show the things the car owners need. If yours is a large service department set a display case on the floor near the door. Use cards and prices. Big dealers have found this highly profitable. Get the goods out where the car owner can't help seeing them.

5—Carry accessory newspaper advertising. Push seasonable goods. Always get in something about your tires.

6—Go over your stock. If there is any junk or slow-moving article get rid of it. Sell it on a bargain counter or any way to get rid of it. But try the runway cabinet first and see if that won't move it.

7—Make a personal effort to sell accessories. Make it some man's duty, or the duty of several men, to push accessories. When a man buys gasoline show him a windshield cleaner or some other device as you give him his change. When he gets a tire repaired show him chalk, patches, a jack and everything connected with tires. This is one of the most profitable forms of accessory-selling effort.

8—In your mail to customers enclose advertising on accessories.

9—Inspect cars in your garage and service station for accessory needs and tactfully approach the owners on the subject.

Color Combinations for Your Windows

HOW TO USE THE CHART—Supposing you want to have your window sort of red and quite subdued. Look in the "Reds" division of the chart. The subdued combinations are in the three columns at the left-hand side of the chart. Supposing you choose to use "maroon" as your principal "red" color. Find "maroon." You learn that "orange" makes a good combination and that if you want a third color you should use "pure red." Now, if you want a "striking effect" you look similarly on the right side of the chart and find you should use "pure blue" and "gold" with your "maroon." In all these combinations the best effect is obtained by making the "first" color predominant, the "second" less predominant and the "third" subordinate to the other two.

Subdued Effects			REDS	Striking Effects		
1st Color	2d Color	3d Color		1st Color	2d Color	3d Color
Pink	Violet	Maroon		Pink	French Blue (Grey Blue)	Green or Violet
Pure Red (Spectrum Red)	Russet	Orange		Pure Red (Spectrum Red)	Green	Grey
Terra-cotta (Yellowish Red)	Light Yellow	Chocolate		Terra-cotta (Yellowish-Red)	French Blue (Grey Blue)	Scarlet
Wine (Purple-red)	Pure Blue	Pure Red		Wine (Purple-Red)	Pale Blue	Yellow
Maroon	Orange	Pure Red		Maroon	Pure Blue	Gold
			BLUES			
Pale Blue	Violet	Pearl or Slate		Pale Blue	Crimson	Tan

COPYRIGHT 1915 BY THE HABERDASHER COMPANY

The color charts on these two pages were worked out by "The Haberdasher," a trade paper in that field, to show men how to combine colors in clothing. The charts apply equally well to window combinations and are reproduced here through the courtesy of "The Haberdasher"

Digitized by Google

Get the Right Colors in Your Windows

Check your window display, your car colors, or your furniture at home on these charts

"B" means BLEND, or related colors. "C" means CONTRAST, or non-related colors.

HOW TO USE THIS CHART—To learn whether two colors go well in combination: Let us illustrate by "pink" and "tan." Find "pink" at the side of the chart and "tan" at the top. Run down the "tan" column until you come to the horizontal column in which "pink" is located. In the little square it says: "Bad C," which means the combination is "bad" and is a ("C") contrast. To find what goes best with "pink" consult the chart on the opposite page. Both charts are printed through the courtesy of *The Haberdasher.*

NOTE—White in conjunction with a color intensifies that color. Black has the opposite effect. When three colors are used to obtain a contrast, a more pleasing effect will result if two of these colors are blends and the third is a contrast than if three contrasting colors are combined. Any three blends, however, may be used together. In these harmonies the best effect is obtained if one color predominates, the second color is less prominent and the third color is subordinate to the others

PERHAPS you have around your garage or service station the boards required to make these stands. Look around and see if you haven't odds and ends of pine or oak or some wood suitable for this work. The work can be done in spare time, if you have any these days. If you haven't, the time is well spent anyway, for these fixtures are a window trimming necessity. The dimensions, "12-in. pedestal, 18-in. pedestal," etc., refer to the height. Make neat jobs and stain to look like oak. In using these the shorter pedestals should be placed at the sides and front and the larger ones at the center and rear, as a general rule, although variations may be worked out. You should also have on hand some cheap draping material to drape over these, as has been illustrated in the windows shown in Motor World's Window Service Department. Look in any dry goods, shoe or department store window and note how pedestals such as these are used.

You Can Sell More

If You Use These

ACCESSORY SALES IDEAS

Their Troubles His Lead

One of our salesmen, when we were introducing a starting device for Ford cars, had cards printed, and as he drove about the city, or walked, whenever he saw anybody having difficulty starting his car he would hand him a card. On it was printed: "The ..... starter would do that for you. Chanslor & Lyon sell .... starters."—Harry Mason, Chanslor & Lyon, Los Angeles.

Demonstrated in Theater

To introduce a new type of tire wrench a group of salesmen organized a team to compete against any other in making quick tire changes. The demonstrations were put on as added attractions at a local theater. The members of the team wore jumpers, and when they turned to leave the stage following the demonstration the audience read, "The ..... tire wrench did it," printed on their uniforms.—Guy West, Western Rubber & Supply Co., Los Angeles.

Issues a Guide Book

Brock's Garage, Trenton, N. J., has issued a 48-page guide book, 9 by 4 in., showing routes around New Jersey. The book also includes a description of Brock's place of business. On the front cover of the book is a photograph of the building, and there is a statement as to the facilities Brock has for taking care of transient tourists.

Selling Fire Extinguishers

One dealer took a bunch of packing boxes out in the street in front of his garage one Saturday afternoon when a goodly number of car owners were in town and set them on fire. Then after the fire had attracted a crowd he took a fire extinguisher and extinguished the fire, all the time telling the crowd that was gathered around how important it was that they have a fire extinguisher on their car.

Afterwards when he succeeded to that territory himself, he developed a plan of selling to the schools in the district, and his idea in this was primarily to teach the children how to operate fire extinguishers with the idea that they would go home and talk about it, and inasmuch as about 50 per cent of their parents were owners of automobiles their parents would thus learn of the value of the fire extinguisher and in this way a demand for a still larger number would be created among car owners.—P. R. MacDonald, Gibson Co., Indianapolis.

Calls on New Owners

The most effective way to sell accessories is to secure a list of every car bought and call upon the buyer as soon as it is delivered and present a line needed. Usually the owner is in a receptive mood and desirous of adding everything desirable. I strongly favor personal solicitation outside in handling accessories.—D. U. Smith, Bloomington, Ill.

Money Back Works

The money back guarantee is the most effective accessory idea to my knowledge. The knowledge to a buyer that any article he may purchase can be returned and money refunded, if not entirely satisfactory, is the most effective means to attract patronage that I know of.—Bernard B. Smith, Bloomington, Ill.

Counter Displays Pull

The most effective accessory idea that ever reached my observation is the cut-out vacuum tank feed, which can be set upon a show case. Buyers can quickly see the principle of the device and also how effectively it works. While in operation, it is the most successful salesman I know of and attracts more attention and secures greater results than anything I have ever noticed to make sales.—W. L. Hinkle, Bloomington, Ill.

Show the Warehouse

I sell accessories by handling standard, nationally advertised goods, by making the customer sure he is getting fair treatment, and by making satisfactory adjustments of all complaints. I find it pays to show people through my warehouse to give them extra interest in accessories.—J. W. Foster, Foster Auto Supply Co., Denver.

Never Argues

I refuse to knock any competitor's goods mentioned or to argue with a customer about what some other goods will or won't do. I show him what ours will do and leave it up to him.—Quinn & McGill Motor Supply Co. salesman, Denver.

Get This, Boys

To sell accessories in a garage keep a neat display, and then watch the storage customers and tactfully suggest articles you are sure will satisfy. A customer brought a new car to our garage for two nights, and when he left his bill was $108 instead of $1.—I. B. Allen, Central Garage, Denver.

Demonstrates the Goods

A garage offers wonderful chances to sell accessories and add large profits to the business. You have a fine chance to demonstrate. I sell a great many Silverbeam searchlights that way.—I. B. Allen, Central Garage, Denver.

Make Goods Fit Purpose

In selling accessories I sell everything for its intended purpose, not for something else.—A Quinn & McGill Motor Supply Co. salesman, Denver.

Thank You

One investment that repays over and over again its cost of $24 a year in the accessory business is maintaining 12 regular subscriptions to Motor World for the benefit of our sales and shop force.—Quinn & McGill Motor Supply Co., Denver.

Marks Only Own Goods

We never put our own brand upon any accessory that we do not make ourselves. This guards against getting our line condemned because somebody else's sparkplugs with our brand on might happen to go wrong.—Quinn & McGill Motor Supply Co., Denver.

Keep Departments Separate

To make the accessory business win, keep every department segregated and make it separately pay profits. This applies particularly to battery service or any shop department.—J. D. Quinn, Quinn & McGill Motor Supply Co., Denver.

Sell Advertised Goods

We handle well advertised goods, and make sure they come up to their adver-

Digitized by Google

tised claims.—J. D. Quinn, Quinn & McGill Motor Supply Co., Denver.

Customer Always Right

To sell accessories follow the late Marshall Field's motto, "The customer is always right." This cost us $46 last year in things "put over" on us, but it brought many times that in trade we would not have had otherwise.—J. D. Quinn, Quinn & McGill Motor Supply Co., Denver.

Keep Salesmen Enthusiastic

To sell accessories get every salesman enthusiastic about your goods, but also teach him to let the customer sell to himself.—J. D. Quinn, Quinn & McGill Motor Supply Co., Denver.

Quick Service Garages

The tourist dislikes the service he gets in some small towns when he is obliged to stop over night. He finds a poor garage and slow service. Let some enterprising garageman in a town where better service is needed secure a vacant lot near the hotel, erect a tent, build a wash rack and get all the tourist business. His quick service would be his big business getter. Of course, if he had a building of his own advantageously located he could operate without the tent. —Anonymous.

Sells Car with Accessories

J. T. Conaghan of Pekin, Ill., whose delivery of Ford cars will be way below what he could possibly sell, is equipping each car with most all of the accessories that a man buying a Ford car would use, and of course cars so equipped are the only ones he has and can make delivery on.

This enables him, in addition to the sale of the Ford car, to realize on the sale of the accessories which otherwise he might not get, and the fellow who wants Ford cars without any accessories on it whatever will have a mighty hard time getting delivery in his territory.

The idea may seem a little bit of taking advantage of the situation, but inasmuch as the dealer has to pay overhead and is, you might say, entitled to all the business he could get rather than the sales on what few Ford cars he could get delivery on, we believe he is justified in taking this stand.—The National E & A Supply Co., Theo. Bass, Peoria, Ill.

Personal Contact at Curb

The best plan I know of for a new store is for the proprietor to personally sell the gas at the curb. I find that the most successful stores have started their business in this way. When a business is once under way, this is no longer necessary, and when the business is built up it is quite impossible for the proprietor to do this.

Personal contact with the customer, a clean store, frequently changed window displays and one fair price to all, and that price in plain figures, is a hard combination to beat.—Ed. A. Bowman, E. A. Bowman Co., Detroit.

Drive on Bumpers

The Boston dealer of cars kept a record of all the bumpers sold by each one of his salesmen when they made the sale of a car. If they did not average a certain high percentage of bumpers to car sales, no matter what their record of car sales was, they were fired. The results of this method of really selling accessories increased the sale of the one item, bumpers, more than 1000 per cent. This plan drove the last nail in the coffin of the old bug-a-boo, "you have to give a man accessories when you sell him a car; you can't possibly sell him accessories."—Carolinas Auto Supply House, Jos. G. Fitzsimons, Charlotte, N. C.

Best Mail Order House

If the dealer wants to sell accessories and is willing to devote to them some of the time usually used in sales of cars, keeps his stock on display and in good condition, and has a sales force able to present the various accessories intelligently, there is surely no reason why the dealer cannot command the accessory business. A great many of the accessory orders going to catalog houses would be side-tracked if the goods were attractively displayed in local stores.—Morley-Murphy Hardware Co., R. E. St. John, Green Bay, Wis.

Spring Drive Window

Our "spring drive" window has brought wonderful results. As a sales stimulator it is hard to beat. We appeal to the car owner driving by. If he needs the accessories displayed our display calls the fact to his attention. The window shows pictures of a car in the five processes of being cleaned. The equipment and supplies used are displayed.—Chanslor & Lyon Co., Seattle.

Use National Advertising

We always take advantage of national advertising. For instance, when some nationally known journal is advertising some accessory, we display the same accessory in our windows.—Chanslor & Lyon Co., Seattle.

Let the Goods Work

Window displays are changed frequently at the Kelly-Springfield Tire Sales Co., Hartford, Conn. A specialty is made of Ford supplies. Lenses, lamps, horns and brake lining are not allowed to remain on the shelves when they can be working assets in the window.

Demonstrations Sell Goods

Demonstrations of articles for sale are made by the E. J. Todd Rubber Co., 274 Trumbull Street, Hartford, Conn. A patented garage light with a reel on which the cable is wound up on being demonstrated resulted in many sales despite that the article sold for a good price.

Accessories Boost Volume

Accessories fill in the blank spaces when there are no cars on hand—or even when there are cars—and impart a merchandising tone. They draw attention. The Elmer Automobile Co., Ford distributer, with eleven stores in northern Connecticut, has installed accessories. They always arrest attention and result in sales. Considerable business is picked up that would go elsewhere.

Keep the Old Customers

In running through the statements of any month we sort out separately those slips which show sales during the past month and those on which no sales are recorded. For each blank statement, indicating that the customer has bought nothing from us during that period, we type a polite inquiry as to why we have been unable to serve the customer during this time. It sometimes happens that the customer thinks he has a grievance. If he has, we want to rectify it. We are harder after keeping customers than for getting new ones.—Clarke G. Powell, Powell Supply Co., Omaha.

Sell "Live" Stock

Our records show at any time what any particular salesman has done during the past month. They show not only his volume of business, but also what class of goods he sold, whether tires, brake-lining, spark plugs or what. They also show what he has not sold. Some men, we found, were simply handing out what was called for, and which required no salesmanship to dispose of. Others were eager to show the customer what was newer and better than what the customer had been in the habit of getting. Constant checking is not only a means of being able to advise the salesman, but is also a stimulus to his efforts.—Clarke G. Powell, Powell Supply Co., Omaha.

How to Sell Tires

I keep on tab for my salesmen a list of all owners of motor cars in Omaha, arranged in the order of the license numbers. When one of my men sees on the street a car on which there is a bad tire, for instance, he takes the license number at once and turns in this as a memorandum at the office. We refer to the owner's list, and the next day a salesman calls upon this car owner and tells him the merits of our particular tire. We have found it a fine business-getting plan.—Clarke G. Powell, Powell Supply Co., Omaha.

Demonstrate Accessories

To sell an accessory of the specialty class, go right out to a prospect's car and show him right there what it will do for his own machine.—E. E. Turner, Fearless Carbon Remover, Denver.

Sells for the Future

I tumbled some time ago to the fact that what I wanted was customers rather than immediate sales. When a man gets into my store, I try harder to make a friend of him than to get some of his money.—B. B. Weldon, distributer Oildag and Gredag, Kansas City.

Extra Shekels

The Farm Lighting System

Hundreds of Prospects with Money to Buy, Little Added Overhead for the Dealer, No Service, a Clean Business and a Good Profit

THE Distributer, who sold cars and accessories at wholesale to a long list of dealers in a prosperous area drove up in front of the Dealer's salesroom with a trailer hitched on behind the Distributer's car.

"Come out and look at this thing," called the Distributer, as he drew off the canvas cover and disclosed to view a compact farm lighting system, reposing in the little two-wheeled vehicle.

The Dealer came and looked.

"You see," said the Distributer, "I've taken on the distributing agency for this system. I figure we can sell a lot of them in this territory. There ought to be a big sale for them and I think it will be a fine source of profit to you.

Keep the Volume Up

"You've been howling at me for more cars, more cars, and I haven't been able to get them for you for the very good reason that I can't get them from the factory. The factory can't give us as many this year as it did last year. We've got to keep our volume up some way and get some more legs under our businesses, you and I, so I've grabbed the agency for this lighting system.

"It will help keep the volume up NOW and later on will give us a greater volume than we ever could have if we stuck to cars alone."

"Why should I bother with this thing?" asked the Dealer. "It isn't connected with cars. It ——"

"It runs by gasoline, doesn't it?" asserted the Distributer.

"Yes."

"Well, I figure you should be making yourself headquarters here for everything that runs by gasoline—and this is just one of the things you ought to be selling.

"Your town is surrounded by farmers, all of whom are making money these days. They have dollars now where they didn't have cents a few years ago. Furthermore, they are getting wise to the comforts of life, and they want these systems."

"How do you know they do?" asked the sceptical Dealer.

"Because I went out and sold a few myself," retorted the Distributer. "I know they want them.

"All you've got to do is rig one of these things up in a trailer like this and fly at it. You can sell a lot of 'em. You hitch this trailer on behind your car and drive out to some farmer's home. If you can make such a trip late in the day when the farmer has more time to talk and is in the house you can give him an evening demonstration that will knock his eyes out.

"You drive into his yard, go to the door, introduce yourself, talk a while, eye up the house, pick out a good place to hang this cluster of lights on this wire, and then ask him to wait a minute until you bring the light in. He may think you are going to bring the whole thing into the house, but what you do is go out, get this cluster of three lights on this extension wire, carry it into the house, and just as you get it hung up snap the button. It will make his house lights look sick. That first snap of the switch is one of your biggest sales arguments.

An Easy Seller

"As you talk you mention the convenience of the thing, the saving on eyes, the better air, the better health, and then you screw an extra lead into one of the sockets and say: 'You could have a lamp here to good advantage,' and as you say it you take the lead to the kitchen or the pantry or the stairway or some other dark spot. As you are leaving you show how a porch light would illuminate.

"Leaving the lights burning in the house you take the farmer outside and show him how small the device is, how easy it is to install and operate and how little it costs. All he has to do is give the engine a turn every morning and go away and leave it. When the batteries are full it stops, and those batteries will run him electrically for more than one day. It takes only a little kerosene a day, less than a gallon, to keep the system charged.

"You have with you an electric iron, a toaster, a percolator and some other things. Show them how these operate. If necessary, fill the percolator with coffee for breakfast, leave it on the table, leave the toaster handy, leave the iron and the other fixtures, and finally say: 'I won't need this until to-morrow and I've got to make a run up the road. I'll just leave this thing here and get it in the morning.' With that you go away and leave the system there to sell itself. When you call the next day the farmer's wife will be your best salesman.

> No man who has ever seen one or who has had electric lights in his house for five minutes ever wants anything but electric lights. The thing is easy to sell.

"After you sell this all the farmer has to do is put down a concrete base in a small building and put in as much wiring as he wants. You can get an electrical man to do this or can have an electrician in your own employ. You ought to have a good electrical man anyway. This is a good excuse for hiring one.

"In case the evening is cool and the farmer couldn't have the window or door open a crack to let the wire in you could make a little board with a notch in it that you could slip under a window and let the wire through. I've used that. The board

Digitized by Google

is in two pieces and slides like a telescope so it fits any window.

"I don't see how any farmer can help buying one of these things if you give him a good demonstration. I've found them easy to sell."

"Maybe," said the Dealer, who still seemed far from sold on the idea.

"Maybe!" almost shouted the Distributer. "Say!

"And it is a clean business. There is nothing to trade. When you sell a car you have to trade four times out of five. With this thing it is a clean money deal. You don't have to give any service. There aren't any repairs. There's no kick or come back. The man can't drive the thing

> This is a better business proposition than your cars. There is nothing to trade. It is a clean money deal. You don't have to give any service.

up to your door whenever he wants to and bull you into giving him something for nothing.

"And, do you know, I've found quite a few of the newer farmhouses all wired and just waiting for electricity. The farmer knew electricity would come some day, so when he built the house he had it wired. Wiring costs more now than it did then and installing the wires when the house was built is a better and cheaper job than installation after the house is completed.

"And here's another sales idea you can use. Some night when the Grange is to meet at a farmer's house get his permission to light the house for him for that evening. The Grange might even give you permission to talk a few minutes on what electricity means to the farmer. Don't make too long a speech, and leave some literature and return postal cards lying around.

"You should mention all the things this system can do. It will run milking machines, washers, churns, cream separators, flat-irons, toasters, percolators, heaters and a raft of things.

"And here is a big sales point.

"What doesn't electricity mean to the farmer in his barns? He can have light everywhere cheaply instead of having to cart a dangerous lantern around all the time. It's great!" The Distributer enthused to the top degree.

"But what's it going to cost me to go into this thing?" the Dealer WANTED TO KNOW.

"Almost nothing," said the Distributer. "You need a demonstrating outfit such as this. You buy a trailer and fasten the thing in. The whole outfit won't cost more than a thousand dollars. In addition, you ought to have one in your place of business so you can demonstrate to people who come in. But with it you can run your own lights to a large extent and effect a saving in your own lighting bills. I should say you could get two outfits, one for the salesroom and one for the trailer, for not to exceed eight or ten hundred dollars, and one of them will work for you at the same time that it sells for you."

"But how about the farmer installing the thing after he gets it?"

Hire an Electrician

"Easy. It's a job for an electrician. You can hire an electrician and do the job yourself or you can turn it over to some small electrical contractor. In the latter case you will have this contractor boosting for you, because he knows that every time you make a sale it means work for him.

"Also, unless you want to go into the electrical home devices business, it means business for him if he is on the job. He is the man who to-day should be selling all these toasters and percolators and other things, and one by one he can slip them into the farmer's home at a profit to himself—if he is on the job."

The Distributer was getting more enthusiastic every minute. The dream of the electrified farm unfolded itself in his imagination. But somehow or other the Dealer didn't get the fever. He asked, once more:

"But do you think I ought to take on this thing? You know, I'm an automobile dealer. I'm not a farm lighting dealer."

"No," retorted the Distributer, "and you never will be unless you get some of this fog out of the back of your head and wake up and hear the birds sing. Can't you dream a little and see where you and I and all the rest of us are headed for? We have sold motor cars and made some money. We can continue selling cars and make a little money, but we never shall be able to make the money we all dream about unless we get out of old ways and into new.

"Your business as an automobile dealer is limited. Your business as a garageman is limited. You can go only so far with trucks and tractors and everything else you sell. The only way you can get a real volume of

> If a farmer were to run all this machinery on lighting company current it would make a big electric bill, but when he makes his own electricity it comes very cheap.

business is to expand your business to the point where it is a complete automotive establishment. You must be the headquarters for all things that are founded on gasoline. When any one in this territory thinks of gasoline they must think of you.

"This lighting system is just one more of the legs that you must put under your business. You must have several avenues of income. Then, when one of the legs gets weak your whole business won't go down. To-day the car business is off. We all know it. Why kid ourselves on the subject. It's off. If we had automotive business with several legs under the business the slump in one leg won't be felt so much. Right now farmers will buy farm lighting systems. When you can't get cars you can use your time selling these. And in the winter when your car sales are off anyway you could be demonstrating these things on a sleigh.

"They are extra shekels. They are money found. They will take some of your unused time and turn it into real money. They put another leg under your business.

"But—you've got to become a figuring business man, realizing the value of time and merchandise, analyzing costs at every turn and taking advantage of every chance to add a dollar to your profits."

"Well," said the Dealer with a drawl and a smile, "if I can talk about this thing the way you have I KNOW I can sell 'em. I'll take it on."

> You've got to become a figuring business man, realizing the value of time and merchandise, analyzing costs at every turn and taking advantage of every chance to add a dollar to your profits. These systems are extra shekels—money found — unused time turned into cash.

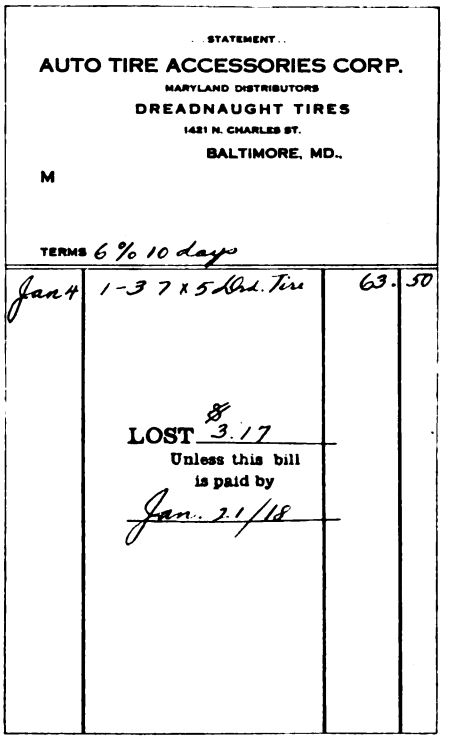
repair and accessory departments. Kicks are less frequent when bills are rendered promptly.—Arthur Stanley Zell, president of the Zell Motor Car Co., Baltimore, Peerless and Chalmers distributer.



Get an Expert Accountant

I advise every dealer to get an expert accountant to come into his place and see where the leaks are. We did it and while our place is on a high plane we found it paid for itself.—R. Milton Norris, sales manager, Standard Motor Co., Cadillac distributer, Baltimore.

Rubber Stamp Good Collector

An investment of 75 cents proved to be a real money collector and brought prompt payments of bills, according to a plan worked out by Oscar S. Duerr, manager of the Auto Tire Accessories Co., Maryland distributer for the Dreadnaught Tire & Rubber Co. This investment was the cost of making a rubber stamp and has been in use since last year, so that it has had a good tryout.

The rubber stamp prints as shown on the invoice here. This is how it operates: If a tire 37 x 5 is purchased on Jan. 11, for $63.50 at terms of 5 per cent 10 days the discount would be $3.17. This amount is set out in the dotted line as shown.

LOST 3.17
Unless this bill is paid by
Jan. 21/18

The little "Lost" mark on the bill brought in some slow accounts

When it first appeared on bills customers began to call up for explanation, laughed heartily, took the cue and sent in remittances promptly. Customers who were poor payers have now become among the best on the books, and bills that always remained unpaid for three or four months are now paid on schedule.

Wastes We Overlook

Should a salesman use a car whenever he goes down town to lunch?

That question came up during the Chicago motor show when a number of men, dealers, branch managers and factory officials were having a little session at the Congress. A former Bostonian, now with a Western factory, started it going, and he made some apt remarks.

"Why should a salesman use up my gasoline and tires every time he goes to lunch?" he asked. "When I was in business in Boston and I went down town, unless I wanted to show a man our car I took a street car. And so did my salesmen.

"Any one of the six business days of the week you can go down by some of the popular restaurants and hotels in Boston and see a lot of dealers cars outside. And in the early evening some of the cars are there, too. One restaurant, noted the country over for its attractive girls—not the kind that flirt and go joy-riding, for they would lose their positions if they did—is the mecca for salesmen. They like to let the girls see that they have a car to drive.

"Aside from that you will find that what is true of Boston is true of other places. There is no reason why a salesman should use up gasoline and the wear and tear of tires, which though small daily mounts up in the aggregate to a big sum. The dealer who has six or eight or more salesmen would find if he checked up a bit that he could save quite a few dollars every year by telling the men to use the street cars. And it is not unusual in some cities to see dealers' cars out on shopping tours on Saturday evenings when they should be in the service stations."

Some of the men present agreed that they never had given this matter any consideration. It was one of those things that drifted in with the usual run of things, a heritage from the old days when a bird, a bottle and a good story sold the car. Now with business methods in vogue there seems to be one little leak that can be plugged up. The salesman would not stay away any longer for luncheon, for he could have a time limit, and it might make him realize the value of time. Also it would furnish him with comparative ideas on the talking point of the value of a motor car through knowing how necessary it is when you are without it.

Ideas That Will Help Sell Trucks

(*Continued from page* 35)

Then make up a live list of prospects from these trades and show how the truck has entered into the success of this or that man's business.—A. H. Geesey, Anderson Motor Co., York, Pa.

Harsh Methods Won

Indifference to a prospect made a sale for me. I had remained over in a town to sell a truck. When I went back to see him the next morning he said he had closed. I told him what I thought of him for keeping me overnight and then buying without giving me a chance. I said good-by. He tried to call me back, but I told him my time was as valuable as his and, since he had bought, it was useless for me to remain and discuss my proposition. He began to insist, and I told him my office was open to him when he desired to call. Two days later he came and said he had not closed and wanted to hear what I had. He bought in about an hour.—Lyman Bryan, truck sales manager, Packard Motor Car Co., Baltimore.

His Competitors' Knocks Helped

I made a deal by telling a hard prospect who would not listen to my sales talk all the knocks my competitors were using. When I admitted some of the points that had been made against my proposition and showed him the points that counteracted the other talks, he became anxious to know who told me of the knocks. But I got around that by saying if he hadn't heard them he would. He bought.—Lyman Bryan, truck sales manager, Packard Motor Car Co., Baltimore.

Why We Like Our Star Dealer

Things the Factory Likes in the Dealer

1—That a dealer be a MERCHANT from the ground up.
2—An A-1 place of business.
3—Good display of the cars.
4—Thoroughgoing prospect files.
5—Intensive Sales work.
6—Real accounting methods.
7—Firm relations with the banks.
8—No price-cutting.
9—Sane used-car methods.
10—Good standing in the community.
11—Good advertising.
12—Co-operation with the factory.
13—Conservative ordering of cars.
14—Payment of sight drafts.
15—Good service department.
16—Attention to owners' complaints.
17—Prompt answers to factory letters.
18—Furnishing of such data as the factory requests.
19—Gentlemanly treatment of factory officials.
20—Visits to the factory once in a while.
21—Good financial backing.
22—Sells cars every month of the year.
23—Has confidence in the factory.
24—Has confidence in the cars.
25—Doesn't worry about occasional defects.
26—Develops his territory.
27—Spends own money in sales promotion.
28—Doesn't keep flirting with other lines of cars.
29—Gives advice and doesn't get sore when it is not taken.
30—Not subject to panic.
31—Tries to solve own problems before wailing to the factory.
32—Stands on his own feet and doesn't lean on the factory.
33—Doesn't kick all the time.
34—Plays fair. Not always trying to put something over.
35—Proper policies.

The Factory Side of the Dealer Question

WHY THIS STORY IS PRINTED

SOMETIMES the dealer cusses the factory.

And we presume the factory sometimes cusses the dealer.

The dealer's side of the question is well known to the dealer. He knows it better than anyone else. But as this Summer Merchandising Number of Motor World was being prepared it occurred to us that maybe the factory had a few arguments with which the rest of us are not familiar.

So Motor World asked some of the principal factories if they didn't have a "star" dealer, and, if so, why the factory liked him. The answers are interesting.

Read them over carefully. Maybe, after you do that, some of the grievances you have had against the factory may be seen in a different light—and maybe not.

But, anyway, here's a place where the factory man gets a chance to air his opinions on the subject of dealers and how they act, and it's mighty interesting reading.

The stories of the factory men begin on the following page.

PERHAPS there is some factory executive, or road man, or some dealer, or branch man who would like to add a thought to the interesting ideas on these pages. If so, send them along.

Digitized by Google

HE IS A GOOD MERCHANT

Editor Motor World: "Why we like our Star Dealer" certainly has possibilities and if you get the replies to your letter that you are looking for, your article in the annual Summer Merchandising Number ought to be a "Stem-winder."

We must consider our star dealer as three dealers, because there are three who seem to be just about on a par. You can make a composition of the three if you like, but do not mention any of their names.

To begin with, all three of them are merchants from the ground up. They are men who undoubtedly would make an equal success selling any line of merchandise.

Their places of business are A-1. Each of them appreciates the value of a central location, and understands just how much the right kind of display means in selling automobiles. Each of these dealers has from time to time installed special displays in their big show room windows, the ——— dealer, perhaps, going a little farther than the other two, but this we expected from the fact that brilliant displays and publicity of all kinds are a greater factor in any line of business in ——— than in almost any other state.

More than once our ——— dealer has had window displays involving the use of living figures.

All three of these dealers understand the value of a thoroughgoing prospect file. We know each of them operates prospect files. We have had samples of the cards and forms which they use. We know that they utilize every possible means for obtaining prospects such as club and fraternal membership lists, the record of estates and wills filed in the Probate Court, etc.

Of the three, our———dealer probably has the most infallible and effective system of gathering and following his prospects.

They all place great importance in their accounting systems and I am sure that any one of them could give you an accurate statement of the business at the close of each day.

They have each built up an enviable credit with the banking institutions of their city, and in one of these cases I know that the bankers will tell you that our dealers' credit is unlimited. With that sort of a reputation for doing business on a solid basis it is not hard to see why they succeed.

Not one of these three men will resort to "circus" methods, such as price-cutting, prize contests, etc. Each man in the sales end of our ——— dealer's organization, as well as the head of his service department, shop, etc., has an interest in the business and receives a share of the profits.

Our ——— dealer is a specialist in used cars; in fact, before he became a ——— dealer he was for several years an exclusive used-car dealer in ——— and by following methods similar to those which made him successful as a used-car merchant he now finds that the used-car problem is really not a problem at all.

Each of these three dealers personally is a man who is held in the highest regard in his community and through the place which each holds each has built up a clientele of ——— owners numbering many of the most desirable car owners in the community.

Our ——— dealer through his great interest in ——— good roads has become head of the ——— Good Roads Association. He was also one of the directors of ——— Exposition.

Last, but not least, these three dealers believe in advertising and there is scarcely a week goes by that you do not see their names and that of ——— before the public through the columns of their local papers.

Our ——— dealer, living in a state which thrives to a considerable extent on publicity and advertising, has left nothing undone to put his name and that of ——— before the ——— public.

For four consecutive years his ——— car has been the first car into the mountains, and this feat has always resulted in column after column of excellent publicity, illustrated by numerous photographs.

There is really very little to be desired to make a star dealer that these three dealers do not do.—MANUFACTURER.

HE COOPERATES WITH US

Editor Motor World: The ideal dealer is the one who cooperates most closely with the factory, irrespective of the number of cars he may sell.

Cooperation is a much overworked word, but it is the oil which keeps the wheels of commercial machinery running smoothly.

The ideal dealer does many things:

He orders cars conservatively and pays for them when they arrive. Nothing gets a dealer in bad quicker than unpaid sight drafts.

He has a service organization, and particularly a service manager who is diplomat enough to prevent the owners from worrying the factory with their small or great tribulations. Letters from owners, complaining about the service given by a dealer will get him in bad very quickly.

The ideal dealer will answer correspondence very promptly and he will be especially particular in furnishing the factory with all the statistics which it requests. Many dealers think that these constant requests for information regarding cars on hand and orders on hand, et cetera, are a nuisance, but without a comprehensive idea of the car situation no sales manager can handle his job to his own satisfaction, and if a dealer gets in the sales manager's way he has only himself to blame if the inevitable happens.

The ideal dealer, when he wants anything from the factory, goes after it diplomatically. He does not write a wordy tirade, condemning the whole product, criticising the engineers and questioning the business ethics of the company.

Instead, he comes to the factory himself and has a little quiet talk with the sales or service manager, and if he is reasonable he gets what he wants.

Condensed, I would say that the ideal dealer pays his sight drafts promptly, operates an efficient service department, furnishes information that the factory requests and comes to the factory to discuss his problems and to make good his claims.—MANUFACTURER.

HE IS FINANCIALLY BACKED

Editor Motor World: I take it that you do not want a literary composition on what an ideal dealer should be. I am taking it for granted that you want simply an outline of the ideal qualities which we find in our best dealer.

These good qualities, which we find in our best dealer, I understand are going to be combined in a sort of symposium or composite picture, the materials for which have been drawn from a lot of sources.

Here then are qualities which we actually find in the dealer whom we consider the best on our list of ap-

Digitized by Google

proximately one thousand dealers.

I am not going to mention his name nor his location, because I have a painful recollection of a company who did this same thing once with an office employee as the subject—that office employee was never the same afterward.

Our best distributer has financial backing sufficient to permit him to cooperate with us by taking cars in quantities when we are able to ship to him in quantities.

Sells cars to the limit of his quota every month of the year.

Has the confidence in us that enables him to take our word regarding conditions.

Has confidence in our line so that he is undismayed by the casual defect that shows up in individual cars.

Develops his territory by appointing dealers just as we would develop it were we doing it ourselves.

Advertises to the fullest extent which his territory permits.

Is not afraid to spend his own money in pushing sales even when the factory policy prevents our assisting him. Realizes that it is from our line and through our connection that he has made money.

Does not continually keep himself and us in hot water by flirting with other lines.

Is not afraid to give us advice and does not get annoyed when we do not take it.

Views business conditions in his territory on a liberal basis.

Is not ultra-conservative and subject to panic.

Maintains service facilities without our continual pressure that gives owners satisfaction.

Tries his best to solve hard problems that arise in his territory before running to the factory with a tale of woe.

Doesn't "lean" on the factory all of the time expecting us to lift and push him over every difficulty.

Doesn't kick about minor details to every factory representative that darkens his door.

Isn't all the time trying to get something for nothing—in other words he is a dealer you don't have to watch for fear he is trying to put something over.—MANUFACTURER.

HE HAS A GOOD ESTABLISHMENT

Editor Motor World: We feel that this is a subject which you can handle as well as we. Painting a picture of an *ideal dealer* in the automobile business is no different from portraying the ideal merchant in any other line of business.

We figure that the right kind of automobile merchant must have sufficient capital, must have a proper establishment, a keen, competent organization, proper policies, effective sales plans and methods, including methods of getting prospects, reporting them, displaying cars both new and used, and closing sales. In our business we also emphasize the vast importance of an excellent service station.

We demand that our dealers adhere to certain established principles which we know make for success in the long run. I can give you no better picture of this than to quote, herewith, an excerpt from an address made at a dealers' convention by our former president.

This speech was delivered September 3rd, 19—. It expressed the basic thought of the ——— organization *then;* it applies with equal force NOW.

Loyalty to this principle has produced the ——— reputation, which after all is merely accumulated goodwill. ——— reputation sold ten million dollars worth of ——— cars before the first model was delivered to a customer. The address follows:

"What makes a business successful?

"It is conducting the affairs of the company along the lines of straightforward business principles, which will win for the company the good-will of its patrons.

"We could not buy the good-will of our customers. It would not stay bought.

"If we do not deserve good-will by reason of the quality of our goods, by the methods under which they are sold, by the service our organization renders, that good-will upon which the company's success depends will slip through our fingers.

"If it be established that we are right, fair, equitable and sound in our principles, we shall get the good-will ultimately, and then it will belong to us. It will be ours by right of having won it fairly—by right of deserving it.

"We would rather have this company right than have it a greater financial success. We consider that the greatest success we can make is to have it said of us that *we are right.*"

We believe that if our dealers keep eternally busy doing the things they ought to do they will naturally avoid the things they ought not to do.

Probably the one thing that most quickly classifies a dealer as unfit is the tendency toward price cutting. Only a weak dealer cuts prices; a strong dealer, relying upon his honest methods, builds for the future, and has no fear that a price-cutting competitor will outlive him.

He realizes that the best interests of his customers demand that he shall treat them all fairly and that he shall take his proper profit, by so doing putting himself in a position to maintain a more efficient establishment for the benefit of his customers.

He knows that the reputation for square dealing will bring new customers to his establishment.

Therefore, he attends to his knitting, selling cars on the right basis—confident that he will survive.—MANUFACTURER.

HE DOESN'T QUIBBLE

Our "star" follows the Golden Rule between the manufacturer and purchaser. He always represents the car. The confidence of the purchaser is inspired naturally—automatically.

Motor World's suggestion met with favor here and immediately the heads of the various departments cast their votes. A star dealer could scarcely be picked any other way. A dealer might make heavy and consistent sales and at the same time be lax in his advertising or parts accounts, or fail to observe territorial restrictions properly.

He might take cars as fast as they are allotted to him, pay cash for them, sell them and make lots of money and yet not satisfactorily represent the manufacturer. His sales success might be temporary only, due to misrepresentation of the car or possibly his failure to provide faithful service due every purchaser.

Why do we like our star dealer? A few reasons given with the votes are as follows:

He sells lots of cars, he pays the price and takes them without quibbling.

He advertises consistently.

He renders courteous service to owners, new and old.

He deals fairly with competition; he is popular—a true gentleman automobile merchant.

He observes territorial restrictions, and if he has an opportunity to make a sale outside of his territory, he does it satisfactorily to the other dealer.—MANUFACTURER.

These Ideas Will Sell Accessories

(*Continued from page* 50)

Push One Line Hard

Whenever I want to introduce a new specialty, I invariably present its features to everybody who comes into the store, especially the new customers. This is done in a casual, incidental way—and I always try to find out when they will be interested if not now. Ordinarily, I will push one thing this way for a few months or until I have something else new that I want to introduce.—B. B. Weldon, distributor Oildag and Gredag, Kansas City.

Keeps Date

I have sold a lot of specialties by keeping careful card index record of the dates that the customer is likely to want them. If a customer is not interested in a commodity I call his attention to it. I find out when he is likely to be and on the date he gives—I try to make him give a date—I call him up. Customers are always impressed with this attention, and in the large majority of cases will give an order or will say that on the next specific date they will order. This practice has resulted in a lot of sales and in the making of a great many regular customers.—B. B. Weldon, Kansas City.

Two Gasoline Pumps

One dealer located on a main street at the intersection of a side street has found big profit in gasoline sales by the installation of two gas pumps, one on each side of his garage. Sales have more than doubled.

Clean Up for Spring

Spring is here and all nature is at her best. Brighten up the shop, garage and store. Spring house cleaning is quite as much needed in a garage and accessory store as any other place.—A. H. Geesey, Anderson Motor Co., York, Pa.

Use a Window Display

A simple window display consisting of one or two lines of goods, together with a few neat sales cards, is most effective.—William Ilgenfritz, York Garage & Supply Co., York, Pa.

Sell Accessories to Prospects

Get ready for your big summer drive now by putting in a complete stock of accessories for the cars you handle.—J. W. Richley Auto Co., York, Pa.

Use White Overalls

An investment in white overalls for shopmen has actually speeded up work and increased efficiency, besides making the shop and service department pleasanter for such customers as get into them.—L. C. Hinkle, Premier Sales Co., Kansas City.

One Way to Sell Accessories

The Pella Motor Co., Pella, Iowa, has found that the way to sell accessories is to stock them. Formerly this concern had a stock of a few hundred dollars. Early in 1917 they decided to go in on a bigger scale. A $1,500 stock was bought, which is considerably heavier than the ordinary dealer in an Iowa town of 3000 people carries. The end of the year showed that the accessory business had netted $548 profit, 40 per cent.

Sells Accessories at Homes

The best accessory sales puller which the Sweeney Motor Car Co., Carroll, Iowa, ever tried was to put a salesman out with a car and make a house to house campaign among the farmers. He calls on his customers just as a traveling man "makes" his city customers. He collects the money and the accessories go out by parcel post the following day.

Harness Men Can Sell Tires

A harness dealer makes a splendid tire dealer. The names on his old accounts are a fine mailing list for letters seeking trade, which we supply. His former horse drivers are now running cars, and he knows how to resist bad competition, stand for honest goods and service, which not all garagemen have learned.—John R. Shuford, Bittel-Leftwich Co., St. Louis.

Good Kitchen Argument

If a man who is using cheap oil hesitates to buy a high grade oil after I have told him as convincingly as possible of its advantages and economy, I often say to him, "How many times have you recommended to your wife that the best flavoring extracts are the cheapest in the long run?"—Charles Krause, Field-Lippman Auto Supplies, St. Louis.

Know the Sales Story

We tell our starter dealers that the best way to sell starters is to make the first customer an enthusiast by telling him honestly, plainly and thoroughly what his starter will do and getting from him the names of his friends who need starters.—John R. Shuford, Bittel-Leftwich Co., St. Louis.

Forget the Price-Cutter

The only way to meet cut-throat and cut-price competition in accessory and service business is to sell only reliable goods and give honest service and charge honest, profitable prices, regardless of the other fellow.—B. O. Leftwich, Bittel-Leftwich Co., St. Louis.

Use Fine-tooth Comb

We wanted Ford car owners to become customers of our shop. We took a city map and marked off our rightful territory, half way to the nearest Ford station in every direction. Then we set a red pin for our customers and white ones for other Ford owners. When we got through changing white pins for red ones, or learning by interview why we could not, the shop was profitable.—W. L. Johnson, Johnson Automobile Co., St. Louis.

How Successful Men Sell Cars

(*Continued from page* 28)

Gets Real Figures

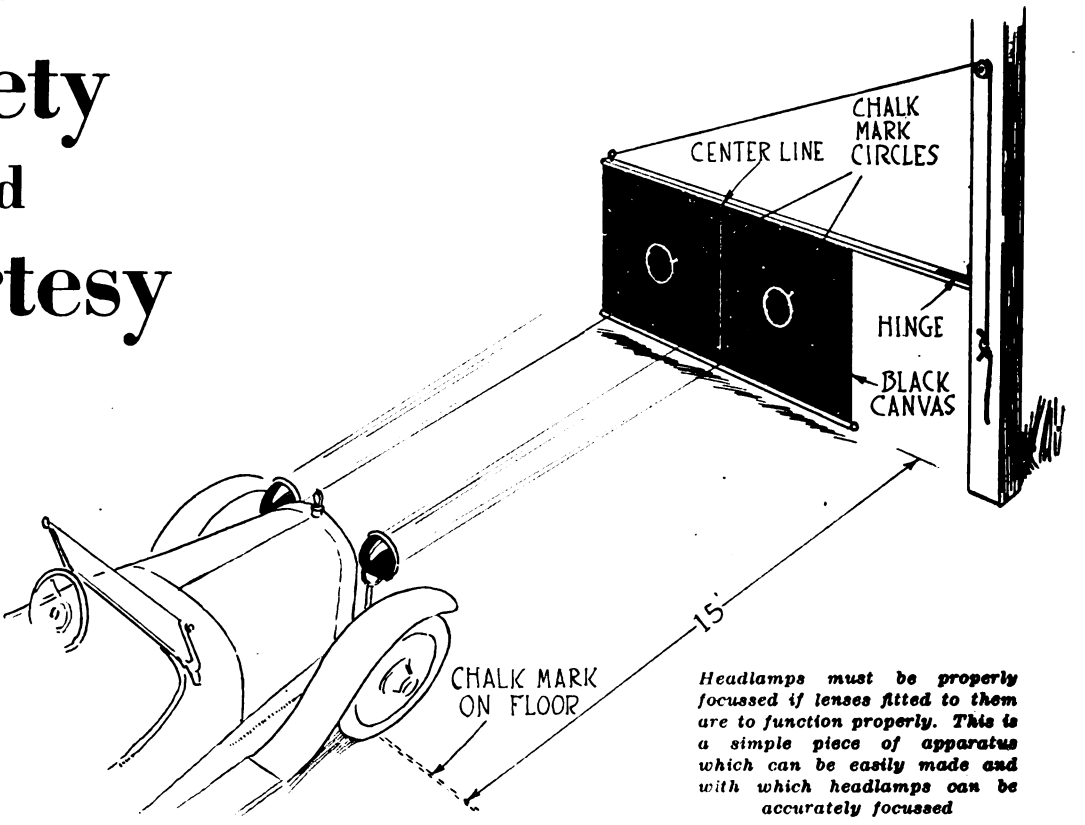
Herbert D. Ellinwood, salesman with the Butler Motor Co., Kansas City, selling the Dodge, has for several months been selling wholly with figures. He gets the upkeep and depreciation figures from firms which are using many Dodge cars and the figures from those who are using other cars; when necessary the element of efficiency of salesmen when traveling in the Dodge is emphasized.

Steal Ideas

"The best idea I ever had was the notion to get the other fellow's idea," says L. A. Buxton, retail manager of the Buxton-Phillips Motors Corp., Kansas City. Any number of sales by members of the retail sales force of Chalmers and Maxwell are directly traceable to suggestions of fellow salesmen on problems presented at the daily and weekly meetings. The men of this organization are thoroughly imbued with this policy of getting all the help they can on their business.

Keep Posted

L. A. Buxton, retail manager of Buxton-Phillips Motors Corp., Chalmers and Maxwell, Kansas City, believes familiarity with local affairs and general information important to salesmen. For instance, progress of plans for erecting the 22-story building for the Kansas City Athletic Club should be familiar to a salesman, since members of the athletic club are particularly good prospects for sales and they are all glad to talk about the club.



Cars for Drummers

One of the most successful Kansas City salesmen has drifted into selling his moderate-priced car for use of salesmen in large organizations. He goes after the sales managers of these firms—but is careful to interest the salesmen who would use the cars so that there might be pressure on the sales manager from this direction also.

For

Safety and Courtesy

Headlamps must be properly focussed if lenses fitted to them are to function properly. This is a simple piece of apparatus which can be easily made and with which headlamps can be accurately focussed

Headlamps Must Be Properly Adjusted

IF you were standing in the doorway of your garage some fine evening this spring; and if you saw a car coming down the road in a blaze of glory—such a blaze, in fact, that you couldn't see the car or who was in it; and if after the car came abreast you recognized one of your best customers, would you let him go his way or would you 'phone him the next morning and tell him something like this:

"Good morning, Mr. Jones. I noticed your car passing my garage last night and I wondered if you would care to have me look over your headlamps for you. I am afraid that if they are not adjusted you may get into trouble with some of the local constables because of the headlamp glare law.

Help the Car Owner

"I'll be glad to look your lamps over and adjust them so that you won't have any trouble, even if you do drive out of the state. Charge? Oh, no, certainly not. Glad to help you out."

Or, would you let Mr. Jones go his way, dangerous to others blinded by his lamps, and dangerous to himself because of already widespread and spreading anti-glare laws.

Courtesy to others using the road and safety for Mr. Jones as well as for others demand that you help him. And in helping him you will help yourself. You will gain his goodwill—and very likely will sell him a pair of lenses.

States Have Laws

At the present time there are 29 states which have headlamp laws. Sixteen of these specifically mention the 42-in. line and limiting the height to which direct beams can rise above the roadway. In other words, if headlamps are so adjusted that direct beams do not rise more than 42 in. above the roadway, no motorist need fear falling into the clutches of the law.

It is the duty of the dealer, garageman and repairman to assist the car owner in the adjustment of his lamps so that sufficient illumination is provided to make driving safe for the owner and safe for others and at the same time follow the intent of the various anti-glare laws.

The proper adjustment of headlamps is very simple and requires no equipment other than a black canvas screen 4 x 8 ft. with two white circles chalked on it.

If this screen is mounted so that its height may be varied a few inches, the chalk circles can be placed the same distance from the floor as the center of the headlamps.

If the car is then placed exactly at right angles to the screen and 15 ft. from it, the headlamps if properly adjusted and with plain lenses or none will show two clear circles of light without dark spots or rings.

If dark spots or rings appear the bulbs should be adjusted until the circles of light are perfectly clear.

The next operation is to bend the headlamp brackets so that the circles of light come directly over the chalked circles on the screen, the screen having been previously placed so that these circles come at exactly the height of the headlamps.

How to Bend Brackets

Next, brackets should be bent so that they toe in slightly in order to concentrate the light from the two lamps on the center of the road.

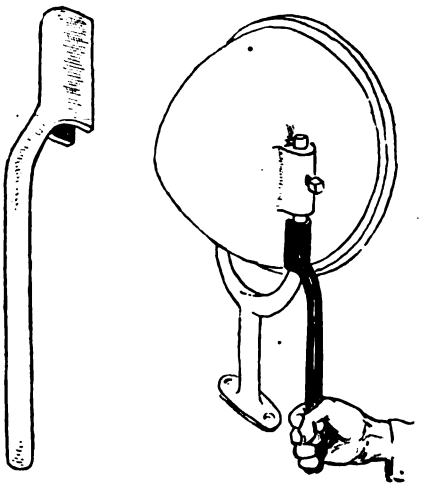
It is practically impossible to so adjust the headlamps with plain lenses that objects 150 or 200 ft. in front of the car are revealed and at the same time keep direct light beams below the 42-in. limit. If all the direct light beams are kept below this limit there will not be sufficient

Digitized by Google

light projection. In other words, it is at this point in the adjustment that the dealer or garageman should suggest the advisability of equipping with lenses.

On the other hand, if the lamps are already equipped with lenses it may be that they are not functioning properly because the bulbs are out of focus. It is essential that the bulbs be properly focussed, as outlined previously, if the lenses are to perform their duty properly.

Elsewhere on these pages is given a letter that a dealer or garageman should send to all his customers now, outlining the need for having lamps properly focussed and equipped with lenses that fulfill the requirements of the law.



What Size Tractor?

(*Continued from page 41*)

the tractor is noticeable. A further significant fact concerning the tractor owners in classes one and two is that in class one, 42, or all but nine, are located in corn belt states, namely, Ohio, Indiana, Illinois, Wisconsin, Iowa, Nebraska and Kansas. Of those in class two, 66, or all but 14, are located in the same states.

The significance of this is obvious: the largest number of tractors have been sold, and will continue to be sold, in the corn belt states. The average size of the farms in those states are well below the 400-acre size. As indicated above, the popular sizes of tractor for farms below this limit are the 8-16, the 10-20 and the 12-25. These all are three-bottom tractors. *The inference for the dealer who would sell tractors in this territory is unavoidable. If his line comprises tractors of these ratings he can safely and satisfactorily meet the average condition of his trade and insure satisfactory results.*

Just two years ago the United States Department of Agriculture, in Bulletin 719, announced a tentative conclusion almost identical with that reached here, based upon the experience of 200 Illinois farmers, but at that time experience had not been extensive enough to warrant absolutely conclusive recommendations.

Tool for bending headlamp brackets so that the light beams can be directed straight ahead and slightly toward the road

Mr. Motorist:

If you saw Bill Jenkins coming down the road toward you some dark night with a pair of headlamps blazing like the torch of Glory, you'd be likely to cuss at him, wouldn't you?

May we examine your lamps for you so as to make sure that Bill has no reason for cussing at YOU?

If you will stop in any time, day or night, we shall be glad to examine your lamps, focus them properly and make dead certain, not only that Bill can't cuss you for glare, but that no constable in any state will hold you up.

It's a very simple operation—takes about five minutes, and we shall be glad to do it without charge for the good of the cause of courtesy and safety.

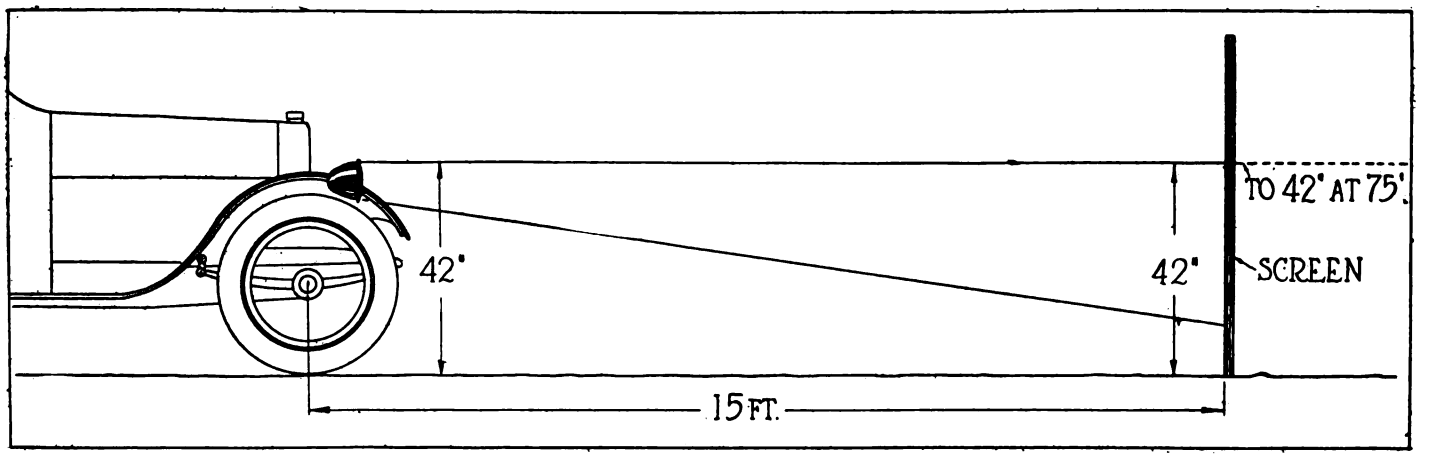
You owe it to yourself and to others to have your lamps right.

Come in to-day and let's do it.

For Safety and Courtesy,
Frank Smith,
THE BLANK GARAGE

Within the last year the Iowa State College conducted a survey among tractor owners in Iowa and reached identically the same conclusion. The inference then, deduced from the data studied in this article, and confirmed by authoritative investigations by others, may be relied upon by the dealer as a safe guide in selecting a tractor line, as regards rating, which will insure satisfaction among his customers and permanency and profit in the trade for himself.

Accessory Profits Beckon



(*Continued from page 44*)

the result is increased costs and decreased volume, as, if it costs 20 per cent to do business one month, and the following month with the same personnel you reduce your volume by half, you will find the overhead is increased by half and your cost increased. I would repeat that volume can best be obtained by selling standard lines of accessories known to the average car owner through advertising and recommended by reputable jobbers.

I believe the profit on accessories compares very favorably with that on cars. I understand some cars are sold on 15 to 20 per cent, whereas you can get an average of 30 per cent on accessories and turn over the capital invested many more times. You could safely give considerable time and a portion of your working capital to handling accessories and earn a very respectable profit on the line.

Urge Better Roads

NEW YORK, April 20.—Resolutions calling upon the President and Congress to adopt some definite road-building policy and provide for some centralized control for the determination, construction and maintenance of highways throughout the United States, and for the use of prisoners of war in road construction work was unanimously adopted at the meeting of the Highway Traffic Assn. of the State of New York here April 16. The broad aspect of road construction in the United States was outlined by the speaker of the evening, S. M. Williams, President of the Highways Industries Assn., with headquarters in Washington, D. C.

When lamps are properly adjusted, the light rays should not rise above a mark 42 in. high at a distance 75 ft. in front of the car. If so adjusted, they will comply with practically every headlamp law

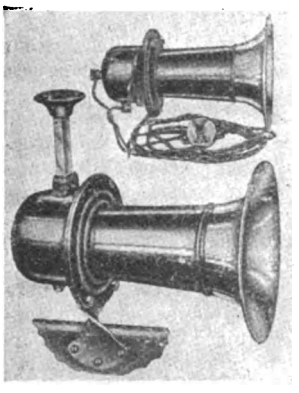
Added Profits

For Your 1918 Summer Business

ACCESSORIES

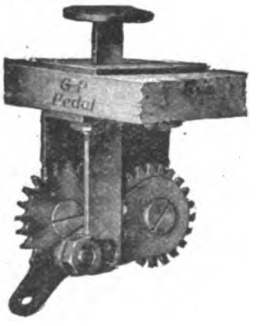
CAR owners are in your place every day. They want accessories. Sell them to them. Every accessory you sell is that much added profit. The accessory business is going to get bigger and bigger and bigger and somebody's going to make a lot of money out of it in your town. Everything is in your favor. All you need is the stock and the store. Here are goods for your stock.

PANTHER TIE-ROD SILENCER



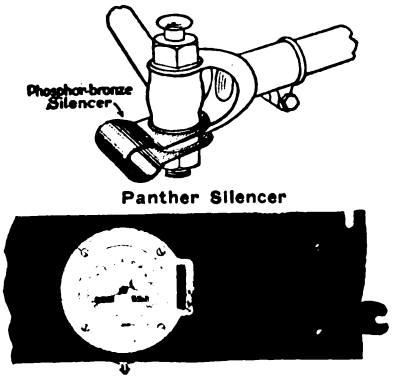
A phosphor bronze spring silencer for tie-rods on Chevrolet, Saxon, Ford, Scripps-Booth and other cars. One end of spring goes between eye and yoke and other end is held by nut on bolt. Price 25 cents per pair.—B. A. T. Co., Wayne Junction, Philadelphia.

G-P CUTOUT PEDAL



A cutout pedal made entirely of steel, the up and down motion of the pedal being changed to horizontal motion by means of gears with compound leverage. Needs but one round hole drilled in floor board. Price $1.50.—Edward A. Cassidy Co., Inc., Madison Avenue and 40th Street, New York City.

CARBORUNDUM VALVE GRINDING COMPOUND



A valve grinding compound put up in combination can, each compartment containing 2 oz. of compound. Coarse compound is in one compartment and fine in the other. Price 50 cents. Also put in 1 and 5-lb. cans and in collapsible tubes.—Carborundum Co., Niagara Falls.

Clero Horns

G-P Pedal

Panther Silencer

Sears-Cross Instrument Board

Moats Portable Stove

MODEL A CLERO HORN

A hand-horn finished in black, black and brass or black and nickel. Horn is constructed with spiral drive mechanism. Length 9 in., weight 3 lb. Price $4.—Fitzgerald Mfg. Co., Torrington, Conn.

SEARS-CROSS INSTRUMENT-BOARD

Model FCN speedometer and cowl dash are intended for use on Fords. Speedometer is set flush in cowl and furnished with regular straight bronze drive or with swivel drive when car is equipped with shock absorbers. Dash can also be used for installation of other instruments. Speedometer finish is nickel and dash is covered with heavy imitation black leather, brackets on each end of board being made to fit firm in place under windshield frame. Price $12 with straight drive, $14 with swivel drive.—Sears-Cross Co., Bush Terminal, Brooklyn, N. Y.

ATTWOOD GREASE CABINET

A device to handle light and heavy oils and to measure grease directly into transmission or differential case through a 48 in. rubber hose with shut-off nipple. Price $8.50.—Fulton Sales Co., 910 South Michigan Avenue, Chicago.

FORD REAR CURTAIN LIGHTS

Celluloid curtain lights with center reinforcement attached with fasteners. Price $1.10 for 1910-16 cars, 45 cents for 1917 cars.—Powers Mfg Co., Waterloo, Iowa.

SHALEX RADIATOR CLEANER

A compound placed in the cooling system, dissolving in the water, to clean lime and rust from the inside of radiators and cooling systems. Screw top 14 ounce can 75 cents.—Northwestern Chemical Co., Marietta, Ohio.

MOATS FOLDING PORTABLE GASOLINE STOVE

A folding portable stove consisting of case, table and cooking and serving outfit for two, four or six people. No. 1 oven stove has three burners, two for frying or boiling and one for baking or roasting, includes equipment of two frying pans, baking pan, sugar and coffee container, funnel and pressure pump. Equipment, legs and ends of oven packed into base of stove. Price fully equipped $24, with pump and funnel only, $22.50. No. 2 stove has two 6 in. grates, coffee pot, two frying pans, sugar and coffee containers, pressure pump and funnel but no oven. Price fully equipped $13, with pump and funnel only $12. No. 3 stove is the same design as No. 2 but a little larger. Price fully equipped $14, with pump and funnel only $13. No. 4 is a one burner stove with pressure pump and funnel. Price $7.—Prentiss-Wabers Mfg. Co., Grand Rapids, Wis.

Digitized by Google

RUSCO BRAKE LINING

Brake lining made from long fibre asbestos yarn, interwoven with brass wire. Both edges are selvedged with asbestos yarn twisted around the two brass wires. Impregnated with secret compound to give it long quality and make it water and oil proof.—Russell Mfg. Co., Middletown, Conn.

HERCULES SPRING BUMPER

A spring bumper made in sizes to fit any car, constructed entirely of steel, and can be attached without boring holes or defacing car where mud splashers are used in front. Bumper has double spring action, does not rattle and comes with black enamel or nickel finish. Price $15 for large size, $14 for medium size, $12 for Ford size. Prices are for nickel finish; black enamel $1 less.—Hercules Spring Bumper Co., 1777 Broadway, New York.

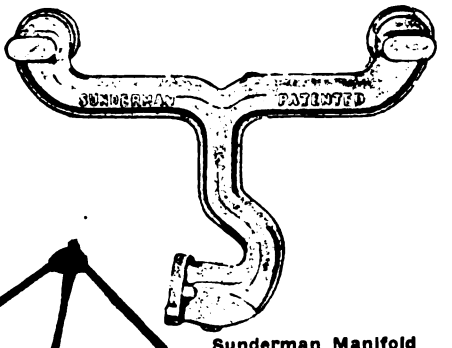
MACK AUTOMATIC OIL GAGE

An oil gage for Fords that automatically stops the engine by breaking the ignition circuit when the oil level gets below a certain point. The gage also shows the amount of oil in reservoir through a sight glass. Can be attached in a short time to any car without machine work. Price $7.50. Mack Safety Oil Gage Co., 14 State Street, Boston.

EASYON CHAINS

Chains to go around tire and snap around spoke. Four single chains serve each wheel, leather protectors for preserving spokes. Tread or cross piece is shaped to give wear and prevent injury to tire. Packed set of eight to the bag. Small size $4 for 3 or 3½ in. tires, medium size $5 for 4 or 4½ in. tires, large size for 5 or 5½ in. tires $6 per set.—Woodworth Mfg. Corp., Niagara Falls.

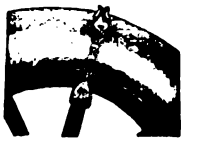
SUNDERMAN MANIFOLD FOR FORDS



A special manifold with a pocket to vaporize condensed fuel in the manifold. Because of the bend a uniform vacuum is preserved and economy results, as a pocket near the joint holds the gasoline that condenses when the engine is shut off or throttled low. Can be used with all Ford carbureters. Price $2.50.—Sunderman Corp., Newburgh, N. Y.

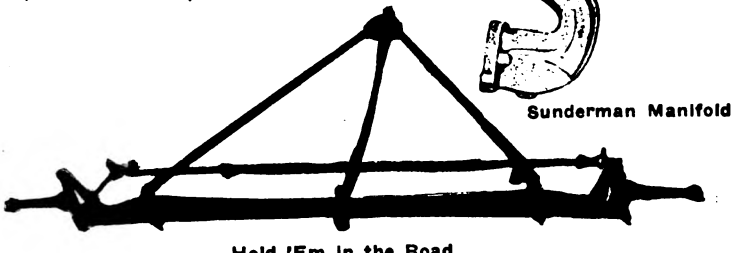
TONGEMAN VULCANIZER

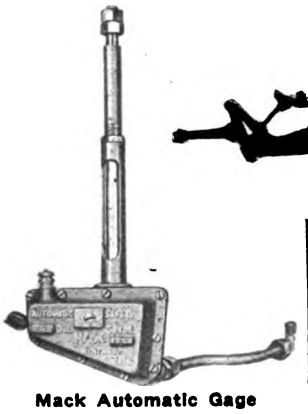
Consists of a modified pair of pliers, the jaws of which hold the fuel container and heater against the tube. Complete outfit consists of nickel-plated tongs, one large copper-heating pan, one small copper-heating pan, nine small patches, eighteen small vulcanizing fuses, three large gum patches, six large vulcanizing fuses, sandpaper and directions. Price $1.75.—Tongeman Vulcanizer Co., 626 Plymouth Building, Minneapolis.



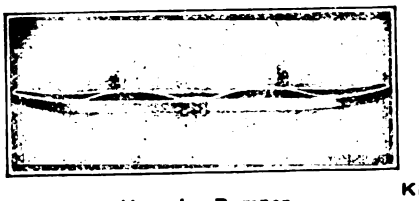
GOODRICH ENGINE TESTING VALVE

A modified type of cut-out, having bell mouth opening to allow for ample expansion of gases, relieve back pressure and intensify sound of explosion. Made in sizes to fit all cars; 1½ in., $3; 1⅝ to 3⅛ in., $3.75; 2⅛ to 3 in., $4.25.—Goodrich-Lenhart Mfg. Co., Widener Building, Philadelphia.





Sunderman Manifold



Goodrich Valve

Easyon Chain

Tongeman Vulcanizer

Hold 'Em in the Road

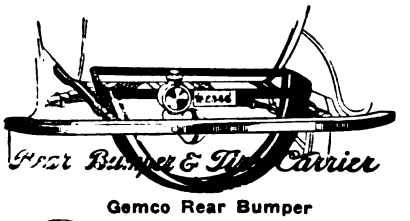
Mack Automatic Gage

Hercules Bumper

Klaxon Warning Signals

Cleveland Slip-On Body

HOLD 'EM IN THE ROAD



A combination radius rod brace, anti-rattler, axle support and steering device for Ford cars. An arm is clamped, one end on the front axle, the other near the ball socket, and two springs are coiled around the tie rod which goes through a hole in the arm. The springs act between the arm and the stops on the tie rod. Stiffens the front radius rod by acting as a third arm; the spring tension prevents the tie rod from rattling and also tends to keep the wheels straight.—Cooper Auto Supply Co., Thomasville, Ga.

GEMCO REAR BUMPER FOR FORD SEDAN

A spring bumper, made so as not to interfere with the channel bar supporting the car spring. Furnished in nickel or black finish and with round, diamond or channel bar. Packed five in a crate. Prices range from $10.24 to $13.80.—Gemco Mfg. Co., Milwaukee.

SANITARY RUNNING BOARD MAT

A wire mat attached to running-board without use of bolts or screws. Size 8½ x 18 x ⅞ in. Fits any make of car. Price $1.25.—Sanitary Wire Door Mat Co., 413 South Lincoln St., Chicago.

Gemco Rear Bumper

Cochran Speednut Wrench

Sanitary Runningboard Mat

UTILITY BLACK AIR-DRYING ENAMEL

A black air-drying enamel for metal parts. Dries in 1 hour to a gloss black finish. Half pints 60 cents, pints $1.—Northwestern Chemical Co., Marietta, Ohio.

SIMPLICITY DEMOUNTABLE WHEEL

Demountable wheels for Fords which go on regular Ford hubs. Simple, light and strong.—Simplicity Wheel Co., Grand Rapids, Mich.

CLEVELAND SLIP-ON BODY

A flare-board tail-gate body to be attached with a few bolts in place of the rear deck of the Ford runabout. Has hardwood frames, floorboards run lengthwise, well ironed and painted black. Is 54 in. long, 36 in. wide, 10 in. side panels and 5 in. flareboards. Weight 118 lbs. Price $7.20.—Cleveland Top & Specialty Co., 3102 Franklin Ave., Cleveland.

KLAXON WARNING SIGNALS

All Klaxon warning signals are of the motor driven type except the hand-operated model. The Klaxon 20 "L" lists at $25, the Klaxon 12 at $14, and the Klaxon 6 at $7. There are also two hand-operated models selling for $4 each. A Klaxon display board is furnished to dealers.—Klaxon Co., Newark, N. J.

COCHRAN SPEEDNUT WRENCH

A three-piece end wrench, the handle of which acts as a lever to tighten the jaws, thereby eliminating any screw or worm adjustment for different size nuts. Two sizes, 6 and 8-in., with either square or hexagon jaw.—Cochran Pipe Wrench Mfg. Co., Seventy-eighth Street and Woodlawn Avenue, Chicago.

Digitized by Google

HART BELL CARBON REMOVER

A mechanical device whereby water from the cooling system is conveyed to the intake manifold and thence to the cylinders, where it converts the incandescent carbon into gases which are blown out of the exhaust. Made in either dash or under-the-hood type, selling at $6 and $5 respectively.—Hart-Bell Co., Inc., 1926 Broadway, New York.

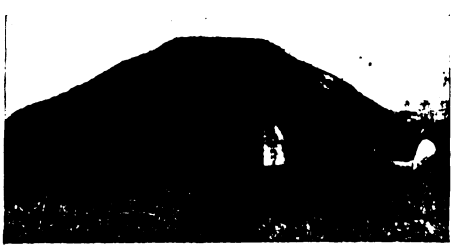
TRIDENT CARBURETER FOR FORDS

A carbureter for Fords with fuel jet size calculated to engine needs and the only adjustment necessary is air supply. Mixing chamber is formed into a venturi tube and throttle opening is of oval section with beveled edges. Air adjustment is controlled by increasing or decreasing the compression of springs placed concentrically above the auxiliary air valve. Price $10.—L. V. Flechter & Co., 192-200 Jackson Ave., Long Island City.

RED HEAD DISPLAY CABINET

Made of steel lithographed in red and with an index on the front of the cabinet giving the size and model of the plug required for all the leading cars and engines. Cabinet is leased to dealers with an assortment of 50 or 100 Red Head spark plugs suited to the requirement of the trade.—Emil Grossman Mfg. Corp., Brooklyn, N. Y.

"X" RADIATOR LIQUID

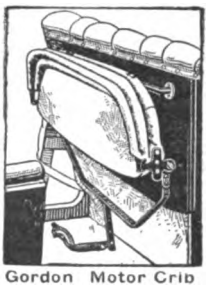


A liquid which is poured in the cooling system and circulated freely until it nnds a leak, when it hardens. Also loosens rust and scale and prevents formation of scale. Price $1.50 per can; Ford size 75 cents a can. A special assortment of 18 cans is offered the dealer, together with one $1.50 can free. Assortment includes selling helps. — "X" Laboratories, 630 Washington Street, Boston.

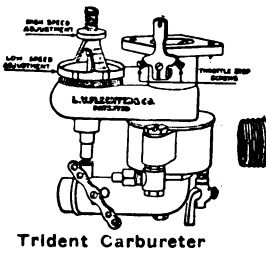
EASYON TRUCK CHAINS

Chains to go around the tread of the tire and fasten around the spoke. Portion going around spoke covered with leather. Made in sizes for tires from 1½ in. to 7 in. and also for dual tires. Prices 65 cents to $2 each or $7.80 to $24 per set of twelve. Packed eight, ten, twelve, fourteen or sixteen to the bag.—Woodworth Mfg. Corp., Niagara Falls.

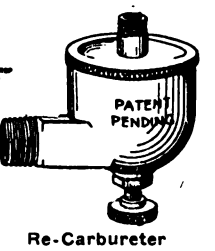
PETELER LIFTING JACK



A lifting jack which is placed in position beneath the car by a long telescoping handle having a short stroke, raising the car ⅜ in. on each stroke. To lower the car, the handle is turned, operating a small lever which reverses the action and the load comes down step by step. When all the load is off the jack, a slight lift of the handle allows the lifting bar to drop the remaining distance at once and the jack can be withdrawn by the handle, handle taken out and the parts stowed away. Capacity 3000 lbs. Price $6. —Coe-Stapley Mfg. Corp., 115 Broadway, New York.



Demoin Touring Tent

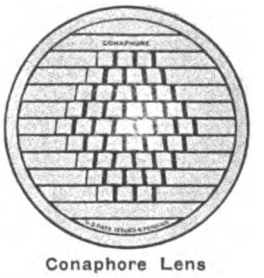


Hart Bell Carbon Remover

Gordon Motor Crib

Trident Carburetor

Re-Carbureter



Red Head Display Cabinet

Victor Pump

Easy Truck Chain

Conaphore Lens

Peteler Jack

Economy Vapor Plug

CELL-BEAM CONCEALED SPOTLIGHT

A spotlight which is small enough to carry in the pocket of the car instead of on the windshield. Can be used as an inspection light. Throws concentrated beam 500 ft. and diffused light near by. Weighs less than 1 lb., and has a 30-cp. bulb, uses 6-volt or any other current and sells for $5.—Cell-Beam Corp., 501 Fifth Avenue, New York City.

GORDON MOTOR CRIB

A folding baby crib attached to the back of the front seat and held in open position by a spring connection made to the back seat or floor with an adjustable strap. The crib thus suspended is free of shock or jar and does not interfere with the entrances. An adjustable hood protects the child and the motor crib can be bolted in compact space. Size 32 x 14 in. Price $10.—Gordon Motor Crib Co., 27 South Water Street, Chicago.

RE-CARBURETER CARBON REMOVER

A device to be screwed into the intake manifold which can be connected by a tube to the radiator to draw moist air into the manifold, or it can be used as a primer cup. Price $2.—J. M. Kelley, 80 N. Water Street, Rochester.

VICTOR TIRE PUMP

A three-stage hand compressor fitted with brass tubes delivering the air to the tire on the down stroke produces a large flow of air with a minimum of energy. Price $5.—Judd & Leland Mfg. Co., Clifton Springs, N. Y.

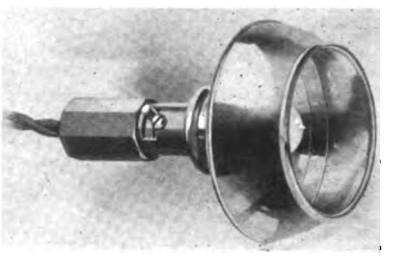
NORWESCO TOP AND UPHOLSTERY DRESSING

A dressing for leather, Pantasote and upholstery. Water-proofs, softens and preserves material and gives egg-shell flat-black finish. Pints 75 cents, quarts $1.25.—Northwestern Chemical Co., Marietta, Ohio.

DEMOIN TOURING TENT

A Ford-size touring tent for one side of the car or for both sides as desired. Made of khaki waterproof and sells for $40 for the one-size model and $2.50 per foot for each additional foot above 11 ft.—Des Moines Tent & Awning Co., 913-915 Walnut St., Des Moines, Ia.

CONAPHORE HEADLIGHT LENS



A headlight lens causing beams of light to extend in a long intense beam, neither down nor directly in front of the car nor up in the air. Made in clear and Noviol glass, the latter for eliminating back glare and penetrating fog or dust. Made to fit all lamps. Prices range from $1.30 to $6 per pair for Noviol glass and 80 cents to $4 per pair for clear glass.—Edward A. Cassidy Co., Inc., Madison Avenue and 40th Street, New York City.

ECONOMY VAPOR PLUG

An auxiliary air valve attached to the intake manifold, adjustable in such a manner that the proper amount of air will be automatically drawn in through the device to compensate for the varying speeds of the engine. Attached by drilling 11/32 in. hole in the manifold and tapping ⅛ in. pipe thread. Price $3.50.—The Aristos Co., Warren, Ohio.

MOORE'S SOAPS

Mooreoil Soap is in neutral paste form and cleans by absorption rather than abrasion. For cleaning highly polished surfaces. Moore's Vegetable Oil Soap is in semi-solid form and lower in cost than potash soap. Useful in garages. Moore's gelatine soap is a vegetable jelly for cleaning tile floors, wood-work and scrubbing. Moore's Laundrine Soap is put up in bulk form, lathers freely and is used for rugs, mats, cushions and tops.—Moore Oil Co., York St. and McLean Ave., Cincinnati, Ohio.

Cell-Beam Spotlight

HIGHWAY FIFTH WHEEL TRAILER

A two-wheel trailer attached to truck or tractor by a fifth wheel. Made in five models as follows: Model E-5 carries 1-1½ tons, 56 in. tread, 36 x 3 in. tires, 20 in. diameter fifth wheel, price $365. Model F-5 carries 2-2½ tons, 56 in. tread, 32 x 3½ in. tires, 20 in. diameter fifth wheel, price $445. Model G-5 carries 3-4 tons, 58 in. tread, 36 x 5 in. tires, 25 in. diameter fifth wheel, price $765. Model H-5 carries 5-7 tons, 60 in. tread, 36 x 5 in. tires, 25 in. diameter fifth wheel, price $965. Model J-5 carries 8-10 tons, 66 in. tread, 36 x 5 in. dual tires, 36 in. diameter fifth wheel, price $1165. Fifth wheel permits oscillation at every angle by means of springs.—Highway Trailer Co., Edgerton, Wis.

GTL RIM TOOL

A push and pull rim tool having a sliding or adjusting bar that moves to and fro in an E shape heavily ribbed channel. The slot in the connecting link allows the adjusting bar to move backward, allowing the tool inside rim for unlocking rim, pushing joint apart and pushing rim and joint to place. It also allows car to move forward for attaching hooks to outside of rim. Made in two sizes, No. 1 for 30 to 36-in. tires, priced at $3.50 to $4.50, depending on finish, and No. 2 for 36 to 42-in. tires from $3.75 to $5.—Metal Products Mfg. Co., 2416 University Avenue S. E., Minneapolis.

C. S. RIM TOOL

A malleable iron tool for contracting demountable split rims. Ends hook over opposite sides of rim, and tool is contracted by a lever the centers of which pass each other when lever is pushed down, thus holding the rim in contracted position while tire is being changed. Weighs less than 2 lbs., and sells for $2. Dealer's price, $1.35.—Canton Specialty Co., Canton, Ill.

MILLER AUTO BED

A bed for camping which folds in two parts, one end being fastened to the runningboard and when in use the other end folds down and the runningboard forms one of the legs. When folded up it stands vertically on the runningboard and is covered with a dust-proof cover. Price of the bed alone is $25, 3-in. mattress $8, 10-ounce canvas waterproof tent $10, waterproof cover $4.—Miller Auto Bed Co., Oakland, Cal.

WOODWORTH SPRING COVER

A felt lined, oil and water-proof covering that laces over and completely encloses springs. Felt lining is soaked with oil before putting on. Furnished for all makes of cars. Display sign, order blanks and selling helps furnished to dealers with first order.—Woodworth Mfg. Co., Niagara Falls, N. Y.

BEST RIM CONTRACTOR-EXPANDER

A turnbuckle device for expanding and contracting split demountable rims. Hooks adjust themselves and are pulled together by the turnbuckle until the slack is taken up, when the hooks pull the rim together. Price $3.50.—Fish-Best Co., 730 Lumber Exchange, Chicago.

WOODWORTH LOCK CHAINS

Strong welded chains for locking spare tires, locking front wheel to frame of car, etc., covered with leather to protect paint or varnish. Made in 36 and 42 in. lengths and in three qualities at prices from 65 cents to $2.75. Discount of 33 1-3 per cent to dealers in lots of a dozen.—Woodworth Mfg. Corp., Niagara Falls.

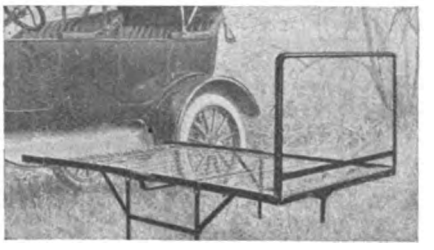
B-W COIL TESTER FOR FORD CARS

A wooden base on which is mounted a low-reading ammeter, receptacle contact springs in which to place the coil to be tested and adjusted, binding posts for connecting to a storage battery or dry cells, an adjustable spark gap and a switch for making or breaking the circuit. The spark gap on the coil tester takes the place of the spark plug in the engine and should be set about ¼ in. Price $6.—Ballman-Whitten Mfg. Co., 4440 Olive St., St. Louis.

McINTYRE 7-PASSENGER FORD BODY

A device to convert the standard five-passenger Ford into a seven-passenger car. An 18-in. extension panel is just back of the rear door. The additional cross and side braces are mitered, glued and screwed. The outside metal is accurately fitted and screw heads soldered, 42-in. channels strengthen and lengthen the frame. Running boards, top, floor and shaft are lengthened. The outfit is complete with two additional 18-in. side curtains. Price $510, including new Ford car and all accessories, $150 for converting five-passenger touring car into a seven-passenger and $225 for converting two-passenger car into seven-passenger.—McIntyre Motor Products Co., Chicago.

GOODRICH THERMOSTATIC CARBURETER CONTROL



A device to control the needle valve of the carbureter by means of the heat of the engine. When the engine is cold a richer mixture is fed than when it warms up. Price $5.—Goodrich-Lenhart Mfg. Co., Widener Building, Philadelphia.

COLD WATER CARBURETER AND PRIMER

A device to allow water in the form of finely divided spray to be drawn into the intake manifold in direct proportion to the work of the engine. Consists of a tank attached over the engine, a tube and a water carbureter. Price complete with tank, $25.—Automobile Appliance Co., Drexel Building, Philadelphia.

RIE NIE PATCH

A patch for tubes or casings made of a layer of raw rubber and a layer of vulcanized rubber backed by a khaki fabric. Small size (36 sq. in.) 50 cents, large size (108 sq. in.) $1, shop size (648 sq. in.) $5.—Durkee-Atwood Co., Minneapolis.

BLAXSHINE ENAMEL

A quick drying black enamel, easy to apply, which dries in 1½ hours and hardens over night. Flows evenly, is durable and resists 450 deg. of heat. Dealers are furnished with counter signs and each package is accompanied by a silver monogram. Price $2.85 per package, containing sufficient Blaxshine for one car, and complete outfit for applying.—Twin City Varnish Co., 208 North Wabash Avenue, Chicago.

KNICKERBOCKER RUNNINGBOARD LUNCHEON CASE

A runningboard case including a refrigerator container for ice. Sizes from 9 x 4½ x 15 in. to 28 x 11 x 18 in., furnished either empty or with dishes, cutlery, food boxes, etc., at prices from $3 to $40.—Knickerbocker Case Co., Fulton and Clinton Streets, Chicago.

WOODWORTH CLEAR LIGHT LENS

A headlight lens to eliminate glare and throw light on road. Smooth on the outside, of heavy, clear glass. Price per pair $3 for 8 to 8½ in., $3.75 for 8¾ to 9½, $4.50 for 9¾ to 11 in. Twenty-five cents per pair additional west of the Rockies.—Woodworth Mfg. Corp., Niagara Falls.

BEST VALVE LIFTER

A valve lifter with notches along the handle so that the spring can be held compressed by means of a link while the valve is removed. It can be used on nearly all makes of cars and is malleable iron. Price 60 cents.—Fish-Best Co., 730 Lumber Exchange, Chicago.

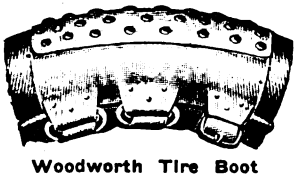
ROSE TIRE PUMP

A hand tire pump with patent valve to make pumping easy. Has turned wooden handle and footplate on one side.—J. H. Haney & Co., Hastings, Neb.

REES LIFTING JACK

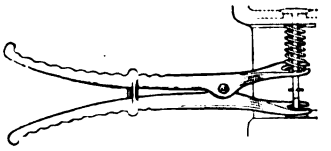
A double worm-gear lifting jack operated by a folding crank handle. Made in two models. No. 1 has a capacity of 2 tons, weighs 12½ lb., and has a lifting range of 10 to 16 in. Price $8. No. 2 has a capacity of 5 tons, weighs 21 lb., and raises 12 to 18 in. Price $17.—United States Jack Co., Union Arcade Building, Pittsburgh.

JOHNSON'S RADIATOR CEMENT



A liquid cement to heal radiator leaks in less than 10 minutes. Is poured through the filler while engine is hot and is soluble in water till it reaches the leak, when the air hardens and toughens it. Prepared in half-pint containers, 65 cents; pints, $1, and quarts, $1.75.—S. C. Johnson & Son, Racine, Wis.

BLAKE CLAMPLOCK



A combination clamp and lock to fasten trunks and other articles to the runningboard. Consists of a modified C-clamp, the upper arm of which fits into a lug riveted on the article to be clamped to the runningboard. The lower arm of the clamp has a screw with a head turned by a special key. Requires no boring of holes in the runningboard and does not mar the finish. Price complete with two lugs and two key wrenches, $2.50.—Blake Mfg. Co., Emerick and Madison Streets, South Bend, Ind.

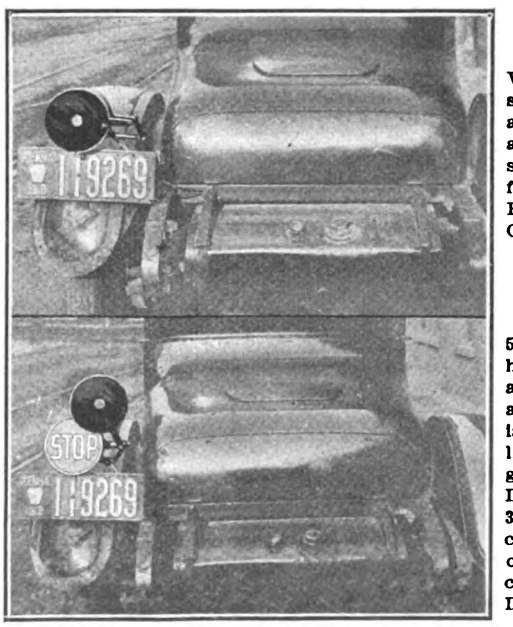
Blake Clamplock



Nasco Valve Grinder

WOODWORTH LEATHER TIRE BOOTS

Tire boots of heavy chrome tanned leather, studded with steel rivets. Hook-on style has thin hooks to engage clincher rims. Strap-on style is held with strong leather strap lacing through rings on each side adjusted by buckle. Laced-boot laces across rim with strong leather lacing. Prices, for 3½ in. size, hook-on boots $1 in grain leather, 75 cents in split leather; strap boots $1.25 in grain leather, $1.10 in split leather; laced boots $1 for grain leather, 90 cents for split leather. Dealer discount of 35 per cent in lots of a dozen. Display signs, circulars, electrotypes and lantern slides furnished to dealers.—Woodworth Mfg. Corp., Niagara Falls.

ARCO CARBON ELIMINATOR

A metal tank installed on the exhaust manifold with connections to the intake manifold and the cooling system. Water is kept in the tank automatically by vacuum and goes from there to the cylinders, removing the carbon by steam. Price $17.—Automatic Carbon Eliminator Co., Inc., 2010 Broadway, New York.

Vacu-Rear Signal

NASCO VALVE GRINDER

A grinding head for refacing valve seats. With the accessories supplied, almost any size valve may be refaced. Driven by belt and fitted with fine emery wheel set at right angles to valve holding device. Four reseating cutters and suitable guides for refacing valve seats come with the outfit. Price $40.—National Auto Specialty Mfg. Co., Tama, Iowa.

VACU-REAR SIGNAL

A rear signalling device consisting of a 5-in. diameter tail lamp with license tag holder combined. The lamp is covered by a shield, the red tail light showing through a hole in the center until the brake pedal is depressed by the driver, when the shield lifts, exposing frosted letters "Stop" on ruby glass. Letters are distinctly visible in day. Device operates by engine vacuum through 3/16-in. tube, there being no rods, cables or cranks to require lubrication, replacement, or other inconvenience to the operator of the car. Price $15.—Automobile Appliance Co., Drexel Building, Philadelphia.

Digitized by Google

RIE NIE PAINTING OUTFIT

A sufficient amount of enamels for refinishing all parts of a small car. Standard outfit black, other colors substituted if desired. Outfit includes leather and Pantasote dressing, body enamel, running gear paint, hard rubber air drying black enamel for lamps and trimmings, engine enamel and varnish for dash together with necessary brushes. Price $4.50.—Durkee-Atwood Co., Minneapolis.

G-P MUFFLER CUTOUT

A cutout with a valve tongue and seat so constructed that when the cutout is opened the line to the muffler is completely closed. Area of sections of each part of the cutout is greater than the area of the exhaust pipe. Ends are bored to exact size of exhaust pipe with shoulders at each end and set screws to prevent shifting. Packed in substantial box. Special model made for 1916 and 1917 Packard Twin Six (double exhaust), $7, and special model for Fords complete with pedal and chain, $4.50. Other models range in price from $4.50 to $5.50, depending on size. —Edward A. Cassidy Co., Inc., Madison Avenue and 40th Street, New York City.

WOODWORTH NO-STRETCH FAN BELTS

Fan belts of non-stretching fabric with specially treated leather stitched on face. Oil and water-proof. Price 40 cents for endless type of Fords. With detachable hook 50 cents. Also furnished in coils, widths ⅝ to 1¼ in. wide at from 12 to 20 cents per ft.—Woodworth Mfg. Corp., Niagara Falls.

RELIABLE BEVEL GEAR JACK

A handle-controlled gear-operated jack, giving a lift on the upstroke of the handle as well as the downstroke. Detachable handle is 16 in. long with telescopic steel extension to 30 in. A turn of the handle reverses the movement of the screw to raise or lower the car as desired. Weighs 9 lb.; extension from 10½ to 17 in.; capacity 2 tons; price $4.50.—Elite Mfg. Co., Ashland, Ohio.

EVERLASTING AIR HOSE

Air hose compressors and air stations, constructed of treated heavy double cotton jacket woven on high grade rubber air hose. Is claimed not to kink, buckle, or be harmed by being run over and will stand any pressure. In 25- and 50-ft. lengths, coupled if desired. In ¼ and ⅜ in. sizes.—Chicago Tubing & Braiding Co., 216-224 N. Clinton St., Chicago.

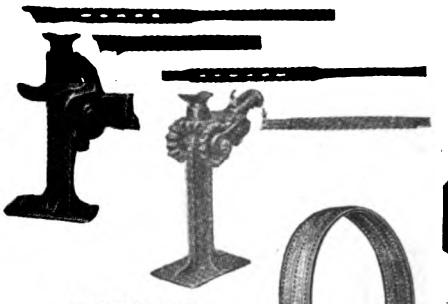
EVERBRIGHT BODY POLISH

A liquid preparation for polishing bodies to remove dirt, grease and marks and restore the original finish. Pints 75 cents, half gallons $1.75, gallons, $3.—Everbright Mfg. Co., 409 Golden Gate Ave., San Francisco.

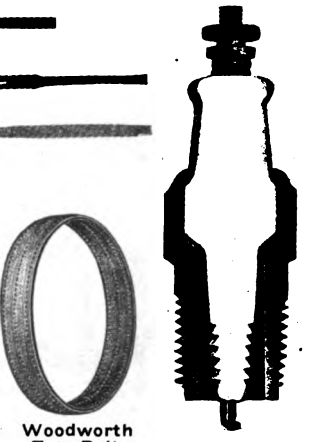
AMERICAN CONVERTIBLE BODY

A convertible body which can be changed in a few minutes to form different types suitable for general farm use. The forms include grain-tight body, flat rack with scoop board, flared body, hog rack, stock rack, flared rack, and basket rack. Prices range from $80 to $125, depending on size.—American Wagon Co., Dixon, Ill.

AC SPARK PLUGS

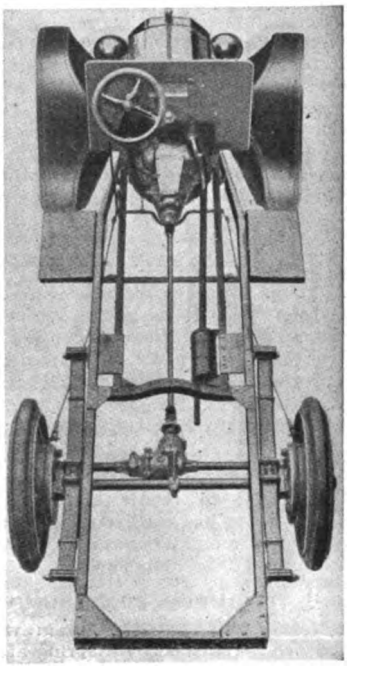


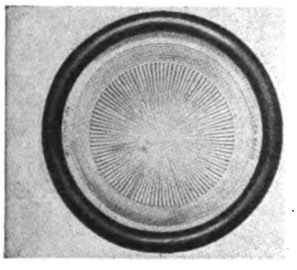
AC Carbon Proof has a porcelain with saw edges which heat enough to burn the carbon. Designed especially for Ford, Overland and Studebaker cars. AC Titan is a one-piece construction. Price $1 for each model.—Champion Ignition Co., Flint, Mich.



TRUXTON TRUCK UNIT

A device for converting a passenger car into a truck, consisting of a lengthened frame and propeller shaft, solid steel rear axle and rear wheels driven by an internal gear. It is made in 1¼ and 2-ton sizes and can be attached to either a new or used car of almost any make. Bodies are optional with purchaser, prices depending on the type specified. Made in four standard models at prices from $410 to $560 for the units only depending on wheelbase and kind of car they go on.





G-P Muffler Cut-Out

Reliable Jack

Woodworth Fan Belt

AC Spark Plug

Truxton Truck Unit

Culver Radio Lens

Air-Friction Carbureter

Everlasting Air Hose

CULVER RADIO LENS

A headlight lens of convex shape with ½ in, flat margin around outer edge to fit frame of lamp. Prisms radiate from the center to within ⅞ in. of the flat edge, and the space in between has seven prism circles. Prisms deflect direct rays and diffuse light. Smooth on outside so it can be kept clean. Price $3 per pair for all sizes.—Culver Superior Glass Co., 1029-1035 W. Adams St., Chicago.

AIR-FRICTION CARBURETER

A carbureter with a spray nozzle which is so arranged that the fuel orifice is at right angles to the flow of air. Fuel is released between two disks, the lower of which has holes drilled in it to permit mixture of some air between the surfaces, breaking up and atomizing the fuel before it strikes the incoming air. All air, whether at high or low speed, is taken through one opening and is all heated so that no condensation can take place. Price of 1-in. instrument is $14.53, and 1¼-in. is $16.98, these prices being 30 per cent off list.—Air-Friction Carbureter Co., Dayton.

WIZARD WASHER

A set of two brushes fitted with an attachment by which they can be attached and detached instantly to any garden hose nozzle. One of the brushes is of a material that is not affected by kerosene, and this brush is used for running gear, removing tar, etc. The other brush is larger, about 2 ft. long, of camel's hair twisted into galvanized wire and is intended for the body. Both brushes have a long twisted galvanized wire handle with a hole in the end through which the hose goes, and this may be used as a handle to reach under the car. Price $2.50 for the two brushes; $1.75 for camel's hair brush alone, $1.25 for fiber brush alone.—Edwin S. Calkins, 106 Charles Avenue, Solvay, N. Y.

RED WONDER TIRE PUMP

A single-acting, single-cylinder hand tire pump with heavy steel cylinder threaded into a foot base of heavy construction. Valve is solid brass with an indestructible flexible seat. Piston has special guide and chemically treated cup leather. Plunger rod is 7/16-in. cold rolled steel with hardwood handle. Cylinder and base japanned and baked glossy red and handle enameled black. Made in sizes 1¼ x 20 in. and 1½ x 17 in. Price $4, west of the Rockies $4.25.—Sidel-Rattner Mfg. Co., 31-35 Broadway, Brooklyn.

Digitized by Google

PANTHER SPARK PLUGS

Spark plugs with either conical or petticoat porcelain, and made in twenty-two sizes covering the three threads. Packed in two-piece boxes and thirty-six plugs to the carton. Square shoulders have been avoided in the porcelains.—B. A. T. Co., Wayne Junction, Philadelphia.

HAUSER ENGINE-DRIVEN PUMP

An engine-driven tire pump operated with plain connecting rod and crankshaft. Has automatic poppet valves for both intake and outlet, three piston rings, a baffle plate to prevent oil splashing up, and babbitt bearings. Breather tubes follow contour of baffle plates and on upstroke of piston, fresh air is drawn in and distributed in compression chamber below the rings. On down stroke of piston, compression is relieved by exhausting direct to the atmosphere through these tubes so that compression cannot get into crankcase. Price, complete with all fittings for attachment to car, hose, and gage, $16.50.—Hauser Machine & Mfg. Co., Inc., 232-234 Mill St., Rochester.

NU-BACK REFINISHERS

Leath-R-Nu is for renewing leather and pantasote, cushions and tops. Dries in 15 min., leaving material soft and pliable. Waterproof Mohair Top Dressing is for restoring original black finish to faded tops and to waterproof them. It dries in about 1 hr. Nu-Auto is a quick-drying high-luster enamel drying hard over night and made in black and six other colors. Lining Dye is intended for drying the inside of top and curtains, producing a jet black finish and drying in 1 hr.—Nu-Back Mfg. Co., 114 North Commercial Street, St. Louis.

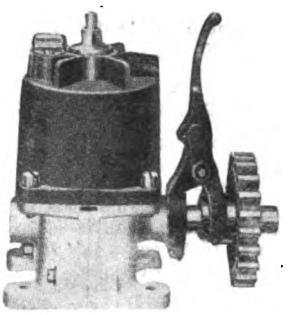
STEERING WHEEL FOR CHEVROLET

A 17-in. diameter steering wheel for the Chevrolet "490" to be had in either plain or corrugated rim. Finish is black enamel. Price $3.50 with plain rim, $4 with corrugated rim.—Gemco Mfg. Co., Milwaukee.

PANTHER RADIATOR CEMENT

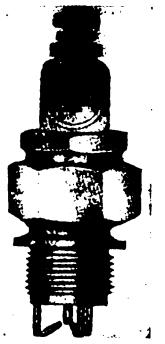
A liquid radiator cement containing a high average of iron crystals, requiring about a tablespoonful to repair a leaky radiator. Price 75 cents per can containing enough to repair four to eight radiators.—B. A. T. Co., Wayne Junction, Philadelphia.

TWOMBLY FOOT PUMP



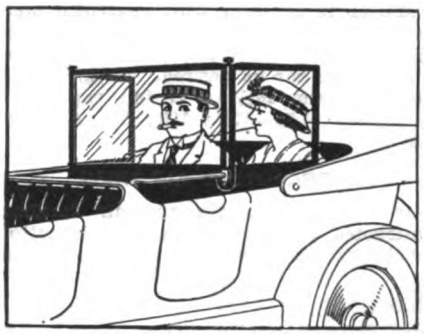
A foot-operated tire pump in which the foot lever is returned by a spring after being depressed, and a toggle joint gives sufficient leverage so that 100 lbs. can be pumped with little effort. Price $5, with gage $6.—Edward A. Cassidy Co., Inc., Madison Avenue and Fortieth Street, New York City.

LUCAS AUTOMOBILE FINISH



A ready-to-use finish drying with a rich gloss, put up in friction-top quart and half-pint cans. Colors are black, gray, Brewster green, fawn, deep blue, yellow, roadster red, vermilion, radiator black and white. Dealers' assortments at $24.21 and $48.42 less 40 per cent discount. Color cards, selling helps and a display stand with a celluloid window, outlining a car in black, so that different color cards can be put in back to make the car appear in different colors, are furnished free with these orders.—John Lucas & Co., Inc., 22 Race Street, Philadelphia.

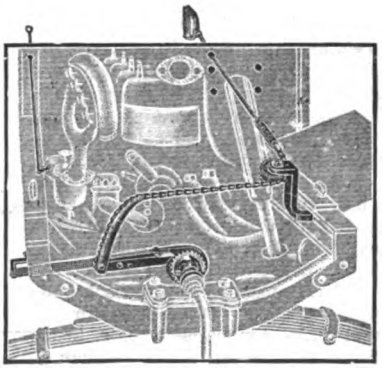
OHIO KARBON KILLER



A heavy grease intended to be dissolved in the gasoline in the proportions of a spoonful to 5 gal. of gasoline. Price $1 in 1-lb. lithographed can.—Ohio Grease Co., Loudonville, Ohio.

Hauser Engine-Driven Pump

Elgin Plug



J. H. Tonneau Windshield

Gemco Steering Wheel

Thomas Timer Elevator

Twombly Foot Pump

Miller Cranker for Fords

HOLLEY MANIFOLD FOR FORDS

An intake manifold for Fords in which exhaust gas passes through a jacket surrounding the manifold. The amount of gas admitted and consequently the heat, is controlled by a rod on the dash. It is a complete unit and replaces the Ford manifold without drilling or machine work. Price $11.50. — Holley Kerosene Carburetor Co., 145-147 Willis Avenue, E., Detroit.

ELGIN SPARK PLUGS

Spark plugs have porcelain insulators, central electrode and three outside electrodes. Furnished in all threads and sizes. Price $1. — Elgin Motor Power Mfg. Co., Cedar Rapids, Iowa.

MILLER CRANKER FOR FORDS

A device for cranking a Ford from the seat by a handle extending through the dash, connected by chain and a ratchet arm which engages a wheel on the crankshaft. Entire device weighs but 5 lb.; can be installed without machine work and the old crank is left on. Price $7.50.—Miller Mercantile Co., Memphis, Mo.

JOHNSON'S CARBON REMOVER

A liquid carbon cleaning compound intended to be placed in the cylinders in small quantities periodically. Put up in half-pints selling for 65 cents, pints $1, and quarts $1.75.—S. C. Johnson & Son, Racine, Wis.

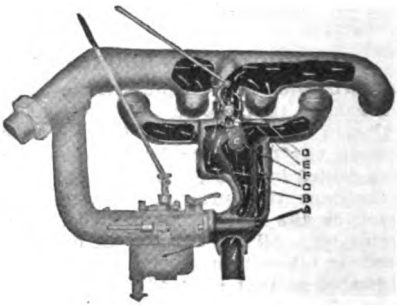
INGHAM'S PERFECTION POLISH

A liquid polish to preserve the original finish. Easily applied and quickly removed so that dust will not adhere. Also used to bring back luster on dirty and dull finishes. Price 25 and 50 cents.—Perfection Polish Co., Waverley, N. Y.

THOMAS TIMER ELEVATOR

A device to elevate the Ford timer so that the wiring is taken up out of the grease and oil and the timer is more accessible. It consists of a housing attached to the crankcase by slipping it under the nuts. A bevel gear is on the end of the timer shaft and this drives a vertical shaft. It can be installed in about half an hour without removing radiator. Price $5.—Thomas-Andrews Corp., Waukegan, Ill.

COMMON SENSE POLISH



A liquid polish to clean and polish in one operation. Removes oil, grease and dirt and leaves a dry polished surface. Price, small size, 35 cents; pints, 75 cents; quarts, $1.50; gallons, $4.50.—Common Sense Mfg. Co., St. Louis.

J H TONNEAU WINDSHIELD

A windshield for rear seat consisting of a central main frame and two folding wings with glass. A removable apron hangs from the bottom of the shield, affording protection from drafts under the shield when it is drawn back. Mounted on a pair of extending steel arms so that shield can be drawn close to passengers. Parts work by friction and lock, and the wings can be set at any angle. —Tonneau Shield Co., 1778 Broadway, New York.

Panther Giant Plug

Holley Manifold for Fords

Digitized by Google

FORD IGNITION WIRES

A complete primary and secondary wiring set of high-grade wire with cables cut to correct length and finished with soldered terminals or black rubber nipples as desired. Low-tension wires are protected with cable insulation where exposed to grease. Furnished in contrasting colors for easy replacement.—S-E Motor Engineering Co., 14 East Jackson Boulevard, Chicago.

CLARK TONNEAU WINDSHIELD

A two-piece tonneau windshield fastened on the side of the rear seat. The two sections are separate and can be swung in any direction. An apron is suspended from the lower edge of each section. It can be quickly removed by loosening one nut.—A. N. Clark & Son, Plainville, Conn.

MOXOTIRES

This is an inner shoe with one side made like a straight-side tire having a tough, endless steel hook laid in it. This hook just fits the rim and makes it impossible for this side to blow out. The opposite side has no hook, but is made very wide so as to cross between the tube and the rim up the other side of the tire past the hook. It thus completely encircles the tube. Made in sizes from 3 to 6 in.—K & W Rubber Co., Ashland, Ohio.

DEAD EASY TIRE PUMP

A two-stage tire pump clamped to the runningboard and operated by a handle which is worked back and forth. A gage in plain view while pumping shows tire pressure. Dimensions without handle are 5 x 8½ x 9 in., weight 15 lb. Handle is in two sections, each 16 in. long. Equipment includes gage, 12 ft. of hose, tire valve connector and clamps for attaching to runningboard. Finished in black enamel with nickeled cylinders and trimmings. Price $15.—Globe Mfg. Co., Battle Creek, Mich.

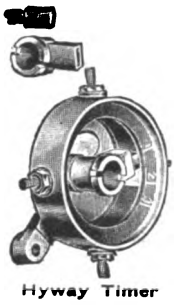
WARNER UPHOLSTERY COVERS

Upholstery covers held with glove fasteners, easily snapped on or removed for washing or cleaning. Made in a variety of colors, striped, plain and mixed, for all models of cars at prices depending on size of car and quality of material. Set for Fords, without top cover $15 for touring car, $7.75 for roadster.—Warner Auto Top Co., 1646-50 Central Ave., Cincinnati.

GEMCO E-Z TILT STEERING WHEEL

A steering wheel for Chevrolet "490" that is quickly and easily tilted. Fits steering column and is secured with original key and nut. Spiders fit Chevrolet patterns perfectly. Wheel 17 in. diameter. Price $5 with plain rim, $5 50 with corrugated rim.—Gemco Mfg. Co., Milwaukee.

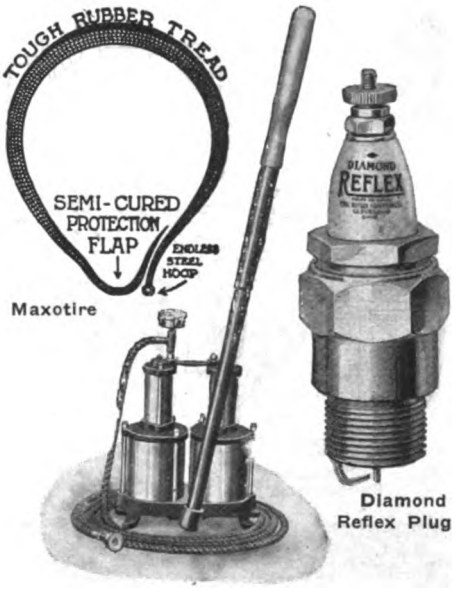
RIE NIE RADIATOR COMPOUND



A powder which dissolves in the warm water of the cooling system and solidifies when passing through the leak to the air, making a permanent mend. Also cleans rust and scale formation. Price 50 cents in 6-oz. tins.—Durkee-Atwood Co., Minneapolis.

UNIVERSAL GREASE CUP WRENCH

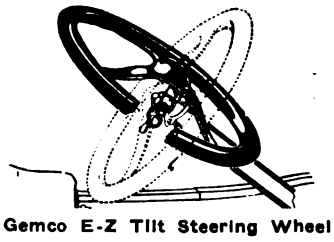
A wrench for turning grease cups, pet cocks, etc., when they cannot be easily reached. Price 50 cents.—Prismolite Co., Fourth and Gay Streets, Columbus, Ohio.



S-E Ignition Wire for Fords

Hyway Timer

Clark Tonneau Windshield



Diamond Reflex Plug

Dead Easy Pump

Cochran Spring Oiler

Gemco E-Z Tilt Steering Wheel

Davenport Vulcanizer

HYWAY TIMER FOR FORD CARS

An oilless timer with 50 per cent longer contact than the standard Ford timer, using a brush contact, the brush being of hardened brass and slightly curved to fit the ring. The shell is stamped steel with black enamel finish and the insulation is bone dry fiber. Price $1.25.—Hyway Mfg. Co., 14 East Jackson Boulevard, Chicago.

McINTYRE COMMERCIAL BODIES

Commercial bodies for Ford chassis made in five styles, three for use on the regular chassis and two for use on 1-ton converted truck chassis. In the former class are the express body with top, convertible farm and stock body with stock racks, and one without stock racks. For the 1-ton trucks there is an express body with top and an all-season cab. Bodies built of hardwood, heavily ironed and braced and painted. Prices are as follows: Express body for 1-ton trucks, $131; all-season cab for 1-ton trucks, $58; express body for standard chassis, $73.50; same without stock racks, $66.—McIntyre Motor Products Co., 100-110 West Fifty-fifth Street, Chicago.

DIAMOND REFLEX SPARK PLUG

A large, massive plug for heavy duty engines and racing cars. Finished in bronze, has heavy Cromite petticoat porcelain and large electrodes.—Reflex Ignition Co., 1708 Payne Ave., Cleveland.

EVERBRIGHT TOP DYE

A liquid top dye intended to give a silky coal-black finish to mohair or canvas tops and to preserve them. Easily applied and dries in 30 min. Quarts $1.50, gallons $3.50. —Everbright Mfg. Co., 409 Golden Gate Ave., San Francisco.

LIQUID VENEER

A combined liquid polish and cleaner which is said to protect finish and not gather dust. Quart bottles $1. Packed in a special display case containing also a brass finish sprayer, $1.50.—Buffalo Specialty Co., Buf-

COCHRAN SPRING OILER

A wedge to be inserted between the leaves of the spring as far as the center, when it serves as a guide to conduct the oil to the place where it does the most good. Actual size 3 in. long.—Cochran Pipe Wrench Mfg. Co., Seventy-eighth Street and Woodlawn Avenue, Chicago.

NORWESCO MOHAIR TOP DRESSING

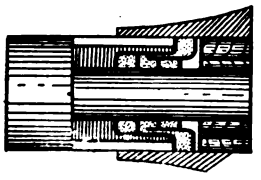
A top dressing and lining dye which dyes and water-proofs with one application. Pint cans 75 cents, quart cans $1.25.—Northwestern Chemical Co., Marietta, Ohio.

DAVENPORT VULCANIZER

A screw clamp vulcanizer using chemically-treated strawboard for producing heat to vulcanize different sized patches on inner tubes. Complete outfit costing $1.50 includes clamp, quantity of strawboard, patches, etc. —Davenport Vulcanizer Mfg. Co., Inc., Davenport, Iowa.

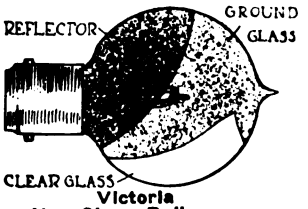
NOBLE'S STANDARD POLISH

A body polish which is neither explosive nor inflammable and will preserve lustre or enameled or varnished surfaces. Price $1 per quart.—Noble Piano Co., 971 Woodward Avenue, Detroit.



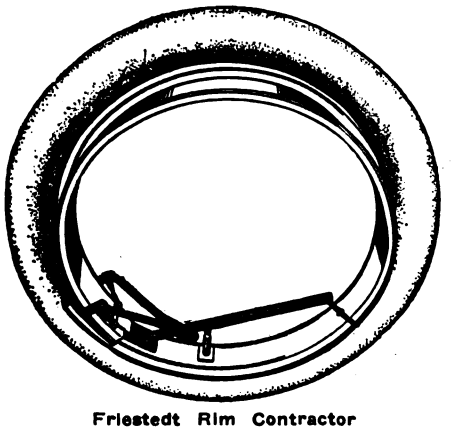
Digitized by Google

KANT-LEEK GREASE WASHER



A washer to retain grease in Ford axles, consisting of two annealed steel cups between which are four oil-resisting felt washers. Applied by removing hub cap, nut, wheel and roller bearing, inserting washer on shaft and replacing parts. Price 75 cents a pair, packed in carton.—Apex Mfg. Co., Inc., St. Louis.

VICTORIA NON-GLARE BULB



A lamp bulb partly mirrored, inside partly frosted and partly clear glass, the sections so arranged that light from the filament which would ordinarily go to the part of the reflector, causing glare, is reflected back to the part of the reflector throwing the light on the road. The frosted part is in between the mirrored and clean sections. The bulb has an adjustable collar so that it can be placed in correct focus.—Victoria Sales Corp., 33 West Forty-second Street, New York City.

Kant-Leek Grease Washer

Victoria Non-Glare Bulb

Friestedt Rim Contractor

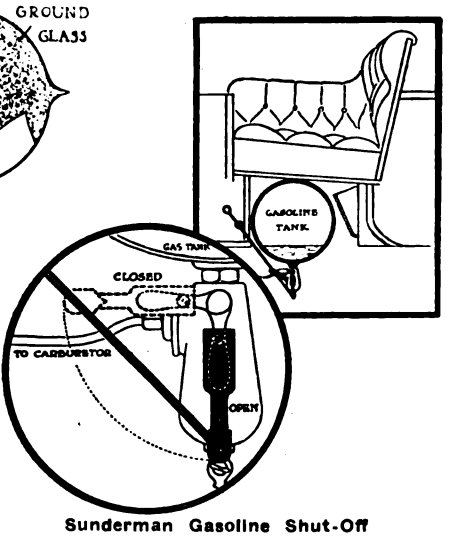
FRIESTEDT RIM CONTRACTER

A rim tool that opens, contracts and relocks split demountable rims. It securely grips and supports both flanges of the rim, operates at the split and provides a leverage of 20 in. to break the rust, open the lock and overlap the rim ends. There are no clamps to adjust or bolts to tighten. The plain contractor will operate the Kelsey latch, Kelsey hinge and Stanweld rims. The Baker, Firestone and Kelsey Dovetail Contracters are adapted to these models only. The Universal Model is for shop use and can be quickly adapted to operate any rim. Prices are: Plain Contracter, $2; Baker Contracter, $3; Firestone Contracter, $3; Kelsey Dovetail Contracter, $3; Universal Contracter, $5.—Friestedt Mfg. Co., 2934-38 W. Lake Street, Chicago.

RIE NIE RADIATOR CEMENT

A liquid radiator cement to be placed in the cooling system, which solidifies on coming in contact with the air through a leak. Pints, $1, half-pints 60 cents.—Durkee-Atwood Co., Minneapolis.

LAZCO PORTABLE VULCANIZER



A portable vulcanizer for casing and inner tubes. Flame is inclosed so that it can be used on the road where there is wind or rain. Complete outfit includes the vulcanizer, chains and hooks for clamping around inflated tire, roll of repair rubber and piece of sandpaper. Price $1.50.—Lazarus Mfg. Co., 750-800 Prospect Avenue, Cleveland.

AUTO-KRAT TOP DYE

A liquid top dye to clean and color in one operation, for both inside and outside. Prices $1.50 per qt., $3.50 per gal.—Frank A. Crandall, 2134 Indiana Ave., Chicago.

Johnson Curtain Windows

Sunderman Gasoline Shut-Off

Lazco Portable Vulcanizer

JOHNSON CURTAIN WINDOWS

Bevel plate glass windows for flexible curtains which are made in three parts so that they can be permanently fastened into any curtain, the weight being supported by webbing. Made in rounds, ovals, diamonds and double diamonds at prices from $2 up.—Wm. R. Johnson Mfg. Co., 359-361 East Ohio Street, Chicago.

COMBINATION OVERALL SUITS

Combination suits made in two styles. Lot 20 is of heavy khaki and Lot 21 is of high count army duck, water and oil-proof. Both sets have six large pockets, plier, rule and pencil pockets, and adjustable leg bottoms and cuffs.—Beaver Dam Mfg. Co., Beaver Dam, Wis.

RIE NIE AIR-DRYING BLACK ENAMEL

An elastic enamel for all smooth finished metal surfaces which air-dries in a few hours to bone hardness. May be used for dipping, spraying or baking. Price, quarter-pints 25 cents, half pints 40 cents, pints 75 cents, quarts, $1.25, half-gallons $2.25. Colors other than black are: quarter-pints 35 cents, half-pints 60 cents, pints $1, quarts $1.75, half-gallons $3.—Durkee-Atwood Co., Minneapolis.

C-W FABRIC PATCH

A self-vulcanizing fabric patch for making a quick repair without heat or tools furnished in screw-top can, small size 50 cents, large size $1.—Cord-Wyckoff Tire & Rubber Co., 414-416 Douglass Street, Sioux City, Iowa.

Singer Traffic Signal

SUNDERMAN GASOLINE SHUT-OFF

A device to shut off the gasoline at the tank, which is operated by a short rod through a hole in the floor boards. Pushing and pulling the rod shuts and opens the cock. Especially designed for Fords. Price 50 cents.—Sunderman Corp., 9 Chambers Street, Newburgh, N. Y.

SINGER TRAFFIC SIGNAL

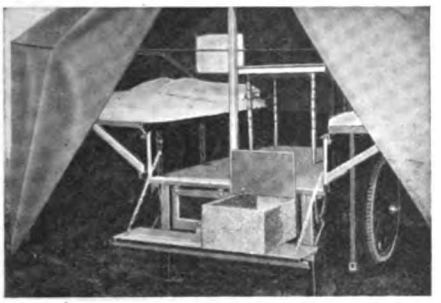
A traffic signal that flashes both front and rear the words "Stop," "Ahead" and "Back" in printed letters and arrows pointing either right or left for turning. Signals are illuminated at night and appear in white letters on a black background with the exception of the stop signal which appears on a red background. Control of the signals is by a push button on steering post close to wheel. Control buttons for interlocking preventing more than one signal being given at a time excepting in the case of stop signal which replaces any other signal in force when the brake is applied, and when it is released former signal appears. A pilot light informs the driver that the signal is in operation.—Singer Auto Traffic Signal Co., St. Louis, Mo.

NEVER-LEAK GASKETS

Cylinder head gaskets made in stock sizes for almost every car on the market. Also standard closed type gaskets, French type gasket, flange exhaust gaskets, spark plug gaskets, etc. Complete set of gaskets for Ford car. Price 63 cents.—Fitzgerald Mfg. Co., Torrington, Conn.

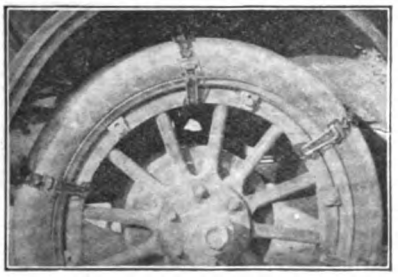
Digitized by Google

KORECT REAR TIRE CARRIER



A rear tire carrier for all Ford casings with or without demountable rims which will fit all Ford bodies and fastens directly to the chassis without drilling holes. Prices range from $5 to $6.50.—New Era Spring & Specialty Co., Grand Rapids, Mich.

GOODRICH STEERING COLUMN LOCK



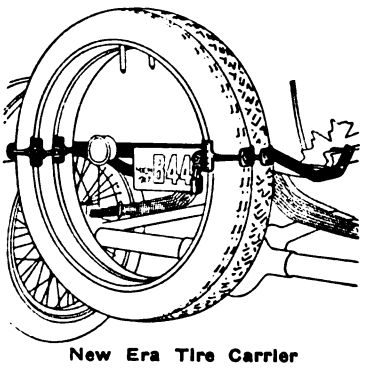
A device attached to the steering column with a plunger which when locked in the up position with the Yale lock prevents the spokes of the spider from turning. Easily installed without machine work. Price $10 for Fords, $12 for other cars.—Goodrich-Lenhart Mfg. Co., Widener Building, Philadelphia.

AUTO KAMP TRAILER

A two-wheeled trailer fitted with full camping equipment for four persons. Trailer has semi-elliptic springs, pneumatic tires and a draw pole and hitch with ball and socket connection. The equipment includes a heavy khaki duck tent, 7 x 12 ft., ash tent frame, ironed to fit sockets, two beds, 48 x 75 in., with Sagless springs, ice box and food compartment located under body floor, four feather pillows, electric light outfit, folding table, folding shelf, two-burner gasoline stove, etc. When folded up for traveling, the entire trailer and contents are covered with a water and dust-proof tarpaulin. Price $225.—Auto-Kamp Equipment Co., Inc., Saginaw, Mich.

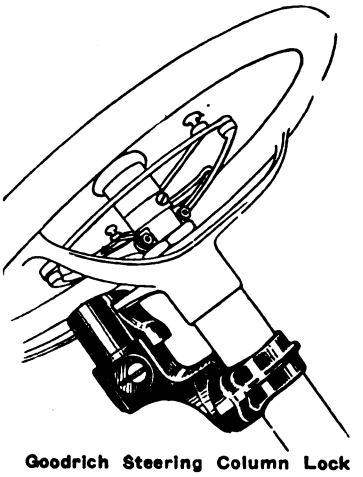
Auto Kamp Trailer

Quick-on Mud Chain



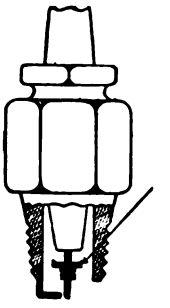
Nelson Collapsible Basin

QUICK-ON MUD CHAIN

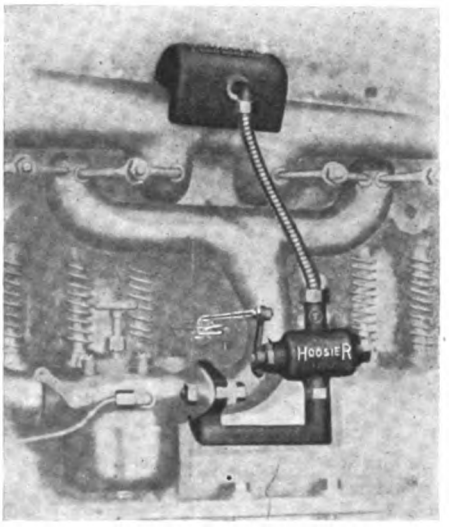


A chain clasped around tire and felloe which is put on and tightened by a cam and lever. Presses tight against tire and is flat so that it will not roll. Made from flat steel ⅛ in. thick, and tread plate is 2 in. wide. links 1¼ in. wide. Cam is on one end and loop on other, and cam hooks into loop. Leather is placed on steel band where it crosses felloe. Tread plate is corrugated to keep from slipping. Can also be used to hold swells and blow-outs. Price 40 cents for 3 and 3½-in. tires, 50 cents for 4 to 5-in. tires.—Kimball Tire Case Co., Council Bluffs, Iowa.

A-SCHO SPARK PLUG



A self-cleaning plug having a movable metal washer on the central electrode which by hitting the bottom of the insulator keeps it free of carbon. A stop nut on the electrode marks the lower limit of travel of the washer. Price $1.50.—Apex Co., Evansville, Ind.



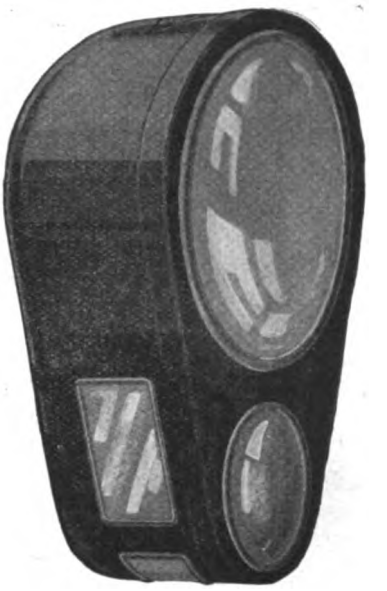
New Era Tire Carrier

Goodrich Steering Column Lock

A-Scho Plug

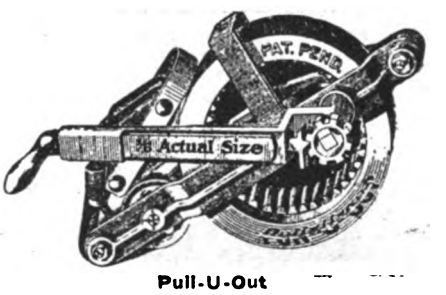
Hoosier Sub-Carbureter

HOOSIER SUB-CARBURETER



A device for applying heat from the exhaust pipe to a point between the carbureter and the manifold, or in the manifold, according to the car it is installed on. Price $10 for Fords, $11 for other 4-cylinder cars. $12 for 6-cylinder cars, and $14 for 8 and 12-cylinder cars. Sold on a 30-day free trial plan.—Hoosier Sub-Carbureter Co., Indianapolis.

CONTROLLITE LENS



A headlight lens designed to make light beam intersect highway 20 ft. from the car and light an area 40 ft. wide, 30 ft. from the car. As the distance increases the light rays converge, concentrating the light for distance. The entire light beam is deflected. Furnished 8 to 8¾ in. diameter $3.50 per pair, 9 to 9¾ in. $4, 10 to 10¾ in. $4.50.—Super-Lighting Co., 1834 Broadway, New York City.

KING SAFETY TAIL LIGHT

A combined searchlight and tail light. By pressing a button, the white light is switched on and throws light 50 ft. in back of car and to the sides. Searchlight is 4 in. in diameter and red light is 2 in. Three windows at base of lamp illuminate license plate. Light, compact, black enameled and furnished with two bulbs, necessary connections, bracket and switch.—King-Bull Mfg. Co., Chicago.

King Safety Tail Light

Pull-U-Out

PULL-U-OUT

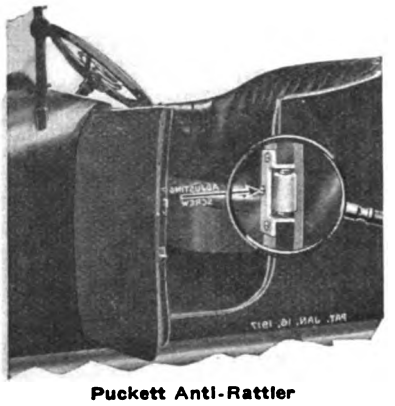
This is for pulling cars out of mud, lifting, hoisting, etc. Forty feet of steel rope, a pulley and two 7-ft. light-weight chains complete the device. Three light-weight steel stakes, T-braced and notched at the top to engage the chains are furnished with the equipment.—Price $20.—Pull-U-Out Sales Co., 2018 Market St., St. Louis.

COLLAPSIBLE BASIN

A collapsible basin or pan made of a single piece of canvas without seams suspended from a wire frame with reversible handles. Size is 11 x 13 x 4½ in. and when collapsed is only ½ in. thick. Retail price $1, dealer price 80 cents, jobber price 60 cents.—Nelson Bacon Mfg. Co., Oshkosh, Wis.

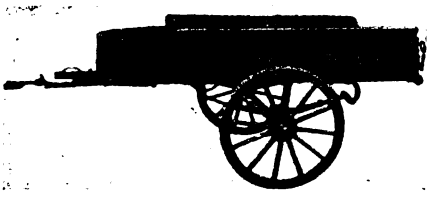
Digitized by Google

GUIDE MINIATURE WINDSHIELD LAMP



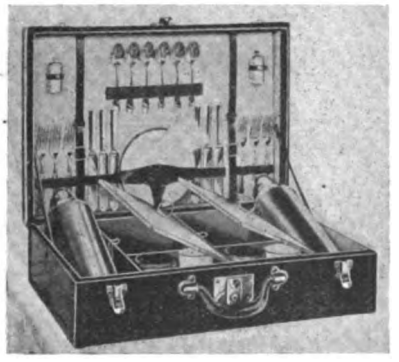
Small lamp with clear semaphore lens, outside diameter 2 in. Weight ¾ lb., and can be attached to either Ford or truck windshield frames by two bolts now on the frame. Operated on two dry cells and can be used as signal lamp or to take the place of oil lamp. Price $2 per pair, complete, with bulb.—Guide Motor Lamp Mfg. Co., Cleveland.

PUCKETT DOOR ANTI-RATTLER



A device to be let into door jamb to prevent rattling and consisting of a rubber roller contained in a small frame with adjusting screw. Price 50 cents, packed in a box, twelve boxes in a display carton.—Western Auto Specialty Co., Iowa City, Ia.

BEHLEN TOURING TRAILER



A two-wheel touring trailer, enabling close connection to the motor car, equipped with Behlen Quick-Hitch Universal Draw Bar.

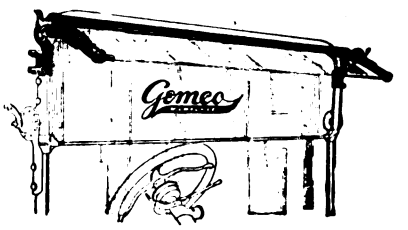
Puckett Anti-Rattler

Behlan Touring Trailer

Knickerbocker Luncheon Suitcase

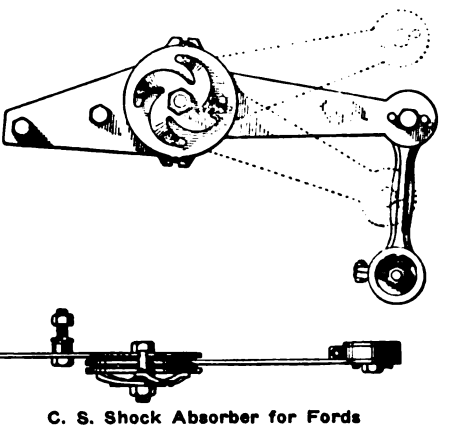
absorbing shocks and making trailer track with towing vehicle. Axles are 1¼ in., ball bearing, artillery type wheels fitted with 1¼ in. solid rubber tires. Springs are semi-elliptic, five leaf, 1¾ in. wide. Body is flare board, 84 x 42 in. Capacity 800 lbs. Price $150.—Charles Behlen Sons Co., Vine and Fifteen Streets, Cincinnati.

KNICKERBOCKER LUNCHEON SUITCASE



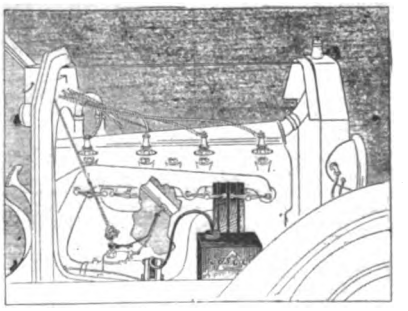
A combined luncheon suitcase in which the entire equipment can be taken out and the case used as an ordinary suitcase. Straps are provided for holding shirts, waists, etc., when so used. Sizes from 9 x 4½ x 15 in. to 28 x 11 x 18 in., furnished either empty or with cutlery, dishes, food boxes, etc., at prices from $3 to $40.—Knickerbocker Case Co., Fulton and Clinton Streets, Chicago.

GEMCO VISORS FOR FORDS



An adjustable visor with a ratchet for quick adjustment to any angle. Made of plate glass with black enamel frame. Model for sedan sells for $10 and one for touring car, attaching to stanchion, sells for $10.50.—Gemco Mfg. Co., Milwaukee.

C. S. SHOCK ABSORBER FOR FORDS



A friction-type shock absorber with adjustable tension for Ford cars. Has a single arm, uses woven asbestos between friction members, is stamped from steel and fastens directly to frame of car. Easily attached and fits all Ford models. Retail price $16 per set of four. Dealer's price $12.—Canton Specialty Co., Canton, Ill.

Gemco Visor for Fords

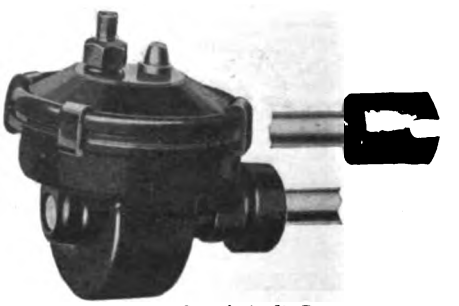
C. S. Shock Absorber for Fords

Gas-E-Co Economizer

GAS-E-CO ECONOMIZER

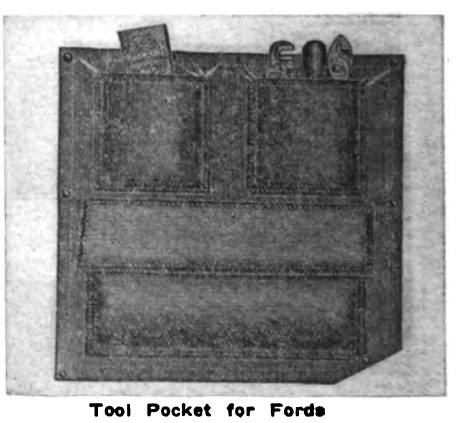
A vaporizer, decarbonizer and automatic needle valve control for Fords. The vaporizer is an auxiliary mixing chamber placed between the carbureter flange and the manifold flange, which automatically adjusts itself to the speed of the engine to completely vaporize the gasoline. The decarbonizer is a tank automatically supplying the engine with moisture by drawing it from the tank through a tube to the intake manifold. The needle valve control connects the gas lever on the steering wheel with the needle valve and reduces the consumption of gasoline in proportion to the demands of the engine.—Gasoline Economy Co., Colonial Trust Building, Philadelphia.

TAYLOR MODEL G CRANKSHAFT TIRE PUMP



A tire pump operated by the engine crankshaft through a coupling slotted to surround the starting-handle pins. Held in position by a bearing at the crankhandle hole and supported by a spring grip which fastens to the cross member of the frame. Price $7.15 in the East, $7.65 West of the Rockies.—Taylor Mfg. Co., Redford, Mich.

TOOL POCKET FOR FORDS



A pocket to fasten to the left front door of the Ford to carry tool bag, tools, maps, etc. Of heavy material and matches other trimmings on the Ford. Fastens with snap buttons or tacks. Price $1.20 with tacks, $1.50 with buttons.—Hodes-Zink Mfg. Co., Fremont, Ohio.

HANDY TOOL CABINET

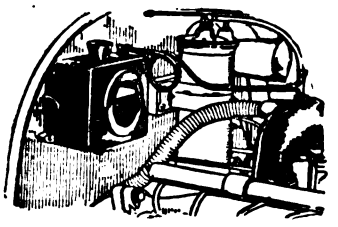
A three drawer wooden tool cabinet, the drawers of which can be sub-divided by wood

Taylor Crankshaft Pump

Tool Pocket for Fords

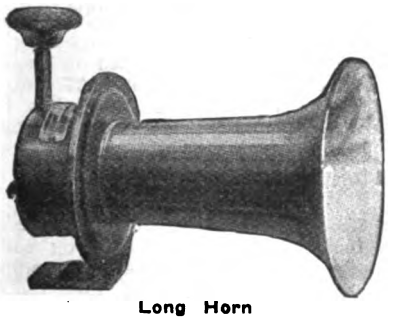
Stevens Handy Tool Cabinet

divisions, making spaces of different sizes. Drawers, 2½ x 12 x 18 in., lined with galvanized sheet steel, each drawer provided with two pulls and a card holder. Price $5.—Stevens & Co., 375 Broadway, New York City.



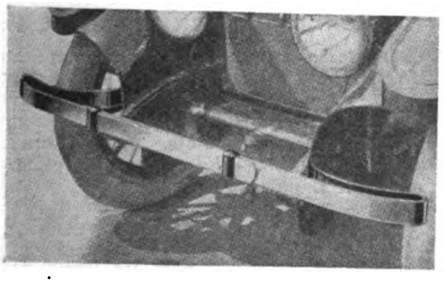
NOBLE'S ENAMEL RENEWER

A cleaner for bodies that have been made dull by washing or exposure to the elements. Contains no inflammable material. Price $1.25 per quart.—Noble Piano Co., 971 Woodward Avenue, Detroit.



Digitized by Google

ESTA WATER AUXILIATOR



A device for removing carbon from the cylinders by introducing water into the combustion chamber continuously while the engine is running. It consists of a polished aluminum tank, in the top of which is a tunnel-shaped filling-tube which extends down to within a short distance of the bottom, and fitted at its lower end with an annular opening. A flexible copper tube leads from an upper corner of the tank to a hole drilled and tapped in the inlet manifold. When the engine is running, the partial vacuum in the manifold draws air down the filling tube in the form of minute bubbles through the annular opening at its lower end, up through the water and on through the tube to the manifold. Price $15 in the East and $16.50 in Colorado and west thereof.—Esta Co., 103-107 Massachusetts Ave., Boston.

Esta Water Auxiliator

Long Horn

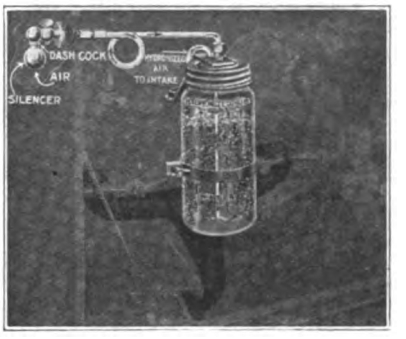
Lyon Resilient Bumper

Crowe Fan Belt for Fords

LONG HORN

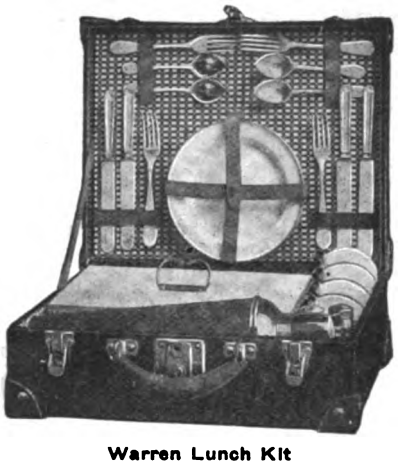
A hand-actuated horn with hardened gears, ball and roller bearings and seamless projector and housing, finished in black and nickel, black and brass, or all black. Length 9 in., diameter 5½ in., price $5.—Edward A. Cassidy Co., Inc., Madison Avenue and Fortieth Street, New York.

LYON RESILIENT BUMPER



A resilient or spring bumper for attachment to front or rear. Made in sizes for large and medium cars, and special models for Fords, Saxons and Chevrolet four-ninety, and in either black enamel finish with nickel clips or nickel finish with black clips. Prices range from $8.75 to $14.50, depending on size and finish.—Metal Stamping Co., Long Island City, N. Y.

FRIESTEDT HYDRONIZER



A device for supplying the combustion chamber with a supply of water vapor taken from a jar by means of vacuum. The device is mounted on the exhaust manifold and the vacuum in the intake pipe draws air from the dashcock through the water in the jar. Price $9.—Friestedt Mfg. Co., 2934-2938 West Lake St., Chicago.

LUNCH KITS

Lunch kits in the shape of a suit case so arranged that everything has a place and fits compactly. No. 1725 is fitted for six persons, with knives, forks, spoons, cups, plates, salt and pepper shaker, 16-oz. glass jar, large metal food box with two compartments and space for two 1-qt. vacuum bottles. Size is 21¼ x 15 x 6 in. and is black enamel covered, waterproof, and has washable cover lining. No. 1723 is fitted for four persons and has the same equipment in reduced amount as the first model. Size 15¾ x 12½ x 5½ in. Prices are about $15 and $12 respectively.—Warren Leather Goods Co., Worcester, Mass.

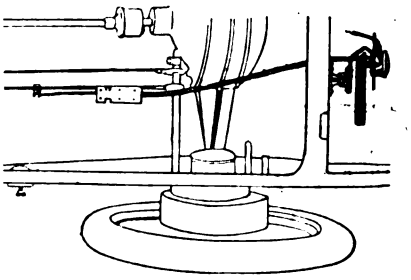
Friestedt Hydronizer

Warren Lunch Kit

CROWE FAN BELTS FOR FORDS

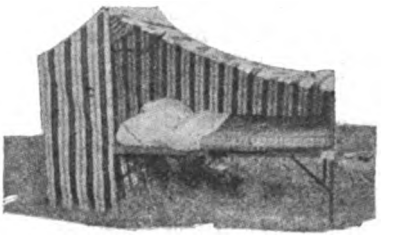
A fan belt for Fords consisting of a steel chain into which blocks of oak-tanned sole leather are firmly embedded. There are three parts to each length so that by sliding out any leather section, the chain opens and is closed when the section is replaced. No metal touches the pulleys. Price $1.25.—Mechanical Belt Co., St. Joseph, Mo.

LIBERTY PLANE



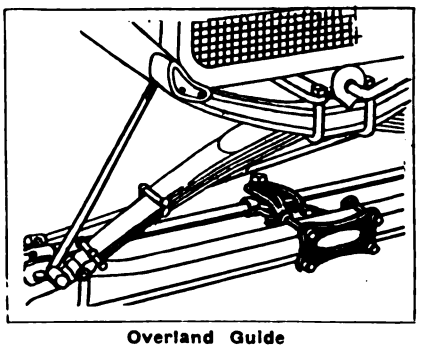
A radiator ornament which is a miniature airplane of cast aluminum, polished and decorated with the flying emblem in red, white and blue. Device is weather-proof and a breeze revolves the fan on the front. Price $1.—Defender Auto Lock Co., Marquette Building, Detroit.

COMER AUTO-STOP SIGNAL



A rear signal device combined with a license number bracket and tail-light so arranged that a signal arm with the word "Stop" rises from a hidden position automatically when the brake pedal is depressed. Connection is made by a flexible cable between the arm of the signal and the brake rod. The signal is illuminated at night when the arm is raised.—Auto Signal Co., Sullivan, Ill.

AUTO-HOME-CAMP-BED



A combined camping bed and tent which can be used as dressing room or for any other purpose desired. The bed is full sized double with Sagless wire springs, oak frame, steel reinforced aluminum joints and the tent is fine woven striped awning. Price $50.—F. G. Musso, San Jose, Cal.

Comer Traffic Signal

Auto-Home-Camp Bed

Overland Guide

OVERLAND GUIDE

A device to assist steering Fords, which clamps around the front axle and has a pivoted arm the end of which clamps on the tie rod. This arm is maintained in a position at right angles to the axle by a spring so that when the wheels are turned one way or the other the tie rod pulls the arm against the spring, which tends to pull the tie rod back to a position where the wheels are pointed straight ahead. Weighs less than 4 lb. and is lubricated by an oil bath, and spring is packed in hard grease and completely inclosed. Price $8.50.—Meixell Co., Merchants Bank Building, Indianapolis.

WOODWORTH RADIATOR CEMENT

A liquid cement to be poured in radiator. Also prevents rust and scale; price 50 cents per can; 40 per cent dealer's discount in one dozen lots.—Woodworth Mfg. Co., Niagara Falls.

Digitized by Google

HILL-SMITH MINUTE DEMOUNTABLE WHEEL

A demountable artillery wood wheel for Ford cars which is changed by removing one nut. Outfit consists of extra wheel interchangeable with any Ford wheel, four hubs, hub wrench and one extra flange. Price $30. (Denver and West $35.).—Hill-Smith Metal Goods Co., 82 Brookline Avenue, Boston.

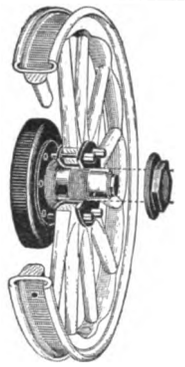
LAZCO SPRING LUBRICATOR

An adjustable spring lubricator that can be fitted to any spring. The side pieces telescope to allow variation of height and they are connected by adjustable bolts for varying width. Lubrication of the spring is by wick action and requires little attention. Set of four for Ford cars sells for $2 and set of 10 for all other cars sells for $5.—Lazarus Mfg. Co., 750-800 Prospect Avenue, Cleveland.

AIR-FRICTION SPARK PLUGS

Constructed with specially made porcelain which is not easily broken, and which resists soot and fouling. Made in ½ in., S.A.E. and metric sizes and in various lengths. Price $1 each, 5 for $3, or 7 for $4.20.—Air-Friction Carburetor Co., Dayton, Ohio.

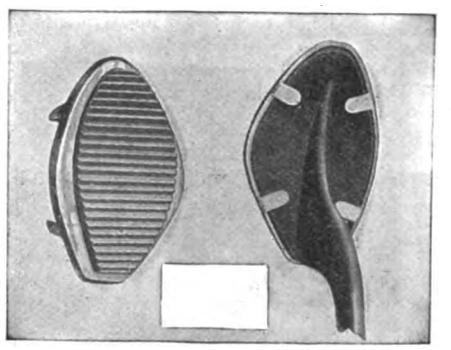
BRUNNER AIR COMPRESSOR OUTFIT



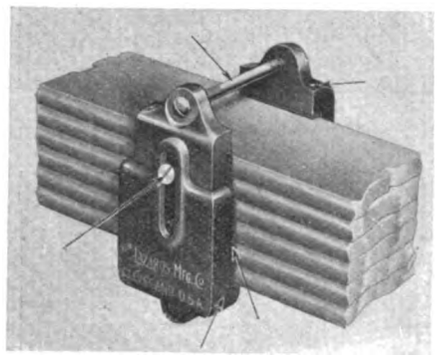
A motor-driven air compressor unit consisting of 32-gal. welded steel tank on saddles with No. 42 Brunner motor-driven air compressor, consisting of two-cylinder air compressor operating at speed of 350 r.p.m., producing 2½ cu. ft. of free air per minute and pressure up to 150 lbs. Compressor is connected by means of pinion and gear to ½ hp. motor. Equipment includes 25 ft. of Brunner "Resistoil" air hose with swivel hose connection and automatic air chuck. Shipping weight 415 lb., length 36 in., width 18 in. and height 34 in. Price $195 for direct-current motor, $210 with alternating-current 60-cycle motor.—Brunner Mfg. Co., Utica, N. Y.

WONDER MINUTE GREASE AND OIL GUN

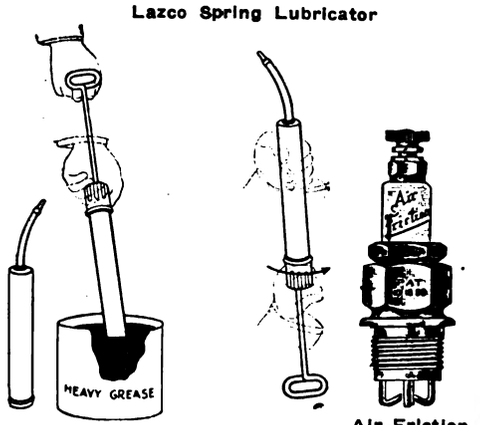
A grease and oil gun made of two steel tubes telescoping into each other and secured by a tapered grip which locks the shell to the container with a single motion. Grease is loaded in the barrel without use of paddles. Cylinders are 1¼ and 1⅜ in. heavy gage steel and piston provided with two-way chemically treated cup leathers. Spout is ⅛-in. tubing fitted with reducer for oil. Finish in nickel. Capacity 8 oz., weight 1½ lb., price $2.50.—Sidel-Rattner Mfg. Co., 31-35 Broadway, Brooklyn, N. Y.



Ajax Touring Refrigerator

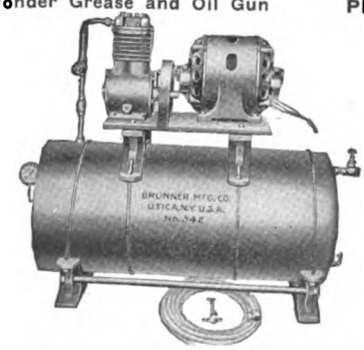


Hill-Smith Demountable Wheel



Auburn Plug

Perfection Pedal Pads



Lazco Spring Lubricator

Wonder Grease and Oil Gun

Air-Friction Plug

Brunner Air Compressor

AUBURN SPARK PLUGS

A plug made in all sizes and threads with heavy central electrode. Porcelain plugs 75 cents and $1 and mica plugs $1 and $1.25.—New York Mica & Mfg. Co., Auburn, N. Y.

PERFECTION PEDAL PADS

Pedal pads of molded solid rubber secured in cold-rolled steel frames which are attached by metal prongs folding around the back of the pedal. Frame is nickeled and upper surface of rubber corrugated. Made in over 28 stock sizes at prices from $1 to $1.50.—Auto Pedal Pad Co., Inc., 794 Seventh Avenue, New York City.

AJAX TOURING REFRIGERATOR

A refrigerator made in trunk form which contains three compartments, two for food or bottled goods, and a threaded ice compartment to prevent leakage of water. Price $20.—Ajax Trunk & Sample Case Co., 144-150 West Eighteenth Street, New York.

WOODWORTH CARBON CLEAR

A liquid carbon remover to be dissolved in the gasoline, one teaspoonful to 5 gal. Price $1 per tube, containing sufficient to treat 250 gal. of gasoline. Dealer's discount of 40 per cent on one dozen tubes.—Woodworth Mfg. Corp., Niagara Falls.

WAXIT BODY POLISH

A liquid wax polish to clean and polish in one operation. Can be used on linoleum, leather, etc. Six ounce bottle 35 cents, 14 ounce 60 cents, quart, $1, half gallon $1.75, gallon $3.—Waxit Mfg. Co., Old Colony Building, Chicago.

WHIZ STOP LEAK

A liquid radiator cement to be placed in the cooling system, hardening on contact with the air through a leak. Half-pints 75 cents.—R. M. Hollingshead Co., Camden, N. J.

ELGIN TIRE RACK BRACKETS

Iron brackets which fit over iron pipe and form brackets to which wooden slats are attached. Any number of length of shelves can be made by varying the length of pipe and the length of the slots. Price of brackets $12 per dozen.—Elgin Motor Power Mfg. Co., Cedar Rapids, Iowa.

GOLDEN GIANT SPARK PLUG

A spark plug which gets its name from its proportions and from the fact that shell is plated with 24 karat gold. Has large blue adamant insulator, with asbestos gaskets and a "wave side" electrode, claimed to give better flame propagation. Electrodes are pure nickel.—Benford Mfg. Co., Mt. Vernon, N. Y.

Elgin Tire Rack Brackets

Golden Giant Plug

Digitized by Google

NU-EX FIRE EXTINGUISHER

A fire extinguisher which discharges the liquid Nuexolene by compressed air and will throw a stream 30 ft. The liquid is released by turning a valve. This liquid will not freeze and forms a gas blanket to smother the flames. Extinguisher is 15 in. high, weighs 10 lb. and sells for $10.—Nu-Ex Fire Appliance Co., Columbus, Ohio.

ELGIN PEERLESS PINK POLISH

A pink emulsion that will not separate and will remove dirt, dust and blemishes. Quarts $1; half gallons $1.50; gallons $2.50.—Elgin Motor Power Mfg. Co., Cedar Rapids, Iowa.

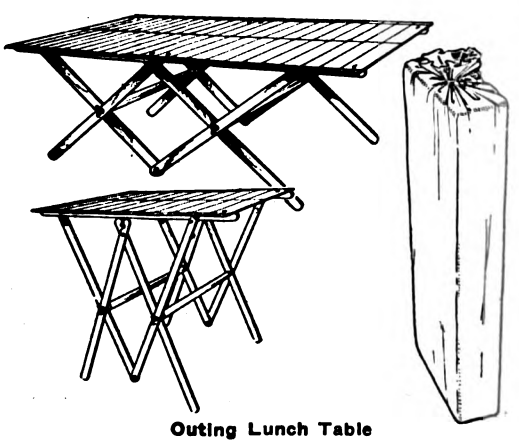
BETHLEHEM SPARK PLUG

A spark plug with porcelain insulator, heavy central electrode, the ground electrodes varying in the different models. Made in all sizes and threads and prices from 75 cents to $1.50. Spark plugs with mica insulators are also made, price $1. Any type terminal furnished on any size or style of plug.—Silvex Co., South Bethlehem, Pa.

GEMCO RAIN VISION VENTILATING WINDSHIELDS FOR FORDS

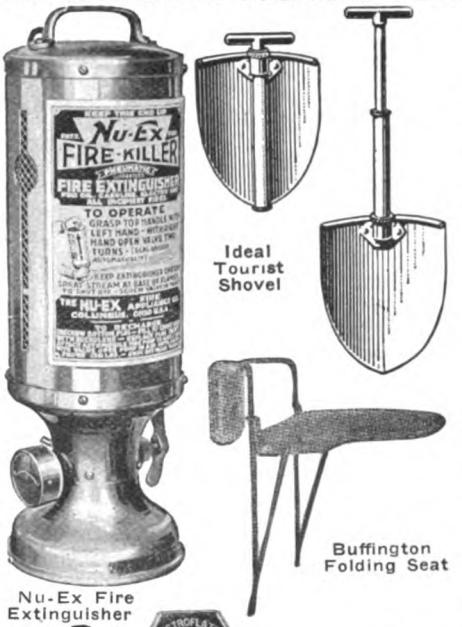
A windshield for Fords in which the upper and lower glass can be set in any position. Weight 33½ lb.—Gemco Mfg. Co., Milwaukee.

C-W BLOWOUT PATCH



A heavy flexible blowout patch or boot made from Sea Island cotton fabric containing five to eight plies, according to size. Edges are beveled and flaps are on sides to hold boot in place. Made in sizes from 3 to 5 in. at prices ranging from 50 cents to $1.50. —Cord-Wyckoff Tire & Rubber Co., 414 Douglass Street, Sioux City, Iowa.

OUTING LUNCH TABLE



A folding table 2 ft. x 4 ft. x 18 in. high that can be stowed away in a package 4 x 6 x 25 in. It can also be made into a table 2 ft. square and 25 in. high. Weighs 7 lb., made of wood and has no exposed metal parts. Price $4.—Puffer-Hubbard Mfg. Co., Minneapolis.

OXYGEN TANK TRUCK

Truck consists of a pair of wheels on short axle with a steel strap contracted on oxygen tank by bolt and wing nut. Handle is a steel strap with bolt and wing nut, and iron handles welded on. Price per set of truck and handles $6.50.—Auto Repair and Storage Battery Works, 41 Union Street, Portland, Me.

Outing Lunch Table

Nu-Ex Fire Extinguisher

Ideal Tourist Shovel

Buffington Folding Seat

Bethlehem Plug

Garage Lectroflater

Gemco Windshield for Fords

Oxygen Tank Truck

IDEAL TOURIST SHOVEL

All steel telescoping shovel with nickel finish. Telescope is in two parts so that full length, or half length can be used or it can be folded up altogether. Blade is 6¾ x 8½ in., length of handle 16 in., weight 2 lb. Retail price $2.50, dealers' price $1.50.—Ideal Mfg. Co., Kansas City, Mo.

NOBLE'S MOHAIR TOP DRESSING

A stain for faded mohair tops containing no inflammable material. Price $1.25 per quart.—Noble Piano Co., 971 Woodward Avenue, Detroit.

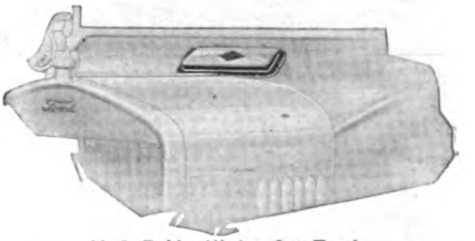
BUFFINGTON FOLDING SEAT

A folding seat held in position by hanging it over the door and which can be folded and carried on the door or laid on the floor of the car. The side which comes against the outside of door is upholstered and the top of frame is wrapped with leather. Metal parts are ⅜-in. polished steel, japan finish, and seats are three-ply veneer ½ in. thick, 11 x 11 in., upholstered with imitation black leather.—C. A. Buffington & Co., Berkshire, N. Y.

ELGIN MAGIC RUBBER BACK PATCH

Patching material put up in sections containing 48 sq. in. which can be cut to proper size and cured to tube with gasoline and cement. Put up in cans. Price 75 cents.—Elgin Motor Power Mfg. Co., Cedar Rapids, Iowa.

NO. 2 GARAGE LECTROFLATER



An electric motor driven air compressor mounted on three-wheel carriage for public garage use. Has a capacity of 1¾ cu. ft. free air per minute, maximum pressure of 150 lbs., bore 1¾ in., stroke 2 in., requires 400 watts and 100 lbs., and weighs 70 lbs. Furnished with 20 ft. hose and 15 ft. electric cord. Price $110 for 110 volt, $114 for 32 and 220 volt.—Black & Decker Mfg. Co., 109-115 S. Calvert St., Baltimore.

H & D VENTILATOR FOR FORD CARS

A hinged ventilator to be inserted in the Ford cowl. Vent can be opened to any one of eight positions. Size of opening is 8½ x 3¼ in. Price $2.50.—H & D Co., Goodland, Ind.

GRINNELL STYLE 4446 DRIVING GAUNTLETS

Driving gaunlets of velvet coltskin either with or without ventilated feature. Also made in khaki, gray or black horsehide. Price $5.—Morrison-Ricker Mfg. Co., Grinnell, Iowa.

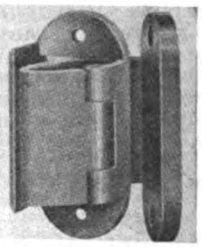
Detroit Engine-Driven Pump



House Wire Wheels for Fords

Shurnuff Manifold for Fords

B-W Ammeter

Hubbard Concealed Hinge

DETROIT ENGINE-DRIVEN TIRE PUMP

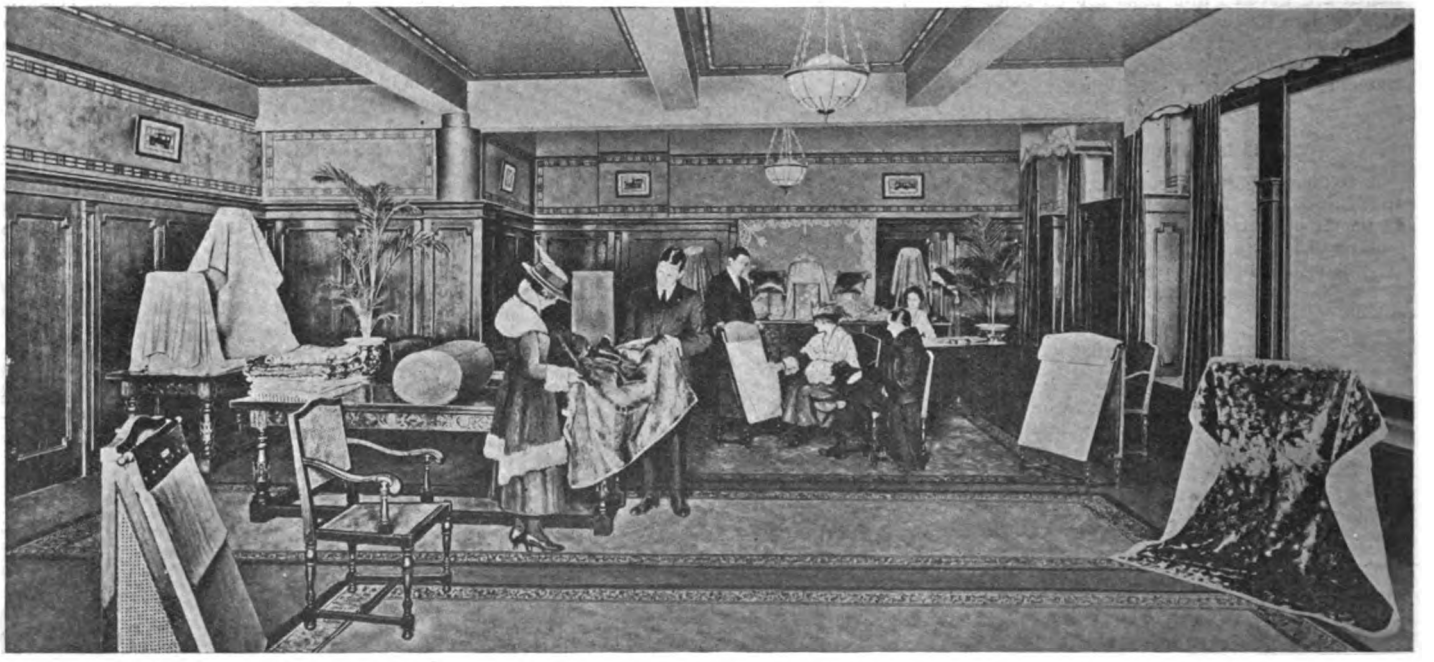
A detachable engine-driven tire pump which attaches to engine crankshaft in place of hand crank. Pump is carried in tool box, and when needed can be slipped in place and locked with thumb screw in half a minute. Pistons, crankshaft and cylinder are ground to close limits and piston has double ring grooves and six special compression rings. Both inlet and outlet valves are in the head and easily accessible. Lubrication is by hard graphite grease in the crankcase. Furnished complete with 14 ft. steam type rubber hose. Price $12.—Detroit Accessories Corp., Detroit.

HOUSE TYPE WIRE WHEELS FOR FORDS

Quick change wire wheels for Fords, a set consisting of five wheels, four inner hubs, hub caps and all necessary equipment for installation. Dust cover for spare wheel, hub-cap wrench and spoke-nipple wrench are also furnished. A mechanical locking latch locks the hub-cap to the inner hub, the latch releasing when the wrench is applied to the hub, and automatically locking again when the wrench is removed. May be had in black, white or red enamel. Price $60.—Wire Wheel Corp. of America, 1700 Elmwood Avenue, Buffalo.

SHURNUFF MANIFOLD FOR FORDS

A combined intake and exhaust manifold for Fords in which the two manifolds are in one casting to allow the exhaust to pass over the intake. Attached in less than an hour without machine work. Complete with all necessary gaskets, packed in wooden box, $9.—Shurnuff Mfg. Co., St. Louis.



B-W DIRECT-CURRENT AMMETERS

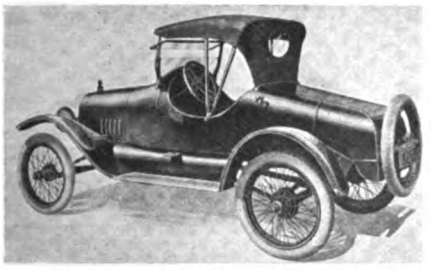
Made in flush type bright nickel finish or surface type black rubberoid finish. Cases of drawn brass, the glass being held in place with special cement. Flush type meter will mount in a 2-in. hole. Furnished in 10-0-10, 15-0-15, 20-0-20 and 30-0-30 scales. Price of all models $1.90.—Ballman-Whitten Mfg. Co., 4440 Olive St., St. Louis.

HUBBARD CONCEALED HINGE

A concealed door hinge made of two parts and a pin, the female portion going on the jam and having an oblong slot and extensions forming the pin barrel. The male portion has a long tongue which is bent around inside the oblong slot in the female part, the end of the tongue forming the balance of the pin barrel.—Smith & Hubbard, Ashtabula, Ohio.

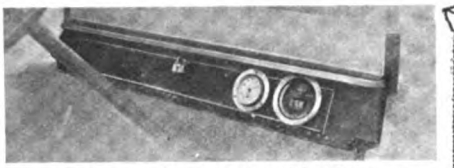
How to Touch the Fashionable Woman's Bankroll

The Laidlaw Co., New York, a maker of automobile upholstery and interior fittings, realizes a good percentage of its profits every year by appealing to the fashionable tastes of women, and is endeavoring to extend the use of the ideas



On the second floor of the Laidlaw building, all of which is occupied by this company, is a room about 30 x 50, in which automobile upholstery and fittings are displayed. The room is fitted up with rugs and appropriate furniture, as is shown in the accompanying illustration. The room is panelled in mahogany and the furniture is mahogany.

If a woman comes in and says she wishes a car finished in blue a sample of the color of the car is laid upon an easel such as is shown in the foreground, and the various samples are matched against the color of the car until she finds exactly the color she wishes.



Oftentimes a woman wishes a car trimmed to harmonize with her clothes. In that case she is surrounded with upholstery and fittings of the colors that match her dress and she is enabled to discriminate until she finds just exactly what she wants. This appeal to feminine taste has done a great deal to build up the Laidlaw business to its present large proportions.

On account of the war many owners are having their cars reupholstered and refinished instead of buying new cars. This opens up a large field for new kind of work, and the Laidlaw company is working out a plan for co-operating with dealers. Samples of upholstery are supplied in book form to dealers, they are shown how to utilize these in making the color of the car and the color of the upholstery harmonize to fit the taste of the women.

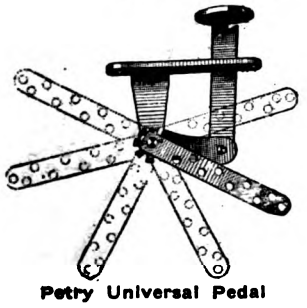
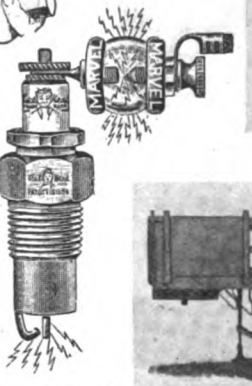
Arrow Grip Chain



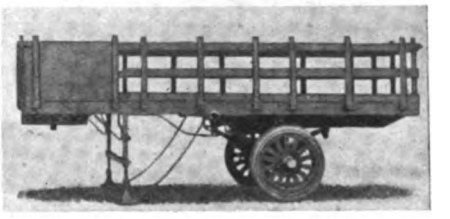
Warner Trailer

Berry Rim Expander

Stewart Lens



Petry Universal Pedal



Berry Crank Holder

Crank Release for Ford

Marvel Spark Intensifier

Fruehauf Semi-Trailer

FRUEHAUF SEMI-TRAILERS

Semi-trailers built in 4, 6, 8 and 10-ton capacity. All bearings are Timken, wheels are of artillery type fitted with solid tires, semi-elliptic springs and bodies of different styles for different purposes. Martin-Rocking fifth wheel is used and Fruehauf trailer jack supports front end of trailer when tractor or truck is not supporting it.—Fruehauf Trailer Co., Detroit.

BERRY CRANK HOLDER

A bar with ends bent and drilled to fit under nuts of radiator bolts. License plate holders are attached to bar and a V-shaped loop held by a spring holds the crank in vertical position. Easily attached without machine work.—Berry's Garage, Gray, Maine.

ARROW GRIP CHAINS

Tire chains for trucks having cross chains of welded steel which go around the tire to hooks on each side of a clamp which is bolted around every other spoke. The clamps are lined to protect the spokes and a hinged catch drops down between the end links of the chain, preventing the chains from becoming detached. Chains can be attached or detached without jacking up wheels. The grip remains permanently attached to the spokes.—Arrow Grip Mfg. Corp., Inc., Glens Falls, N. Y.

LAMCO BODIES FOR FORDS

Sport model bodies for Fords in two-passenger style with long sloping rear deck and stream line hood. The body disguises the original car completely with the exception of the axles, radiator gills and crank handle. Made of 20-gage steel on wood frames, upholstered in artificial leather, deep, soft removable cushions and linoleum covered floor boards. Top is one man type mohair with side curtains, windshield, two-piece ventilating, full rain vision type, hard rubber and nickel finish. Prices $95 to $165, depending on completeness of equipment.—Lehman Mfg. Co., Cannelton, Ind.

WARNER TOURIST TRAILER

A two-wheeled pneumatic tired trailer, containing complete camping equipment which includes 7 x 14 ft. 10 ounce double filled army duck tent, two double folding Pullman beds with springs and mattresses, mahogany finished folding table, folding camp grid, ice chest, water-proof cover, etc. Trailer has roller bearing wheels, ball and socket hitch connection. Made in two models, T-40, 1500 lb. capacity, $235, and model T-41, capacity 2500 lb., $325.—Warner Mfg. Co., Beloit, Wis.

BERRY DEMOUNTABLE RIM EXPANDER

A demountable rim expander and contractor consisting of two bars and a split bar with turnbuckle forming a triangle to fit inside rim. Hooks attaching to expander pull the rim to contract it and a chisel point expands the rim. Folds compactly for carrying and weighs 6¾ lb. Price $5.—Berry's Garage, Gray, Maine.

CUTLER SERVICE BOARD AND LOCKER FOR FORDS

A combined service board and tool locker to go in the cowl dash of the Ford. Can be attached or detached in a moment as it hangs on the two rear bolt nuts of the door and is held in place by strong, steel springs. Door or locker can be removed without interfering with the electric system. Price $6.50 to $20, depending on style. Also made in larger sizes for other cars.—Cutler Combination Service Board and Locker, 1722 Market Street, San Francisco.

MARVEL SPARK PLUG INTENSIFIER

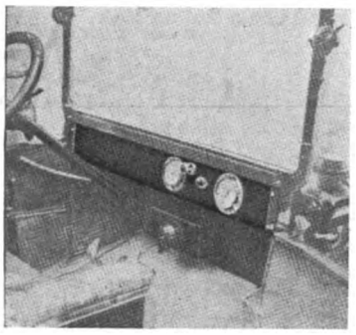
A spark gap contained in a glass globe between two terminals one of which goes on plug and the other on high tension wire. Spark is visible and gap is adjustable. Price 35 cents. A 10 by 13 in. display easel with twelve gaps mounted is supplied to jobbers and dealers.—William Simpson, 603 Insurance Exchange Bldg., Chicago.

SUPPLEMENTAL BASE FOR LANE'S JACK

A supplemental base to increase the area of a jack base when using it in soft ground. To attach for use, jack is placed in position on the supplemental base and clamped by turning a button. Made in one size for Lane jacks only. Price 50 cents.—Lane Brothers Co., Poughkeepsie, N. Y.

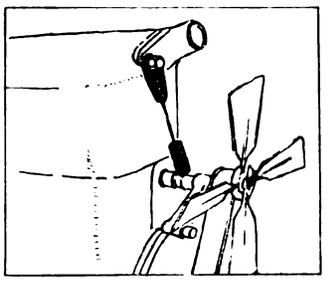
STEWART LENS

A glass diffusing lens of open end bell shape, surrounding the bulb so that one size fits all headlamps; designed to throw light to the sides of the road without glare. Easily installed, price $2 per pair—Stewart-Warner Speedometer Corp., 1826-52 Diversey Blvd., Chicago.



PETRY UNIVERSAL PEDAL

A universal pedal for muffler cutouts, accelerators, exhaust whistles, heater valves, etc. Can be used either to pull or push Made of high grade steel, gun barrel finish. Price 75 cents.—N. A. Petry Co., Inc., 1307 Race Street, Philadelphia.



CRANK RELEASE FOR FORDS

A crank release for Ford cars consisting of a ratchet on the crank handle and a pawl attached to the front engine bearing, this pawl engaging with the gear and disengaging the crank if there is any backward movement. Price $5.—Alta Co., 417 Market Street, San Francisco.

Stewart Speedometer

PETRY VENTILATOR FOR FORDS

A cowl ventilator with shutters which can be opened or closed from the driver's seat. Rain-proof, dust-proof, throws air on the floor and does not rattle. Price $3.—N. A. Petry Co., Inc., 1307 Race St., Philadelphia.

SWAN FAN BELT ADJUSTER

A coil spring and convenient fixture connecting the fan bracket to a stationary part of the engine so that the fan pulley is held up by the spring tension to keep the belt tight. Price 35 cents.—Mechanical Belt Co., St. Joseph, Mo.

UNIVERSAL EXTENSION PEDAL

An extension pedal for clutch and brake which is attached with a sliding clamp. Fits all makes of pedals and sells for $4 per set of two or $5 if fitted with rubber cushion. —Rich Mfg. Co., 1777 Broadway, New York City.

STEWART SPEEDOMETERS

Speedometers of magnetic type with season register and a tripodometer which can be easily reset without changing season record. Warner autometer from $50 to $200, and Stewart speedometers $10.75 to $25. Ford model $10.75.—Stewart-Warner Speedometer Corp., 1826-52 Diversey Blvd., Chicago.

W-A DELIVERY BODIES FOR FORDS

A delivery body replacing the rear deck on Ford roadster. Of flare-board type, 52 in. long, 34 in. wide, 10 in. sides and 6 in. flare-boards. Has four inside braces and two outside braces. . Drop-end gate is edge ironed heavily and has full length hinge. Finished in black varnish and furnished with bolts for attaching, $15.—J. W. Whetstone Co., Lapeer, Mich.

PULLMAN DINER LUNCHEON CASE

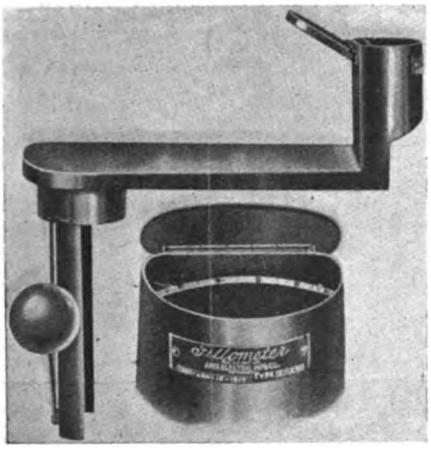
A combined luncheon case and table, sizes from 9 x 4½ x 15 in. to 28 x 11 x 18 in., furnished either empty or with dishes, cutlery, food boxes, etc., at prices from $3 to $40.—Knickerbocker Case Co., Fulton and Clinton Streets, Chicago.

COOPER SPECIAL MUFFLER CUT-OUT

A cut-out with each half of valve ground to a gas-tight fit and with pipe opening reamed to pipe size and halves clamped together with lockwashered bolts. Flapper valve seat is machined flat to fit valve, and strong flexible spring holds valve in its seat. Flapper valve is placed in an inclined position in the exhaust pipe, shutting off the gas from the muffler and deflecting it downward through an opening more than twice the area of the exhaust pipe. When not in operation, the ground valve prevents any gas going through this opening. Made in sizes for pipe 1½ to 2½ in., prices $2.25 to $3.75 for valve only, or $2.50 to $4.50 with pedals, which are of two styles.—Cooper Mfg. Co., Marshalltown, Iowa.

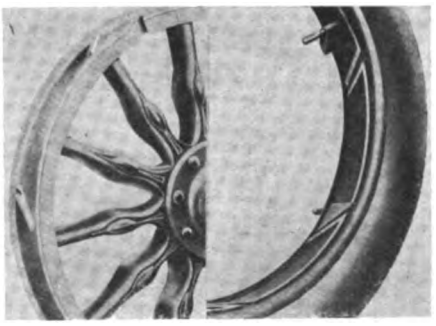
W-A INSTRUMENT BOARD FOR FORDS

An instrument board for Fords with good center covered with imitation leather and with two metal brackets to attach. Brackets fit under nuts on windshield bracket. Also furnished in mahogany without leather. Price $1.50.—J. H. Whetstone Co., Lapeer, Mich.



PETRY CUTOUT

A cutout in which the valve completely cuts off the muffler pipe when the cutout is being used and the shape of the orifice accentuates the explosions. Has a flexible spring, big leverage and large vent. Control lever can be placed in any of seven positions on valve shaft. Made in sizes for exhaust pipes with outside diameters of 1½ to 3¼ in., at prices from $4 to $6. Model for Ford car complete with chain and pedal $4. N. A. Petry Co., 1307 Race St., Philadelphia.



EVERGOOD WINDSHIELD MIRRORS

Windshield mirrors made in round diminishing type 90 cents to $2, French round beveled type $1.80 to $2, oval $2 to $2.20, and rectangular $2 to $2.20. Also made in DeLuxe model, price $5.—Emil Grossman Mfg. Corp., Brooklyn, N. Y.

Vesta Sidelamps

FILLOMETER FOR FORDS

A combined extension filler for gasoline tank and gasoline gage. The filler is flat and extends out under the cushion so that tank can be filled without raising cushion. A cork gage in the tank indicates in the extended filler opening the contents of the tank. Made of rust-proofed steel, price $2.25. —Apex Electric Mfg. Co., 1410 West Fifty-ninth Street, Chicago.

EDSTROM DEMOUNTABLE RIM

A demountable rim in which the tire rim has diagonal grooves and the wheel has diagonal tongues to fit these grooves, being locked in place by two set screws which are not removed but only loosened to remove the rim.—Edstrom Rapid Demountable Rim Co., 767-768 Phelan Bldg., San Francisco.

WARNER LENS

A headlight lens to remove glare and diffuse light to both sides of the road and well ahead of car. Price $3.50 to $5 per pair, according to size.—Warner Lens Co., 914 So. Michigan Ave., Chicago.

MANLEY GENERAL UTILITY CRANE

A crane which by slight adjustment of its members can be used as a wrecking crane, portable floor crane, and a general purpose winch. There are four parts, the saddle and anchor piece with two side braces, the crane beam with complete hoist mechanism and chain, top extension assembly and base. As a floor crane, base length is 66 in., width 36 in., height of lift 7 ft., weight 465 lb. As a wrecking crane, length 78 in., anchor piece in saddle foot 36 in., weight 355 lb. List prices range from $74 to $135 depending on lift; dealers prices from $50.20 to $108.—United Engine & Mfg. Co., Hanover, Pa.

VESTA SIDE LAMPS

Lamps to provide side illumination so that the outline of the car can be told at night from the position of the lamps. The projecting opalescent bowl illuminates the side as well as to the front of the car can be fitted to curvature of the car body by sawing the tube to the correct angle. Diameter 3 in., price $5 per pair. Also made with bolt at back to fit Ford side lamp bracket, price $3 and $3.75 for semaphore or opalescent bowl.—Vesta Accumulator Co., 2100 Indiana Ave., Chicago.

R. M. S. SHOCK ABSORBER

A shock absorber of double cantilever type replacing spring shackle on Ford cars. The extended arm of the device is suspended by coiled springs. Price $8 per set of four.—Right Motor Specialties Co., 1326 Michigan Avenue, Chicago.

TRAILMOBILE TRAILERS

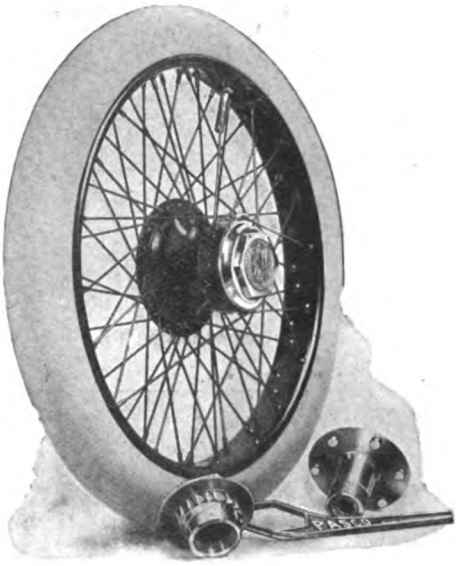
Four-wheel trailers of 1½-ton capacity with roller-bearing axles, truck type springs, steel frame with cast steel spring hangers compressed spring drawbar. Drawbar pull is taken from the axle. Artillery type wheels are fitted with solid rubber tires.—Trailmobile Co., 538-550 E. Fifth St., Cincinnati.

McMILLAN BED

A spring bed for camping which is placed over the backs of seats and provides room for two persons. Weighs 13 lb. and rolls into a bundle 2 ft. long by 4 in. diameter. Price $10 for model to fit Fords, Chevrolet "490" and Baby Overlands, $12.50 for models to fit Dodge, Buick, Overland, Studebaker, Maywell; $15 for seven-passenger cars.—Auto Bed Co., Bellingham, Wash.

WHETSTONE CAMP TRAILER

A 1250-lb capacity trailer equipped with 10-oz. duck tent, 11 x 7 ft., accommodating four persons. Body of trailer 46 x 84 x 10 in., semi-elliptic six-plate springs, artillery wheels, 30 x 2 in., pneumatic tires. Price $155.—J. H. Whetstone & Co., Lapeer, Mich.

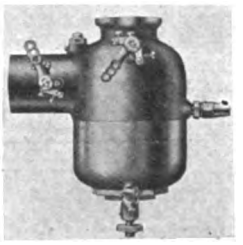


UNION TIRE CHAINS

Tire chains made in two sections so that they may be applied without the use of jacks. Have cup-shaped traction plates made of special steel that will not flatten nor break, and which fit the tire smoothly, have patented hook and are easily applied and detached. Made in sizes from 28 x 2½ to 40 x 6 in. at prices from $3.50 to $15 per pair. Extra plates ready to attach 10 to 20 cents each. Trade discount to dealers.—Union Chain Co., 112 N. Fourth Street, Minneapolis.

Digitized by Google

PASCO WIRE WHEELS



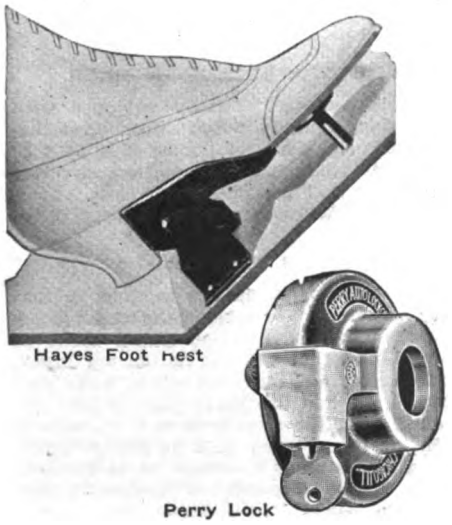
Wire wheels for Fords and other cars with spoke lacing in which each spoke crosses four others in both front and back rows. Hub caps are white metal castings and wheels are so laced that all nipple heads on the spokes come under tire beads, preventing tubes being scratched by spoke heads. Valve hole is placed where the largest air chuck can be used without interfering with spokes. A locking device prevents wheel from loosening while in motion. Wheels furnished complete with four inner hubs permanently fixed on car axles. To make change, release safety lock, unscrew hub cap, slip off wheel, put on spare wheel and replace cap. Set consists of five wheels, four inner hubs, four hub caps, dust cover for spare wheel, name plate and wrenches. With Ford wheels bearings are included. Price $75 for Ford set in black enamel, $80 in other standard colors, $100 for Maxwell set in black or white, $105 in other standard colors.—National Wheel Works, Inc., Geneva, N. Y.

Pasco Wire Wheels

KNOX MODEL F CARBURETER

A carbureter with a floating atomizing valve which operates in unison with the engine speed and automatically handles the fuel as it is passed by the metering needle. It has 20 independent jets which are swept by the full volume of incoming air. Condensed fuel when idling is returned to the bowl. There is only one moving part, and, when once adjusted, needs no attention, as altitude, weather, engine speed or load do not affect the carbureter. Sizes and prices are No. 1 (1 in.), $18; No. 2 (1¼ in.), $20; No. 3 (1½ in.), $23; No. 4 (2 in.), $33. Steering post or dash controls and warm air housings extra.—Camden-Anchor Rockland Machine Co., Camden, Me.

Knox Carbureter



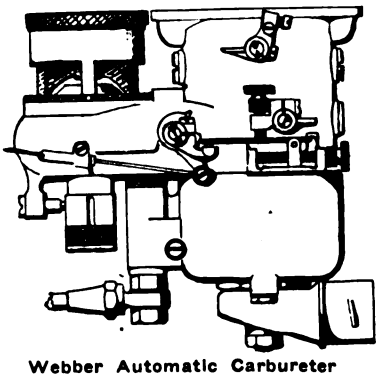
SHALER ROADLIGHTER

A prismatic headlight lens with prisms so arranged that the light is divided into three distinct beams, a long, narrow distance beam and two concentrated beams which light up the sides of the road and signs. Ford size $2.75, larger sizes $3.50. Dealers' display fixtures furnished.—C. A. Shaler Co., Waupun, Wis.

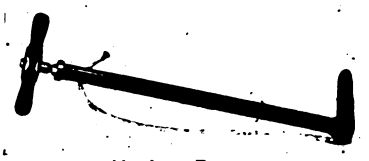
Shaler Roadlighter

HAYES FOOT REST

A two-piece accelerator foot rest with one piece bolted to floorboard and the other piece on which the driver's foot rests pivoted on the lower piece. Made in different heights for different cars, easily and quickly installed. Price $1.—Onguard Auto Necessities Co., Detroit.



Hayes Foot Rest



Perry Lock

Kant-Mis Plug

Adamson 5-Minute Vulcanizer

Webber Automatic Carbureter

Harlem Pump

PERRY LOCK STEERING WHEEL

This comprises an entire new steering wheel into which is built a lock. Wheel is 18 in. in diameter with polished aluminum spider. The central locking hub, which is keyed to the steering column, is a duplicate of the old steering wheel. When in locked position the wheel will turn freely without moving the wheels. For Fords and other cars. Price $15.—Perry Auto Lock Co., 2210-2214 South Michigan Avenue, Chicago.

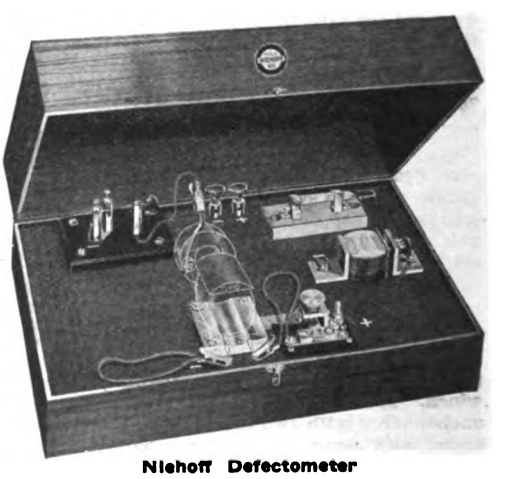
KANT-MIS SPARK PLUG

A plug with one of the electrodes a ground bar with three sparking places paralleling the wire electrode. An individual rotation of sparks is claimed for the three points, similar to an electric brush. Price $1.25.—Kant-Mis Spark Plug Co., Green Bay, Wis.

ADAMSON 5-MIN. VULCANIZER

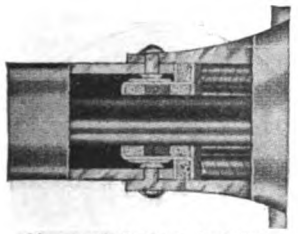
This model E outfit is a dry fuel vulcanizer for repairing tube punctures. Consists of a C-clamp which clamps the heating arrangement to the tube.—Adamson Mfg. Co., East Palestine, Ohio.

NIEHOFF DEFECTOMETER

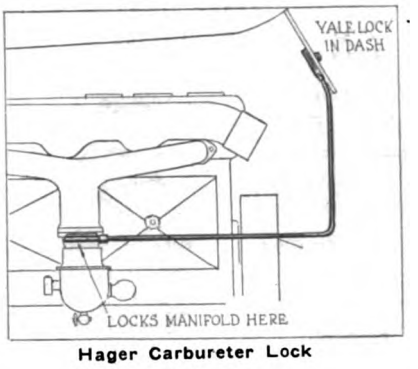


A testing device to locate magneto troubles. Can be connected with 6-volt storage battery and determines condenser, armature and collector defects. Case 15 7/16 x 10¾ x 5 in., mahogany finish, price $25.—Paul G. Niehoff & Co., 232-242 East Ohio Street, Chicago.

WEBBER AUTOMATIC CARBURETER



A carbureter with an automatic feature of supplying the engine with the most efficient ratio of gasoline and air at all engine speeds. The auxiliary air and finely divided particles of gasoline are thoroughly mingled before the mixture leaves the carbureter. A cam movement raises the fuel needle for starting, still allowing a flow of air in the venturi to pick up the gasoline and carry it to the cylinders. This starting cam is controlled from the dash. Sizes and prices are: 1-in., $25; 1¼ in., $30; 1½ in., $35; 1¾ in., $40; 2 in., $45.—Webber Mfg. Co., 66-68 Stanhope Street, Boston.



HARLEM TIRE PUMP

A single-action hand pump having a collapsible base which folds up out of the way. The tube is 1¼ x 22 in. heavy gage steel screwed into the base. Plunger rod is heavy and pump is finished in black enamel and nickel. Price $2.75.—Judd & Leland Mfg. Co., Clifton Springs, N. Y.

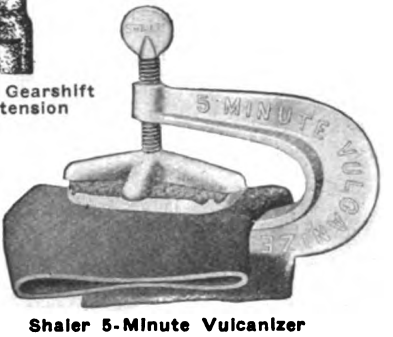
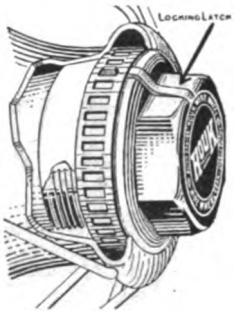
Miller 4-Cavity Vulcanizer

Gemco Service Jack

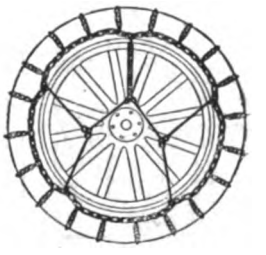


Mellin's Gearshift Entension

Houk Wire Wheels



Elgin Ford Lock



Babbitt Spring Oiler

Shaler 5-Minute Vulcanizer

Merchant's Chain Tightener

BABBITT SPRING OILER

A wick spring oiler clamped around the spring, oil being carried from the reservoir to the oiling pad by capillary attraction. Made for any make of car at from $3 to $12, according to size.—Babbitt Spring Oiler Co., 1907 East Thirteenth Street, Cleveland.

MILLER'S FOUR-CAVITY VULCANIZERS

This is a four-cavity vulcanizer, the widths of the cavities being 3, 3½, 4 and 4¾ in. across. Furnished with this outfit is a boiler, gas or gasoline burner, tube vulcanizer, bead molds and all necessary equipment. The weight complete is 800 lb. and price from $150 to $153, depending on style of burner.—Chas. E. Miller, Anderson, Ind.

HOUK QUICK CHANGE WIRE WHEELS

Quick change wire wheels with positive self-tightening hub cap with mechanical latch that locks each wheel securely. To remove the hub cap the Houk wrench is used, this pressing down the locking latch, unlocking the hub. When the wrench is removed the cap is locked automatically. A set consists of five wheels, four inner hubs, four hub caps, dust cover for spare wheel, hub-cap wrench and spoke nipple wrench. Furnished in black or other color enamel and with various kinds of rims.—Wire Wheel Corp. of America, 1700 Elmwood Avenue, Buffalo.

SHALER FIVE-MINUTE VULCANIZER

A solid fuel, portable tube vulcanizer for tubes, consisting of a C-clamp, screw and foot to hold the fuel unit and patch down on the tube. Either round or oblong patches can be vulcanized, there being patch units of both these shapes. The one-piece patch and fuel units consist of solid fuel, vulcanizing plate and patch of raw rubber, giving a fresh vulcanizing surface for each repair. Outfit consisting of vulcanizer, six each of the round and oblong patches and fuel units, sells for $1.50. Extra patches 75 cents per dozen.—C. A. Shaler Co., Waupun, Wis.

HAGER CARBURETOR LOCK

A bronze lock which operates a shutter placed between the carbureter and the intake manifold. The lock is actuated by a Yale key on the dash. Requires about an hour to install. Price $10 for Fords and $15 for all other makes.—Hager Auto Lock Co., Jewettville, N. Y.

GEMCO ONE-STROKE SERVICE JACK

A service jack which is adjusted for height by a knob on the handle, and lifts the car with one stroke. Is 8 in. wide and has lifting range from 8 to 18¼ in. Supporting arm and wheels are castings, all other parts steel. Weight 32 lb. Price $15.—Gemco Mfg. Co., Milwaukee.

MELLIN'S GEARSHIFT EXTENSION

An extension for gearshift levers consisting of a bent rod threaded at both ends and reversible. The device is heavily nickeled and is inserted between the ball top and the lever.—M. & H. Novelty Co., Los Angeles, Cal.

ELGIN FORD LOCK

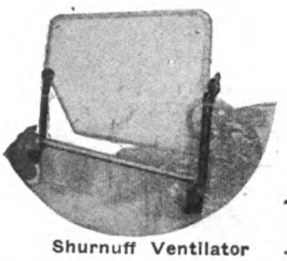
A lock to lock the spark and throttle levers on a Ford car in such a position that the spark is all the way retarded and the throttle all the way closed. Lock furnished with two keys, packed six locks in a box. Retail price $2; price to dealers $15 per dozen.—Elgin Motor Power Mfg. Co., Cedar Rapids, Iowa.

SHURNUFF GREASE RETAINER

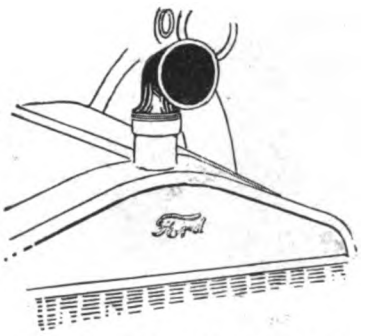
A grease retainer for Ford axles consisting of three felt washers, one rubber-asbestos washer, a cold-drawn steel cup and two retaining rings. The retainer remains stationary, the two rivets already in the axle preventing it from turning. One pair of retainers is packed in a cardboard box, and a counter display is furnished free to dealers with each dozen pair. Price per pair, 90 cents.—Shurnuff Mfg. Co., St. Louis.

MERCHANT'S TIRE CHAIN TIGHTENER

A combination of rods and springs to keep skid chains tight and prevent them from creeping around the wheel. Six small rods hook into the chain and two of them hook into the spring as shown in the illustration. The other end of the spring is attached to the chain. Price $1 per pair.—M. H. Merchant, 236-238 Emma Street, Syracuse.

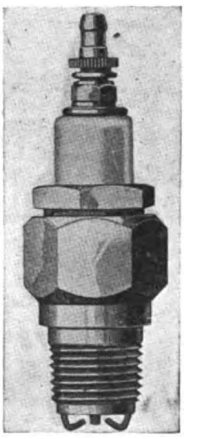


SMITH SIGNAL



A signal box which is placed on the left rear fender of car and shows from both front and rear, visible day and night. Controlled for left, right or stop by a single three-way switch attached to steering column under steering wheel. Easily attached, with no moving parts to get out of order. Buzzer indicates that signal is working. The current from dry cells or lighting system may be used. Price $17.50.—Smith Signal Corp., 53-55 West Sixty-sixth Street, New York.

PARKO CLEANER



A soap for washing the hands without water. In screw-top 1-lb. cans selling for 25 cents. Fits in a repair kit. Can also be used with water.—Parker-Rishor Sales Co., 50 South Water Street, Rochester.

Back

Vaporator Oil Cock

Jackie Tire Rest

Beardsley Valve Lifter

Diamond Signal

Shields Injector

VAPORATOR OIL COCK

A device to test the oil level of a Ford, replacing the lower petcock. It is screwed into the petcock hole and extends at right angles, there being a leather valve held on its seat by a spring. A wire extends from the valve to the side of the car, so that by pulling the wire the valve is lifted off its seat, allowing oil to drop out of a hole if the level is the correct height. Price $1 installed, 75 cents retail price.—Vaporator Mfg. Co., 2737 Washington Avenue, St. Louis.

WOODWORTH GIBRALTAR SPARK PLUG

A plug of large size for hard service with extra large porcelain made of Cornish Kaolin, made in all sizes and threads. Price $1. Also made in junior size with smaller shell and porcelain. Price 75 cents.—Woodworth Mfg. Co., Niagara Falls, N. Y.

MORE-LITE LENS

A lens for overcoming glare and at the same time diffusing light evenly over the road. Prices, 8-8½ in., $1.50; 8⅝-9½ in., $1.75; 9⅝-10¼ in., $2; 10½-11¼ in., $2.25.—L. E. Smith Glass Co., Mount Pleasant, Pa.

SHURNUFF VENTILATORS FOR FORDS

Allows the lower half of Ford windshield to swing inward by means of two black enameled uprights attaching to the hinges in the center of the present windshield. Uprights are so shaped that the sides of the shield are rain-proof. A metal and rubber strip is provided which, when fastened to the cowl, makes it rainproof at the bottom and a metal handle is attached to the lower sash so that it may be pulled backward. Counter display stand is furnished free to dealers with each half dozen. Price for regular set complete for 1915, 1916 and early 1917 cars, or special set for 1917 and 1918 cars, $7.50.—Shurnuff Mfg. Co., St. Louis.

NEW ERA MOTO NOSE

A ventilator for Ford radiators shaped like a ship's funnel which screws into the radiator filler and admits cold air into the radiator. A screen in the funnel keeps out dirt. Price $1 in black enamel and $1.50 in nickel.—New Era Spring & Specialty Co., Grand Rapids, Mich.

WATCH HOOK AND PROTECTOR

A watch hook and protector allowing the watch to be attached to any portion of the clothing where it can easily be seen. Watch can be removed in a few seconds from the hanger. Glass is protected. Metal device is nickel plated, strap is cowhide with a nickel-plated buckle. Price 50 cents.—Mealy Mfg. Co., Coca Cola Building, Baltimore.

GRAY-LOCK

A gearshift lock which locks the lever in neutral and prevents it being shifted into any gear. Can be installed in 30 min. by putting two bolts through the dash, and consists of a hinged hasp which fits over the shift lever, the hasp being locked to the dash. Price $6.—Gray-Lock Co., 2604 Ninth Ave., Oakland, Cal.

STEWART V-RAY SEARCHLIGHT

A searchlight that can be turned in any direction, used as a trouble lamp for lighting inside of car or for camping. Attaching bracket fits all windshield standards. Has silver plated reflector, 6 in reflector, uses any size bulb and has 3½ in. reducing mirror on back. Price $5.—Stewart-Warner speedometer Corp., 1826-52 Diversey Blvd., Chicago.

SHIELDS INJECTOR

A grease gun using cartridges containing grease, operated by slipping a cartridge into injector and turning handle. Made of steel finished in black enamel with nickel trimmings. Cartridges hold 1½ lb. of grease and sell for 40 cents. Price of injector with twelve cartridges $4.80.—Wheless-Wilson Auto Supply Co., Shreveport, La.

DIAMOND STOP AND TURNING SIGNAL

A signaling device consisting of two small diamond-shape lamps fastened at the right and left rear of the car. Glasses show red when driver is going to stop. Left glass shows red for turn to the left and right glass turns red for turn to the right. Operated by small one-lever switch, fastened to steering column under steering wheel. Price $15 per set.—Diamond Signal Co., 715 Market St., San Francisco.

JACKIE TIRE REST

A tire-saving jack that has two parts constructed of ½-in. round steel, the parts being hinged so that when the handle is lifted up the car wheel is raised. Set consists of four jacks, weighing 31 lb., retail price $3. Made in two sizes, one for 30-31-in. wheels and the other for 34-36-in. wheels.—Nelson-Bacon Mfg. Co., Oshkosh, Wis.

Digitized by Google

TRI-CO RAIN RUBBER

A device to remove rain from the windshield. Consists of two arms with multiple rubbers and a spring to hold it in position. It slides in the slot between the glasses and cleans clear across both. It does not rattle, and celluloid rivets prevent scratching. Can be attached in a few seconds. Price $1.50.—Tri-Continental Corp., Sidway Building, Buffalo.

NORWESCO VALVE GRINDING COMPOUND

A valve grinding compound made in fine, medium and coarse grades, containing neither ground glass nor emery. Single collapsible 1½ ounce tubes 25 cents, 4 ounce cans, containing coarse on one side and fine on the other, 40 cents; 1 lb. cans $1.—Northwestern Chemical Co., Marietta, Ohio.

ECO HEADLIGHT CONTROLLER

A device to control the quantity of light by a controller on the steering column under the wheel so that it can be reached by the fingers without taking the hands off the wheel. This operates a rheostat which allows lights to burn from full brilliancy to a dull glow. Weighs less than 2 lb., is nickel plated and sells for $7.50.—Western Mfg. Co., Oskaloosa, Iowa.

RIE NIE LEATHER DRESSING

A liquid dressing to penetrate, soften, preserve and waterproof cushions, tops, Pantasote, leather and rubber goods. Prices, pints 40 cents, quarts 75 cents, half-gallons $1.25, gallons $2.25.—Durkee-Atwood Co., Minneapolis.

BANNER WOOD CREEPER

Constructed of wood to fit the back and has an upholstered headrest permanently fastened to the creeper. Castors are ball bearing type of steel and tool trays are added on the side. Size 37 x 22 in., weight 7½ lb., price $2.—Banner Accessory Mfg. Co., St. Louis.

GEMCO LUGGAGE CARRIER

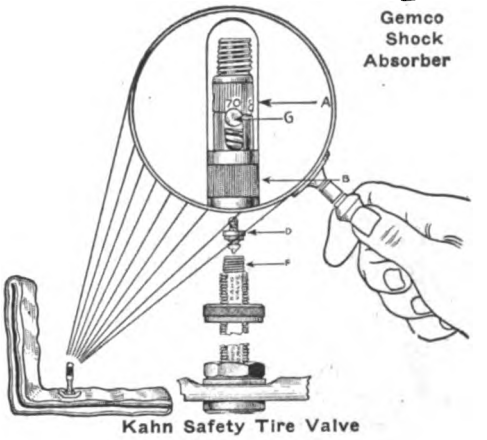
A runningboard luggage carrier having clamps to be secured to the runningboard with thumb screws, these clamps having slots in the top arm so that straps can be run through the hollow arm and out of any of the holes and buckled around the luggage. Set consisting of two carriers and two straps sells for $2.50.—Gemco Mfg. Co., Milwaukee.

POWERS TOOL CASE

A tool case with seven pockets especially prepared for Ford tools. Made of waterproof leatherette with web tie strap. Size when flap is folded 12 by 13½ in. Price 80 cents.—Powers Mfg. Co., Waterloo, Iowa.

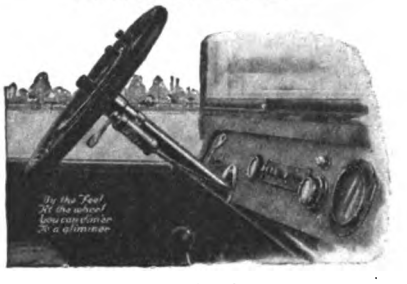
GOODRICH LOCK SWITCH FOR FORDS

A lock switch attaching to coil box on Fords with screws concealed by steel shutters when key is turned. Made of ductile metal, special alloy, which will not split or crack. Spring contact and metal disc concealed within the switch make it impossible to tamper with wires back of the dash and thereby start the engine. Price $3.50, $4.50 in Canada. — Goodrich-Lenhart Mfg. Co., Widener Building, Philadelphia.

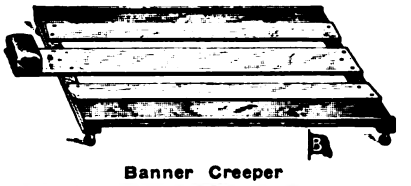


WHIZ BODY SPRAY POLISH

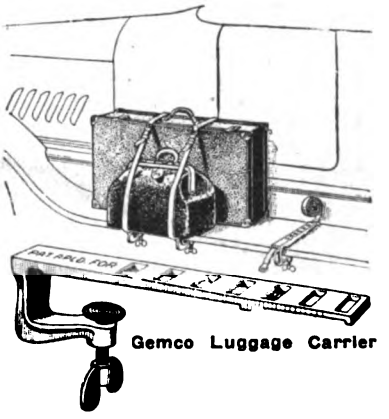
A liquid spray polish to remove streaks and stains and to restore and preserve the finish by feeding the varnish with oils and gums. Pints 50 cents, quarts $1, gallons $3.—R. M. Hollingshead Co., Camden, N. J.



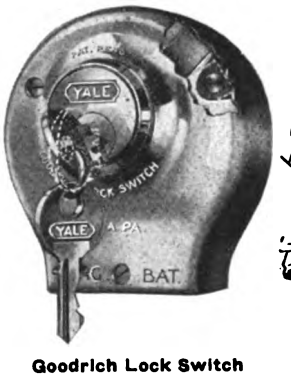
Tri-Co Rain Rubber



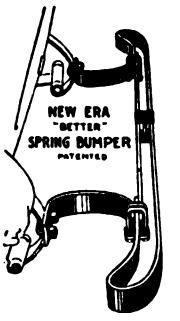
Gemco Shock Absorber



Kahn Safety Tire Valve



Eco Headlight Controller



Banner Creeper

Gemco Luggage Carrier

Goodrich Lock Switch

New Era Bumper

CHAMPION ABSORBERS FOR FORDS

A spring shock absorber consisting of a specially made shackle to be substituted for the regular Ford shackle, and a pair of coil springs placed between the extended arms of the shackle and the regular spring. The lower seat of the two coil springs is pivoted to allow independent action of the springs. —Champion Shock Absorber Sales Co., Inc., 918 North Senate Avenue, Indianapolis.

KAHN AUTOMATIC SAFETY TIRE VALVE

A safety tire valve so constructed that when the pressure in the tube reaches a predetermined point the valve blows off. It can be set for any pressure, pressures being marked on the valve in pounds. Fits any tube and has standard threads for both lock nuts and valve caps.—Armstrong Rubber Co., Inc., 118-122 Adams Street, Newark, N. J.

SURE-HOLD TRANSMISSION BAND LININGS FOR FORDS

Transmission linings for Fords in which a resilient facing of cork has been applied to the ordinary lining, this cork being securely attached by cementing and stitching. Price per set of three with brass rivets $2.—Right Motor Specialties Co., 1326 Michigan Avenue, Chicago.

CLERO BULL-DOG HORN

An electric vibrator horn made entirely on automatic machinery so that it can be turned out at a low price. Has the same mechanism as the Clero horn, excepting for the bell which is shorter and round shape. Price $3.—Fitzgerald Mfg. Co., Torrington, Conn.

WOOD'S TIRE PATCH

A tire patch for repairing tubes containing fabric, cured rubber which is pressed into the fabric and uncured rubber which is the adhesive. Patches are applied with rubber cement. Made in three sizes selling for 50 cents, $1 and $1.50.—W. C. Wood Co., Minneapolis.

EVER LAST TREAD

A new tread which is applied to an old tire by a process of cold cure cement after the old rubber is first removed from the old casing. Made in all sizes from 30 x 3 in. to 37 x 5 in. at prices from $10.50 to $33.50. Ever Last Tread Co., 128 East New York Street, Indianapolis.

SE-MENT-OL

A radiator cement in powder form which dissolves in the warm water of the cooling system and solidifies on contact with the air through a leak. Screw top 7 ounce can 75 cents. — Northwestern Chemical Co., Marietta, Ohio.

DUTCH BRAND 2 IN 1 TREAD FILLER

A tread filler to prevent sand, gravel and moisture from entering cuts in the treads of tires. Price 25 cents in collapsible tube. —Van Cleef Bros., 7701-7711 Woodlawn Avenue, Chicago.

WHIZ TAR REMOVER

A liquid remover to dissolve tar and road oil without injuring the varnish. Pints 50 cents, quarts $1, gallons $3.—R. M. Hollingshead Co., Camden, N. J.

NEW ERA SPRING BUMPERS

Spring bumpers for front and rear of all makes of cars. Bumper is double flat steel car with spacer in center and various methods of attachment, depending on the style of car. Prices $10 in black enamel, $11.50 with nickel front.—New Era Spring Specialty Co., Grand Rapids, Mich.

Digitized by Google

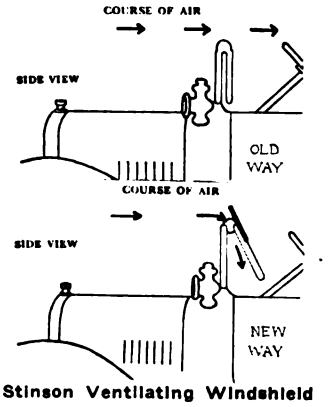
STINSON VENTILATING WINDSHIELD

An extension to the lower end of the upper glass of Ford windshields, so that when the upper glass is turned back the extension projects above the lower glass, throwing the air into the driver's compartment. Constructed of plate glass with a steel frame and spring steel clamps. Price $2.—E. B. Stinson, Jr., & Co., 2402 Transit Avenue, Louisville, Ky.

AJAX LUNCH KIT

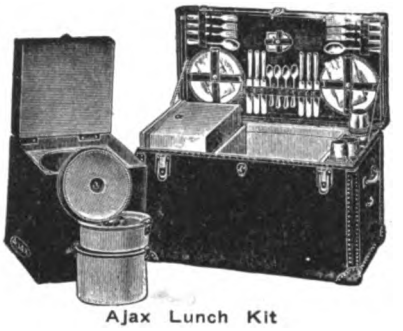
A lunch kit shaped like a small trunk. In addition to the compartment for food, it contains a complete dining outfit for six persons. Made of veneered basswood, bound with enamel duck, sole leather corners and nickel trimmings. Also has ice box with threaded cover to prevent water coming out. Food is carried in compartments on each side. Price $50.—Ajax Trunk & Sample Case Co., 144-150 West Eighteenth Street, New York.

DETROIT GASOLINE GAGE

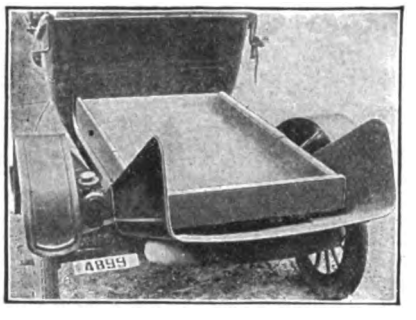


A gasoline gage for Fords that screws into the filler opening and does not have to be removed when tank is being filled, as the filler opening is offset. Indicates in gallons, half-gallons and quarts. Has no gears; gage head rests on top of tank cover and dial is large with unobstructed view of face. Price $1.50.—Detroit Gasoline Gage Co., 401 Marquette Bldg., Detroit.

WHIRLYFLAG RADIATOR ORNAMENT



A durable patriotic radiator ornament which revolves rapidly in the breeze, giving the appearance of waving. Price $1.—Prismolite Co., Fourth and Gay Streets, Columbus, Ohio.



NEW ERA SPRING BUMPER

This new bumper has a double cross bar, and is interchangeable for 90 per cent of the cars now on the market. It is also stated that 93 per cent of the cars now in use will take either the patented ratchet or hook-on attaching arms supplied with this bumper. Main bars are highly tempered spring steel and short detachable attaching arms are semi-tempered. It employs a double front bar across the full length with center tie to give maximum strength from end to end without weak points. The bumper is furnished in black or black with a nickel front bar, the nickel being plated on duplex copper. The material is 1¾ x 5/16 in. spring steel. The price is $10 for the black, and $11.50 for the nickel front. Add 10 per cent West of Denver.—New Era Spring & Specialty Co., Grand Rapids, Mich.

Stinson Ventilating Windshield

Ajax Lunch Kit

Murphy Disappearing Ford Truck Body

MURPHY DISAPPEARING FORD TRUCK BODY.

An interchangeable passenger and delivery body for Fords in which the original Ford rear compartment is removed and the Murphy body bolted in place. After being attached, it takes but a few seconds to change from pleasure to delivery and vice versa. When used as a delivery, turn back the entire cover and slide the telescoping steel box out to engage under the steel strap across the inside of the cover. Loading space 32 x 69 in. Sole sales representatives, C. L. S. Holmes, 702 Boston Block, Minneapolis.

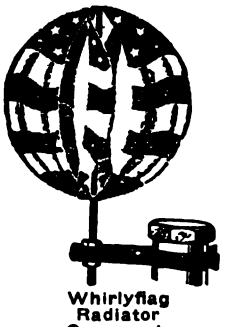
EVERBRIGHT METAL POLISH

A liquid metal polish for brass, copper, nickel, silver, aluminum, etc. Half pints 15 cents, pints 25 cents, half gallons 75 cents, gallons $1.25.—Everbright Mfg. Co., 409 Golden Gate Ave., San Francisco.

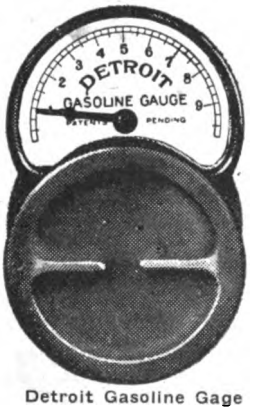
POWERS TRANSMISSION BRAKE LINING FOR FORDS

Transmission brake lining for Fords made of long fibre cotton treated with compound to make it oil and waterproof. Contains no wire. Packed in cartons of three pieces cut the proper length with necessary brass rivets. Price $1.35.—Powers Mfg. Co., Waterloo, Ia.

BUFFINGTON LUGGAGE CARRIER

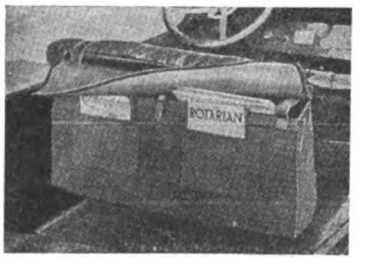


A carrier attached to the rear of the front seat with ample room for clothes, light blankets or lunch. Two pockets are on the front of the carrier, designed to hold reading matter, clothes brushes and other small articles. Carrier is made of imitation black leather, weighs 2 lb., is 33 in. long by 15 in. wide, and will not mar the car.—C. A. Buffington & Co., Berkshire, N. Y.

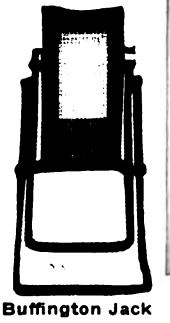


BUFFINGTON TIRE-SAVING JACK

A tire-saving jack with framework of ½-in. round polished steel and block of wood provided with holes to adjust height. Footrest is 5 x 8 in., and there is nothing to mar the car. Finished in black enamel and furnished in sets of four.—C. A. Buffington, Berkshire, N. Y.



BURGESS REBOUND CHECK



A rebound check and shock absorber, one end of which is attached to spring hanger, and the other end clamped around leaf spring about one-third of the way to the center. A spiral coil spring supports a plunger, the lower end of which attaches to the end of the leaf spring. Set of four for Fords sells for $15.—Zinke Co., 1323-1325 Michigan Avenue, Chicago.

LIBERTY FLAG HOLDER

A flag holder combined with a bright star with three bars of red, white and blue, fitting any radiator cap, windshield or inside of limousine. Price with flag, $1. Another flag holder to hold five flags rigidly and securely sells for 15 cents.—H. K. Metal Products Co., 60 Grand Street, New York City.

TROY TRAILERS

Four-wheel trailers which track with the towing vehicle, made in capacities of 1-2 tons and 3-5 tons. Built with patent spring drawbar which takes up shocks and steers the trailer. Frame is channel section, braced, gusseted and riveted, springs are semi-elliptic, I-beam axles, artillery wheels and solid rubber tires. Prices are $695 for the 1-2 ton and $1540 for the 3-5 model.—Troy Wagon Wks. Co., Troy, Ohio.

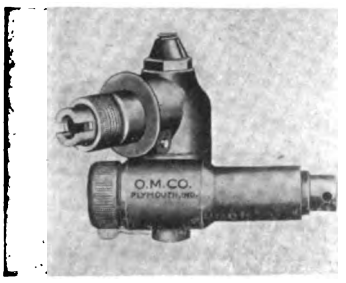
GEMCO LIGHT TRUCK BUMPER

A rigid bumper for trucks up to 2 tons capacity. Fits without alteration on trucks that have a projecting frame. Details of make of truck, width of frame or springs and whether tapered or not are advisable to secure proper yokes for fastening. Packed 5 in a crate. Price $11.74 in nickel, $10.58 in black finish.—Gemco Mfg. Co., Milwaukee.

OGDEN SPEEDOMETER SWIVELS

Swivel joints for speedometers with spiral three-quarter diameter gears and ball bearing. Can be adapted for either right or left side drive by simply removing the driven end.—Ogden Mfg. Co., Plymouth, Ind.

COMFO-LUX BACK REST



A back rest for driver's seat of concave construction to fill out hollow space between the seat and the driver's shoulders. It is stiffened to prevent sagging and getting out of shape. Fits any make of car. Price $3.—Rudolph Coaus, Coaus Building, Ottawa, Ill.

AUXILIARY RADIUS ROD

Made of ⅞-in. tubing fastening under the head of the spring bolt on the two front ends and clamped over the Ford radius rod near the ball end at the rear. Also made in 1-in. angle iron instead of the tubing. Price $2 for either style.—S-E Motor Eng. Co., 14 East Jackson Boulevard, Chicago.

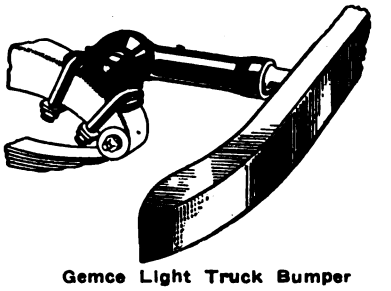
FIT-ALL ADJUSTABLE PEDALS

Adjustable pedals which can be extended or folded up for short or tall drivers. The pad is hinged and when dropped down is in the low position. Can be extended 3¼ in. by means of the strut under the pad. Price $5 per pair.—George Borgfeldt & Co., Sixteenth Street & Irving Place, New York City.

WILLIAMS WRENCH SETS

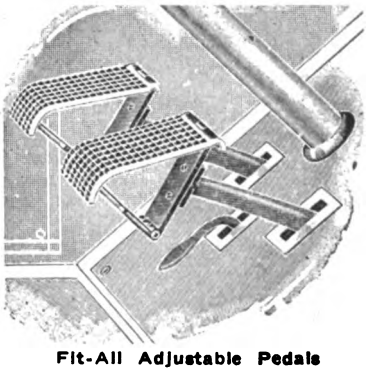
Solid end wrenches put up in various assortments and in three styles, unfinished with openings milled to fit nut on screw for which they are intended, semi-finished in which the forgings are milled, case-hardened, black-lacquered and the heads ground bright; finished in which the forgings are milled, polished, case-hardened and lacquered with heads bright. Sets are supplied to dealers, mounted in groups of about six of each size on "Silent Salesmen" display boards. The wrenches on these boards are sold at the regular prices, but mounts are free.—J. H. Williams & Co., Brooklyn, N. Y.

C S VULCANIZER AND PATCHES



Vulcanizer consists of a small cast-iron clamp and screw and uses oblong tin patches with heat producer. Requires 5 min. per patch. The patches are packed twelve in a carton, retailing for 60 cents per dozen. Clamp retails at $1. Prices to dealers are 45 cents a dozen for patches and 70 cents per clamp with six patches.—Canton Specialty Co., Canton, Ill.

BLACK & DECKER PORTABLE DRILL



A portable electric drill with compensated interpoled type universal motor, operating either on direct or alternating current. Made light by use of aluminum alloy field casting. Has automatic pistol grip and trigger switch, giving control of the drill. Size illustrated is 3/16 in., which weighs 6¾ lbs., speed 1900 r.p.m., and furnished with 15 ft. of cord. Price $50 for 110 volts and $53 for 220 volts. The ⅞ in. size which has pistol grip and trigger at bottom and breast plate at end, weighs 24 lbs., speed 450 r.p.m., and price is $100 for 110 volts, and $103 for 220 volts.—Black & Decker Mfg. Co., 109-115 S. Calvert St., Baltimore.

MISSING LINK FOR SKID CHAINS

A repair link with open eyes, two of which are used to repair broken cross chains. Put up in handy holders containing ten links suitable for tool kits.—Stolp Electric Specialties Co., 2210 South Park Avenue, Chicago.

NEW ERA WHEEL CARRIER FOR FORD CARS

A wire wheel carrier constructed of angles attached to rear spring clips. For touring car and sedan the carrier is interchangeable and designed to follow body line of car. Price $5.—New Era Spring & Specialty Co., Grand Rapids, Mich.

HUDSON CRANKCASE REPAIR ARM

An A-shaped forging with ends bent at right angles to replace the rear engine supports on the Ford car. To install it is only necessary to loosen three bolts, slip the repair arm in place, and tighten. Price $1.50—Hudson Specialties Co., Real Estate Trust Building, Philadelphia.

PANVAR BODY FINISH

A light liquid finish applied with a long soft brush, claimed to level itself out eliminating brush marks and will not crack, peel or turn white. Price $1.50 per quart. Can also be used on tops and seats.—Panvar Co., Bulletin Building, Philadelphia

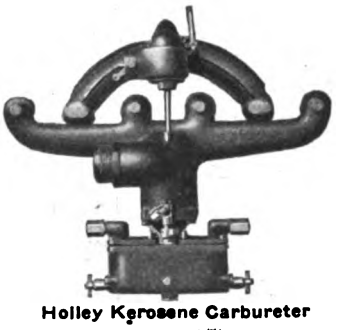
ATTWOOD GREASE MACHINE

A grease measuring machine and pump to handle fibrous and shredded grease. It is valveless, the container being made of 22-gage galvanized iron; indicator, pump cylinder and all attachments of cast brass. A full stroke measures ¼ lb., surplus discharging back to container.—Fulton Sales Co., 910 S. Michigan Blvd., Chicago.

RIE NIE MOHAIR DRESSING

A preparation to bring out the silky and mohair effects and waterproof the material. Prices, pints 75 cents, quarts $1.25, half-gallons $2.25.—Durkee-Atwood Co., Minneapolis.

NEW RED SPOT SEARCHLIGHT

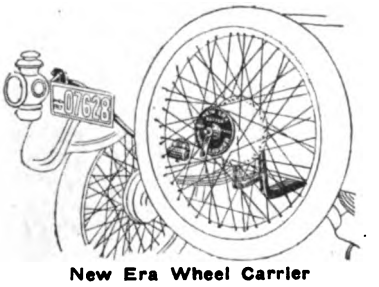


A powerful light 7 in. in diameter, having a 30-cp. bulb. Red and white rays are selective by pressing a button. Furnished complete with bracket, cord and bulb for $9.50.—F. W. Wakefield Brass Co., Vermillion, Ohio.

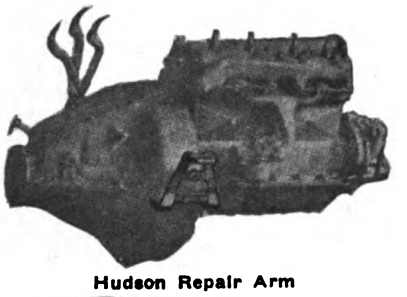
HERCULES SPARK PLUGS

A spark plug with special stone insulator capable of withstanding heat and vibration. Has a spring gland to prevent crushing the insulator and to hold the plug compression tight. Made in two models, the Hercules Giant selling for $1 and the Hercules Junior, 75 cents.—Eclipse Mfg. Co., Indianapolis.

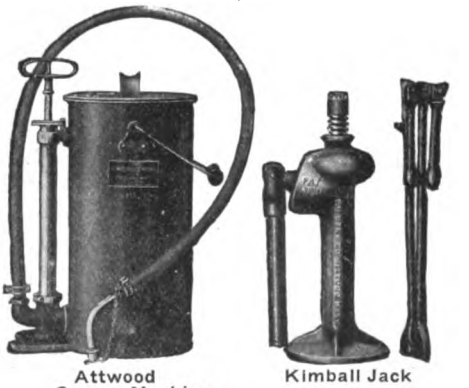
Red Spot Searchlight



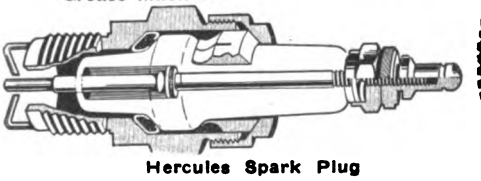
Holley Kerosene Carbureter



Gemco Rear Frame Bumper



New Era Tire Holder



New Era Wheel Carrier

Hudson Repair Arm

Hercules Spark Plug

HOLLEY KEROSENE CARBURETER FOR FORDS

A carbureter for Fords to use kerosene, distillate, benzol, gasoline or any hydrocarbon with a final boiling point below 600 deg. Fahr. Operates independently of gasoline except for the short time required in heating the carbureter. Complete outfit includes head, shim, tank, exhaust pipe, and other parts and accessories, $35.—Holley Kerosene Carburetor Co., 145-147 Willis Avenue, E., Detroit.

GEMCO REAR-FRAME BUMPER

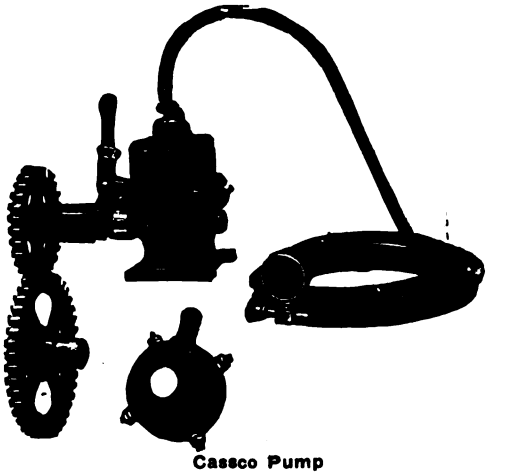
A rigid bumper made in channel, diamond and round bar and in black or nickel finish, for any car with cantilever rear springs, such as the Buick, Kissel and others. Gemco basket-type tire carriers can be combined with the bumpers. Prices range from $7.94 to $12.08, depending on size, style of bar and finish.—Gemco Mfg. Co., Milwaukee.

ROWELL FORD CRANKER

A spring starter with the power stored in a long coil spring made of 5/16-in. spring wire. When the car is started the spring winds up to a predetermined tension and then automatically cuts out.—I. B. Rowell Co., Waukesha, Wis.

NEW ERA STRAPLESS TIRE HOLDER

A side tire holder of strap steel that needs no straps. A locking device is part of the holder, as are also the tire supports. A self-expanding carrying rim can be furnished where demountable rims are not used. Price $2 single, $3 double, $1.50 for carrying rim.—New Era Spring & Specialty Co., Grand Rapids, Mich.



KIMBALL BALL BEARING JACK

A heavy type truck jack with long handle and wide handle grips to permit lifting car without reaching under it. Has diamond-point hardened steel top, ball bearings carry the lift and thrust and a ball socket holds the handle rigid while sliding jack under car. The handle folds up in a small space. No. 1, with lift from 9 to 15 in.; No. 3, 11 to 18 in.; No. 4, 12 to 20 in. Price $5 for all models.—Edward A. Cassidy Co., Inc., Madison Avenue and Fortieth Street, New York.

CASSCO ENGINE-DRIVEN PUMP

An engine-driven tire pump for Fords bolted to the right side of engine frame at front. A new timer is supplied with the outfit, and the hub of the driving gear extends through the top of this timer to the camshaft, this gear driving the pinion or slide gear mounted on the end of the pump shaft. No machine work is necessary. Price is $10 complete with all fittings.—Edward A. Cassidy Co., Inc., Madison Avenue and Fortieth Street, New York.

Tommy Trumbull

HAS A TOUCH OF PACIFISM

By Ray W. Sherman

TOMMY TRUMBULL was taking a last look at the morning paper before throwing it into the waste basket and beginning his day's work.

"Do you know," he said, talking in the direction of Reilly, "I've thought a lot about this war and I don't seem to grasp it all. It seems to me like an awful thing. Sometimes I think I can't get enthusiastic about it."

"No?" noncommittally asked the Sennett dealer.

"I've bought bonds—all I can carry. I've done everything I can do, I wouldn't utter a word of my thoughts to any one but you—for they might be misunderstood. But I have a hard time all by myself just the same."

"Well—" Reilly hesitated. "Maybe there are a lot of people like yourself, Tommy. Who knows? There are comparatively few people in the world who really like war. And there aren't many people who would relish the idea of going across the street and hitting that husky street sweeper in the eye—but under certain conditions I think you or I might do it, don't you think?"

"Maybe," assented Tommy, flipping the paper into the basket.

"You see, Tommy, you and I are both pretty young compared to our country, and sometimes we forget just what it all means to us. If every man and woman in the United States were a hundred and fifty years old there wouldn't be many pacifists, and it wouldn't be as hard as it is to get the Liberty loans across.

"Just think for a minute, Tommy. Supposing you were living in a country like England under a king like George the Third, who was so German he could speak hardly a word of English. Supposing conditions became intolerable and you said: 'I don't like it here. I'll pull up and go to a country where there are no laws such as these, where I can live in peace and contentment and prosper and grow according to my own ability.'

"So you pull up and sail for a new country. You settle down. You find opportunities. You prosper, and all those around you prosper. Your children have opportunities, and your children's children become prosperous and happy and famous.

"You and the rest of the people who came with you make laws. You lay out the country and govern it according to your own desires. You get a taste of the freedom you never knew back on the other side in the old days, and you come to love the thing, the institution, that you have built with your own hands. You have seen it grow. You love it.

> "Do you know," said Tommy, "I have a hard time getting enthusiastic about this war? And then" —but read the story.

"And finally you shake it clear of all the encumbrances that tied it to the old country with its nasty kings and its hated laws. You sail along smoothly. And then the old institution across the water takes a nasty fling at you, and finally, after you have stood about all you can, you fight off the old institutions again—and once more you begin to build the institution you have created here.

"Troubles come. They always do. Part of your country wants to break away. There is a hard fight over that. Then an old world power carries its oppression too far on an island near your shores, and, like a good neighbor, you help the oppressed, for you can't stand it to see the hated institutions you have left behind inflicting themselves upon the new world which you have flooded with the sunlight of freedom.

"You have a long period of happiness and peace. You begin to believe the whole world will eventually come to your way of thinking, because much of it already has done so.

"In your years of peace and contentment you often sit and dream of the old days when you came across the water, of the hardships you endured that you might have freedom of body and of mind, of the wonderful big country you have built where only wilderness was when you came—and as the smoke curls up from your pipe your heart warms in love of the thing you have built.

"Then a menace arises. The old institutions are once more asserting themselves. They try to expand and break down the ideals toward which you have built. You can see that your own great institution, with all its freedom and happiness, must fall unless this menace can be beaten down, with all its cruelty and oppression.

"If you were a hundred and fifty years old and could personally realize what it all means don't you think you would forsake your peace and prosperity and fight for the thing that you yourself had built?"

"Yes, I guess I would," said Tommy.

"Just supposing you had built a beautiful grape arbor back of your home. You did it all with your own hands. You drove the stakes, planted the shoots, trained them up, enjoyed the fruit, cared for it year by year, and looked forward to the enjoyment you would get from it in the years to come.

"And, now, along comes that street sweeper across the way. He steals a bunch of grapes. You tell him he ought not to do that, and that you don't want him to do it any more.

"He says he won't. But in a few days he comes along again and yanks so hard at a bunch of grapes that he pulls down part of the vine. This time you begin to get sore, and you go out again and tell the man he MUST NOT do that, because the vine is yours, you raised it with your own hands, and you don't care to see it destroyed.

"In a few days the street sweeper yanks again and pulls down a lot more vine. How would you feel? Would you let him keep on yanking in order to preserve peace, or would you take off your coat and throw him over the front gate?"

"What would I do?" snapped Tommy. "I'd make a mess of him."

"Certainly you would, and that is a close parallel to what is happening to-day in this war."

"But nobody ever taught me that when I went to school," lamented Tommy. "Nobody ever taught me love of country. Nobody ever told me what our free institutions mean. All I ever was taught was to hate England, and I have a hard time even now cheering when they show the Union Jack."

"Our teaching has been negative," exclaimed Reilly. "I have found it so myself. They taught us of battles, and hateful things, and war and strife and everything like that and they never said a word about love of country in such a way that it set itself in our youthful minds. We went at it wrong and to-day we're paying the penalty in a sluggish patriotism in many quarters.

"It takes a month to raise a government loan because we don't understand that it's OUR loan. We don't realize that the fight is not for geography but for the free air we breathe. We—"

"Yes," said Tommy, "I didn't realize. I never knew. It looks different now."

Editorial Observation

War Service Recommendations

FOR the first time in the history of the industry the dealers have collectively taken action of a national nature. The War Service Committee of the National Automobile Dealers' Association has investigated conditions within the trade and has adopted certain recommendations for co-operation with the government in attaining greater efficiency. To help win the war is, of course, the object, but the object will be beneficial in peace times as well.

The primary consideration in these recommendations is labor. The desire is so to shape the trade that it can better stand the losses of men that are occurring every day and that it can give more of its skilled men and have more skilled men to give. The story of the recommendation is told in the news section of Motor World this week.

First in the list comes the elimination of "unnecessary service," and, while many will contend that some service is necessary if cars are to give greatest value to the owners, a further recommendation is that dealers so educate their customers that service which now is called necessary may become unnecessary. If both recommendations are worked equally they should work out well.

It is also proposed that Sunday and night service be cut down considerably and that service on these periods be thrown to one or a few shops, so that all shops may not have to maintain a complete service squad. This plan has been tried in at least one town for some time. It should be as popular with the workmen as with the employers.

Fundamentally the biggest idea in the whole group is that of the training of mechanics. It is recommended that associations operate schools for training men, and that where no capable associations exist the dealers co-operate in this work, encouraging apprentices and helping make unskilled men into skilled workers.

This is one of the greatest needs of the trade. The idea of training men is being agitated. It is only a question of time until practical application of the idea will come. It must—else there will be a dangerous shortage of men. It is indicative of the caliber of the dealers' War Service Committee that it has so promptly grasped this timely question.

The cash basis for the dealer's business is another recommendation, one which has already been adopted by thousands. Probably no idea has been taken up so rapidly with so little urging, as is evidenced by the news stories in Motor World every week, telling of cities that have "gone cash" en masse.

Saving of materials has always been a good idea and is not new, as is the case with demonstrating costs. These latter are things the trade should have taken up long ago, and the ideas should have deep consideration now that this group of trade leaders has seen fit to recommend them as war emergency measures.

Speaking of Associations

THERE are or have been local dealer associations in nearly all the principal cities of the United States. Some are more energetic than others.

The try-out of these organizations has been given no better test than in the work on the Liberty Loan. In some cities the job has been done well. When the call came a working organization was already in existence, prepared to put the loans over in a big way. In other cities the loans were handled in only a half-hearted manner.

Some associations have shot far above the quotas set. Some associations have been given quotas far too large. Others have not been permitted to operate as a trade group on the third loan, for some reason not quite clear, although they did well on the other loans.

But, aside from this loan question, there remains the degree of spizz and life in the local organization. If an association is not thoroughly alive it should be made so. The reason for lackadaisical conduct probably varies in each case, but the reasons should be found and the condition remedied.

A local association can be a wonderful benefit to the dealers. The individuals should take an active interest in the work. The organization should be a live, working unit of the men in the trade rather than an office with a secretary of whom everything is expected.

Dealers who feel that their association isn't all it should be would do well to ascertain if there is danger of dry rot, because, with the trade progress that is being made, there will soon be a line-up of live ones with a second rank of not-so-live-ones—and, naturally, the various cities would prefer being among the leaders rather than among the less successful.

Letters From Readers

THIS page is for the use of MOTOR WORLD readers with something to say. Letters on subjects of interest to dealers, garagemen, repairmen and jobbers are always welcome.—EDITOR.

Must Train Men

Editor Motor World: There is scarcely a day goes by but that a letter comes to my desk from some dealer asking for a first-class mechanic and electrical man. It does not seem clear in the garageman's and repairman's mind that they are not going to pick up such men—but that they have got to make them; they have got to get busy and begin to make them—that is, train every man they have in their employ to be a better mechanic. I find that the majority of the garages—especially the medium-sized or smaller garages—make no effort, or take an interest in their help along these lines. A great many of them are very good prospects for making good mechanics, but they are always looking for somebody better and trying to leap a gap between.

This seems to be one of the big points that is overlooked in the city of Minneapolis to-day. There is hardly a garage that isn't short good mechanics and while a great many of them have a sufficient number of helpers they are still "hollering" for good men. Now, if they would put the effort back of the help they have, put a man in charge and let him spend his time in educating the help, we believe that we would soon have a force of mechanics so that we could lend a certain number of trained men to the Government without any difficulty.

At the present time, I believe they have taken a large proportion of those mechanics who are in Class A-1, but it seems a hardship that they have to take married men due to the fact that they are trained mechanically when we have sufficient young, unskilled labor that can be trained and should be sent out first.

I think there is a great deal that might be said and a great deal of good work could be done in educating the garage men to train and educate the help they have. A great many times you will find a man on wash rack in a garage, doing the washing, whereas if he is taken and put to work on assembling or disassembling of cars with the help of a better mechanic he would soon become a better mechanic, yet they will allow him to shift from garage to garage as a washer and always be one.

I have found that the majority of men who know how to work nowadays are not afraid to work; what I mean is, men who will work from 8 o'clock in the morning until 6 o'clock at night—whether the boss has his back turned or not, are usually doing the "scrub" work of the shop while the better mechanics of the younger, more loafing kind, know nothing about "real work" and what it means to them or their employers.—D. W. Onan, Reinhard Bros. Co., Manufacturers.

Speed of Velie Roadster

Editor Motor World: I have a 1917 Velie Chummy roadster, Model 28, which I bought last April and have never been able to exceed a speed of 45 m.p.h. Would you please let me know what a car like that ought to do? I think it ought to do a little better than that. It has a tendency to overheat at that speed, which I think robs it of power. The high gear ratio in Motor World says 4.75-1. The motor is a six-cylinder Continental, 3¼ x 4½; Stromberg carbureter, 115 in. wheelbase and 32 x 4 tires.—William J. Lincaster, 23 Hill Street, Waterbury, Conn.

Answer—Trouble of this kind is generally due to air restriction. The car should readily do between 50 and 55 miles an hour with this gear ratio.

The fact that the engine tends to overheat at the higher speed indicates that it is either traveling on too rich a mixture or the spark is not advanced far enough. In correcting the trouble it would be well to work to both ends. That is, first see that there is nothing to restrict the volume of charge entering the cylinders, and second, see that the spark advance is far enough ahead at high speed. The spark should be so set that firing occurs on upper dead center in the full retard position.

In checking over for air restriction, first see that the high-speed adjustment is so set that plenty of air enters the carbureter when the throttle is open. Very often, also, trouble of this kind will occur due to a restriction in the gasoline line. When this trouble occurs it can generally be detected by spitting back into the carbureter when the throttle is wide open. As a general rule if overheating occurs and car will not throttle at higher speed, if there is no spitting back, the trouble can generally be checked up as retarded spark, too rich a mixture at high speed or a restriction in gas passages.

There have been many cases where the trouble you mention has been remedied by putting on a size larger carbureter.

Cause of Knock in Hudson Super-Six

Editor Motor World: Could you please tell me what causes the slight knock at camshaft in the Hudson Super Six at slow speed and how to remedy same? I notice that nearly every super has this same knock in a greater or less degree, and I have examined all camshaft bearings and valve push rods and end thrust spring, but they knock just the same, only at comparatively slow speed. This is very annoying and I would very much appreciate information on same.—Ernest W. Helbig, Aberdeen, Wis.

Answer—This may be due to either one of two causes—first, a worm pump shaft bushing, permitting end play in the camshaft, or, second, worn tappet guide. It is very probable that the first cause is the one which is giving you the trouble, as when a slight wear occurs in the pump shaft bushing it permits end play in the camshaft, which gives the rattling sound you refer to. The worn tappet guides are also possible.

Louisville Advertising Better

LOUISVILLE, April 20—As a possible indicator of the situation of the automobile trade in this section is the annual automobile number of the Louisville Courier-Journal which appeared Sunday, April 7. This carried 84½ columns of automobile advertising, whereas a year ago there were only 74. Also, this year there was no show because the armory is being used by the government and last year there was a show.

Repairshop Shortcuts

From Motor World Mechanics

NO. 1637—SPOTLIGHT BRACKET

A bracket for spotlight and mirror on sedans and closed cars is made of ¾ in. round iron about 18 in. long. The ends are bent, flattened and drilled and the bracket screwed to the body.—C. B. Smith, Nash Agency, Hollywood, Cal.

NO. 1638—FOR WORN TORSION RODS

This is a scheme for quieting torsion rods after the eyes get worn. Instead of tearing down the rod, reaming and rebushing, case hardened steel cones are made to fit the bolt, and one is placed each side of the rod eye, between it and the springs. The cones are reamed so that they will slide easily on the bolt.—H. Wirebaugh, Wilson Motor Car Co., Canton, Ohio.

NO. 1639—INSERTING VALVE-STEM PINS

By using 2½ x 3/16 in. cotter pins as pincers, with a cut-off eye of one for a binder, valve-stem pins may be easily inserted in holes that are difficult to get at. By bending ½ in. of the end at 45 deg., almost any angle can be reached and the holding power will be greatly increased by filing the split surface of the cotter with a triangular file, forming a sort of universal chuck.—T. E. Hogan, Waverley Garage, Waverley, Mass.

NO. 1640—PISTON JIG

A jig for setting up a number of pistons of the same size in a lathe for recutting the ring grooves is made from a piece of pipe a little larger than the piston, a locking pin to fit in the piston pin holes, a clamping piece to fit back of the pipe and an eye bolt made of ½-in. stock tapped on the end. The clamping piece is 3 in. longer than the diameter of the pipe and is drilled and tapped to receive the eye bolt. The piston is clamped to the pipe by passing the pin through the piston in hole and the eye bolt. The piston is then turned on its seat in the pipe until the flat stock comes against the back of the pipe, clamping the whole together. The pipe is left in the chuck until all the pistons have been cut.—Peter Gillespie, Glen Ridge Auto Co., Glen Ridge, N. J.

NO. 1641—MOVABLE BENCH LIGHTS

Drop lights over a bench or drafting table, arranged in a row, may be moved to any desired position by having two parallel wires strung above the benches supporting wooden cross bars with screw eyes in the ends. The eyes slide along the wires and drop lights may be suspended from any point on the bars.—W. R. Davis, Washington, D. C.

NO. 1642—GAS SAVER

A gas saver which turns down the gas when a soldering iron is lifted off the flame and turns it on again when the iron is put back on the fire. A cock is fitted in the gas pipe, the handle of which is fastened to a rod, the other end of which acts as a holder for the iron. It is held up and the gas closed off all except a pilot light till the weight of the iron pushes the rod down and so opens the gas cock.—F. R. Crocker, Acme Radiator Works, Salt Lake City, Utah.

NO. 1643—BATTERY LEVEL TESTER

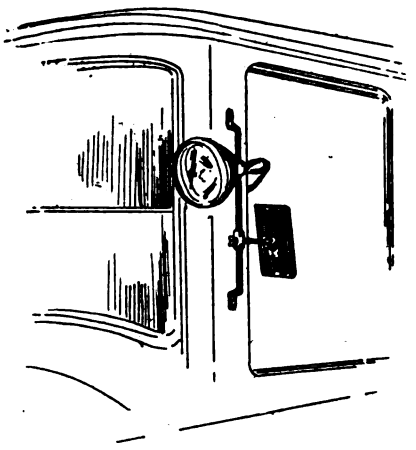
A battery hydrometer can also be made to serve as an acid level tester by cutting a small hole in the rubber tube about ½ in. from the lower end. Acid can then only be drawn down to a level with the hole, when air comes in through the hole.—H. K. Mayer, Morris Motor Co., Fort Collins, Col.

NO. 1644—PORTABLE PRESS.

A portable garage press is made by constructing a frame of 3 x ¾ in. steel bars, the uprights having holes bored every 6 in., so that the horizontal bar can be raised or lowered according to the work to be done. The jack is mounted upside down on the horizontal and the whole outfit mounted on casters so that it can be wheeled around the shop.—Karl Winter, Salt Lake City, Utah.

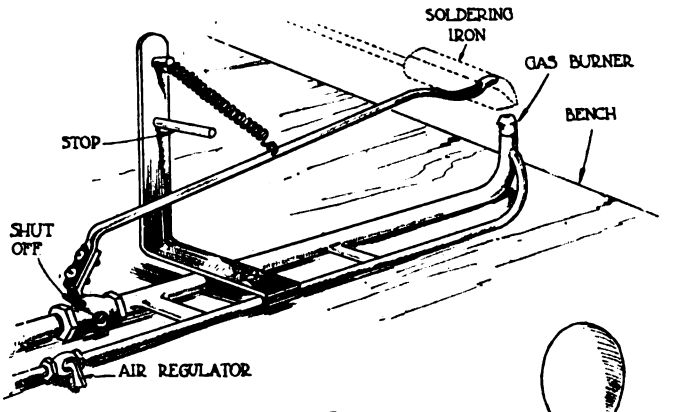
NO. 1645—RADIUS ROD BENDING IRON

A bending iron for Ford front radius rods is made from an old drive shaft by bending a hook on one end to go over the radius rod and then bending at right angles again 4¼ in. from the hook.—Fred J. Long, Massillon, Ohio.



Milwaukee Quota 90 Per Cent Subscribed

MILWAUKEE, April 22—By the splendid aid given by the manufacturers and dealers in motor vehicles and parts, the Milwaukee campaign in behalf of the third Liberty loan is already a success. The city's quota is $14,600,000 and of this amount 90 per cent already has been subscribed, insuring a generous oversubscription, as during the first two loan campaigns. Among the largest subscribers among manufacturers and dealers are the following: A. O. Smith Corp., Cutler-Hammer Mfg. Co. and Chain Belt Co., $100,000 each; Sivyer Steel Casting Co., $25,000; LeRoi Co., motors, $20,000; National Enameling & Stamping Co., $25,000; Wadhams Oil Co., $10,000; Shadbolt & Boyd Iron Co., accessory jobber, $13,000. A large number of subscriptions from this group have not yet been officially reported.



$1 a Shortcut

SHOP men are invited to send in the ingenious kinks they have worked out for saving time and labor in their shop. MOTOR WORLD *will pay* $1 *for each Repairshop Shortcut that is accepted for publication. The only requirements are these:* 1—*Describe the shortcut briefly but clearly, in few words.* 2—*Send a sketch, in pencil or pen, no matter how rough; our artists will finish the job.* 3—*Write on ONE side of the paper only.* 4—*Sign your name and initials, the name of the company your are with, and the town. Write plainly. If your name is unusual, or if there might be any doubt as to the spelling of the name, print it in capital letters with your pencil.*

How to Lay Out a Building—2

THIS is the second of a series of articles which take up in detail the layout and arrangement of buildings for the dealer, garage and repairshop.—Editor.

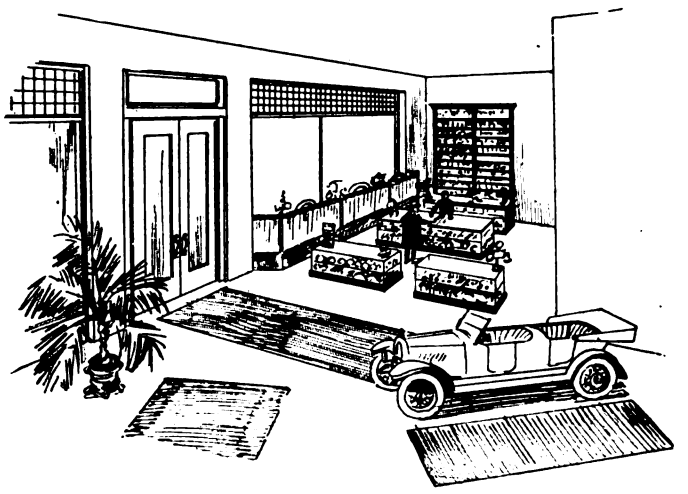

Fig. 4—One attractive arrangement which may be used if the placing of the store in a separate room is not desired. The store is situated in an ell at one side of the showroom, to the rear is the stockroom. This layout offers the same advantages obtainable by combining cars and accessories in one room, yet the store is a distinct unit

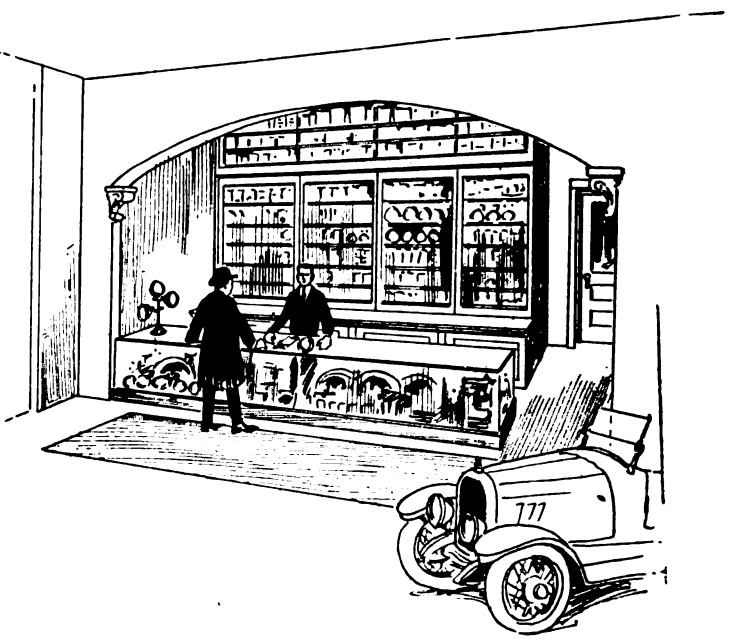

Fig. 5—Another happy solution of the problem of combining car and accessory departments. The store is placed in an alcove opening into the showroom. The broad showcase extending across the alcove serves to make the two departments distinct, yet for all practical purposes they are one. This arrangement may be used either at the side or the rear

By Harold F. Blanchard

Figs. 3 to 10 inclusive

SPECIFICATIONS: Plot, 50 x 100; showroom for two cars; small accessory store; office; toilets; garage for 12 cars; shop for five cars, with lavatory and locker room; tool room, and three machine tools.

Plan No. 1

THIS plan, Fig. 3, is intended for the small-town dealer. The showroom is designed for two cars, which is an absolute minimum, though most dealers would want more; the accessory store is rather small; and the shop is also modest. It will hold five cars but there is no provision for extra rooms for welding, vulcanizing, etc.

There are office toilets for men and women and a shop toilet. There is one small office only. To sum up, this plant is for the dealer who feels that the volume of his business warrants minimum building equipment only.

The location of the entrance and the position of the accessory store are typical of all the plans, and inasmuch as there is great difference of opinions on these two points it is desirable to thrash them out before proceeding further.

Usually there are no real advantages in placing the entrance in the center. Perhaps the biggest arguments in its favor are that it gives a more symmetrical building and that it conserves aisle space in the garage, but a glance at the plan in Fig. 3 will show that placing the entrance at the side really does not waste very much space.

The adv .ntages in placing the entrance at the side are many. In the first place the showroom, accessory store, offices, etc., are a unit and should be kept so. The extreme desirability of keeping this unit intact will be plainer when, later on, more is said about the unit idea.

It is certainly desirable to have showroom, accessory store and offices convenient to each other—the fewer steps between them the better. Therefore to have them divided by a driveway is poor practice. Many small-town dealers insist upon having accessories and cars in the same room so that one man can look after both when necessary.

This cannot be done if there is a driveway between. It is almost equally out of the question to put showroom and store on the same side of the driveway, inasmuch as there is not room; certainly there is no room for a display window. In fact, a side driveway is almost necessary in order to efficiently use the window space. Half the frontage less half the drive width is not enough to display a car in, and relatively this amount of window surface is more than required for accessory purposes. This discussion, of course, applies particularly to plots 40 to 50 ft. wide.

There are some who insist upon having showroom and accessory store as far apart as possible so that the customers to the one shall not disturb the prospects in the other. It is going too far, however, to place a driveway between. The

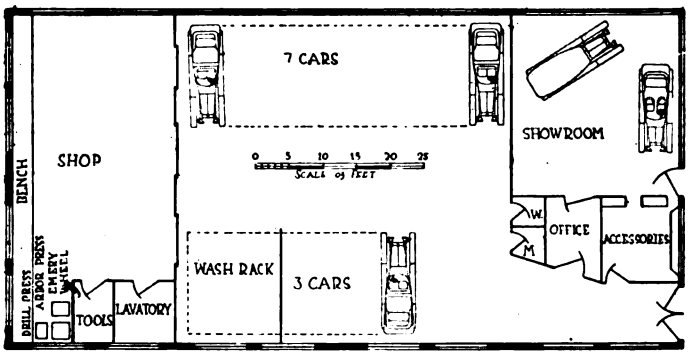

Fig. 8—This plan, providing a showroom for two cars, is for a dealer in a small town

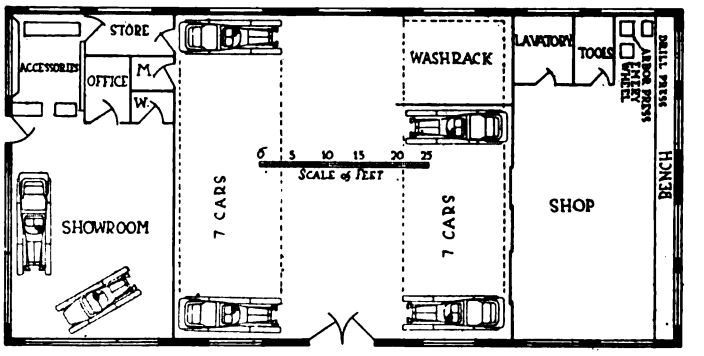

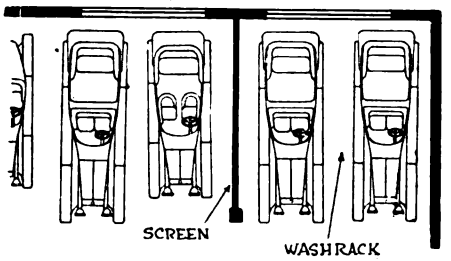

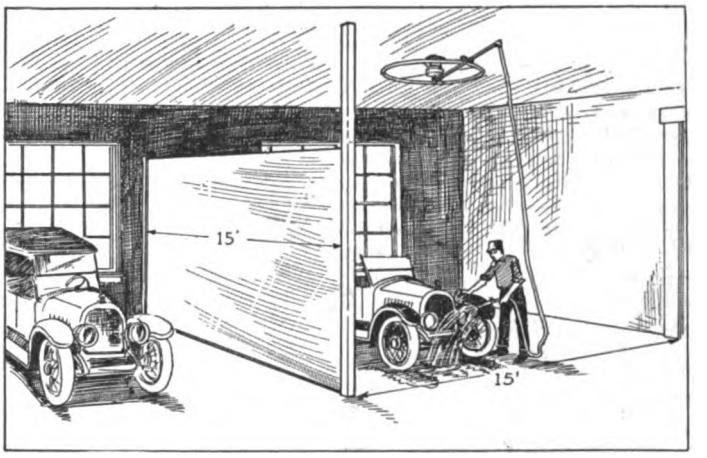

Fig. 10—This shows the same plan slightly modified so as to fit a corner location

Fig. 6—Right—To prevent cars being spattered, there should be a curtain for the wash rack

Fig. 7—Lower—When not being used, the wash rack holds two cars

fact that there are advantages in having the two so widely separated should convince those who still believe in a combined showroom and accessory store of the error of their ideas.

It seems hardly necessary to call attention to undesirability of going out of doors or running the risk of being run over by a car in order to pass from one department to the other.

Summing up all these reasons it is plain that the place for the driveway in a building of ordinary size is at the side.

The other mooted question, whether the accessory store should be integral or separate from the showroom, has been partly answered affirmatively by the preceding discussion, but this may be said in addition:

The store should unquestionably be a separate room, but for the sake of those who hold that it should be intimately connected with the showroom, several layouts have been so made. In every case, however, the store has been made as distinct from the showroom as is possible under the circumstances.

The best way to combine the two is to put the accessory store in an alcove, either directly back of the accessory display window, Fig. 4, or at some other point, Fig. 5. A showcase or showcases may be used to separate the two rooms without interfering with the ease with which one man may look after both departments.

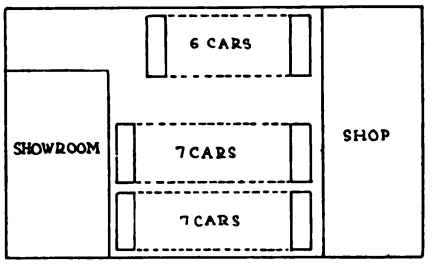
The advantages of a separate accessory store are well summed up by a Motor World subscriber, Roy T. Sprague, Fowlerville, Mich., who says:

"When a salesman is talking to a prospect we do not want his attention called to tire troubles and all the other troubles which are handled in the office and accessory store side. I want storage customers and people whose cars are in for repair to pass through or wait in the accessory store where they will see what we have to sell. I want the man who is buying a car away from all that, with nothing to distract his attention."

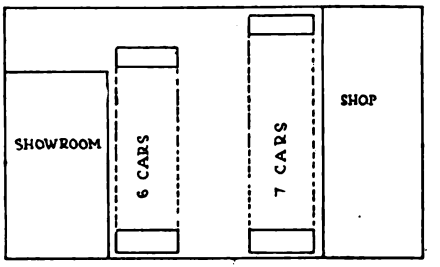
Placing the store in an alcove does not obviate this objection but it does improve the appearance of both showroom and store, because one of the most important reasons for separating them is that they do not look well together. No man would think of trying to combine showroom and shop, even though the latter were clean and attractive. They simply don't go together and that is all there is to it.

Then, too, the shop is noisy. The same arguments hold regarding showroom and store, although naturally the objections are not so great.

Car customers will be distracted and interrupted by transactions in the accessory store. One of the main reasons for having a showroom is to enable the salesman to work at 100 per cent efficiency, to have his every effort register the full count in its effect on the prospect, and to a degree the accessory store defeats this purpose.



Having fully discussed the reasons for driveway and accessory store location let us return to an examination of the plan.



The showroom is an unbroken rectangle amply large enough for two cars but not of sufficient size to accommodate three without spoiling the effect. Entrance from the street is through a single door. Cars are introduced in the showroom through a sliding door opening into the garage. The small front door is desirable because it conserves the window display space.

The store is separated from the showroom by two showcases. There are shelves around the walls and another showcase in the room.

There is a single office large enough for two or three desks.

The RETAIL NEWS

NORTHWEST

O. W. Shaffer, Atlantic, Iowa, has bought the half interest of W. H. Wagner, Jr., in the White Pole Garage. William Briggs, who was owner of the repairshop in the same garage, has sold this to Wagner & Shaffer.

Grant Hendricks, Bentley, Iowa, has bought the garage of Rudolph Kay.

J. Gibson, Clarinda, Iowa, has bought the E. Dugan Garage.

E. N. Maxfield, Council Bluffs, has bought an interest in the Auto Sales Co.

M. L. Blair Motor Co., Council Bluffs, has moved to Automobile Row, taking quarters at 2417 Farnam Street. The firm handles the McFarlan and Empire for Wyoming, Nebraska and western Iowa.

Ted Himgenberg, Emerson, Iowa, has bought the garage of F. F. Brehm.

J. W. Hall, Greenfield, Iowa, has bought the West Side Garage from Lampher & Dory.

The Jensen Auto Co., Graettinger, Iowa, has bought the Geil Auto Co.

Fred Russell, Greenfield, Iowa, has bought the interest of his partner, Forest Law, in the Russell & Law Auto Supply Shop.

Cedric Barnes has sold his interest in the garage at Grinnell, Iowa.

Henry E. Selle, Kellogg, Iowa, has bought the Hill Bros. Garage.

Rolland Skinner, Lytton, Iowa, has opened a repairshop.

Kohn Leitzen, Mapleton, Iowa, has bought the City Garage from Lester Patrich.

The Ruble Garage, Merengo, Iowa, has been consolidated with Willenbrock & Simmons.

J. L. Curtis, New Market, Iowa, has bought the interest of his partner in the Reilly & Curtis Auto Co.

W. N. Wesp, New Hampton, Iowa, has sold his interest in the Wesp Motor Co. to Frank P. Wentz, Arthur Wesp and C. F. Chaney.

H. Enger, Ottumwa, Iowa, has opened a salesroom in Sigourney and will handle the Buick.

Perkins & Co., Pisgah, Iowa, have bought the K. T. Garage stock from Will Mobley.

H. L. W. Meyer, Schaller, Iowa, has bought the Woodke Garage.

C. W. Beeler, Sibley, Iowa, has purchased an interest in the Fairview Motor Co.

Ted Watson, Albion, Neb., has opened the Albion Auto Repair Co.

Richard Ulrich, Battle Creek, Neb., has bought a half interest in the garage of J. M. Lederer.

John Kasparek, Brainard, Neb., has bought the Ford garage.

Charles Munsey, Broadwater, Neb., has bought the interest of R. C. Duelin in the Broadwater Garage.

W. T. Moore, Broken Bow, Neb., has opened a repairshop.

W. T. Headly and E. H. Kolbo, Callaway, Neb., have bought the Callaway Auto Repairshop.

Dale & Fink, Elgin, Neb., have opened a repairshop.

Harry Vaughn, Fairbury, Neb., has bought the interest of his partner in the Fairbury Garage.

Harry Vaughn, Fairbury, Neb., has bought his partner's interest in the Whittet Traeger Auto Co.

Roy McCaslin, Fairbury, Neb., has moved his tire repairshop into a new building.

Will Dana and O. Juhnke, Fairbury, Neb., have leased the T. L. Vaughn Garage.

M. A. Beamish, Gering, Neb., has opened a repairshop.

Ayres Brashear, Gering, Neb., has sold his garage to Meynard & Frey.

Jake Cone, Gordon, Neb., has bought the automobile business and garage of Havener & Son.

Herman Warner, Gretna, Neb., has opened a repairshop.

Macrum & Lester, Haigler, Neb., have bought the Burlington Highway Garage of A. J. Archer.

New York State Jobbers Form an Association

Accessory Men Unite for Handling of Territorial Trade Problems and Co-operation with N. A. A. A. J.

ROCHESTER, N. Y., April 20—The jobbing interests of New York state yesterday organized themselves as the New York State Association of Automobile Accessory Jobbers. They are an adjunct of the National Association of Automobile Accessory Jobbers and were assisted in their organization by National Field Secretary George Fritz, who has helped form similar divisions in other parts of the country.

The officers are: President, C. S. Owen, Chapin-Owen Co., Rochester; secretary, E. T. Ball, Joseph Strauss & Son, Buffalo; treasurer, W. J. Davis, Davis-Brown Electric Co., Ithaca. The president named the following executive committee: C. S. Owen, Chapin-Owen Co., Rochester; E. T. Ball, Joseph Strauss & Son, Buffalo; W. J. Davis, Davis-Brown Electric Co., Ithaca; H. J. Rowerdink, W. H. Rowerdink & Son, Rochester; W. E. Foskett, Albany Hardware & Iron Co., Albany; Harrie R. Williams, A. J. Picard & Co., New York; R. Bundy, U. S. Rubber Co., Buffalo.

The companies represented at the organization meeting were: Joseph Strauss & Son, Buffalo; H. D. Taylor & Co., Buffalo; U. S. Rubber Co., Buffalo; W. H. Rowerdink & Son, Rochester; U. S. Rubber Co., Rochester; Chapin-Owen Co., Rochester; S. B. Roby Co., Rochester; U. S. Rubber Co., Syracuse; Lee Auto Supply Co., Syracuse; Barker, Rose & Clinton, Elmira; Davis-Brown Electric Co., Ithaca; Motor Car Equipment Co., New York; H. A. McRea & Co., Glens Falls; Farrell Auto Supply Co., Brooklyn.

Waterloo Holds An Opening

WATERLOO, IOWA, April 20—The Waterloo Dealers Association, consisting of every automobile and accessory dealer in the city, has just held a spring opening week. Each dealer put on his best clothes, showed his new models in his well-decorated salesroom and donated 5 per cent of his cash retail sales to the local Red Cross.

In addition each car dealer donated a used car, the accessory men donating tires, batteries and accessories, which were taken to a city park Saturday and sold for the benefit of the Red Cross.

The street parade, led by a brass band, consisted of ninety-six new cars, several trucks and fifteen used cars and each car containing several lady members of the Red Cross. The sale was a complete success, netting the Red Cross over $3,500.

In addition Waterloo dealers invited the Cedar Rapids dealers to be guests at a banquet, this to reciprocate to Cedar Rapids for their hospitality some months ago.

The Cedar Rapids dealers came seventy-eight strong with a brass band and after a street parade sat down to a special dinner with 198 automobile men at what was the livest entertainment ever staged in Waterloo. The Waterloo committee who put over the big events consisted of W. O. Campbell, Chairman, H. H. Henry, Ralph Cramer, B. E. Farrand and Harry Padden.

Pinkerton Heads Peoria

PEORIA, April 20—H. B. Pinkerton was re-elected president of the Peoria Automobile and Accessories Dealers' Assn. at the annual election. Pinkerton has been at the helm during the past 2 years. W. F. Johnston was named first vice-president, Robert H. Fitch, secretary, and Robert F. Graham, treasurer. All of the officers were re-elected. The following directors were elected at a recent session: Theodore Bass, Robert Fitch, W. F. Johnston, C. A. Porter and Howard Kinsey.

A dividend was declared as the result of the success of the 1918 exhibition and checks are being mailed the members by secretary Fitch. The Peoria dealers staged their own show at a great saving to themselves.

Close Los Angeles Ford Plant

LOS ANGELES, April 20—Owing to inability to get a sufficient supply of parts from the Detroit factory, the local assembly plant of the Ford Motor Co. has discontinued assembling cars here temporarily. The sales, service and accounting departments continue in operation. Approximately 80 employees were affected by the change. This territory is now being supplied from the San Francisco plant, the cars being shipped here ready for the road. It was stated at the plant to-day that as soon as a continued supply of assembly materials can be assured the former plan of operation will be put in effect again.

Old Tire Day Raises $628 for Red Cross

Denver Dealers and Owners Donate Useless Tires Amounting to 10,930 Lbs.

DENVER, April 20—The Denver Motor Club has just raised $628.48 for the Red Cross through a unique enterprise termed old-tire week. The event was originally planned for one day only, but bad weather and delayed reports from donors caused the committee in charge to extend the affair a few days longer. A goodly number of the club's more than 1200 city members responded with old tires, and many outsiders were enlisted in the project. Several members enthusiastically went out canvassing business concerns, while others donated trucks to go out after tires reported by telephone. The collection weighed 10,930 lb. Offers are still being made, and the club plans to repeat the performance near the close of the summer. All motorists are urged to save up their worn-out tires for the next fund.

Motor clubs and trades associations throughout the country are expected to adopt the plan. The idea was originated by E. R. Cumbe, motor club director, Federal tire dealer and a veteran in Denver's motor car industry.

Paddock Relinquishes Chalmers

NEWARK, N. J., April 19—The Paddock-Zusi Motor Car Co., which has had the Chalmers for about 10 years, has relinquished it to the De Cozen Motor Co., which also has the Maxwell. Paddock retains the Chevrolet. George Paddock, head of the Paddock-Zusi company, is considered the daddy of the row.

Here's part of the pile of old tires donated to the Red Cross by Denver dealers and owners. The sales realized $628.

Six Companies Make Tire Price Advances

Fisk, Goodrich, Goodyear and Ajax Raise All Prices 10%—U. S. and Firestone Higher

NEW YORK, April 22—Six tire companies, Fisk, Goodrich, Goodyear, Ajax, Firestone and U. S., have advanced their tire prices 10 per cent and more. The first four companies have made a straight 10 per cent increase on pneumatics, solids and all products which they manufacture. Firestone is making a 10 per cent addition to its schedules on all but non-skid fabric tires which are from 12 to 15 per cent higher. United States has increased prices 10 per cent on plain, USCo. chain and all cord makes except the nobby. There is no advance on any of the nobby treads. U. S. red and gray tubes are also up 10 per cent. Other concerns predict a similar rise within the next few days. Following is the situation to-day:

Kelly-Springfield prices remain as before, but an increase of at least 10 per cent is expected shortly. It is believed that this will not be a straight increase on all goods, but will vary according to the product.

Empire tires are expected to go up 10 per cent within a few days, although no definite word to this effect has been received from the home office.

No increase is expected at the present time on Batavia and Nassau tires.

Republic tires are likely to be advanced any day from 10 to 15 per cent, but no notice of a change in schedules has been received.

Michelin tires will remain at their present quotations for a while, but new rates are expected to be introduced in the near future.

Cleveland Truck Men Organize

CLEVELAND, April 22—Permanent organization of the Cleveland Commercial Car Dealers' Association was effected at a meeting held Friday evening, April 19, at the headquarters of the Cleveland Automobile Club. The following officers and directors were elected: President, R. J. Schmunk, Peerless Motor Car Co.; vice-president, H. S. Norton, Packard-Cleveland Co.; secretary, G. K. Wadsworth, National Garage Co., GMC; treasurer, H. L. Schnider, Republic Motor Sales Co.; Fred P. Brand, president Fred P. Brand Co., Pierce-Arrow; L. K. Hays, The White Co.; J. Mertz, Kelly-Springfield; S. F. Selby, Motor Distributors Co., Selden, and Ben F. Hopkins, Grant Motor Truck Sales Co.

H. S. Norton talked on the aims and purposes of the return-loads bureau which is being organized, and which will operate from the traffic department of the Cleveland Chamber of Commerce. Arrangements have been made for cooperation among the Chamber of Commerce automobile club and truck dealers' organization to perfect the operation of the bureau, and Norton has been made chairman of the Chamber of Commerce's committee which will be in charge.

Women Attend Coast Tractor School

LOS ANGELES, April 20—The tractor school held recently at San Fernando, near here, had a total registration of 110 students taking the full course, including lectures and field demonstrations, and is said to have set a record for the size of its class of women.

Twenty-nine women and girls have learned the ins and outs of tractor management, including the complicated inside workings. Mrs. E. C. Ingham, principal of the school, points with pride to the persistence with which the 22 girls of the high school clung to the helm of Yuba and Bean and miniature Beanon over the rough courses of freshly broken fields where clouds of dust would have daunted less determined aspirants. Seven women, including several from Los Angeles, actively engaged in learning the man-and-horse displacing job.

Hundreds of persons watched the demonstrations on the school grounds and a 10-acre tract nearby. D. C. Clower, head of the agricultural department, and R. G. Millen, of the manual training department of the San Fernando high school, who had much to do with the success of the tractor school, feel that a gratifying work has been accomplished by the week's effort in the successful effort of arousing interest in the tractor for practical farm use.

No Sanction for Accessory Show

CHICAGO, April 22—Preparations for the accessory show on the Municipal Pier in September are going ahead despite the fact that the Motor and Accessory Manufacturers Association has declined to issue a sanction. It is stated that the Hardware Jobbers' Association may hold a convention in Chicago at the same time. This would tend to line this show up in opposition to the accessory show planned by the National Association of Automobile Accessory Jobbers in October, as there has been friction between the hardware and accessory jobbing organizations.

Kissel Drops One Model

HARTFORD, WIS., April 18—The Kissel Motor Car Co. of this city has discontinued the manufacture of its ¾-ton bevel-driven Flyer delivery vehicle. In its place it has added a new worm-driven 5-tonner called the Dreadnaught, with a chassis capacity, including the body, of 11,800 lbs.

When He Balks

When I get a prospect to the dotted line and he balks I want to know why. I listen to his whys, then show him where he is wrong. If I can convince him, he is sold.—R. Satterthwaite, Pacific Kissel Kar Branch, Seattle.

Not Even Snow Could Spoil Deadwood Show

Three-Foot Blizzard Keeps Doors Open Three Days Longer—Results Were Good

DEADWOOD, S. D., April 20—Deadwood, which can usually be depended upon to furnish entertainment or amusement far out of the ordinary, produced a 3-ft. snowstorm in the middle of automobile show week. The storm began Wednesday afternoon and by late Thursday night, when it ceased, 3 ft. of snow had tied up traffic in every direction. The result was that the show, instead of closing on Saturday night, April 20, as had been advertised, was continued into the following week, and covered Monday, Tuesday and Wednesday, April 22, 23 and 24.

When the show, which was the sixth annual affair, given under the auspices of the Deadwood Business Club opened on the afternoon of Tuesday, April 16, thirty-three cars and tractors, two motorcycles and any number of tire and accessory exhibits were in place.

Dealers were all highly pleased with the outlook and business transacted, and a large number of sales are reported, the first passenger car to be disposed of being an Apperson, four-passenger, six-cylinder roadster. Every dealer wanted to be represented again next year, and even before the show opened several had made reservations for space in the 1919 show. Deadwood is the center of a large territory, which includes a most prosperous agricultural section as well as a gold mining section of note. Its diversified resources make it uniformly prosperous.

While the show was held in the largest hall in the western part of South Dakota, the Deadwood Auditorium, with a floor 82 x 123, it was not large enough to accommodate the exhibits. The Nash and Studebaker cars were among those which could not get floor space, while several large dealers had been cut down in their space allotments so that the greatest possible number would have an opportunity to exhibit.

Attendance all the way through the show was the best which ever patronized the affair, with the exception of Thursday, when it stormed, and Friday, when the roads were not yet easily passable.

Col. George Pope Dies

HARTFORD, CONN., April 20—Col. George Pope, president of the National Assn. of Manufacturers, treasurer of the National Automobile Chamber of Commerce and formerly treasurer of the Pope Mfg. Co. of Hartford, died at his home here yesterday, in his seventy-fifth year.

Col. Pope had been connected with the Pope Mfg. Co. in various capacities since 1890, when he became president of the Hartford Cycle Co., a branch of the Pope Cycle Co., founded by his cousin, the

Digitized by Google

late Col. Albert A. Pope. In 1899, when many bicycle interests were merged into the American Bicycle Co., George Pope was elected vice-president of the concern, and later president of the reorganized Pope Mfg. Co.

Col. Pope's first active interest in automobiles was in 1897, when his company put on the market several Columbia electric phaetons. He was at one time chairman of the Show Committee of the Association of Licensed Automobile Manufacturers and the Automobile Board of Trade. It was largely through his efforts that the early automobile shows were successful, and he had active charge of the work in the New York shows from 1903 to 1913. When the Electric Vehicle Manufacturers Assn. was formed in February, 1906, he was elected president.

Anti-Strike Agreement in Minnesota

ST. PAUL, April 22—The first wartime agreement to prevent strikes and lockouts has been made in Minnesota, thus insuring continuance of all work in automobile, truck and tractor factories, in garages, repairshops and other lines of activity affecting the motor trade. The agreement has been an order by the Minnesota Public Safety Commission. It is signed by heads of the State Federation of Labor and the Minnesota Employers' Association. All differences shall be referred to the State Board of Arbitration and, pending settlement, work shall not be interrupted.

Government Takes Bosch Plant

WASHINGTON, April 19—The Government has taken over the plants of the Bosch Magneto Co. at Springfield, Mass., and Plainfield, N. J., as the result of an investigation which showed the company was entirely enemy owned. Directors will be named by Alien Property Custodian Palmer to conduct the operations of the business. The Bosch plant at Plainfield was closed last October, and all the machinery except gas generators was taken out. About 400 persons had been employed in this plant.

Joseph A. Bower, head of the business department of the custodian of alien property, has been designated to represent the Government on the board of directors. The company has a capital of $25,000 and property valued at $7,000,000.

Grit in the Gasoline

WILMINGTON, DEL., April 22—Malicious persons, as yet unknown, but presumed to be German sympathizers, in view of the fact that so far they have directed their spleen toward officers of the military exemption boards here, have invented a new scheme for damaging automobiles, through the gasoline, which they have applied in such a subtle way as to baffle detection so far.

Some foreign substance, which was pronounced by Dr. Frank Roop Smith, a chemist, to be a mixture of chemicals and abrasive substance, was introduced into the oil feeding openings, and thus brought into contact with the whole lubricating system.

Savannah Show Draws From Entire Country

Four-Day Event Made Gala Occasion—Dealers Report Cars Selling Freely

SAVANNAH, GA., April 20—The automobile show held here April 17-20, under the auspices of the Savannah Automobile Trade Association, proved to be a great success, judging from the interest shown by the crowds that visited it. Thousands of people visited the show from the city and the surrounding country.

In proof of the value of the show as an advertising factor a number of machines were sold while on display. These were removed then and others put in their places. In the show were included complete lines of all kinds of accessories. These were shown by both local concerns and out-of-town factories.

The show was held in the Municipal Auditorium. The place was attractively decorated for the occasion. Flags of the Allies were strung in streamers all across the building. They also served as the background to the different exhibits.

Opening Night for Dealers

The opening night was a day for the automobile owners and dealers. The show opened Thursday night with an address by Mayor W. J. Pierpont on behalf of the city. Judge Peter W. Meldrim, of the Chatham County Superior Court, also made an address, and S. N. Harris, general chairman of the show, spoke on behalf of the automobile men.

The city and surrounding country made the four days' show a gala event. The country people showed as much or more interest than the city people did, and they came in large numbers from the smaller towns to look at the latest models of all kinds of machines, with a view of selling their present "John Henry" and purchasing a newer and better car.

The school children were admitted free Thursday afternoon providing they were accompanied by their parents. Many took advantage of this offer and the auditorium was crowded this afternoon.

Philadelphia Pushes Its Drive

PHILADELPHIA, April 20—The Philadelphia Automobile Trade Association in its first two weeks of the big drive for the Third Liberty Loan cleaned up in subscriptions a total of $973,750, but since these official figures have been posted on the huge scoreboard filling the wall space at one end of the dining room, $100,000 more has been signed for, making in all to date $1,073,750. The goal is $2,000,000.

Following is the tabulated result for the two weeks' official figures:

Group 3, W. B. McCullough, Chairman.

Trade A, Motor Cars—A. E. Maltby, chairman; W. A. Almy, vice chairman. Team 1: C. R. Cunliffe and A. M. Pollock, $67,900; Team 2: S. Stankowitch and S. R. Blocksom, $46,750; Team 3: C. W. Lloyd and H. L. Bogardus, $3,300; Team 4: E. G. Browning and J. J. Smith, $39,600; Team 5: E. W. Burnshaw, Jr., and O. W. Doolittle, $46,450; Team 6: Benjamin Hoffman and E. M. Bartlett, $55,400; Team 7: T. S. Johnston and H. B. Harper, $40,250; Team 8: W. G. Herbert and A. W. Lockwood, $52,750; Team 9: J. C. Bartlett and N. G. Wilson, $7,350; Team 10: A. W. LaRoche and G. P. Parker, $24,050.

Trade B, Tires—W. R. Walton, chairman; Garfield List and E. H. Fitch, vice chairmen. Total, $70,900.

Trade C, Accessories—G. B. Shearer, Jr., chairman; A. W. Stellwag, vice chairman. Total, $206,550.

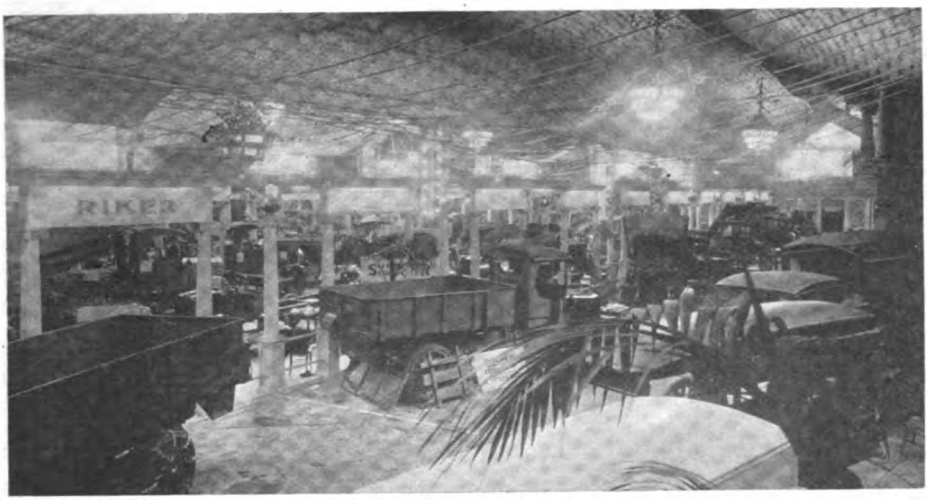
Trade D—Joseph Haines, J. H. Flanagan, Frank Buhler and Albert Wunderlich, chairmen. Total, $161,950.

Trade E—Thomas Quirk, chairman. Total, $21,300.

Trades F and G—G. H. Taylor, chairman. Total, $76,550.

Following are some interesting isolated subscription figures for the Third Liberty Loan in the motor car and allied trades:

Hess-Bright Mfg. Co., $50,000, employees, $61,000; Atwater Kent Mfg. Works, $24,000, employees, $24,000; Standard Roller Bearing Co., employees, $75,000; Automobile Sales Corp., $50,000; Foss-Hughes Co., $30,000; Overland-Harper Co., $30,000; Thornton-Fuller Automobile Co., $25,000; United States Tire Co., $25,000; Studebaker Corp. employees, $25,000; Fanning, Mathis Co., $25,000; J. H. McCullough & Son, $10,000; Herbert Bros., $15,000.



New York Trade Buys $28,400 Bonds

NEW YORK, April 19—A total of $28,400 worth of Liberty bonds was bought by the New York dealers at a meeting of the automobile and accessory trades held in the Automobile Club of America to-night. The audience at the rally was small but enthusiastic. Among the big contributors were: S. A. Miles, manager of the National Shows, $10,000; Alfred Reeves, general manager of the N. A. C. C., $3,000; H. P. Baran, H. P. Baran & Co., $5,000; Charles E. Reiss, Hupmobile dealer, $4,600; Frank White, Stewart-Warner, $1,200; Leon Jaffes, tire dealer, $1,000; William Allen, $1,000; Edward Korbell, publicity manager for the New York show, $400. Alfred Reeves spoke on what the automobile is doing to help the war. Sergeant Harold Wright of the French Flying Corps and the Lafayette Flying Corps gave a stereopticon talk. John C. Wetmore, automobile editor of the New York Evening Mail, led the drive for the Liberty bond sale. Charles M. Brown, president of the Automobile Dealers' Association, presided.

Crude Oil Production Increases

WASHINGTON, April 17—Production of crude oil during March was 176,000 barrels, more than twice as much as the February amount. This was also an increase of 50,000 barrels over March, 1917, and 20,000 over March, 1916. The number of completed wells for March this year was 1962 as compared with 1200 in February.

Here is a view of Pittsburgh's first exclusive truck show, which has been pronounced a distinct success by exhibitors

Pittsburgh's Exclusive Truck Show a Success

Only Commercial Vehicles Shown in Motor Square Garden—To Be Repeated

PITTSBURGH, April 20—Sales aggregating several hundred thousand dollars give assurance that the motor truck show in Motor Square Garden, Pittsburgh, will become an annual institution. When the great exhibition opened Saturday night, April 6, Pittsburgh business interests were given the first opportunity to see assembled under one roof virtually every type of motor truck used for commercial purposes. Limited exhibits had been a feature of the semi-annual automobile shows, but this was different—a show devoted entirely to motor vehicles designed for utility. Among the one hundred exhibits representing forty-one different makes of trucks, business men found one or more types for every possible purpose for which commercial trucks are being used.

St. Louis Gathers 400 Volunteers

ST. LOUIS, April 23—More than 400 volunteers from Class 1A of the draft in Missouri, Iowa and Illinois have been gathered here for mechanical training for army service. All trades are to be taught, but the chief training will be in gasoline engine work, blacksmithing and carpentry. The instruction is given in Washington University, David Rankin, Jr., School of Mechanical Trades, Soldan and Central High Schools. The men are almost exclusively college and high school graduates, and are lodged in hotels leased by the Y. M. C. A., which institution has taken over their care.

New Coast Truck

SAN FRANCISCO, CAL., April 19—The De Martini Motor Truck Co. of this city is now offering four models of worm-driven trucks of 1, 2, 3 and 4-ton capacity. All four units are equipped with Buda engines, Brown-Lipe clutches and Brown-Lipe gearsets mounted in unit power plants, and Sheldon worm-driven rear axles. The 1-tonner has a 3¾ by 5⅛ engine, the 2-tonner a 3¾ by 5½, and the 3 and 4-tonners a 4¼ by 5½. In the chassis the 1-tonner sells at $2,250, the 2-ton unit at $2,750, the 3-tonner at $3,650, and the 4-ton model at $4250.

New Winther 1-Tonner

WINTHROP HARBOR, ILL., April 19—A new 1-ton internal-gear-driven truck has just been added to the Winther Motor Truck Co. of this city. The newcomer sells at $2,250 in the chassis, and is fitted with a Wisconsin 3¼ by 5 engine having a Borg & Beck dry-plate clutch, with a Brown-Lipe four-speed gearset mounted amidships and a Clark internal-gear-driven rear axle with the springs arranged to take the torque and propulsion on the Hotchkiss plan.

13 St. Louis Dealers Have Truck Agencies

Several Added Recently, and It Is Predicted Exclusive Car Agency Is Passing

ST. LOUIS, April 22—A recent census of the motor car dealers of this city shows that the following are additions to the ranks of truck dealers:

De Luxe Automobile Co., Bethlehem; Weber Implement & Automobile Co., Armleder; Welleng Motor Co., Gramm-Bernstein; Kardell Motor Co., Kelly-Springfield; J. W. Leigh Motors Co., Rainier; Cadillac Automobile Co., Knickerbocker; Briscoe Motor Sales Co., Redden; Mound City Buggy & Auto Co., Panhard and Defiance; Brandle Motors Co., Traffic.

The passenger car agencies of the Ford, Maxwell, Dodge and Grant cars all are selling trucks recently put on the market by the companies which make the passenger cars. It is predicted that it soon will be a novelty to see an exclusive passenger car agency.

Limit Rubber Shipping Space

WASHINGTON, April 22—It is understood that the Shipping Board has practically decided upon a definite curtailment in the amount of shipping space which will be permitted for the importation of rubber. This was practically decided following the hearing which was held in Washington last week between representatives of the Shipping Board and of the various large rubber consumers of the United States. The amount by which tonnage space will be limited has not been definitely established. It is stated that the complete plan of the shipping board will be made public within the next two weeks.

Hartford, too, had an entirely successful show, which, despite the martial air, was held in the armory

Digitized by Google

Prominent Tradesmen Assume New Duties

Resignations and Promotions Place Workers in New Places

Joseph P. Hall, formerly treasurer-director of the Combination Rubber Mfg. Co., Bloomfield, N. J., has been appointed general manager of the company.

George S. Shugart, formerly western sales manager of the United States Tire Co., New York, has been promoted to the position of manager of branches of the company, to succeed C. S. Tweedy, who resigned. Mr. Shugart has also been elected a director of the company.

Ralph ("Scotty") Lupton, who for some time has been a Wilmington, Del., accessory man, has enlisted in the army.

W. M. Tutt has been appointed sales and shop manager of the North State Motor Co., Greensboro, N. C. He was formerly associated with the Universal Auto Co. in the same city.

J. L. Hardin has been appointed office manager of the North State Motor Co., Greensboro, N. C.

A. W. Maire has been appointed manager of the Cleveland branch of the King Motor Car Co.

George Rumford, for many years general superintendent of the Oakland Avenue branch of the Maxwell Motor Co., Detroit, has resigned. His future plans are not announced.

F. G. Scott has left his position as sales manager of the Roedding Signal Light Co., Detroit, to join the colors.

Robert N. McCormick, general manager of the Hupmobile Sales Corporation of Philadelphia, severed his connection with that organization on April 15. He has not announced his plans for the future. His successor probably will be named within the next few days.

H. N. Cooke has been appointed Philadelphia representative of the Standard Fabric Co., Walpole, Mass.

J. F. Bowman has been elected vice-president and general manager of the Acason Motor Truck Co., Detroit. He formerly was vice-president and director of sales of the company. Prior to joining the Acason interests he was director of sales for the Federal Motor Truck Co. **H. A. Colon** has been appointed sales manager of the Acason Co. He was formerly assistant to Bowman in the Acason Co. and before that was assistant sales manager to Bowman at the Federal Co.

J. George Shaw, formerly president and treasurer of the Milwaukee Steel Foundry Co., Milwaukee, has organized the Shaw Foundry Co., which already is engaged in a large production of gray iron castings for the motor car and tractor trade.

J. V. Gilmour, Chicago, has been appointed assistant advertising manager of the Racine Rubber Co., Racine.

E. E. Smith, who represents the Shubert theatrical interests at Boston, has entered the motor field by buying an interest in the Scripps-Booth Motor Car Co. and taking on the New England distribution for the Sandow trucks. A lease has been taken of the building 3, 5, 7 and 9 Brighton Avenue, next door to the big Packard plant, and this will be used for a sales and service station. **J. V. Schenck,** who has been in charge of the Scripps-Booth sales, will be sales manager of the new combine.

Thomas O'Neil, formerly of the Hercules Gas Engine Co., Evansville, Ind., has been appointed assistant general manager of the Worthington Pump & Machinery Corp.'s big gas engine works at Cudahy, Milwaukee County. He succeeds George W. Thexton, who has gone to the Bucyrus Co., South Milwaukee, as works manager.

Record Birmingham Registration

BIRMINGHAM, April 20—The sale of automobile licenses for the first six months of the fiscal year ending April 1, in Birmingham, has passed the total for the twelve months, ending Oct. 1, 1917, according to the figures made public this week by the Board of Tax Equalizers.

The tax report for the state shows automobile tags sold from Oct. 1, 1917 to April 1, 1918 reached a total of 30,394, private automobiles; 5909 commercial cars, and 858 motorcycles, for the state. Of this number Birmingham automobile owners bought 5982 private tags, 1550 commercial tags, and 417 motorcycle licenses.

During the twelve months ending Oct. 1, 1917 Birmingham bought 5540 private automobile licenses, 1697 commercial licenses, and 560 licenses for motorcycles. The total sales for the state during the same period was 26,952 licenses for private cars, 5921 commercial, and 1240 for motorcycles.

Another development which reflects the big growth in the automobile industry of recent months is a general demand coming from all sections of the state for better highways and the large amount of road improvement which is now going on despite the depression which might naturally be expected to follow war conditions.

Gas Advances in Chicago

CHICAGO, April 20—The price of gasoline in this territory was raised this week for the first time in six months. The Standard Oil Co. of Indiana announced an increase of 1½ cents a gallon, in the tank wagon price, making it now 22½ cents. The filling stations, both of the Standard and the Independent, have raised their prices from the previous figure of 21 cents to 24½ cents. The reason given by the Standard Oil Co. of Indiana is the heavy government demand, particularly for the high-grade fuel needed for aviation engines, which puts a greater strain on the refiner. It is impossible to get an expression as to whether they anticipate any raises in the near future.

Menominee in New Plant

MENOMINEE, MICH., April 22—The Menominee Motor Truck Co., Menominee, Mich., is now comfortably settled and operating at full capacity at its new factory, consisting of the former group of the Richardson Shoe Co., which has been entirely rebuilt and strengthened for motor truck manufacture. The output of Menominee trucks, which during 1917 numbered approximately 500 vehicles, will be more than doubled in the new plant.

Propose Same Law in All States on Theft

Secretaries of All States Draft Statute, and It Is Endorsed by National Dealer Body

ST. LOUIS, April 22—The attention of the local committee named by the Automobile Manufacturers' and Dealers' Association and other business organizations to work out a solution of the stolen car problem has been called to a proposed law drafted by J. T. Botkin, secretary of state for Kansas, who is acting as chairman of a committee of the Society of the American Secretaries of State.

The National Automobile Dealers' Association is backing the movement.

The proposed law is almost completed and will be submitted in proper form to the secretary of each state within the next few weeks, with a request that its passage be sought at the next state assembly. The idea is to have uniform state laws as to the registration and traffic in motor cars in all states, which Botkin and his associates think will be as effective as a federal law, and the enforcement of it will then be in the hands of the local authorities throughout the whole country.

The idea behind this act is that the transfer of title to a motor vehicle must be registered and accompanied by the official notation just as a deed to land now is. Any person pretending ownership to a motor car not so transferred will be subject to punishment without further evidence than his pretended ownership.

Registration of cars in various states would be uniform, each requiring engine numbers. If these have been removed, a secretary of state can assign a number for the first year, and this number must be cut into the engine. Then the owner will be given a certificate of registration. When he sells this car, he must formally transfer his certificate and the state department must be notified within 10 days. He will then issue a new certificate of registration at a nominal fee.

The bill provides that thefts shall be reported to the secretary of state, who shall at once notify all other secretaries of state. Also means is provided for notifying the police departments of the larger cities.

Catalogs Received

The Akron Rubber Mold & Machine Co. has published a booklet entitled "Tire Repairing—the Business of the Times." In it are cited reasons why the tire repair business contains innumerable opportunities for the business man and suggestions for conducting a tire repair business. Diagrams and descriptions of the company's Tip-Top Ti-Re-Pair outfit are also included.

Chicago Trade Takes Over $500,000 Bonds

Dealer Association Steadily Pushing Hand of Giant Speedometer Around

CHICAGO, April 20—Up to date the Third Liberty Loan Speedometer Bulletin of the Chicago Automobile Trade Association shows that concerns in the trade have sold to their employees and others Third Liberty Loan bonds to an amount of more than $500,000.

The Liberty loan drive in the automobile trades is being handled through the Chicago Automobile Trade Association. Vigorous efforts are being put forth to insure that the automobile interests do their full share. Every second day during the drive the association issues a bulletin showing the results to date, not only that all in the trade may be kept advised of the progress of the drive, but also to spur on those who might otherwise be inclined to lag.

The official bulletin is in the form of a poster in patriotic colors, at the top of which appears a representation of a speedometer dial. The pointer is advanced on each successive bulletin to show the progress which has been made and to indicate the total of the bonds sold.

Immediately below appear the names of the concerns whose employees have bought Liberty bonds, with the percentage of purchasers relative to the whole number of employees. Where the number of persons to whom bonds have been sold exceeds the number of the employees of the firm, a plus percentage is credited.

Upon the lower portion of the bulletin it is proposed, beginning with the one which will be issued on Monday, April 22, to print the names of concerns in the Automobile Trades Division which have made no sales. It is fair to presume that not many concerns will be emulous of publicity in this space on the poster.

Delaware Tractor Demonstration Bringing Results

WILMINGTON, DEL., April 22—As a result of a tractor demonstration, which took place three days last week on Joshua R. Bishop's farm, near Dover, the capital of Delaware, farming by machinery has been stimulated. All sections of the state were represented at the demonstration, and the interest manifested ought to be productive of results. Seven tractors of as many different makes were in action at a time, plowing and doing such work as tractors are capable of doing on a farm. There were many inquiries, because the exhibition proved a revelation to many of the spectators.

The exhibition was conducted under the auspices of the Kent County Farm Bureau, a federal-state combination, and was open to all who cared to exhibit there.

As a result it is believed that a number of orders for machines will be booked. Farming by machinery looks like an early possibility in Delaware, and it seems quite likely that once installed it will automatically develop itself.

Western Electric Farm Outfit

NEW YORK, April 22—The Western Electric Co., with offices at 195 Broadway, is placing on the market a new farm lighting system, which, with a 90 amp.-hr. battery sells for $325; with 180 amp.-hr. battery the price is $385, both prices being without the gasoline engine. Both outfits have a 700-watt generator, storage battery and a switch panel, 5 x 10 in., incorporating an automatic regulating device. The switch panel is equipped with an ammeter and a single-pole double-throw switch for starting the engine and controlling the lights. All terminals are at the back of the panel, which is made of Munson slate and fully fused. The regulator governs the charging current, supplying a tapering charge. It is planned later to market a 500-watt and a 1050-watt outfit. Engines can also be supplied.

Detroit-Pontiac Road

PONTIAC, MICH., April 18—Petitions for a new concrete highway from Pontiac to Detroit have been filed with Oakland County and state officials. The route selected is out Auburn Avenue from Pontiac, entering Detroit on John R. Street, just east of the Ford factory. It is a direct line to Utica and Mt. Clemens, and a much traveled way to Rochester. It is expected that this route will divert traffic from the present congestion of summer seasons on Woodward Avenue concrete, which passes through Royal Oak and Birmingham. It is probable the work will not be started until next season. In conjunction with the roads to be built this year around Orchard Lake, and out Maple Avenue, from Birmingham toward Farmington, several of the larger villages of the county will thus be connected with Detroit and Pontiac by improved thoroughfares.

Reo Truck Output Increases

LANSING, April 20—Truck production of the Reo Motor Car Co. for the month of March was 735, compared with 325 in March, 1917. The present output of fifty per day will be increased. On April 15 the sales department was 1119 trucks behind its orders, of which 270 are heavy-duty trucks.

4901 Overland Men in Service

TOLEDO, April 18—The Willys-Overland Co. now has 4901 employees in the service of the United States Government, according to its service flag.

"Get the List Price!" Philadelphia Slogan

Automobile Accessories Business Association Nails This Motto to the Mast

PHILADELPHIA, April 20—Features of the meeting of the Automobile Accessories Business Association of Philadelphia last night, at the Hotel Adelphia, were epigrammatic propaganda for the National Association of Automobile Accessory Jobbers, prepared and presented by W. H. Metcalf, president of the Automobile Accessories Business Association; an address by Captain C. P. Ross, of the British army, on his two and a half years' experience on the western front and instructive remarks on the plans for the Return Loads Bureau that is being established in this city for the benefit of motor trucking concerns and shippers.

Absorbingly interesting to the members were the following points made by Mr. Metcalf on sticking to list prices in the trade and, which, it was suggested, should be printed for framing:

"Get the list price—always. There's a motto that should hang over the desk of every accessory dealer and it is, 'No one ever went broke by taking a profit.'"

"The garage owner who is successful has learned to estimate his costs and base reasonable charges upon them; but some accessory dealers still have rather hazy ideas about business. For this the selfish habits of some of their friends are to blame."

"The high cost of the early automobile produced a class of discount beggars. There are still plenty of men who think they shouldn't pay list prices for anything connected with motordom."

"Accessory dealers have more chances to give away their profits than nearly any other class of merchants."

"The property owner who regularly pushes up your rent thinks you should give him a family rate on spark plugs."

"The meat dealer who wants you to throw off profits for him, isn't shading the price of beefsteak this year."

"Your grocer isn't giving accessory dealers twenty and give when you make your monthly settlement."

"There's only one rule: Stick to list prices."

First American Tank a Steamer

BOSTON, April 19—Creeping along in the big military parade to-day on the anniversary of Paul Revere's ride was the tank America, the first one ever constructed in this country for our army. It was built over at M. I. T. field at Cambridge and has been under construction since last November, when Brig.-Gen. John A. Johnston, commanding the Northeastern Department, U. S. A., drove the first rivet. It weighs about 45 tons, and is 35 ft. long, 11½ ft. wide and about 10 ft. high. It has two steam engines using oil fuel, and working with the military engineers who designed it was a member of the Stanley family.

Savings Recommended by War Service Body

Committee of National Automobile Dealers' Association Proposes Business Economies

ST. LOUIS, April 22—In order to guide dealers in war-time efficiency, the War Service Commission of the National Automobile Dealers' Association has worked out certain recommendations which President F. W. A. Vesper has made public.

These recommendations cover mostly the conservation of man power and the elimination of waste. They aim at the elimination of such service work as may be rendered unnecessary by proper education of car owners and provide for the training of men by dealer associations in the various cities, in order that skilled workers may be made available for government service. Many dealers have already been hard hit by the loss of mechanics.

The recommendations are not radical when considered in their entirety. While it is proposed to curtail free service, it is at the same time proposed to teach the car owner to take care of his car. The recommendations are largely those good business practices which the trade could well have adopted in normal times but which are made necessary by present conditions. The statement of President Vesper follows:

"The following report was made and submitted to Mr. A. W. Shaw, chairman of the Commercial Economies Board at Washington, with the assurances that the dealer industry stood ready to immediately develop these suggestions to the highest point of efficiency. The meeting of the committee indicated plainly that its function was largely in effecting economies of labor, rather than material, and that local association officials would be advised to immediately institute plans to bring about an early operation of the suggestions contained therein. The demand of the Government for skilled labor, both mechanical and drivers, will be met to its fullest possible degree by the automobile dealer industry throughout the United States, and the War Service Committee will lend its efforts in co-operating with the officials at Washington in this direction.

"**1—Unnecessary Service:** Careful investigation has disclosed the fact that unnecessary service, requiring the use of mechanics whose services might be dispensed with and released for the use of the Government or for work in other channels, due to the practice of issuing free service coupon books, service cards and other unnecessary work done because of custom—for a great majority of the work is of minor character, such as adjustments, etc., which the owner should make himself—can be eliminated and a very material saving of man power be made.

"**2—Sunday Work:** The large proportion of the mechanical work done on Sundays is occasioned by the use of cars almost entirely for pleasure purposes, and is usually emergency service on the road. It is suggested that a proper curtailment of this Sunday service will bring about a material saving of labor and release mechanics.

"**3—Night Service:** A substantial saving of mechanics' time can be made by the elimination of all-night service except where absolutely necessary for cars used in actual essential pursuits, including work on commercial vehicles in use for commercial purposes and on trucks which may require attention. It is suggested that it is entirely practicable that the work be handled at some one designated shop or in larger places divided up among a few, thus releasing a large amount of labor now necessary to keep open a number of establishments.

"**4—Education of Mechanics:** It is entirely practical for dealers' associations in larger cities to establish classes for the purpose of educating mechanics, drivers, etc., and for shops generally to encourage apprentices. In smaller cities, where no association exists, classes may be formed by the co-operation of dealers and could be held in garages in the evening and at odd times.

"**5—Establishing Cash Basis:** It has been demonstrated that the cash basis for labor, parts and supplies is of great economical value, as it eliminates a lot of unnecessary work, reduces clerical help and office maintenance and reduces losses. Also, much unnecessary work is saved when cash payment is required because it has been demonstrated, in towns working on cash basis, users do a large amount of the ordinary small adjustment work themselves and only call upon the mechanic when actual necessity requires it.

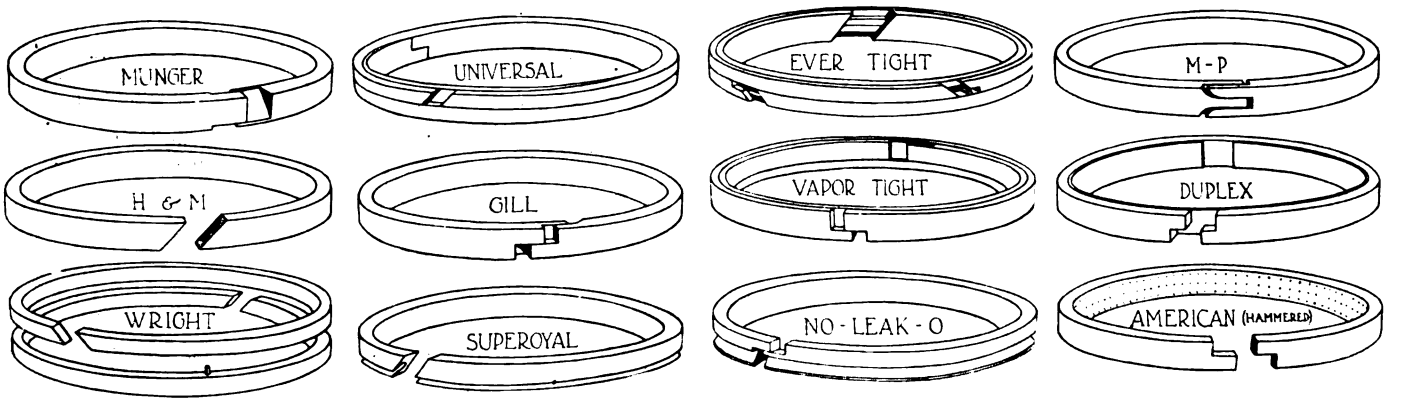
"**6—Education of Users:** It is clearly evident that users are not properly informed regarding the handling of the cars, thus making demands for service and unnecessary work extremely great. If a user is properly instructed in the handling of his car and urged to keep his car properly equipped, to see that his tools are in order and all there, that his jack is in working condition, that his extra inner tube and other extra equipment is in proper repair, a large amount of unnecessary mechanics' time will be saved, as it has been demonstrated by investigation that a large proportion of the emergency work is occasioned because the users' equipment is not in proper condition so that he can take care of his emergency or road repairs himself.

"**7—Elimination of Waste:** Inquiry develops the fact that a great deal of material, such as gasoline, oil, grease, etc., can be saved by proper shop methods, and immediate steps have been taken to canvass this important matter in a systematic manner.

"**8—Reduction in Demonstrating Expense:** While not a general practice, yet in some localities a large reduction in the number of demonstrating cars and cars used by salesmen will show a material saving in expense for the dealer as well as time required in keeping these demonstrating cars in order."

The meeting of the War Service Committee of the automobile dealers, called by President Vesper, was held in Chicago April 11 and 12, and was attended by a majority of the committee, who are as follows: Earl C. Anthony, Los Angeles; A. E. Maltby, Philadelphia; J. H. MacAllman, Boston; Geo. D. McCutcheon, Atlanta; F. E. Murphy, Minneapolis; Geo. W. Browne, Milwaukee; A. E. Mitzel, Canton, Ohio; Chas. Collier, Green Bay, Wis.; Finley L. MacFarland, Denver; Fred H. Caley, Cleveland; Dayton Keith, Chicago; O. P. Tyler, Worcester, Mass.; Charles M. Brown, New York, and F. W. A. Vesper, St. Louis.

Complete Program for National Roads



U. S. Good Roads Association Wants Federal Government to Link Up Truck Highways

LITTLE ROCK, ARK., April 18—Immediate need of the adoption and carrying forward of a definite and complete program for the construction of national highways by the national Government is the burden of the message which goes out to America to-day from the Sixth Annual Convention of the United States Good Roads Association which was in session here Monday, Tuesday and Wednesday of this week.

The kernel of the whole meeting is embodied in a resolution addressed to Congress and President Wilson calling for the creation of a federal highway commission which will look after the roads now under construction. It suggests that these roads should be designated as parts of a comprehensive federal highway system.

Particular pressure is laid upon the need of immediate action with reference to roads connecting military cantonments and other points with their bases of supplies and also special reference was made to such roads as give communication to military and naval points along our sea coast.

ACCESSORIES

(*Continued from page* 84)

LEAK-PROOF PISTON RING

A two-piece concentric ring with sections of L-shape, each section sealing the opening in the opposing member. Tension is uniform. Made of special process gray iron, in over 2000 stock sizes, price varying according to size.—McQuay-Norris Mfg. Co., St. Louis.

McQUAY-NORRIS SUPEROYL RING

A concentric ring with oil reservoir to collect excess oil from cylinder walls on the down stroke of piston. A reservoir is cut in the bottom of the ring at an angle of 45 deg. from the inner section of the cylinder-wall bearing face of the ring. Intended to be installed in top groove of each piston with Leak-Proof rings in the other grooves. Made in all sizes.—McQuay-Norris Mfg. Co., St. Louis.

BURD PISTON RING

A one-piece concentric ring with the ends of the ring milled to tongues and a coupling or metallic guard surrounding the tongues. Made of fine gray cast iron, ground to size. Prices, 2½ in. and under, $1; up to 3½ in., $1.25; up to 4½ in., $1.50; up to 5½ in., $1.75; up to 6½ in., $2; up to 7½ in., $7.25. —Burd High Compression Ring Co., Rockford, Ill.

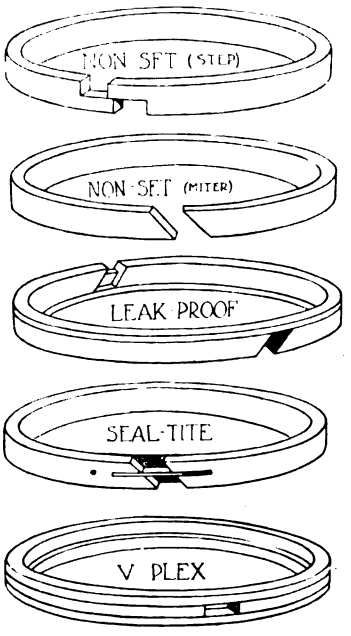
MUNGER

A one-piece concentric ring with a joint made by a double cut so that the contact surface of the ends are at an angle to the side of the ring. This allows the joint to remain tight after the ring has worn and the ends have separated a little. The inside of the ring is peened. Rings are made in standard sizes and oversizes for all engines and are packed in cartons, each containing a full set of Munger rings for the engine for which they are made, including oversize rings for the top grooves, a Munger Piston Re-grooving Tool, a Munger Ring Insertion Tool, and directions for operating and installing.—Splitdorf Electrical Co., Newark, N. J.

DUPLEX

A two-piece concentric ring with stepped piece, a conventional cast-iron snap ring with lap or step joint and the inner guard ring of clock spring steel. It is held in place to prevent slots in the bearing and guard rings from coming together by an arrangement of tongue and recess, and this closes the opening at the lap joint in the outer ring. Made only for Ford cars in regular 3¾ x ¼ in. standard and oversizes of diameter and width. Price 50 cents each.—The Piston Ring Co., Muskegon, Mich.

MICRO PISTON RING



A two-piece concentric ring, the larger ring having a groove cut in its outer surface in which the smaller ring fits, the joints coming on opposite sides and sealed in each case by the solid metal of the other ring. Castings are fine gray iron, cast individually and ground to size.—Micro Piston Ring Co., 1960 Broadway, New York City.

NON-SET PISTON RING FOR FORDS

A one-piece piston ring for Fords with either step-cut or mitre joint, made from individual castings with inner surface retaining the hard skin. Made in standard size 3¾ by ¼ in. and over sizes of .0025, .005, .010, .015, .03125 and .0625 in. Put up twenty in a package.—Stevens & Co., 375 Broadway, New York City.

VAPOR TIGHT

A two-piece concentric ring with stepped slot in the outer ring and split on a radius on the inner ring, so that the two lips will meet each other regardless of where. The slots in the two pieces are diametrically opposite. Made in sizes from 2 7/16 to 18 in. diameter and standard widths at prices from $1 to $17.50 each.—Baker Valve Co., Minneapolis.

TENION PISTON RING

A gapless concentric ring. The upper section is an inverted L-shape and the lower section is rectangular and interlocks with the upper section. The joint of each section is sealed by the solid part of the other section and the circumferential joints are on the lower and outer surfaces, where they collect oil. Prices are $1.60 for 2¾ to 4½ in., $1.75 for 4⅝ to 4⅞ in. and $2 for 5 to 5½ in.—Edward A. Cassidy Co., Madison Avenue and Fortieth Street, New York City.

GILL PISTON RING

A one-piece concentric ring with a joint overlapping both horizontally and vertically and stepped on each joint. Made of individual castings of high grade, close grained iron. Price $1 up to 4 in., and $1.25 for 4 to 5 in.—Gill Mfg. Co., 351-359 West Fifty-ninth Street, Chicago.

INLAND PISTON RING

A one-piece concentric ring with long overlap spiral cut to allow for expansion, the ring uncoiling slightly in such case. Made in sizes from 2½ to 7½ in. at prices from $1 to $1.50 each.—Inland Machine Works, St. Louis.

HI-COMP PISTON RINGS

A two-piece concentric ring formed of two interlocking eccentric rings so placed and held that the joints come on opposite sides of the ring and are surrounded by solid sections of the other half. Exerts an equal pressure on all parts of the cylinder and has no extraneous parts. Made in all sizes at a uniform price of $1.50.—Continental Piston Ring Co., Memphis, Tenn.

M-P PISTON

A one-piece concentric ring with a joint which overlaps both horizontally and vertically. The inside of one of the ends is milled half way and a slot cut in the remaining tongue. The other end is cut just reverse to fit in. Rings 2⅝ to 3⅞ in. are $1 each, 4 to 4⅞ in. are $1.25 and 5 to 5½ in. are $1.50. Made in all widths from ⅛ to 5/16 in. at the above prices.—Metal Products Co., 3205 S. Broadway, St. Louis.

NO-LEAK-O

A one-piece concentric ring with step joint and oil-sealing groove machined around the circumference. The two lower rings should be set with the groove facing downward and the top one upward. Oil is held in the grooves and forms a seal or packing. Made in sizes from 2¼ to 6½ in. at from 50 cents to $1.10 each.—Automobile Accessories Co., 824 West North Ave., Baltimore.

Digitized by Google

SEAL-TITE PISTON RING

A one-piece eccentric ring with patented lock joint, cast individually from refined gray iron, with scale left on the inside to give life and spring. Made in sizes from 2 to 8 in. in diameter. Prices under 4 in. 75 cents, up to 5 in. $1, up to 6 in. $1.25, up to 7 in. $1.50, up to 8 in. $1.75.—Seal-Tite Piston Ring Co., Inc., 1704 E. Lake St., Minneapolis.

V-PLEX PISTON RING

A three-piece concentric ring in which the center V-shaped piece makes the ring expand sideways as well as circumferencially. Price $1 to $2.25 according to size.—V-Plex Piston Ring Co., 2133 So. Michigan Avenue, Chicago.

AMERICAN

A one-piece concentric ring, hammered or peened on the inside and with a step joint. Sizes 2½ to 8 in. Prices $9 to $18 per set of 12 rings. Ford set, $7.50.—American Piston Ring Sales Co., Newark, N. J.

W'RIGHT

A two-piece eccentric ring with the pieces one over the other and so placed that the diagonal slots come at 90 deg. Made of close-grained gray cast iron, accurately sized and surfaced to a true fit. Made in stock sizes from 3 to 5 in. by eighths and in 3/16, ¼ and ⅜-in. widths at prices from 65 cents to $1 each.—V. A. Longaker Co., 448 North Capitol Ave., Indianapolis.

EVER TIGHT

A three-piece concentric ring designed to give equal pressure to all points. Has a right-angle interlock formed by the L-shaped ends of the outer rings, forming a tongue to fit in the groove in the inner ring. Joints are spaced equidistant. Stocked in all standard sizes.—Ever Tight Piston Ring Co., St. Louis.

H & M

A one-piece eccentric ring with 45 deg. split, cast of Virago metal by a special process. Finished to the closest limits practical and made in sizes from 3 to 6¾ in. Oversize rings made up to and including .025 in. oversize.—H & M Auto Parts Co., Cambridge City, Ind.

NEW UNIVERSAL

A two-piece eccentric ring composed of two eccentric duplicate rings fitted together sideways in concentric form by cutting each ring down to half its thickness, but leaving part of each ring full width, which is in the form of a crescent-shaped flange running nearly half way round and forming the inner surface on the thick side of each ring. Ford sizes, $1; up to 4 in., $1.25; 4 to 5 in., $1.50; 5 to 6 in., $1.75; 6 to 7 in., $2.—Albany Hardware Specialty Mfg. Co., Albany, Wis.

War Service Committee Appointed by M.A.M.A.

To Serve as Point of Contact Between Governmental Makers—Five New Members

NEW YORK, April 20—At the meeting of the Board of Directors of the Motor and Accessory Manufacturers' Assn. held yesterday, a War Service Committee was appointed to serve as an additional point of contact between the Government and members of the association. A. W. Copland, president of the Detroit Gear & Machine Co. will be general chairman.

Membership of the committee will be comprised of the chairman of each of the groups of the association as follows: B. F. Tobin, president of the Continental Motors Corp., chairman of the Motor and Motor Parts Group; A. R. Domery, vice-president of the Timken-Detroit Axle Co., chairman of the Drive Group; Christian Girl, chairman of the chassis group; J. M. Gunn, president of the United States Tire Co., chairman of the Tire and Tire Accessories Group, and H. J. Hayes of the Hayes Mfg. Co., chairman of the Body Group.

It was also decided at the meeting to send a delegation to the "Win the War for Permanent Peace" Convention, to be held by the League to Enforce Peace, at Philadelphia, May 16, 17 and 18. The delegates chosen to represent the M. & A. M. A. include C. W. Stiger, A. W. Copland, William M. Sweet, Atwater Kent, Henry P. Jones and J. A. Bower.

The question of sanctioning additional accessory shows was brought up at the meeting. The directors decided that this was no time for further expansion, due to the conditions created by the war, and that members of the association should conserve rather than expand. It is possible that a tractor show may be sanctioned later, but nothing definite was decided on.

The following new members were elected to the association: Whitman & Barnes Mfg. Co., Akron; National Tube & Mfg. Co., St. Louis; Walden-Worcester, Inc., Worcester, Mass.; J. & D. Tire Co. Charlotte, N. C.; Torbensen Axle Co., Cleveland.

How to Lay Out a Building

(*Continued from page* 91)

slightly so as to make it easier for cars to enter the garage.

The garage will hold about twelve cars including two on the washrack and if necessary additional machines may be parked in the aisle.

In order to prevent splattering adjacent cars, a thin hollow tile partition is advised, the width of the rack being 15 ft. and the length of the partition being about the same. The appearance of the washrack with a car being washed and also with two cars being stored is shown in Figs. 6 and 7.

There is room for five cars in the shop, entrance to which is through a series of sliding doors which enable a car to be run in exactly where it is wanted.

A work bench runs all along the rear wall. There is a lavatory and locker room, a tool room and space for drill press, arbor press and emery wheel.

The dimensions of this building was stated at the outset to be 50 x 100 but obviously the plan will do for plots near these figures. It should be clear that the building may be any length from about 50 ft. up. In the former case there would be no garage space.

The width may vary from a minimum of about 40 ft. up to 50 or possibly 55 without any change in arrangement. Above 55 ft. and up to about 70 ft. three rows of cars should be used as shown in Fig. 8, wider layouts will be taken up later. This design is not advised for plots wider than 45 or 50 ft. because with wider ones there is space enough to afford a more pretentious arrangement of showroom and shop unit.

For plots not less than 100 ft. deep and of any width the cross arrangement of cars, Fig. 9, is good. In fact for a plot less than 50 ft. wide it will be found more convenient than the other way.

Fig. 10 shows the same plan (50 x 100 ft.) slightly modified for a corner location. The showroom unit is more roomy since the driveway has been eliminated, the cars are arranged cross-wise in the garage and the shop is identical. The extra room in the showroom unit has made it possible to add a stockroom downstairs.

Such a plan may be made in any width without affecting the layout but the length cannot be much less than 100 ft. without rendering the garage too small for two rows of cars. There is no advantage in making the building more than 100 ft. long unless it is desired to increase the depth of the showroom unit or unless the depth of the garage is made 55 or 60 ft. so that two rows of cars may be placed on one side of the aisle.

Selling the Cheaper Car

Sometimes a prospect thinks that by paying a couple of hundred dollars more, he'll get a better car. Then I show him that mechanically our car is as good as the other and what $200 will do for him in buying tires, etc., or suggest that he can have a special top put on, seat covers, wire wheels or some other extra that will tailor the car exactly to his tastes and really get more than he would if he bought the other car.—F. I. Willey, H. C. McVey Co., Los Angeles.

Detroit Subscribes $23,000,000

DETROIT, April 12—At noon Tuesday, the second day of the third Liberty loan drive, Detroit had reached a total of $23,000,000 of its $36,000,000 quota. The automobile and parts manufacturers in this territory have distinguished themselves by their prompt and patriotic response to the loan, and before the drive is over it is expected that a record will be set by the industrial concerns in this vicinity which will place the city and the surrounding territory among the leaders of the country in percentage ahead of

A Book of Startling Inside Facts—Free

An Impartial Investigation of Tire Conditions by Experts

Miller publishes this book and sends it free to any dealer interested. But the investigation that it covers was not made alone among Miller Dealers. Instead, questionnaires were mailed to practically every tire dealer in the United States. This brought over 25,000 answers from nearly every state in the Union.

The questions asked were not phrased to obtain answers favorable to Miller. The whole survey was conducted on a strictly impartial basis. And the startling facts that it brought to light have been charted and given in a nutshell in this book, originally intended for Miller Dealers only. We have decided to distribute a limited supply among good dealers—dealers who want facts about their own business, which they can obtain in no other way.

Miller UNIFORM MILEAGE Tires
GEARED-TO-THE-ROAD

Besides revealing amazing conditions, this book tells you of an idea in tire selling and in tire buying that until now has not been made a reality. It tells you how Miller Tires are built by picked squads 96 per cent efficient—master builders, less than 1 per cent of whose tires ever calls for adjustment.

No matter what tires you are selling now, this is a book that vitally interests you. You may send for it without obligation and confident it will be worth your while, no matter how you feel about tires that you are handling now.

HERE IS THE NEW

UTILITY DISAPPEARING TRUCK

FOR FORDS—INSTALLED BY ANYONE WITH A HAMMER AND WRENCH

In two seconds a Ford roadster is converted into a half ton truck and back again. The truck is completely out of sight under the ORIGINAL turtle back of the Ford. When not in use the UTILITY DISAPPEARING TRUCK cannot be seen by the most careful examination.

Can be completely installed by ANYONE with a hammer and wrench in ONE HOUR. Only four bolts used in attaching it. No rattle, no vibration—a firm, secure truck body made of heavy gauge steel.

The turtle back cannot be injured or marred when Ford is being used as a truck. It lifts up automatically and protects back of seat from scratches. Even when the UTILITY DISAPPEARING TRUCK is in use the Ford does not lose any of its original appearance. It is still a trim, neat little runabout. In TWO SECONDS the car is made into an exclusive passenger car with no hint of the UTILITY DISAPPEARING TRUCK telescoped under the turtle back. Makes a Ford car undoubtedly the most useful car on the market.

CARRIES ANY HALF TON LOAD YOU HAVE TO CARRY

No matter what the nature of the load to be carried, if it does not exceed a half ton it can be carried quicker and cheaper with the UTILITY DISAPPEARING TRUCK. No extra attachments or parts—just lift the turtle back, slide out the UTILITY DISAPPEARING TRUCK and have a half ton truck in TWO SECONDS.

Made of heavy gauge steel, beautifully finished in black baked enamel, and can be pulled out to the desired length. Practically indestructible because no bolts or rivets are used in the acetylene welded body. Like all other UTILITY products manufactured by this company, the UTILITY DISAPPEARING TRUCK carries an unqualified guarantee of satisfaction.

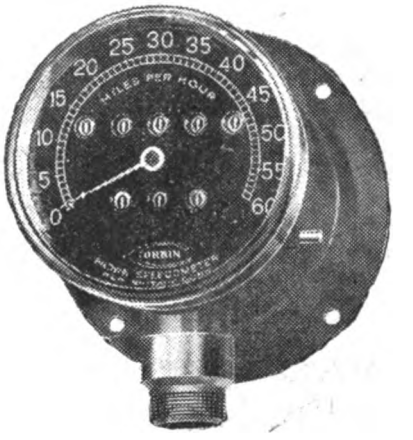
A Reliable Speedometer For Your Ford



THE Ford Owner, lacking an oil gauge, must keep his mileage record accurately in order to renew the lubricant at proper intervals.

Neglect of this safeguard may leave him with an oil-less motor some time far from a garage.

Many Ford owners never bother opening the petcock in the motorbase to learn the oil level. They simply supply a quart of lubricant for about every fifty miles of travel, as indicated by the

CORBIN-BROWN SPEEDOMETER

That saves them a lot of trouble and insures proper oiling. Experience has shown them that the Corbin-Brown remains perfectly reliable after seasons of hard usage.

The accompanying illustration shows Special Ford Bracket No. S-250. This bracket, though firm and rigid, can be adjusted to four positions by merely removing four screws. The driver can place it at the angle most convenient to his range of vision.

The Corbin-Brown for Fords is also furnished with complete, handsomely finished cowl board if desired.

Starts Your Ford—Lights it, too

A touch of the pedal and Genemotor starts your Ford engine. Pull a button and you obtain powerful, sure, safe lights.

Genemotor is installed in a couple of hours, after that it requires no attention except the adding of distilled water to the battery every two weeks.

Genemotor
Trade Mark

"It starts your Ford and Lights it, too"

Genemotor is designed to be a part of the Ford Car. It is light and powerful. It charges the battery at slowest speeds. It is the popular electrical equipment for Fords. May we tell you about our agency plan?

Built by the General Electric Co.

Price $90 F. O. B. Lynn, Mass. Sold Everywhere

"Keep the Sales Fires Burning"

World's Salesmanship Congress Declares for Business Activity and Greater Expansion in America's War Program — Curtailment Propaganda Deprecated

By Ray W. Sherman

DETROIT, April 27—Greater activity in business is essential if America is to prosecute the war successfully, according to the sentiment expressed at the World's Salesmanship Congress here Wednesday, Thursday and Friday.

Out of nearly fifty speakers, drawn from all lines of trade, practically every one spoke upon the relationship between the war and American business. It is stated that war topics were chosen at the suggestion of President Wilson, who opened the Congress in 1916.

War Alone Can't Win

E. LeRoy Pelletier, well known as an advertising man in the automobile trade, summed up much of the sentiment when he said: "You cannot finance a war out of a war."

W. F. Steedman, an insurance man from Montreal, summed up the Canadian situation by saying: "By keeping the home fires burning over here we have kept the hell fires burning over there."

A telegram of confidence and support was sent to President Wilson, who replied by wire while the Congress was still in session. Telegrams were also sent to Edward N. Hurley and Charles M. Schwab of the Shipping Board.

The subjects of a few of the speakers referred to after-the-war business, and the principal thought of each was that we should at this time begin a study of those conditions which are likely to obtain in order that all business may see its way more clearly through the future.

One session devoted to advertising passed a resolution urging the repeal of that part of the War Revenue Bill which would require all national publications, such as Motor World, to pay postage on a parcel post zone basis, thereby doubling the price, and more, to readers in the West and Far West. The Congress also passed a resolution urging a change in the Sherman anti-trust law, which, the resolution stated, is out of date, has never been used for the purpose for which it was intended, and serves to demoralize rather than benefit business.

Hawkins Analyzes Finances

Norval A. Hawkins, sales manager of the Ford Motor Co., and one of the founders of the Congress, proved to be the star speaker of the session, with a cost accountant's viewpoint of the world war situation. His analysis, which is presented on pages that follow, shows the assets of the warring powers, together with the national debts. His summary was to the effect that we must continue business at top speed in order that we may finance the war without using our capital. He urged more business in politics and pleaded for a higher degree of national and business efficiency.

Automobile Men Participate

Speakers from the automobile trade included Norval A. Hawkins, sales manager of the Ford Motor Co.; Commissioner William M. Webster of the National Association of Automobile Accessory Jobbers; E. LeRoy Pelletier, advertising counsel; W. K. Rutherford, sales manager, B. F. Goodrich Co.; F. B. Caswell, sales manager, Champion Spark Plug Co., and L. C. Rockhill, sales director, Goodyear Tire & Rubber Co.

The handling of the nation's business by the government was mentioned by several speakers and the Congress applauded vigorously the assertion that we must, during the remainder of the war and the peace period that follows, have more business men in politics and fewer lawyers, politicians and bureaucrats. Mention of the activities of such men as Hurley and Schwab brought cheers on every occasion.

Salesmanship as a subject was given a minor position in the program, although parts of several sessions were devoted to this science. It was recognized that

Balancing the Books of
The Huns and Humanity

By Norval A. Hawkins

THE article that follows is an address on "The Citadels of Cash, Credit and Commerce" before the third annual World's Salesmanship Congress in Detroit last Wednesday, Thursday and Friday, by Norval A. Hawkins, sales manager of the Ford Motor Co. and one of the founders of the Congress. The address compares the resources of the Allies and the Central Powers from the standpoint of an accountant, which profession Hawkins used to follow. This is a most original and interesting war treatise, and each reader should study it from beginning to end. The article makes plain that WE can win the war IF we try, but that we must not become cocksure. Hawkins asserts that BUSINESS MUST CONTINUE and business men must study and plan for the days now and to come. Success is ours, IF—

A CITADEL is defined by Webster's dictionary as "A final point of defense." It is a sort of "last ditch" which a fighter prepares in anticipation of the possibility of getting so badly licked outside the citadel that he will have to run to cover and fight from there. I am not going to talk to you about our citadels of cash, credit and commerce as "final points of defense," however; because as Americans we are not making any plans to get licked. We are not going to fight this war against the Huns on the safety first policy for ourselves, but on the basis of danger first, last and all the time to the boche beasts—whether they are in Europe or here among us in America.

Our American citadels are not fortifications of resources behind which we mean to hide on the defensive. They are rather bases of offense, in which our active fighting units can be organized and equipped for aggressive warfare in the open. I cannot conceive of such a thing as a citadel of commerce on the defensive. Initiative and free activity are essential to the very idea of trade.

World's Strongest Nation

A weak nation might properly regard its citadels as final points of self-defense. So Switzerland considers her mountain fastnesses. And so Holland thinks of her territory with the sea let through the dikes to isolate her last fighting ground should she be attacked. If America were weak, we might regard the Western Hemisphere as our citadel and find comfort in the ocean as a moat 3000 miles wide. But we are not weak. *We are the strongest of all the nations on earth.* We do not look upon the ocean as a protection from our enemies but as a bridge across which we must take our aggressive might into the battle on the other side. We have picked the place where we mean to fight. It is "over there," not over here.

We have read in the daily papers lately about the titanic struggle of fighting men on the Western front. It has been estimated that over four million soldiers have been engaged in battle since the opening of the German offensive last month. The dispatches refer to the "hordes" of fighters. The two million Huns of Hindenburg's battering ram have seemed to be a well-nigh irresistible force. The civilized world has feared that the fierce assaults of the barbarians would break through the Allies' best efforts of defense by sheer weight and momentum.

Must Be More Than Men

Yet how comparatively insignificant would be two million mere men not backed up by any strength outside themselves! Only when we comprehend the immense powers behind the opposing actual fighters does the struggle appear really tremendous. For every soldier on the battle lines there are seven people in the working citadels at the rear making the war he is distributing in the immense business of conflict. In the citadels the production is done; the soldiers are but the salesmen of war, and the enemy is the consumer.

There would have been no Hun offensive this spring, with the risks the great drive has involved, if Germany had to fight only our present army in France. But the beast sees across the Atlantic all the might of America behind Pershing and knows "it's coming over." Germany has tried our samples and is afraid of our delivering the goods in larger quantities. The Huns don't relish the prospect of being tackled by five million American fighters fully equipped in our citadels of power resources, and just itching to show Germany the latest samples of war, "Made in U. S. A."

Europe Getting Weak

Behind the Huns are no strong citadels of man power, or of cash, or of credit, or of commerce. At their back are the crumbling ruins of erstwhile financial and industrial strength. If Germany faced only her European enemies, she might hope for a stalemate that would mean victory for her because of her conquests already made. For behind the lines of the Allies are weakened citadels also.

But America is just beginning to pour out of her treasure chest wealth in money that is greater than is possessed by all the old world fighting nations combined. She has barely begun to draw from her reservoir of men the fresh fighting power that equals the sum total of the Hun armies. Germany knew that unless she could beat France and England first, she soon would be behind the Rhine as her last ditch. *She is fighting the final battle of desperation to save herself from the just vengeance of America, the irresistible champion of Democracy for the world.*

War Only a Business

Modern warfare is less actual fighting than it is business. War, in fact, has been called "business carried to the *n*th power." All the meanings of life have been changed by this war. The president of the first bank ever chartered under the National Bank Act of the United States recently declared, "The business of this country now is war, and must be war until Germany acknowledges the futility of sword worship." War, then, must be considered as a business; and our principal business must be understood to be war, when we refer to our citadels of cash, credit and commerce.

So considering war as our great national business at present and thinking of America as a national organization engaged primarily in the business of making war, it is vitally important that we know the balance sheet summaries of our assets and liabilities. We need to be familiar, too, with similar balance sheets of our Allies and of our enemies. The fighting nations have all made war their business. By studying their balance sheets as they were before the beginning of the business of war, and also as the figures are at present, we shall be able to learn the condition of their businesses and to judge the strength and weakness of their citadels, or "final points of defense" behind their cash, credit and commerce.

The balance sheet of any business, or of any nation, shows what its condition

was when it started in business. Its capacity to carry out its purpose and successfully conduct its business may thus be judged accurately from the beginning. Another statement taken when the business is under way and has been operated for several years shows the tendency of the business up or down. A comparison indicates what the balance sheet of the business is likely to be in the future if the same tendency is maintained. Checked up against the balance sheet of another business, their respective net values become evident. If the two businesses are competitive, and are fighting each other mercilessly, their balance sheets will show which is likely to be driven to the wall first and which will probably continue as a going concern and heal the wounds of past competition with the profits of future trade.

From the balance sheets of the European fighting nations I shall take only the totals in round figures of their national wealth and public indebtedness a year ago when America entered the conflict, to determine approximately their net worth then. In another summary later we shall see the present balance sheets of these nations according to the latest figures available. And, finally, we shall note in comparison the net worth of America after a year of war expenditures.

Assets of the Powers

At the beginning of 1917 the figures in round numbers for the principal combatants were as follows, the estimated wealth of each being the total as it was before the European war began. It is impossible to approximate at this time the effect of the war on the wealth of the respective nations. Probably there have not been sufficient increases or decreases to change the figures substantially. Increased production of wealth has been offset by war destruction. (See table on this page.)

These were the totals, remember, for the beginning of 1917. Now, one year and three months later, the figures are as follows, assuming that the grand totals of national wealth are not substantially changed. (See table on this page.)

It will be informative, also, to have the figures of the balance sheets before the war started. (See table on this page.)

Note that in these figures neither the wealth of the British Empire outside the United Kingdom, nor the debts of the British Possessions are included.

Now let us think of these grand totals in terms of percentages in order to appreciate their trend vividly.

NORVAL A. HAWKINS
Sales Manager of the Ford Motor Co., Detroit

At the beginning of the European war the public debts of Britain, France and Italy combined amounted to approximately 7 per cent of the total national wealth of those nations.

Three years and a half later, just before America entered the conflict, the debts of our three great Allies had climbed to 21 per cent of their total wealth.

This spring, right now, Great Britain, France and Italy combined owe approximately 34 per cent of all their worth.

Worse in Napoleon's Time

Just here, for the purpose of comparison, let us recall that at the end of the Napoleonic Wars the public debt of Great Britain, which then had a total wealth of $11,500,000,000, was $4,300,000,000—practically 37½ per cent.

Now look at the percentage figures for the Huns.

When Germany and Austria-Hungary started on the business of war in the fall of 1914, their aggregate debts amounted to but a little over 4 per cent of their combined wealth.

At the time we declared war on Germany, the Hun percentage of debts had risen to 20, which was 1 per cent less than the debt percentage of Great Britain, France and Italy combined at that time.

Now the Huns owe 40 per cent of all they are worth, or 6 per cent more than the three Allies. And of this amount so large a proportion is the debt of Austria-Hungary that *the mongrel monarchy owes approximately 60 per cent of all its wealth at the present moment. No wonder Austria-Hungary is losing interest in Germany's war. She has lost not only interest but most of her principal!*

Those figures and percentages are terrific to contemplate. They certainly spell complete ruin if they are continued in the same ratio much longer.

Our Own Standing

Now let us see how Uncle Sam stood on his balance sheets when we went into the business of war, and how the United States stands to-day after a year of war expenditures.

The last of April, 1917, the total public debt of America was $1,200,000,000. Now it is approximately $11,000,000,000. (Incidentally I would say that we are spending $30,000 a minute on the business of war at the present time, of which about two-thirds is money we are borrowing from ourselves.)

The total wealth of the United States is so vast that it cannot be estimated accurately. The most reliable statisticians conclude that we are worth in round figures over $260,000,000,000. Our public debt, at the beginning of the war last April, was therefore less than one-half of one per cent of our total wealth. And now, after we have been in the war a year, despite our enormous expenditures, our debt amounts to but about 4 per cent of what our wealth was when we began the war business. At the end of the present fiscal year of 1918 (the government estimates of expenditures for the year are about $12,000,000,000), we shall have accumulated a debt that will be a total of but 7 or 8

Digitized by Google

More than 300 executives from many professions made up the third annual World's Salesmanship Congress nearly 50 addresses that were delivered the one big thought was that business

per cent of what our wealth was a year ago.

Not Wasting Any Capital

But there is one factor about our situation which is very different from the status of the European countries at war —that while they are *using up their capital wealth we are just applying our national earnings to war. After spending* $10,000,000,000 *on war, we are as rich as we were before we started; though perhaps intrinsically no richer.*

Our Allies and our enemies have been getting poorer because of consuming both capital and earnings; whereas the worst that can happen to us is that we shall stay right where we are, in net wealth; provided we are not prevented by our own laws and regulations from doing business and making money, without interfering in any way with the public business of war.

Now let us return to the balance sheets of the European nations and compare their figures with ours, to determine our respective standings in the business of war.

Our Allies have left a net worth, over and above their debts, of approximately $119,000,000,000. Our enemies could scrape together, after paying what they owe, $71,500,000,000—or about 60 per cent as much as our Allies. Both our enemies and our Allies possess now an aggregate net wealth of $190,500,000,000, or but little more than our Allies alone owned when the war started.

The Cost Enormous

The war therefore has cost Europe already almost the total wealth of the Hun Empires. So if the war business were to be ended to-day by victory for the Allies, they hardly could collect from the Kaiser and his jackal Charles of Austria all that pair of deadbeats owe the civilized world, even if they sold them out for all their net worth.

When the European War started the whole of the net wealth of the principal nations engaged on both sides was just about equal to what America is worth to-day in cash. *At the present moment Uncle Sam is worth nearly one and one-half times as much as all the rest of the belligerents combined, and four times as much as both the Hun nations.*

It is perfectly evident from a contemplation of these figures how tremendously strong are our citadels of resources. We have more than a quarter of a trillion dollars with which to put the Huns' seventy billion dollars net out of the war business. *Who can doubt that economically we will win in spite of the brute strength of the Huns at this time?*

Billions and Billions

I have quoted these stupendous figures from America's balance sheet, not vainglorously, but in absolute confidence of the strength of our citadels of resources for carrying on the business of war. I am not inclined to boast of our inexhaustible wealth. I am conscious of the sober meaning of such enormous sums as I have mentioned.

Nowadays we all talk too glibly of billions. We have not individually comprehended that *each one of a billion dollars is made up of one hundred pennies, each just like the cents we have in our pockets.* So right here I want to pause long enough to say that while I have spoken of billions casually because war figures run into such totals, and while I cannot comprehend a billion dollars any better than can anybody else, I can and do know the worth of a single dollar, and I know the dollars I am talking about are exactly the same kind of dollars as those you and I work to earn that we value at their purchasing worth to us.

There are two reasons why I have given all the big figures. First, the national balance sheets prove the incomparable strength of our citadels of wealth. SECOND, THEY SHOW CLEARLY TO THE EYES OF GOOD BUSINESS SENSE THE COURSE WE SHOULD PURSUE IN ORDER TO MAINTAIN THE STRENGTH OF OUR CITADELS.

It is sheer idiocy for America to pay the cost of this war out of our capital resources. We should carry on war by carrying on business from day to day, year in and year out, and defray all the expenses possible from our national earnings. No other nation on earth can do this. The other nations, enemies and allies alike, are bankrupting themselves in their business of war. In their cases such a disaster is inevitable if the war lasts. We even could figure out the approximate dates when all their wealth will be exhausted. *But the stream of our wealth will continue to flow in sufficient volume to defray the greater part of our war expenses unless we ourselves dry it up.*

It is proper that we should regard the war as our principal business. And one of the elements of that attitude should be our recognition that our principal business must be sustained without impairment of our total business strength. One of the principal things we should have in mind always is the prime necessity of having big business profits with which to pay the total expenses of a big war; so that we shall not be going toward economic ruin every step we take in war, as all Europe is going. Our citadels are strong.

If we have business sense we shall not weaken them by pulling down the walls to hurl the bricks at the Huns. Instead we shall make bricks behind the walls and throw what we produce, leaving our citadels intact and building them stronger and stronger.

Must Not Kill Business

While we are destroying the power of the Hun outside our citadels, we must not destroy our own internal power by killing off business in America. We people of the United States are willing and able to pay from our earnings the special assessments of war. We have a right to demand, however, since we are willing to pay and able to pay for the war out of our business earnings, that our right to earn money shall not be denied to us. It is not necessary to stop doing peace business in America in order to do our war business in Europe. It is not necessary to tie up hit and miss

Digitized by Google

which met in Detroit April 24, 25 and 26 for the consideration of the relation of war to business and the effects. In the must continue with great activity if the world war is to be won for humanity.

our national productive capacity in order to get out the required war materials. If it were necessary to stop peace business entirely in order to make war, we should all be willing to do it.

The total number of men now in our army and navy, including all those in the training camps, amounts to but one million eight hundred thousand. In peace times we always had from two to four times that many idlers in this country. We have only begun to take up the slack in our man power, and we have the tremendous reserve of woman power that can be used effectively besides.

Three Kinds of People

People classify in this world under three headings: First, the people who are willing to work, and do work; second, those who don't want to work, and won't work; and third, the diplomats. We have only just begun to absorb some of the don't-want-to-works and a few of the diplomats in America. And I believe when both of the above classes are put to work here and in Europe, there won't be any more wars for lack of the idle hands that Satan proverbially employs for his purposes of deviltry.

Now how about our business capacity to make war and to make the products of peace, too? There are a lot of people in this country who say we cannot do both; though a good many of them have never been in business and don't show any remarkable ability to make war. The question we'd like those fellows to answer is, *"How do you know we can't do business and support the war fully at the same time?"*

What High Efficiency Can Do

In order to produce all the war materials needed for America, our total national wealth employed actively would need to yield a return of only 5 per cent on our national principal. We business men know that with high efficiency in our operations we can add ten or twelve billion dollars' worth of products to our normal output of manufacturing, to say nothing of agriculture, without doing more than getting up a good sweat at the job.

Every true American is eager to serve his country whether in uniform or in overalls. We all want to do war work if we can, and to do that first. But the government seemingly does not appreciate that there is not enough war work to go around. We refuse to believe it is patriotic to stand idle. *We insist on our right to work at our usual businesses and to create national wealth, to the extent that we are not employed in making war directly.*

For this right it should not be necessary that we plead. American business and American labor must earn the money to pay for this war with taxes and by purchasing Liberty Bonds. We cannot make that much money from war profits, manifestly. *It must come from profits on peace business as well. Yet if we were to accept the ideas of penurious thrift proposed to us, if we were to quit doing business in the production and distribution of any so-called non-essentials, there wouldn't be enough peace business alive to attend the funeral of American prosperity.*

Business in Politics

More practical men of business efficiency installed in the jobs at Washington, and the removal of the impracticable, unbusinesslike theorists, will help greatly to cure what ails American industry. Every business man in the United States should be willing to work just as large a per cent of his capacity on war orders as the government can use to advantage. But that is doing his full duty as a patriotic business man so far as running his plant is concerned. *In order to do the rest of his duty, buying Liberty Bonds and paying taxes, he must have the right to make and sell his regular line if he can, without interfering with the main business of war.*

Conservation of our resources is sound policy. But don't forget that our biggest resources are our manufacturing and distributing organizations which increase enormously the value of the wealth produced from the ground.

If the business of war is efficiently managed, the business of peace won't interfere with it. And it is being managed more efficiently now; so that the snarls of red tape soon will be untangled and we in business shall have *business men instead of bureaucrats to deal with in working out our problems of co-operation with the government.*

Get Everybody Busy

England is not tackling the similar problems there "hind side foremost," as we have been doing. Her policy is to get everybody busy at something productive, either of war materials or of wealth in general. Of course, she does not permit private business to hinder the business of war. But on the other hand she does not interfere with private business that doesn't hinder her war activities. Rather, she is stimulating her industries in order to secure the largest production possible, and consequent large war profits. Then she taxes these extraordinary profits heavily, once they are made, in order to secure as much revenue as possible for war expenses. England is paying a quarter of her war bill as she goes. *She does not label as unpatriotic the business men who furnish her the money in taxes.*

There is no good reason why general business should not be good everywhere in America. Modern business knows what it is capable of doing when under the stress of necessity. But it cannot do its best when hampered. I repeat that adding our complete war materials output to our undiminished peace time industrial production is just a matter of good business management of our enlarged national business. Or, to put the situation in another way, an efficient business management would so organize American activities that we could do both war business and peace business in our same industrial plant, giving war business the preference every time, the same as business sidetracks other work temporarily in certain departments of a factory in order to get out rush orders. The complications in the situation are

Digitized by Google

unbusiness-like complications. What we need is not to do less business, but to get down to business and do the war business in a business-like way.

Twice the Gold of the World

While we are considering our workshop citadels of wealth, let us refer for a moment to the subject of cash itself, since I am supposed to speak on the Citadel of Cash specifically. Cash itself is practically worthless, of course. Money is but a medium of exchange designed for the convenient distribution of tokens of value. But let us think of our stock of gold and silver as if they had intrinsic instead of representative values. How much in gold and silver coin and precious bullion have we working in our citadels to stabilize our business? Approximately $3,800,000,000, the greatest stock of gold and silver ever held by any nation in the history of the world. America owns over $3,000,000,000 in gold and nearly $800,000,000 in silver, which is now worth as metal practically its coin value in gold. *We have nearly twice as much gold as all our allies and our enemies combined.* March 29 of the present year the Federal Reserve system alone held $1,815,704,000 in gold. The first of this year the Huns had only a little over one-third as much, $680,586,000.

Our present banking system is a guarantee that there never is likely to be a shortage of money with which to do business. Besides the tokens of value backed up by gold and silver coin and bullion in our citadel of cash, we now have other tokens of value in bank notes and government bonds that pass currently as cash. You and I would as soon have the bills in our pockets as the coins we carry. They are on an exact parity of value in our eyes, because of our known financial strength of resources. The total stock of money in America, March 1, 1918, was over $6,300,000,000. *There surely then is no money reason why we cannot do both war business and ordinary peace business in America.*

Credit Is Strong

Our citadel of credit is an even stronger resource than is our citadel of cash. Our credit is based, not upon our wealth tokens in precious coin and bullion, but upon our real wealth from manufacturing, agriculture and trade. Our immense gold reserve is a great economic asset on our balance sheet merely because the standardized value of gold as a measure of worth affords a generally recognized basis for sound credit financing of a nation.

Secure in the strength of our citadel of credit, behind the bulwarks of our cash holdings, the government is organizing to the utmost our credit strength as a fighting instrument in our principal business of war-making. For the express purpose of strengthening our citadel of credit still more, the War Finance Corporation, the most gigantic source of credit in the history of nations, has been constituted. It will supply additional billions for the needs of war industry, and may increase our stock of sound money by one-half if that much should become necessary for business expansion. It is too soon yet to judge all the effects of this tremendous power of credit, but we may be sure it will stimulate all war business to an extraordinary degree.

Sufficient Available Credit

It also should relieve ordinary business of any shortage of credit for legitimate needs. Ample but conservative credit resources should be available to any business man for carrying on his legitimate activities whatever their nature, because *though he may be making non-essential goods he is making absolutely essential money.*

Coupled with the power of granting credit and cash to war industries, the War Finance Corporation has control over all sources of capital for ordinary business enterprises. This is a proper function essentially, for of course the government financing must have the preference always, and it would be bad war business not to guard the supply of money against investments that would be a detriment to government financing.

War Orders Sufficient Regulation

Giving the war orders the preference is sufficient regulation of ordinary business. Giving only war business attention and encouragement is in effect proscription of usual business. The sound, economic policy will first guarantee the production of war material adequately, and then will promote to the fullest possible effectiveness general business of all legitimate kinds.

If the government will do its best for business to even half the degree that business is doing its best for the government, ways will be found to develop all our regular businesses without interfering in any way with war production. *The trouble is that the bureaucrats haven't tried to work with business, but have insisted that business must work for them.*

Business is resourceful. Finding itself hampered in the securing of its accustomed credit, it has devised for its emergency an instrument for the facilitating of credit that has long been disused, viz., the trade acceptance. With this instrument, business is building a stronger citadel of credit than it has had before.

Credit has too often been a source of weakness in the past of business, and business is undertaking betimes to cure that weakness in preparation for the future. It is practically certain that when the industrial pursuits of peace are resumed there will be no more enormous credits locked up in open accounts with more or less indefinite terms of maturity. It will not be necessary, for instance, that we sell in Latin America on six or nine months' time, and inadequately finance ourselves meanwhile by partial borrowings from our banks.

The trade acceptance is a commercial instrument with which we can make of our credit system a real citadel instead of a dangerous salient projecting far into the future of every business.

The American people have learned, too, the habit of investment. We are developing in our citadel of credit an army of twenty-five million security holders who have learned the economic satisfaction of true thrift instead of prodigality of its antithesis, hoarding. This sort of thrift is good, sound business to encourage. It is putting idle dollars to work, and it is the complement of the sound business policy of keeping all hands from idleness, too.

The War of Commerce

There remains to be considered specifically our citadel of commerce, which, as I said at the beginning, is an anomaly, since commerce cannot be carried on in a citadel. But we can pursue the metaphor of our subject by thinking of the long-range cannon we are building and can build in our so-called citadel of commerce which in reality is the outfitting point for our commercial expeditions. These are the cannon for our present and future trade battles of peace.

We have a cannon of commerce that will shoot to Berlin an explosive shell which will blow up the Hun delusion that a Teuton "strong peace" ever can be realized. The world's chief sources of wealth despite the partial temporary conquest of western Russia by Germany and Austria are nearly all in the control of America and of our Allies. This is a most powerful economic weapon. When the common people of Germany and Austria realize what they are up against economically they will perceive that *instead of being unconquerable, they are already licked to a frazzle in the business of the world for the future.*

The Merchant Marine

In our citadel of commerce we are developing a great merchant marine, backed by all the power of America's strength. More and more is it evident that our foreign trade, carried largely by our own ships, will be a tremendous factor in our working out of America's destiny after the war. I attended the Fifth National Foreign Trade Convention at Cincinnati last week. I thought before I went that I appreciated pretty well what our foreign business and an American merchant marine will be worth to us. But now I realize American shipping is absolutely vital if we are to win the war and continue to lead the world in prosperity after the war.

Marvelous Shipbuilding Results

Our new merchant marine is the insurance of our commercial future as a nation. Despite all the handicaps under which construction has been organized, our recent record is marvelous as a demonstration of what American business can do. I have quoted so many other figures that I will not give you the statistics of shipbuilding here. But in practically eight months we have increased the number of our shipyards from 37 to 81 actually engaged in shipbuilding, and from 40,000 employees to nearly 250,000 employees, and we are turning out ships right now *at a rate greater than Britain, the chief shipbuilding nation, was pro-*

Digitized by Google

ducing in tonnage the year before the European war began.

Praise for Hurley

At the Foreign Trade Convention in Cincinnati it was generally recognized that credit for our achievement and prospects in shipbuilding belongs largely to Edward N. Hurley. I hope that the World's Salesmanship Congress, which was honored by an address from him last year, will officially express to Mr. Hurley at this session our appreciation as salesmen and sales-managers of what he has done on the job of strengthening America's citadel of commerce by building ships.

We need now seven and a half million tons of shipping. Only a great nation, served patriotically by big business men, can tackle and put through successfully an order of that size. America is able to do it because she has on the job such men as Edward N. Hurley and Charles M. Schwab, who was quite recently called into Uncle Sam's service. When we send Mr. Hurley our appreciation, I should like to have a telegram go also to our other distinguished guest of last year's Congress, Charles M. Schwab, telling him that we are confident he'll get results in the business of shipbuilding for America even better than he always has got results in his private business.

Confidence in Schwab

Ships, as I said a minute or two ago, are vitally necessary to the strengthening of our citadel of commerce. We must prepare now for shipbuilding competition with Germany after the war. She knows how to build ships more efficiently. American manufacturing and business genius, now that it is awake and applied to shipbuilding, does not fear the competition of any brains on earth. Directed and managed by Hurleys and Schwabs, our shilbuilding industry will conquer the world's markets for tonnage.

We have begun, also, to plant our outposts of finance in the world's most important market places. Who can doubt that America's immense resources will be organized for the business war after the war of arms? Germany backed her trade with her imperial resources. That combination was too strong for private business to beat. But Uncle Sam & Company will make Kaiser Bill and Me-Too Charles look like thirty cents when they buck American business in the commercial war that is coming.

Develop Salesmen Now

In our citadels of war we are equipping our army of soldiers for victory. In our citadels of business we should be developing a conquering host of salesmen to send out into the world backed up by American industrial genius in production and distribution of the articles of commerce. We are met here in this Congress to plan for the victories of peace as well as for the victories of war.

Preparations for victory often involve the endurance of setbacks for a time. A good many salesmen are made blue at present by the consequences of the war policy of discouraging business. They are not selling their lines because their houses cannot produce the goods. These salesmen are either working at manufacturing now or are out of work. They feel as if their careers had been blighted. But in reality these salesmen have within their reach the very finest opportunities for successful salesmanship, the chances to study how to sell and what they are selling.

Salesmen in the past have been woefully lacking in knowledge of selling principles and in knowledge of their lines. That kind of salesmen won't do for the war after the war. *We must develop in our citadel of commerce large numbers of a better type of salesmen than America ever before has had. If we do not equip these soldiers of peace thoroughly, we shall be thoroughly licked by the better salesmanship of our future competitors for world dominion in the fields of trade.*

Opportunity Is Great

Many salesmen have been transferred to factory work during the lull in selling activity. This, too, presents a fine opportunity for betterment of their salesmanship. I wish to say, also, in this connection that the bench and the trench are closely allied in this war we are carrying on. The salesman who is engaged in production temporarily instead of in the distribution of products is doing a helpful part of the necessary work of strengthening our citadels. It is a patriotic service, made necessary by patriotic necessities of business.

Business did not want war; but business will win the war, now that it is being given the chance. The government at last is showing a strong desire to utilize the best business brains of this country in the business of war. That is what I believe will get us on the right track. It is a great step of progress when the President summons men like Schwab, Hurley, Stettinius and others of importance to take charge of vital branches of our war-making. *Men of that caliber will iron out the mistakes of bureaucrats and untangle the red tape of inefficiency. As surely as we are met here in this Congress, the problems of business and war will be simplified from now on, because business is taking hold of the job that non-business found beyond its capability to handle.*

The appointment at this late day of such a big business man as Charles M. Schwab to fill a great place in the government is doubly significant. It not only guarantees the solution of our war business problems, but is a prophecy of the sort of men who in the future will, in my opinion, manage the political as well as the commercial business of America.

We are going to have a different grade of men in public office, at Washington, in our state capitols, and in our cities and towns, when America is reorganized for the business of efficient government after the war. The problems of the future will be chiefly business problems. Politicians have proved themselves miserable failures in attempting to do the country's business. The eyes of the people have been opened to the need in their government of the man who knows how to work, of the efficient organizer, of the economist, of the man who understands how to handle men and how to make money—in short, of the best business man.

Each for All—All for Each

The individual American cannot continue any longer the policy of each for himself and the devil take the hindmost. We are all interdependent. The new creed is each for all and all for each.

As Mr. Harris said at the Foreign Trade Convention last week, "A strike to-day in an essential business is a crime. Profiteering is equally so." And he also declared, "Constructive criticism is the highest state of patriotism." Apropos of that, Mr. Koster, the president of the San Francisco Chamber of Commerce advised last week in Cincinnati, *"Create yourself in your own bailiwick a committee of one to work out the solution of your own democracy."*

We business men must make it our business to see that government hereafter shall be on a business basis of efficiency. *That means business men in office instead of politicians.* It used to be said that a man like Charles M. Schwab could not be secured for government service. The patriotism of business, however, has been one of the glorious discoveries that have resulted from this war. Business men have been ready to work devotedly for their country in war and they will be equally ready in peace.

Business Government Needed

A man like Charles M. Schwab does government business efficiently in these abnormal times despite tremendous difficulties. *How much more effectively he can do government business under the conditions of peace when he is not handicapped by a critical situation!* Then he will have a chance to make a real demonstration of business ability. America in the future will give the business man the opportunity of service instead of trusting to the politicians whose weakness has been exposed by the war. The needs of peace for big business brains will be as great as our present war needs for the geniuses of business in office. And America will not take the backward step to political government after testing the efficiency of business administration.

To return to the business of war, I hope among other things that we shall give some business attention to conditions of danger inside our citadels. Our soldiers here in America need some target practice on spies. But first we must catch the targets. I read the other day that the Attorney-General's office reported it had no evidence that any of the fires in American factories this last year were the work of Hun agents. Well, all I have to say about that statement is it's about time the Department of

Digitized by Google

Justice changed its system of collecting evidence afterwards, and started getting the facts in advance. You and I know these fires didn't just happen accidentally in epidemic form. America has been negligent in handling Von Papens, Von Igels, Von Bernstorffs, Boy-Eds, Kaltschmidts, and their like, except at the noose end of a rope or as targets for rifles. *Our citadels will not be safe until we clean house and get rid of the Huns in America by interring them instead of interning them.*

"Can" the Huns

I do not believe in vigilance committees. They are lawless. But unless lawful means for our internal protection are organized, we shall have more outbreaks of lynching and more mobs seeking pro-Germans.

Only a few days ago in one of the shops in Detroit we had an instance of what is going on all over America and growing more frequent. A man had refused to buy Liberty Bonds. He shot off his mouth about his opinions of America and Germany. Shop discipline prevented an outbreak then. But that noon several of the workmen got a new rope and made a noose on the end. They laid that on the pro-Hun's bench. It is reported that he shut up darned quick and signed for some bonds.

There are enough patriots in every block of any American city to insure our internal safety, if the patriots are organized for active service against the foes within our citadel. I hope that the government will not wait until riots result from laxness. The measures of self-protection should be preventive. We should take them in advance. And punishment for spies should be quick and severe, at the hands of the lawful authorities, not at the hands of the mob.

Listen: Mr. Salesmanager!

But I wish to say a word or two to the salesmanagers of America, who want to strengthen our citadel of commerce. You are experiencing a lull in your sales activities. *Do not sit idly twirling your thumbs while you wait for the war clouds to roll by.* Use your opportunity to study your territory, selling-management principles and new methods of trade-winning and keeping. Sales management in America has been very inefficient, especially so when applied to foreign trade. Such inefficiency will be fatal in the new condition of business which will obtain all over the world after the war.

Salesmanagers, particularly devote yourselves to the proper training of sales people in your employ. Impress on your men the importance of selling-knowledge. Make sure of the efficiency of your salesmen by working out detailed reporting and record-keeping systems. Do not rely on generalities and guesses.

Made in the U. S. A.

Study how you can co-operate with the retailers of your goods, how to get your goods to ultimate consumers. Educate everybody with whom your concern has any relations, in the importance of pushing products "Made in U. S. A." The mark that should be on everything produced in American factories, and buyers and consumers should be educated to look for it. If it is missing they should assume that the goods are of foreign make, and should insist on American-made goods instead, if they are manufactured. This would prevent the building up of foreign sales in this country of products we can furnish from our own resources.

We cannot sit tight in our citadels and complacently conquer the world trade now that we have it coming our way. We must get out and hustle our level best. Some European nations know as much about efficiency as we do and this war has helped them. When Europe is re-built the work will ge done by the most efficient workers. We should lead that class, instead of lagging. I am proud that I am an American. I know we can do the biggest job ever put up to a people. *But I know we can't do it if we wear rose-colored glasses when we look at our own inefficiency and blue glasses when we look at the efficiency of our trade rivals among the nations.*

Must Get to Work

We haven't got the world by the tail economically, as a lot of our American business men seem to believe. We must not think we can sun ourselves in the beams of prosperity behind our citadel walls, and get rich from the trade that will come to our ports after the war. We've got to sell our products. They won't be just bought. We are a great creditor nation, and our debtors are not going to run up any larger bills unless we make it decidedly to their interest to buy from us instead of making their own goods. We salesmen must take up the job of serving the world and of saving ourselves; just as our soldiers are doing. We want to fight the war after the war "Over There" instead of over here. We need to prepare for it now in our citadel of commerce.

But ours is a different kind of conquest. Military victories are not permanent. The greatest general of history, Napoleon, compared his futile successes with the growth of the power of love in the world, and acknowledged that Christianity was a greater conquering force than the mightiest armies. Christ taught us the principles of Service to our fellow men. We have begun to use his teachings as practical business precepts.

The Great Idea

We must stick to Christ as the ruler of our thoughts and lives. Devil methods of warfare will be beaten. The doctrine of true Service to which we as salesmen are sworn is invincible. The destiny of America is to Serve the world by selling friendship and good-will to all the nations, to displace their enmities.

God has let men prove to themselves what they would not learn any other way, that man-made methods turn the world into a hell of hates. We must learn the lesson, and not need to be taught it again, that this earth can be made heaven only by the practice of love and peace. Our mission as salesmen is Service, which is the divine principle of love in practice.

Greater than our citadels of Cash, Credit, and Commerce is our citadel of Christ. There we must equip ourselves for the True Service of Mankind.

Keep the Sales Fires Burning

(*Continued from Page 5*)

the field of the salesman is undergoing a change at present because the intrusion of war work has made the demand greater than the supply of many products and it was pointed out that the live salesman may find in this condition an opportunity to fortify himself against the near future and peace period.

Once again the parallel of business in Canada was cited, and it was shown how the Dominion has been able to give a wonderful support to the war largely because its business has been permitted to expand to hitherto unthought of degree.

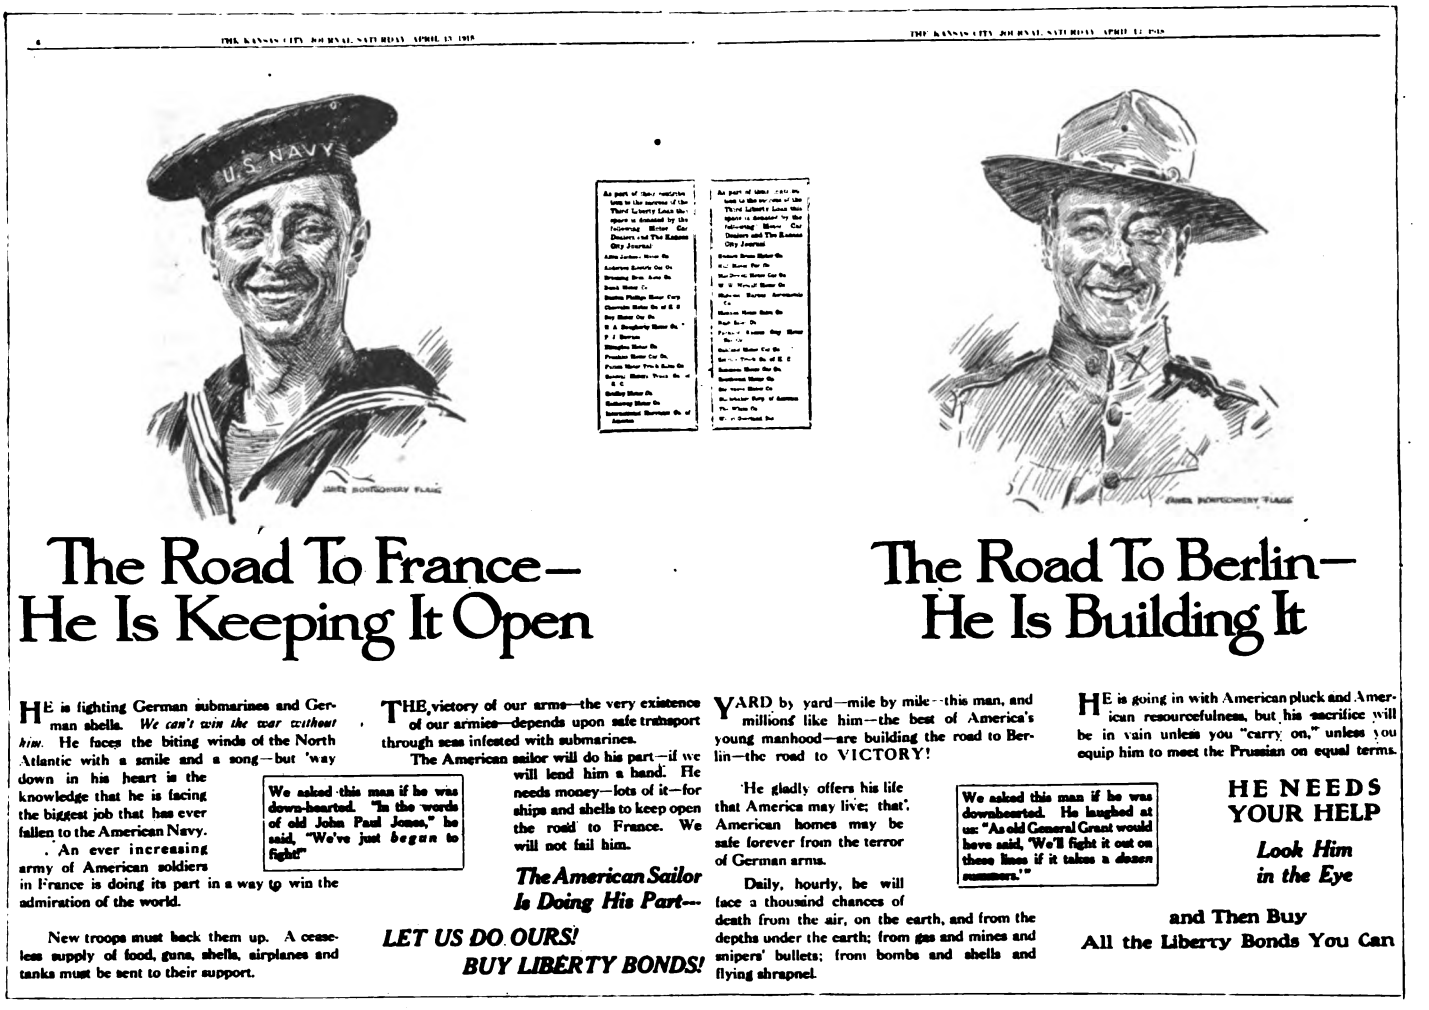
The mental attitude of the people was discussed as one element of national strength, and it was urged that the public be not thrown into a state of pessimism by unwise and unnecessary disturbance of business, although all were agreed that the war program must be given the fullest support at every point.

Advertising must be continued even though there be absolutely nothing to sell, stated one speaker, provided that the manufacturer does not wish to lose the goodwill which he has built at a great cost.

Over-optimism was deprecated as one of our dangers; several of the speakers said we could do ourselves much harm by thinking the situation too rosy, for we might thereby be lulled into a security which would be upset by the earnest efforts of the enemy.

It was suggested that restrictions be put upon German language papers, and energetic handling of pro-German well-wishers was recommended.

Greater harmony between capital and labor was declared a necessity, one speaker asserting that the relationship must be more on a fifty-fifty basis and that the laborer must be assured a fair interest in the production he creates.



A New Zealand speaker told of the extent to which business has increased in that country during the war. He urged business men to effect economies, such as using trucks in place of horses and installing office appliances. He said it was a question of doing more work and not less.

The Congress this year, held in the Statler Hotel ballroom, was not so well attended as in other years. When the first session was held in the summer of 1916 and was opened with an address by President Wilson, there were about 3,000 people present. The convention last year, which was opened by Charles M. Schwab, drew slightly less than the first year. This year about 320 registered and most of the sessions were attended by only from 75 to 100 people. The war is considered to have upset things considerably.

Kansas City Dealers Use Two-Page Loan Ads

The reproduction below is of a two-page newspaper advertisement run by the Kansas City dealers whose names appear in the panels at the center of the layout

THE KANSAS CITY JOURNAL, SATURDAY, APRIL 13, 1918

The Road To France— He Is Keeping It Open

HE is fighting German submarines and German shells. *We can't win the war without him.* He faces the biting winds of the North Atlantic with a smile and a song—but 'way down in his heart is the knowledge that he is facing the biggest job that has ever fallen to the American Navy.

An ever increasing army of American soldiers in France is doing its part in a way to win the admiration of the world.

We asked this man if he was down-hearted. "In the words of old John Paul Jones," he said, "We've just *begun* to fight!"

New troops must back them up. A ceaseless supply of food, guns, shells, airplanes and tanks must be sent to their support.

THE victory of our arms—the very existence of our armies—depends upon safe transport through seas infested with submarines.

The American sailor will do his part—if we will lend him a hand. He needs money—lots of it—for ships and shells to keep open the road to France. We will not fail him.

The American Sailor Is Doing His Part—

LET US DO OURS!

BUY LIBERTY BONDS!

The Road To Berlin— He Is Building It

YARD by yard—mile by mile—this man, and millions like him—the best of America's young manhood—are building the road to Berlin—the road to VICTORY!

He gladly offers his life that America may live; that American homes may be safe forever from the terror of German arms.

We asked this man if he was downhearted. He laughed at us: "As old General Grant would have said, 'We'll fight it out on these lines if it takes a dozen summers.'"

Daily, hourly, he will face a thousand chances of death from the air, on the earth, and from the depths under the earth; from gas and mines and snipers' bullets; from bombs and shells and flying shrapnel.

HE is going in with American pluck and American resourcefulness, but his sacrifice will be in vain unless you "carry on," unless you equip him to meet the Prussian on equal terms.

HE NEEDS YOUR HELP

Look Him in the Eye

and Then Buy All the Liberty Bonds You Can

Taking the Grief Out of Time Sales

By Ben S. Brown

SECURITIES companies recently organized in Kansas City are developing the financing of motor car purchases just at the time when banks are discontinuing such financing.

For the past two years several large Kansas City banks have, in addition to their financial service to dealers on the buying of stocks, arranged through their own organizations for handling the paper of the dealers' customers. The business has been, it is said, most profitable and safe; but war and other conditions are said to have necessitated the discontinuance of such operations.

Stimulates Sales

Into this breach come the securities companies, whose sole business is the buying of notes made to dealers by purchasers of automobiles. The banks encourage the securities companies which are well backed and responsible; it is good business for the banks—and also stimulates the sale of motor cars, and that indirectly stimulates business generally.

The Inter-State Securities Co. of Kansas City provides a good illustration of how these companies operate. James A. Snoddy, until September wholesale manager of the Ford Motor Co. at Seattle, Wash., was visiting last fall at his old home near Kansas City where he had practised law. A movement was then in progress for the organization of a company to finance the purchase of Ford cars. The organizers got in touch with Snoddy, with the result that a company was incorporated for $50,000 and Snoddy was made president and manager. The company started business Oct. 1.

The Inter-State Securities Co. so far has specialized on the financing of Ford purchasers; a considerable number of Ford cars bought through Kansas City dealers since Oct. 1 on time have been entered on the books of this company.

There is no contract between the company and the Ford factory or any other dealer, putting any obligation on the dealer or company. The company has provided the facilities for handling the notes and the dealers, purely as a commercial proposition, have taken advantage of these facilities. Not all the Ford dealers, however, sell their notes to the Inter-State Securities Co.

How Plan Operates

In practice the company's plan operates something like this: The dealer has a chance to sell a car. He discovers that the purchaser wishes to buy on time. The dealer knows about what discount the Inter-State Securities Co. requires when the note will, for instance, cover 50 per cent of the value of the car, payments extending over six months. Then the dealer negotiates with his customer and makes a flat price for the car on the time basis.

In the large majority of cases the negotiations will proceed quite as though the dealer himself were to handle the paper. Frequently the dealer will get the customer's statement as to his financial condition, his business, etc., satisfy himself that the risk is good, have the papers for the sale executed when the order for the car is given, and retain all the documents in his own office until delivery of the car is made. When the dealer wants his money on the time end of the bargain he takes the note, with the customer's statement, to the Inter-State Securities Co. and explains all the circumstances, and gets his money less the discount.

The Inter-State Securities Co. notifies the customer that it has bought the note and that payments are to be made at its office on dates which are in accordance with the terms of the note.

The notes from the customer to the dealer are indorsed by the dealer to the Inter-State Securities Co. usually without recourse. The statements made by the buyer to the dealer are also indorsed merely as a recommendation by the agent. Ordinarily this indorsement of the dealer carries no financial responsibility.

While in the main they are generally understood, there are no hard and fast rules with reference to discounts, indorsements, payments, or the process by which the Inter-State Securities Co. ascertains the data upon which it bases its acceptance of notes.

A dealer may, for instance, have a chance to sell a car under conditions that on the face of them might preclude a loan or note. The dealer himself may be confident that the purchaser will pay, but in the ordinary course of business he might not be able to explain his confidence. In such cases th dealer usually explains the special circumstances to the Inter-State Securities Co., and if the risk looks good to the company the dealer is told to go ahead. Frequently arbitary propositions are made to dealers after special circumstances are explained.

Experienced in Credit

It sometimes happens that the Securities company is even more liberal with reference to risks than the dealer himself would be. Obviously the Securities company with its larger resources would better be able to stand a loss, but this is not the psychological sequence of the liberality. The secret lies in a somewhat broader experience with credit and with human nature—and the knowledge of the Securities company officials that with their facilities they are quite likely to keep track of the purchased car and to get their money out of it.

Sometimes the confidence is on the other side. When the dealer is sure a purchaser is good, but the circumstances do not look so to the Securities company, the dealer is asked to indorse the note. In almost every case, however, the dealer relies upon the judgment of the officials of the Securities company.

The comparative simplicity of the oper-

Digitized by Google

ations of the Securities company is explainable from the following statement by Manager Snoddy: "Without intending to make any comparison at all, we have found that if a man has been a Ford dealer for any length of time he is likely to be dependable in matters of business. The few exceptions prove the rule."

In other words, the Securities company relies largely on the kind of men it does business with. While it has not heretofore handled notes of dealers of other cars, there is nothing in the organization to prevent it from taking on others. It is apparent that the character of the dealer has quite as much to do with the prospect of his clearing his notes through the Securities company as has the kind of car he sells.

While it has been stated that the dealer depends upon the judgment of Snoddy, there is seldom an occasion for such dependence, however, as the Inter-State Securities Co. is inclined, as a usual thing, to depend upon the judgment of the dealer. If the customer looks good to the dealer he is usually good enough for the company.

Covers Big Territory

The Inter-State Securities Co. has only one office, at 708 Commerce Building, Kansas City, Mo. It is, however, handling notes for many dealers—all Ford agents—in Missouri, Kansas and even in other States.

The question was asked Snoddy as to whether more care has to be exercised with reference to the notes when the dealer sending in the notes was not a resident of Kansas City. His reply was that after the usual preliminaries of getting in touch with the dealer, becoming acquainted with his methods and character and forming an estimate of his business ability, the country business is looked upon as safer than city business.

As a rule, country people take care of their obligations better than city people; country people think less often about getting the best of somebody else and they are, as a class, more accustomed to paying their bills and paying promptly. Country people have neither the inclination nor the same opportunities as some city buyers to get away with their cars; and cars are not as frequently stolen in small towns and rural districts as in the city.

Looks Up the Buyer

The Inter-State Securities Co. has been financing the purchase of used cars exactly as in the case of new cars, with this exception, that Snoddy almost invariably investigates the character of the purchaser and the details of the purchase when a used car is to be bought. From Oct. 1 to March 1 only two cars were taken back by Snoddy on default of payment. Both of these were used cars when sold. One of these Snoddy sold immediately for enough to get clear on, while the other is yet unsold.

During the five months only seven cars financed by Snoddy were stolen. Two of these have been recovered. The Securities company requires the purchaser to take out fire and theft insurance. No other insurance is required on Ford cars, though the company is privileged to do so. The fire and theft insurance is almost invariably placed through an agency selected by the company.

The service to the public and to the industry of such institutions is considerable. The banks in many cases helped to finance purchase of cars because no other agency had appeared to do it, and there was economic necessity for the purchase of the cars and their use as soon as possible. But the financing of purchases of cars was not a banking duty.

> The Buyer gets the car.
>
> The Dealer gets his money.
>
> The Securities company takes the notes and does all the worrying.

There is no doubt that the Securities company is more liberal in its treatment of customers than a bank would be in the original negotiations. The Securities company, like the bank, however, tends to force prompt payment of obligations and is in a better position to do this than a dealer would be.

It would appear, too, that banks are more ready to lend resources to a securities company than it would be to a dealer or to some other agency not so well established nor so definite and highly specialized in its line of work.

When the securities companies first appeared on the scene there was much fear lest they encourage the purchase of automobiles by people who could not afford them. It is apparent, however, that this matter is automatically taken care of in the ordinary course of business.

Sometimes Says No

It is obvious that a person who cannot afford a car is probably not going to keep up the payments on it, and the Securities company is therefore not going to burden its books with such customers. Occasionally purchasers are turned down by Snoddy because he does not believe they can afford a car—he is not seeking to protect the customer from an inordinate and foolish desire to buy a car, but he is protecting his stockholders from a possible loss.

Doubtless the operation of securities companies on such a basis will be beneficial to the dealers who sell their notes to it. Furthermore, the dealers can get away from the notion that they can't afford to let a prospect get away. Their business methods will become more business like.

There probably always will be the wildcatter and the predatory class of dealers who are grabbing at a chance to sell. These will, as in the past. have to take their chances on their own responsibilities. They are the kind of competition that the more conservative dealers don't like—but there seems no chance to reform them.

A securities company seems to be able to deal more vigorously with the "speculator" than an individual dealer could. Kansas City has very pronounced speculator instincts—the evidence is strong enough to convince a motor car dealer, although possibly not sufficient to get the crooked one into jail. Here is one instance.

Caught a Bad One

A man bought a Ford from a speculator in Kansas City. He received an invoice declaring that there was no lien on the car—the invoice mentioning the number of the car, which was made up of three digits. The man thought it was a new car. He took it out to his home in Kansas and tried to get a license.

The county treasurer, who was familiar with Ford numerals, suggested that there was something wrong. The Ford numbers are running up into millions now. The owner called up the speculator who had sold him the car and asked him the number. By some freak of accident the speculator gave the man a number in the millions. The man brought his car back to Kansas City, went out to the Ford factory and traced the car of the number which the speculator had given him over the telephone into the office of the Inter-State. It was a car the sale of which Snoddy had financed; somebody had filed off part of the number.

Avoided Trouble

The speculator had made an engagement with the man to whom he had sold this car to discuss the matter. The car was driven to the speculator's place of business and in some way or other had been taken in by the garage. Snoddy, after hearing the facts, sent a man out to get the car. The man went into the garage and drove out with it. The speculator threatened trouble, but none ever developed.

It sometimes happens that the purchaser of a car who is financed by a securities company is in league with a speculator or a gang of thieves. A man accustomed to giving credit, however, can usually scent such a customer, and only a little extra care is needed to disclose his character and avoid any loss.

So far the number of cars financed by the Inter-State company which have been taken out of the State legitimately by their owners has not been large, and those taken out illegitimately are much fewer in number. The problem has not yet arisen, therefore, as to caring for the collection in certain instances. It seems to be as easy to get the payments made when the customer is a thousand miles away as when he is three miles.

And this suggests again the simplicity of the operations of the company. Ordinarily only one notice is sent to a customer informing him that his payments are to be made at the offices of the company. This is sent ten to fifteen days before the first installment is due.

A large majority of the customers

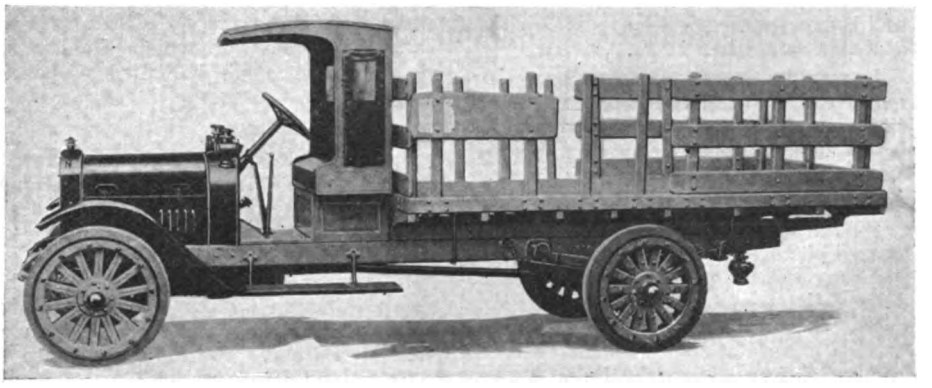
Digitized by Google

come in promptly month by month with their payments, just as they do with their rent and their water bills. Sometimes a man will fall behind, and after he has failed for four or five days to show up he gets a telephone call. There are two telephones on Snoddy's desk and he never writes a letter when he can use the telephone.

The telephone gives a personal touch to the communication. However friendly the tone of a letter may be, it cannot possibly be as friendly as the tone of voice.

In most cases the customer declares effusively that he has overlooked the matter, and usually he shows up with the money or a check comes in the mail. Letters are sent out, however, to follow up those who do not keep their promises. Letters go faithfully to the people who have no telephone.

On the manager's desk are laid every morning the cards of the customers whose installments have passed maturity. Each card bears notations as to what action has been taken on the present and previous delinquencies. As the business has grown Snoddy has kept in personal touch with each of these customers, at least through the cards, so that he can tell at a glance about what action should be taken. After his telephone conversation he may make a notation on the card that this card must come before him again in five days, unless meanwhile the customer has paid. As the number of customers increases, however, the necessity arises of more complete card notations that bear on credit and the liberality with which a customer shall be treated.



The concentration of motor car financing in the securities companies is proving a useful method for the interchange of credit information on persons buying cars on time. In several cases the men have tried to buy cars, only to discover that for some reason their credit is not good. Since nearly everybody is worthy of trust, the disappointed purchaser has a right to presume that others besides the particular firm he has previously failed to pay know about his delinquencies.

The layman might assume that experienced detectives would be employed to investigate the people who ask credit and to help run down stolen cars or defaulting customers. But this is not the case. The only two requirements of the employees are that they shall be honest and that they shall have common sense. Investigations have been so greatly simplified through the telephone that little time is consumed in getting the information—and the impression—upon which to base credit.

The financing company becomes an expert on time sales and all the grief that might be connected therewith. It specializes to such an extent that nearly all the grief is eliminated.

Standard Parts in Jumbo Truck

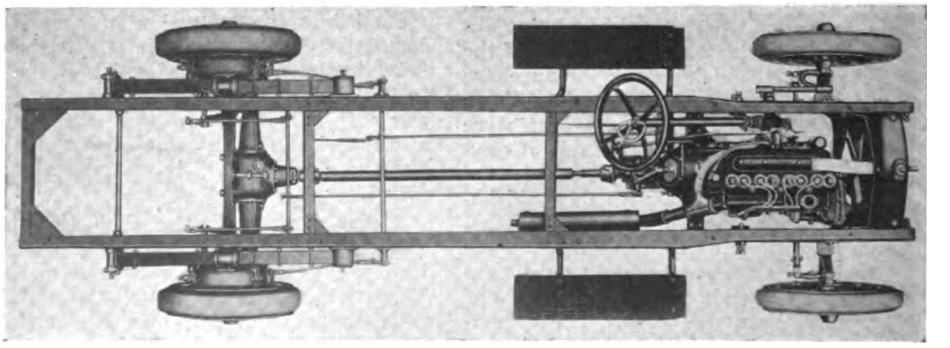
Nelson Company to Concentrate on 2½-Ton Model Selling at $2250

Jumbo 2½-ton standard stake body truck which sells for $2250

THE recently organized Nelson Motor Truck Co., Saginaw, Mich., is going to standardize on the 2½-ton size which will be styled the Jumbo, and this will be produced in as large quantities as possible. It will sell for $2,250, this including the chassis with driver's seat, fenders, lamps, tools and solid tires. Bodies may be made to order at the Nelson factory where special provisions have been made for this kind of work.

The power plant includes a Buda HU, four-cylinder block engine, 4¼ x 5½ in., and a Fuller gearset and clutch in unit with it. The flywheel is enclosed and the engine three-point suspended. Ignition is by Eisemann magneto, type G-4, the spark being fixed. The Zenith carbureter has a hot air attachment. Force feed lubrication is by gear pump and cooling by a G & O radiator with cast iron base and removable core. The circulation is maintained by a centrifugal water pump. Fuel is fed by gravity from a 13½ gal. tank under the seat. A Duplex governor, driven both from the engine and drive shaft, governs engine and vehicle speed independently.

The clutch is dry plate, multiple disk type, with Raybestos lining, and the gearset is selective with three speeds and reverse. Gears and shafts are 3½ per cent nickel steel on ball bearings.



The axle is a Celfor internal gear drive with a high-gear ratio of 8:1. Drive is through a propeller shaft with two universal joints. The Prudden wheels have fourteen spokes 2½ in. square, front and rear. These are fitted with single solid rubber tires 35 x 6 in. all around. Wheel bearings in front are Timken and the rear bearings are Bower and Hyatt. Semi-elliptic Detroit springs are used, the front being 40 x 2½ in. and the rear 54 x 3 in. The front axle is an I-beam drop forging.

Two Sets of Brakes

There are two sets of brakes, the service set external contracting and the emergency internal expanding. The steering gear is a Jacox, block and worm type, adjustable for wear. Steering is from the left side, the gear shift being central. Hand and foot throttle are provided.

The standard wheelbase is 144 in., front tread 56 in., and rear tread 59 in. The frame is pressed steel, ¼ in. thick, 208 in. long, 34 in. wide and 5¾ in. deep, well braced with cross members. The chassis is finished in standard Nelson gray.

Jumbo trucks have been in the process of development for nearly two years, and have had a year's practical service before the manufacture was started. Several well known and thoroughly tried units are used in the assembly, including the engine, rear axle, wheels, magneto, radiator and steering gear.

The Jumbo chassis is cleanly laid out and well braced

Wanted: Real Motor Truck Salesmen

By George W. Grupp

"No real business man would buy a truck, if it is a new idea with him, without first consulting an expert representative of transportation vehicles to look over his delivery problems—and then heed the advice of the expert."

A MOTOR truck, if it is to stay sold, must be sold by a real motor truck salesman. Not for a minute should one liken the sale of a motor truck unto that of the sale of foodstuffs—selling by price and looks of the commodity.

There is something vitally more important. And the motor truck salesman who thinks prices, looks and bluff are the only essentials will soon find himself lost in fog. Gibberish and jargonistic talk is fatal.

Braggadocio is equally dangerous. And yet there is a young army of braggards, swaggerers, gibberishites and jargonites who pose as motor truck salesmen.

All of this reminds the writer of an opportunity he had last summer to observe the performance of a truck in an isolated section of this country. For 2 days, from morning until night, he studied every movement of that truck. The words marvelous and wonderful do not begin to describe the performance of it. But in spite of all that, he could not make himself believe that the truck would live its natural length of life. The reason is a simple one. The roads were terrible. The average grade was 16 per cent and an overload of three-fourths the truck's capacity was always carried.

How One Man Buys a Truck

Who sold this man his truck and how came its owner to buy it? were questions which the writer could not leave unanswered, so he went to the owner and asked him. This is what the owner said:

"Well, after reading and hearing so much about motor trucks, as to what they could do better than horses, I sent for some literature and for a representative of a truck and tractor. After making a very extensive and exhaustive study of my particular business, roads, etc., he recommended a very heavy tractor. What he said sounded all right, but the cost was too much. In fact, it was more than I wanted to spend."

Poor Buying Methods

"As you haven't one of his trucks or tractors how came you to buy the truck you have?" the writer asked him.

"Oh, I learned a lot from that representative, and I put it to good use. I heard of a good make of truck, just as good as his, and I went to its agent and bought one."

"Without having this agent first look over your ground, and against the advice of the representative of the truck and tractor you bought your truck outright?"

"Sure! What was the use of him coming out to see me? I knew what I wanted. Besides, as train service is very poor, he would never be able to get here without having to spend several days coming and going, or he would have to motor 200 miles."

This one can safely call a good example of mess, all around—and this in spite of the fact that this particular owner can afford to junk his truck in less than a year because of the great saving it is over horse-driven vehicles. The writer knows this to be gospel truth because he is in the possession of actual cost and performance figures on this truck. But even that does not excuse poor salesmanship and lack of sound judgment in making a purchase.

No real business man would ever buy a truck, if it is a new idea with him, without first consulting an expert representative of transportation vehicles to look over his delivery and hauling requirements and then heed the advice of the expert. And no real truck salesman would sell a truck to one whose business requirements for delivery he does not know. He is perfectly aware that the duties which will be required of a truck will determine its life. He knows that every truck which is junked within a year's service, in spite of its being able to pay for itself within that period, is not the best kind of advertising he would like his truck to have. He weighs the opinion of the public which observes the short life of his truck and what effect it will have upon future sales.

Expert Advice Needed

Coming back to the truck owner who was exemplified in this article, let me say that he should have heeded the advice of that tractor representative. The investment, no doubt, would have been greater, but the life of the tractor and the increased earning powers would have soon offset the increase in investment. The tractor's life would have been four to five times as long as the truck which he bought. Perhaps after this truck owner finds that the investment on three trucks is greater than one tractor he may reform.

Now, as to the salesman who sold this truck to this gentleman, how does he explain this situation? To be real frank with you, he never tried to explain it to me. But in a general way let us ask these questions: Was he greedy for commissions? Didn't he think it necessary to go out and look the ground over—thinking perhaps that his prospect knew better what he wanted? Or did this prospect force this particular sale?

As a matter of information to the writer he does not care which answer to the above questions is the correct one. But he does know that the truck salesman never saw the place his truck

Digitized by Google

was headed for until he delivered it. The truck driver told me that he was "scared stiff" when he saw the sharp turns, steep grades and rough roads his truck had to climb along the edge of a deep gorge. He then began to realize, perhaps, that "the wages of sin is death."

The most idiotic undertaking which a salesman can do is to sell a truck to one before having first made a very careful study of his prospect's business so as to properly estimate the right type of body, capacity of truck, and, more than that, to actually determine if the prospect really needs a truck. Selling a businessman a white elephant is dangerous business.

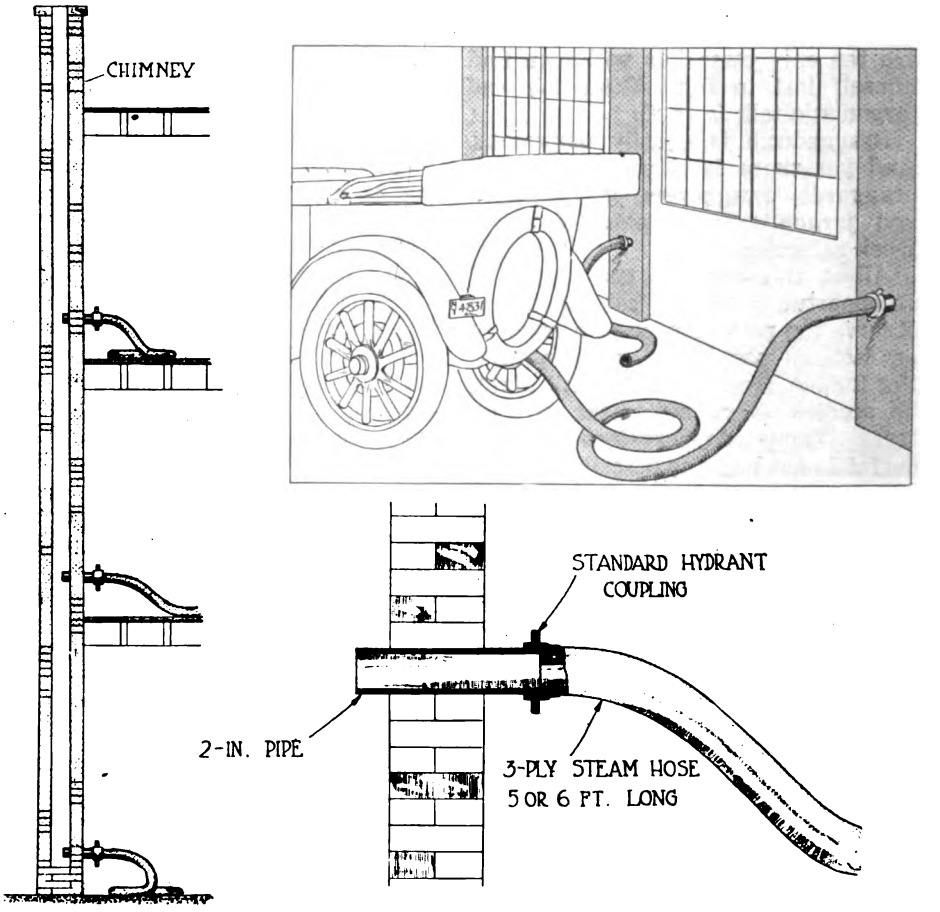
"You can fool some of the people all of the time, all of the people some of the time, but you can't fool all of the people all of the time."

All men who are making their daily bread and butter from either manufacturing or from selling motor trucks should never permit themselves to stoop to such slovenly methods. Amnesty is an exceedingly poor excuse for lack of good common sense. Moreover, no truck manufacturer should permit his good name to be tarnished, in any particular, by employing salesmen who don't know their business, who are too lazy to make a careful study of a prospect's delivery problem, who are so greedy for commissions that they see nothing else, who are too lazy to help the owner get the best results after the truck is delivered, or who will sell a truck for fear some competitor will "beat him to it" in making a white elephant sale. What some truck salesmen must learn is this: What counts most is not how much money you will get out of a sale, but how much manhood you can pack into a sale.

When a salesman carries out the last suggestion he can feel confident that he is a success. His deeds will speak for themselves and they will bring bacon and shoes not only to his family but also to the families of the hundreds, yes, thousands, of workmen and executives at the factory who are making it possible for him to earn a living. No truck salesman should make a sale which will indirectly endanger the livelihood of hundreds of innocent and honest souls at the factory—not in the most teeny-weeny way.

Texas Getting Truck Line

DALLAS, TEXAS, April 29—To cope with the freight congestion in the Southwest and this section especially motor truck freighting companies are being organized. The first was formed recently at Dallas. It operates between Dallas and Tyler, a distance of 100 miles. Fifteen trucks are in operation. A regular schedule between the towns is observed and to date not a trip has been missed. This company is known as the Dallas Freight Truck Co.



No Exhaust Fumes in This Garage

WHEN a man steps into a garage, as a general rule he can tell that he is in one, even if you were to blindfold him. The smell of burned gasoline and oil, while it may still be "breath in his nostrils" to the racing driver, has, however, certain disadvantages when freely loosed in a closed garage.

Aside from the very acute danger of gas poisoning in small garages, the impure air has a bad effect on people even where there is more air space. Another thing to take into consideration is the fact that nowadays many ladies drive their own cars in and out of the garage, and this sort of blue fog is not a thing which they will go out of their way to get into.

One man who has given this subject careful consideration is Henry Loughman, operating the Manhattan Garage, 130th Street and Old Broadway, New York. When the garage was built, a half dozen regular chimney breasts were distributed around the walls of the building to act as conveyors for exhaust gases.

Into the flues are run pieces of 2-in. iron pipe on each floor. These nipples are threaded in the regular way and sections of three-ply rubber steam hose with regular hydrant couplings can be readily attached and detached. As it would seldom happen that more than two or three cars on any one floor would be running their engines at the same time, it is only necessary to have about three pieces of hose on a floor, and these can be quickly coupled to the nearest pipe. For cars with two exhaust pipes, an extra long piece of rubber hose is used for one side to connect to the far pipe, and the other side connects to the near pipe. It is not necessary to cover or cap the pipes when they are not in use,

because the natural draft is always upwards, and a car exhausting into a chimney on a lower floor would not cause any smoke to come out on the upper floors even if left open. The system works so successfully that one is instantly struck by the absence of smoke and smell in this garage.

THE LAW

As It Applies to
Dealers
Repairmen
Garagemen

By George F. Kaiser

Questions on Credit

Editor Motor World: As most of my customers are farmers I do a great deal of credit and every now and then some customer becomes dissatisfied and won't pay for his work and repairs. I would like to know how I can collect such bills after the cars go out of my possession. Could I take out an attachment against any stock or grain they have to ship? Could I attach the car while it was in the possession of another garageman? Is there any sort of agreement that a garageman could have a customer sign so that the garageman will not lose the money due him for work and repairs?—Inquirer.

Answer—The Illinois lien law, which was approved June 21, 1917, provides:

Garage keepers shall have a lien upon any motor vehicle, parts and accessories thereof, kept by them for the proper charges due for the keeping thereof, the repair thereof, the materials furnished thereto, and the expenses bestowed thereon at the request of the owner, or the person having the possession thereof; provided, that such a lien shall not apply to motor vehicles, parts or accessories sold on conditional sale while the vendor remains unpaid; and provided, further, that the contract of sale or mortgage of the conditional vendor has been filed for record in the recorder's office in the county in which said sale takes place, before any lien sought to be enforced under this Act attaches.

Any garage keeper acquiring a lien under the provisions of this Act, upon any motor vehicle, parts or accessories thereof, may replevin the same in any court of competent jurisdiction within the State of Illinois, for the purpose of enforcing such lien and thereby seize and secure the possession of said motor vehicle, parts or accessories thereof, wherever the same may be found within the jurisdiction of the court issuing such writ, provided that said motor vehicle, parts or accessories have not been sold to a bona fide purchaser, and when he shall have so obtained the possession thereof he may hold the same for the enforcement of said lien in the manner as in this Act hereinafter provided. Such action shall be instituted within three months after the said lien attaches to said motor vehicle, parts or accessories thereof.

Garage keepers acquiring a lien under this Act may enforce said lien by a sale of said property when possession of same is lawfully secured on giving the owner thereof, if he and his residence be known, to the garage keeper having such lien, ten (10) days notice in writing of the time and place of such sale, and if said owner or his place of residence be unknown to the person having such lien, then upon his filing his affidavit to that effect with the clerk of the county court in the county where said property is situated; notice of said sale may be given by publishing the same once in each week for three (3) successive weeks in some newspaper of general circulation published in said county, and out of the proceeds of said sale, the amount of said lien and costs shall be paid and the surplus, if any, shall be paid to the owner of said property. The provisions of this Act shall apply to all garage keepers, whether persons or corporations.

Wherever in this Act is used the term "garage keeper," it shall be construed to include all persons who for hire or reward publicly offer to store, maintain, keep or repair automobiles and other motor-propelled vehicles and to furnish accessories and supplies for automobiles or other motor-propelled vehicles for the transportation of persons or merchandise upon and over the public streets and highways; provided, that in municipalities wherein are in force any laws or ordinances relative to the regulations and licensing of garages, no person shall be entitled to avail himself of the provision of this Act unless he shall, during the period of the whole time covered by his claim for lien, have been duly licensed and shall have fully complied with all laws and ordinances relative to the licensing of garages.

Can Replevin Car

Under this law you would have the right to replevin a car if you furnished materials or supplies or repaired it since June 21, 1917. If you want to have your customers sign a contract you might use the following short form:

August 1, 1917.

Standard Garage, New York, N. Y:

You are authorized to store my Mercury touring car bearing New York license 998-1917 at the rate of $20 per month beginning August 1, 1917, and from month to month thereafter, and to repair the same, furnish gasoline, accessories, etc., as per my orders given from time to time. It is understood that you are to have a lien for your charges which shall not be lost by reason of the car being removed from your place; that you shall not be responsible for loss or damage sustained by reason of fire while the property is on your premises, nor shall you be responsible for theft of personal property contained in the car unless the same is checked at your office.

Moratorium Not Retroactive

Editor Motor World: We are always interested in the law and will be glad to have you advise us, either by letter or through your columns, regarding the new law just enacted by Congress, known as the Moratorium Bill. The main point that we desire clarified is: Is this law retroactive?—Howze Motor Co., Demopolis, Ala.

Answer—The Soldiers' and Sailors' Civil Rights Act which you mention provides that the period of military service as used therein shall include the time between the following dates: For persons in active service at the date of the approval of this act it shall begin with the date of approval of this act; for persons entering active service after the date of this act, with the date of entering active service. It shall terminate with the date of discharge from active service or death while in active service, but in no case later than the date when this act ceases to be in force. According to the above provisions this law is not retroactive.

It applies to those soldiers and sailors whose normal ability to meet their obligations has been materially affected by their militray service. It provides briefly that:

Creditors cannot obtain judgment against soldiers and sailors because they are absent from home.

The statute of limitations is suspended as regards suits by soldiers and sailors, no matter how long they are away in the service of the country.

The homes of soldiers and sailors cannot be levied upon to satisfy judgments entered before their departure.

Mortgages on the business or stock in trade of soldiers and sailors cannot be foreclosed.

Dispossess proceedings cannot be brought against the dependents of soldiers and sailors if the rent is not paid while they are away in the service.

If soldiers and sailors are purchasing homes on the instalment plan, mortgages cannot be foreclosed if instalment payments are unpaid while they are away.

Property belonging to soldiers and sailors cannot be sold for non-payment of taxes.

Insurance policies cannot be canceled because of non-payment of premium.

Iowa, Maine, Maryland, Massachusetts, Oregon and Wisconsin passed similar laws last year.

About forty states have provisions in their laws that officers and soldiers of the National Guard shall not be arrested on civil process while going to, remaining at or returning from a place where they are ordered to attend for military duty.

In addition the States of Idaho, Michigan, Minnesota and Pennsylvania have laws providing that no civil process shall be issued against persons mustered into the service of the state or of the Union.

How to Lay Out a Building—3

THIS is the third of a series of articles which take up in detail the layout and arrangement of buildings for the dealer, garage and repair-shop.—Editor.

By Harold F. Blanchard

Plan No. 2

SPECIFICATIONS: Plot 50 x 150; showroom for three cars; small accessory store; private and general office; toilets; accessory store and stockroom; garage for fifteen cars; shop for five cars; elevator; shop lavatory; specialty room, and space for three machine tools and tool cupboard.

THERE is no particular reason for selecting a length of 150 ft. any more than for Plan No. 1 except that this layout is more commodious than the first one in every respect and therefore has, proportionally, a larger garage space.

This and the fact that the showroom and shop are deeper account for the difference in length. The plan may be used on a 50 x 100-ft. lot, but the garage space will be decidedly limited. The showroom holds three cars and store and office also are larger than in Plan No. 1.

The accessory store has been located at the back of the showroom. This position is not as good as the previous one inasmuch as the two departments are not as well separated. The store is not as distinct a unit.

An accessory display window has been provided at the front of the store in the same position as in Plan No. 1.

Double doors are used at the front of the showroom in order to allow a car to be driven in. This is the only car entrance in the room. To provide a car entrance from garage to showroom would entail the waste of space taken up by a driveway.

The only objection to not having a rear entrance to the showroom is that a car in the garage must be driven onto the street before it can be placed in the showroom.

On a rainy day this would mean that the car would have to be cleaned in the showroom, and in snowy weather it might be difficult or impossible to place the car because of high drifts.

All in all, however, these objections ordinarily do not compensate for the space that would be taken up by the driveway between garage and showroom.

A private office is included in the layout as well as a fairly large general office. There are toilets for men and women. Stock is stored on a mezzanine balcony reached by a short, steep staircase the same as in Plan No. 1, Fig. 3.

The shop has a lavatory and locker room, tool cupboard, space for three small machine tools which ordinarily would be drill press, arbor press and emery wheel, and an extra room which might be used for vulcanizing, electrical work, welding, etc.

If the building is two or more stories, the elevator position selected is about as good as any, although with this plan

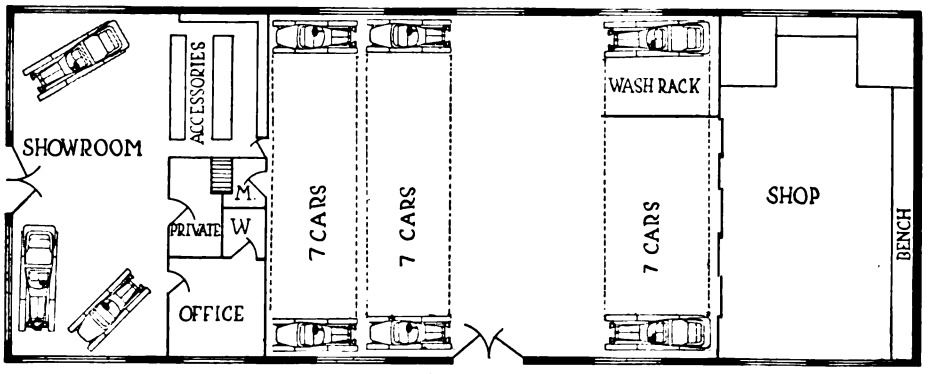

Fig. 11

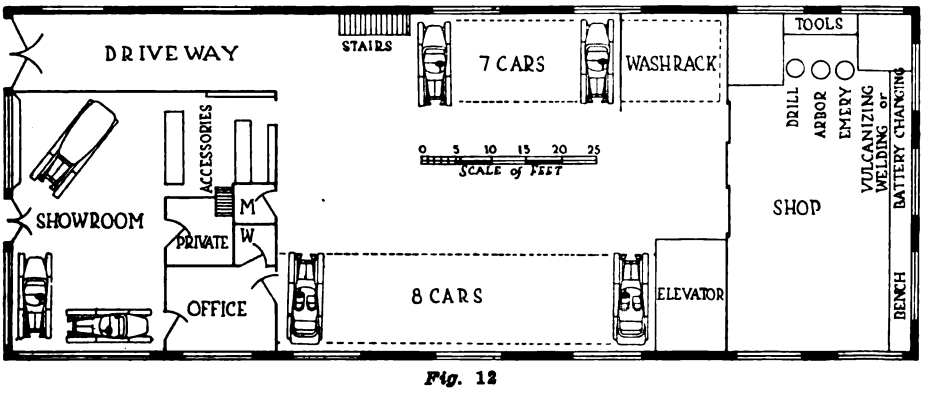

Fig. 12

Digitized by Google

any place along either wall will do about as well.

For the sake of better light and also to keep the shop as far away from trespassers as possible, it is best located on the top floor.

In this case the layout would be altered as shown in Figs. 1 and 2, the shop remaining at the back, or, for that matter, it might be placed at the front.

A corner location, Fig. 12, affords a larger showroom and permits twenty-one cars to be stored in the garage instead of fifteen. No accessory display window is shown in this plan. The showroom door is directly in the center, and both sides are used for car display.

The shop is identical with Fig. 11, and the elevator has been omitted, although its location might be the same as in Fig. 11. Obviously, also, shop and showroom units are interchangeable with those in Plan No. 1.

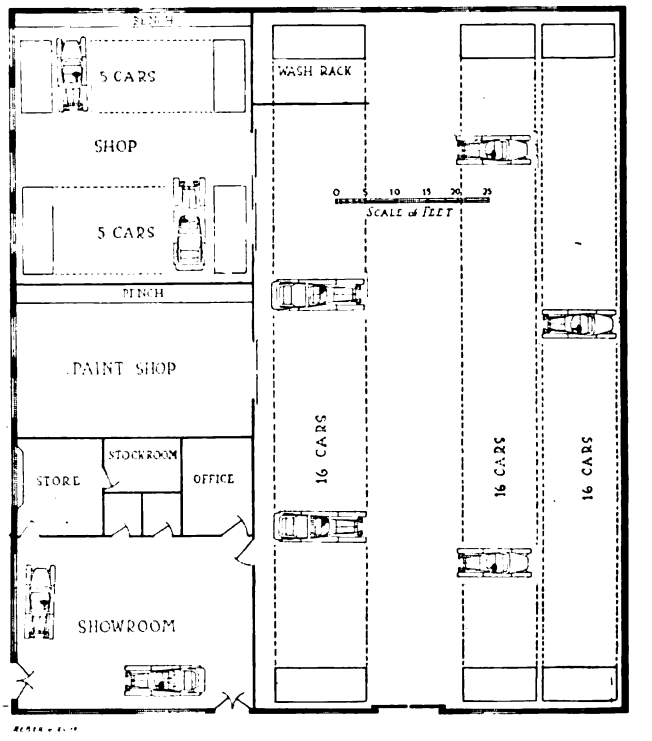
For the sake of good light the office is placed on the same side as the side street.

If the plot were 15 or 20 ft. shorter and showroom and shop unit remained the same, only two rows of cars could be accommodated, and if the property were 15 to 25 ft. longer four rows of cars could be taken care of with two aisles and two entrances instead of one. These remarks take care of the principal variations not discussed later.

(To be continued)

Laying Out a 115 x 120 Ft. Plot for Efficiency

Editor Motor World: Please submit, if possible, plans for garage, one story, on lot 115 x 120 ft., to set back 20 ft. from curb, facing either way, which would give most room for storage, to include combination office and display room and repair shop to hold 6 cars. On the 115 ft. side of the lot we could get more room, or less, whichever would work out to the best advantage.—Reber & Ruhe, Allentown, Pa.



Answer—If we understood your letter correctly, only 100 ft. of the depth and not 120 ft. is available, so therefore we have made the building 115 x 100 ft.

Instead of trying to decide which street the showroom should face on, we have placed it on the corner so that it faces on both streets.

The accessory store may or may not have a partition between it and the showroom, just as you like. If you decide to do without the partition, we would suggest that you place a showcase along the line which separates the two rooms, so as to make them as distinct as possible.

The garage is designed for two rows of cars on one side. You will find that this will save space and it will cause no trouble if you will take care to put the cars which come in early and go out late in the back row, the ones which come in late and go out early in the front row and the doubtful ones in single row across the aisle.

It is impossible for us to estimate the cost without actually visiting your town and finding out what things cost there. Choose brick or hollow tile, whichever happens to be cheaper in your vicinity. Both are very good building materials.

Texas Banning Sunday Gas

DALLAS, TEXAS, April 29—Scores of counties in Texas are enforcing what is known as the Blue Laws and are prohibiting the sale of gasoline and oils on Sunday. In a number of counties as the result and especially the larger towns of the state where such is being done, fire rates have increased. It is claimed the law is responsible for many persons buying large tanks in which to store gasoline for their Sunday consumption and that such has increased the fire risks.

Toledo Organizes for War Work

TOLEDO, April 29—Toledo businessmen and manufacturers have organized a Toledo war industries commission for the purpose of more efficiently co-operating with the government. The objects of the new organization are to help the government in getting greater production, to aid the manufacturer in getting contracts, and to provide employment for labor released through the slowing down of ordinary manufacturing. The commission will make an immediate survey of Toledo manufacturing concerns and estimate the possibilities, so that bids can be made upon war work by the commission as their representative. Factories will be classified and war work will be allotted to all large and small plants which are equipped to handle it.

Texas College to Teach Use of Tractors

DALLAS, April 29—Realizing the importance of the use of tractors, the Texas Agricultural and Mechanical College at College Station has opened a class for instruction. This was decided upon recently at a meeting of faculty members and the directors of the institution. A large number of tractor engines are to be bought for the institution and the students will be given instructions in the various lines of work. This is done because of the increased use of tractors in this part of the Southwest.

More Cash For Signal

DETROIT, April 25—At a recent meeting of the board of directors of the Signal Motor Truck Co. an executive committee of three was appointed and its chairman will be in daily attendance supervising the business of the company. It is stated that stockholders and directors have completed arrangements whereby sufficient new cash and credit has been obtained to enable the company to increase its production immediately. It is understood that lack of working capital has hindered both quantity production and the handling of government business. The offer of the Paige-Detroit Motor Car Co. to purchase the Signal company has been definitely rejected. It is stated that the Signal company has closed contracts since Jan. 1 for more trucks than were manufactured during the whole of 1917 and that with the additional financing the company has sufficient cash to produce all the trucks necessary to meet the demands of dealers.

Simple Electrical Testing—1

Use of the Hydrometer—Battery Charging—The Test Lamp

THIS is the first of a series of three articles on simple electrical testing. The articles have been written with a view to assisting the garageman and repairman to a better understanding of the electrical equipment of the modern car so that he can be of greater service to his customers. Save all the articles for future reference.—EDITOR.

IN winter the electrical equipment of a motor car is required to withstand a much more severe service than at any other time. This is due, first, to the fact that the engine starts harder and quickly runs down the battery; secondly, to the fact that the lights are used for longer periods; and, thirdly, because storage batteries will quickly freeze if allowed to run down.

USE OF THE HYDROMETER

In cold weather the battery solution cannot freeze if the battery is kept fully charged; the plates will not sulphate or harden, and the engine may be cranked at a speed that will facilitate easy starting. However, when discharged, the solution will freeze readily, the plates will harden, and the battery capacity will be reduced. The system may fail entirely and place the car out of commission.

Dim lights or failure to crank the engine easily indicates a discharged battery, though failure to crank may be caused by the stiffened or hardened oil. It is therefore advisable to release the clutch so that the gears in the gearbox do not have to be turned when cranking the engine on a cold morning (on cars where this is possible).

The density or specific gravity of the electrolyte is the best indication of the battery condition, and is determined by means of a hydrometer syringe.

Periodic readings should be taken of all the batteries, and the reading should be between 1.150 and 1.275. If the readings go below 1.150 the battery is so far discharged that it will not properly crank the engine, although the lights may burn bright enough to indicate good battery condition.

The following points should be observed in using the hydrometer:

1—The electrolyte taken from one cell should be replaced in that cell. Otherwise too much acid may be placed in one cell and not enough in another.

2—The formation of air bubbles in the cell should be prevented, as these occupy space and render correct gaging of the electrolyte difficult.

3—If the solution in any one cell is less than ¼ in. above the top of the

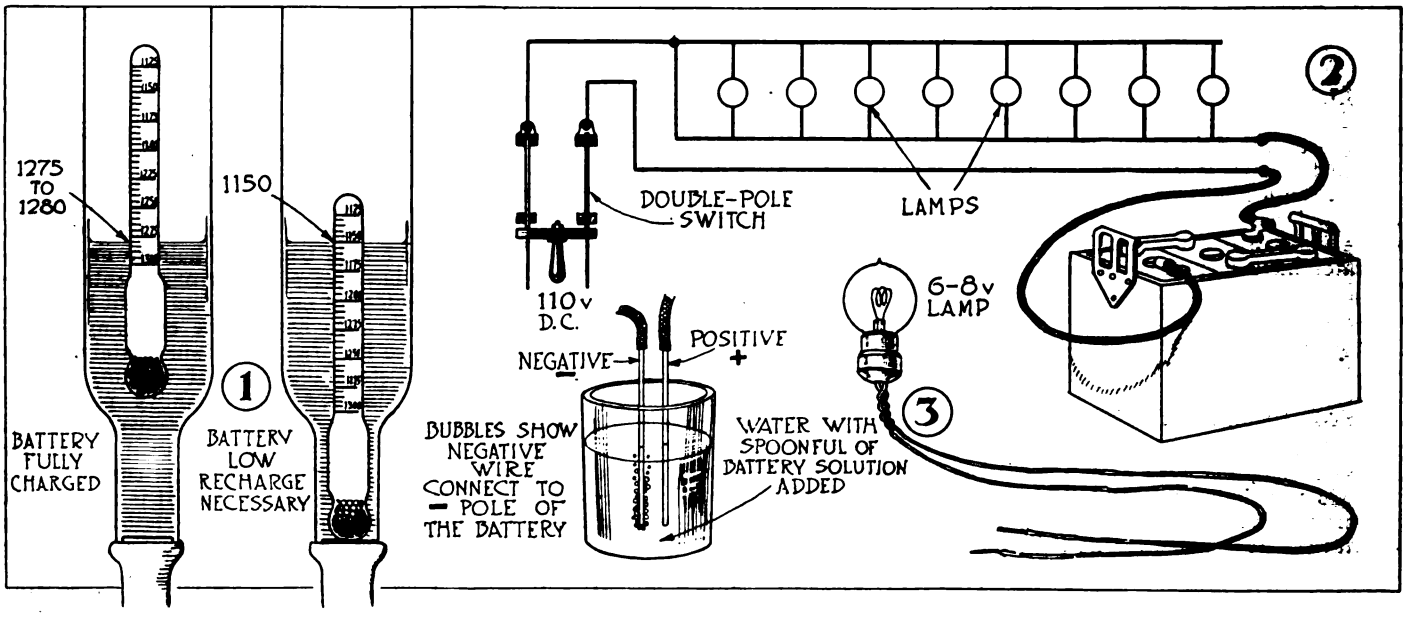

Fig. 1—Showing the readings of the hydrometer when the battery is fully charged and discharged. Fig. 2—How a bank of lamp resistances can be used to charge batteries from 110 volt d.c. line. Before connecting up, the positive and negative wires should be determined by the method shown above. Fig. 3—A handy testing outfit consists of a 6-8 volt lamp connected to 8 ft. of flexible wire

Digitized by Google

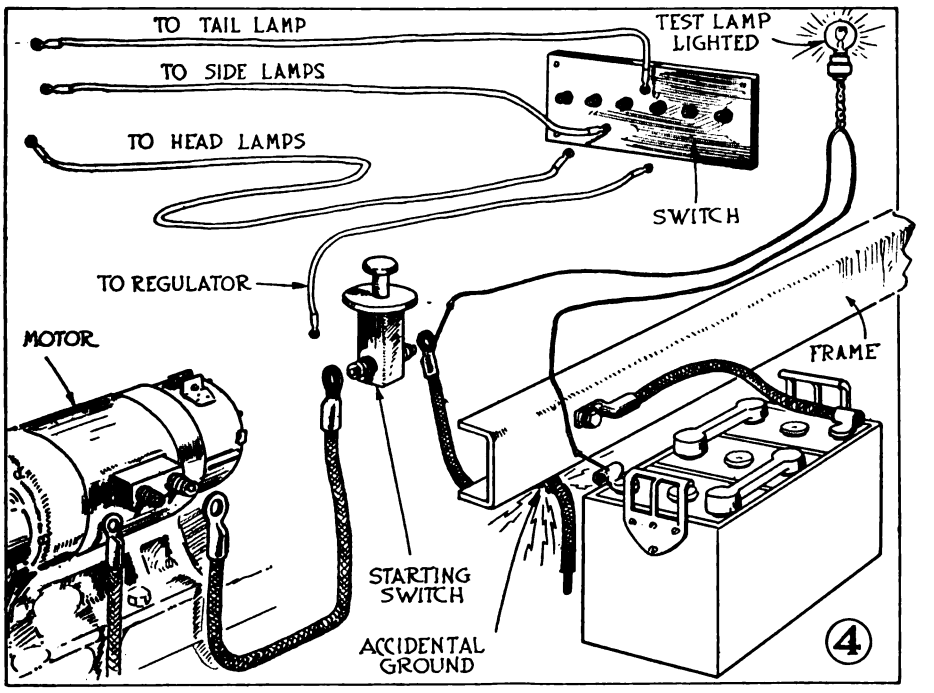

Fig. 4—A grounded connection may be determined by removing both ends of all wires in the system except the battery ground wire, connecting the test lamp to the other pole of the battery and touching the ends of the wires in succession. The lamp will burn when the defective wire is touched. All insulated terminals on the starting switch, main switch block, generator or motor should also be tested in a similar manner. After repairs, the wires should be replaced

plates distilled water should be added until the plates are covered at least ½ in.

The following is a table showing the freezing point of the electrolyte at various specific gravities, as well as the amount of charge indicated at that time:

Specific Gravity	Feezing Point	Condition of Charge
1.275 to 1.285	Cannot freeze	
1.250	50° below zero	Fully charged
1.200	20° below zero	¼ discharged
1.160	Zero	½ discharged
1.120	20° to 30° above zero	¾ discharged
		Discharged

If a car is stored for any length of time the batteries should be first fully charged and given a boosting charge each month during the idle period. This may be done by running the engine for about six hours; but it can best be accomplished by removing the battery and charging it by the regular charging equipment.

Simple Battery Charging Outfit

In those places where direct current is available the common electric lamp may be used as resistance in gaging the current to a point where it may be used for battery charging. Ordinarily a battery should be charged on a 4-amp. current, and enough lights must be lighted to permit that amount of current to flow. A diagrammatic sketch of such a lamp resistance is shown in Fig. 2. These lamps may be conveniently mounted upon a panel and placed at the rear of the charging bench. The following table shows the number of lamps that should be lighted at one time on 110-volt direct current:

Type of Lamp	Number Necessary
60 Watt, Mazda or Tungsten	7
40 Watt, Mazda or Tungsten	10
25 Watt, Mazda or Tungsten	16
16 cp. carbon	8

In using this outfit for the first time it is necessary to determine which is the positive and which is the negative terminal of the charging wires. This may be done by placing the two ends of the terminals in a glass of water about ¼ in. apart and then turning on the current. A spoonful of battery solution is then added to the water. Small bubbles will instantly collect on one of the wires in the solution. This wire is the negative terminal of the circuit, and should be connected to the negative pole of the battery. The other wire is of course attached to the positive pole of the battery.

With a charging outfit of this nature about thirty hours are required completely to recharge the battery, and this condition may be determined by a hydrometer test. Before starting the charge each cell should be practically filled with distilled water. However, in all places direct current is not available, and in such instances a rectifier should be purchased. These may be procured from any electrical manufacturer or automobile supply house. The requirements of the service station should be determined, so that the rectifier will have the necessary capacity. The repairman should advise the supply house or rectifier manufacturer as to the type of power available in his establishment, the voltage, cycle, and the number and type of batteries he desires to charge.

Test Lamps

There are two types of test lamps in common use in the repairshops, each of which is simple to construct and extremely valuable for certain tests.

Individual Test Lamp

For determining shorts, grounds and open circuits on the car and using the storage battery as a source of current, the test lamp shown in Fig. 3 is entirely satisfactory. It comprises an 8-volt lamp and lamp socket, to which is attached 8 to 10 ft. of lamp cord. The free ends of this cord should be soldered in order to prevent fraying and to give a harder medium of contact.

Locating Grounds

When the storage battery becomes run down the lights are consistently dim, and subsequent recharging does not remedy the battery condition, a grounded short circuit is to be expected. In this condition the starting motor will not crank the engine properly, fuses will constantly blow out, and the battery will run down.

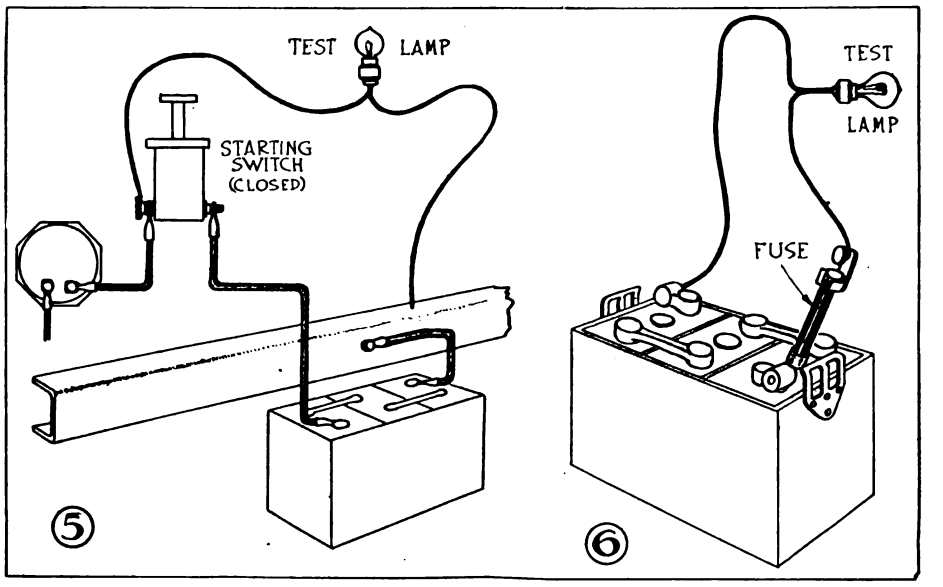

Fig. 5—Left—A dead lamp indicates an open circuit, if one side is grounded on the frame and the other placed on a bare wire through which current should be flowing. Fig. 6—Right—A fuse may be tested by placing one end of it on a battery terminal, connecting one side of the test lamp to the other side, and completing the circuit to the remaining terminal of the battery with the other test lamp wire. If the lamp lights the fuse is all right; if not, it is blown out

Digitized by Google

Examination of the system will usually show where the ground is taking place. Ordinarily this is a point where the wire passes over a sharp edge of the frame or else is budged in between an insulating binding post and some part of the frame. Oftentimes the short-circuited wire will become warm.

The test lamp may be used to show exactly which one of the wires in the system is grounded. The method is shown in Fig. 4 and is as follows:

1—Both ends of all the wires in the system are freed from their terminal connections and placed so that they cannot touch any metal on the car. There is one exception to this statement, and that is that the wire connecting one terminal of the battery with the frame is not removed.

2—One terminal of the test lamp wire is attached to the free pole of the storage battery.

3—The other terminal of the test lamp is touched in turn to the free ends of every other wire in the system in succession.

4—When the grounded or short-circuited wire is touched the test lamp will light, and that wire should either be replaced or repaired with insulating tape.

5—All wires should be replaced to the original point of connection.

Open Circuits

An open circuit is often indicated by failure of some part of the system to operate, and may be caused by poor connections at the terminals or by a break in the wire. Faulty switches, regulators, blown fuses, etc., may likewise cause an open circuit. A test lamp may be used to determine the position of the difficulty. The following is the method (see Fig. 5):

1—Connect one end of the test lamp wire to the frame of the engine so that it is grounded.

2—See that all contacts are tight, that the fuses are in place and the lighting switches closed.

3—Starting at the battery terminal, touch each terminal in the system in turn, following it to its ultimate source.

4—The test lamp will refuse to light when it has passed the point of open circuit.

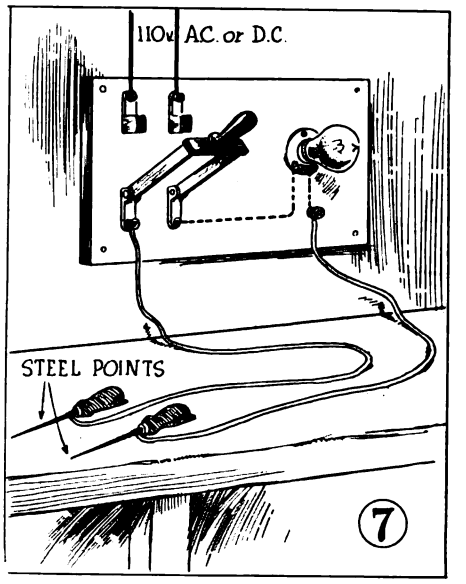

Fig. 7—A testing board which can be installed over the bench consists of a double-pole switch and test lamp with about 10 ft. of flexible wire to the ends of which are attached a pair of steel points provided with wooden handles

Testing Fuses

It is often difficult to determine exactly whether a fuse is blown or not, and when an open circuit is experienced it is advisable to test the fuse to see that it is in good condition. This may be done by removing the fuse to be tested and:

1—Placing one end of the fuse on a battery terminal,

2—Place one end of the test lamp wire on the other end of the fuse,

3—Place the other end of the test lamp wire on the opposite battery terminal.

If the test lamp lights the fuse is in good condition and may be replaced, but if not, a new fuse should be procured.

It should always be understood that a fuse does not ordinarily blow out unless it has received an oversupply of current, and the cause of this should be determined before a new fuse is placed or the only result will be a continued blowing. This may be caused by a short circuit, and the test for short circuits should be gone through.

A point in testing circuits should be emphasized, and that is always to work from the battery toward the end of the system on one circuit at a time and to follow the wiring diagram as supplied by the car manufacturer.

Separately Excited Test Lamps

In repairshop work a most convenient testing outfit comprises a test lamp mounted on a 110-volt lighting circuit in the manner shown in Fig. 7. The test lamp is mounted either at the rear of the bench or placed on a portable panel so that it may be carried to a point on the machine where the mechanic can conveniently watch it. To these lamps are connected two lamp cords, each from 10 to 12 ft., in length and terminating in sharp steel points that are attached to wooden awl handles. These may conveniently be carried to any part of the car, and when placed together or connected by an intervening wire in the system will complete the circuit and cause the lamp to light.

Testing Grounds

Any wire may be tested for a ground circuit by means of the outfit by:

1—Disconnecting both ends of the wire and freeing it from contact with any metal point.

2—By placing one test point on the frame of the car and the other test point on the end of the wire being tested. If the lamp lights the wire is grounded.

The same point emphasized in using the other test lamp outfit applies here—namely, that all grounds due to terminals

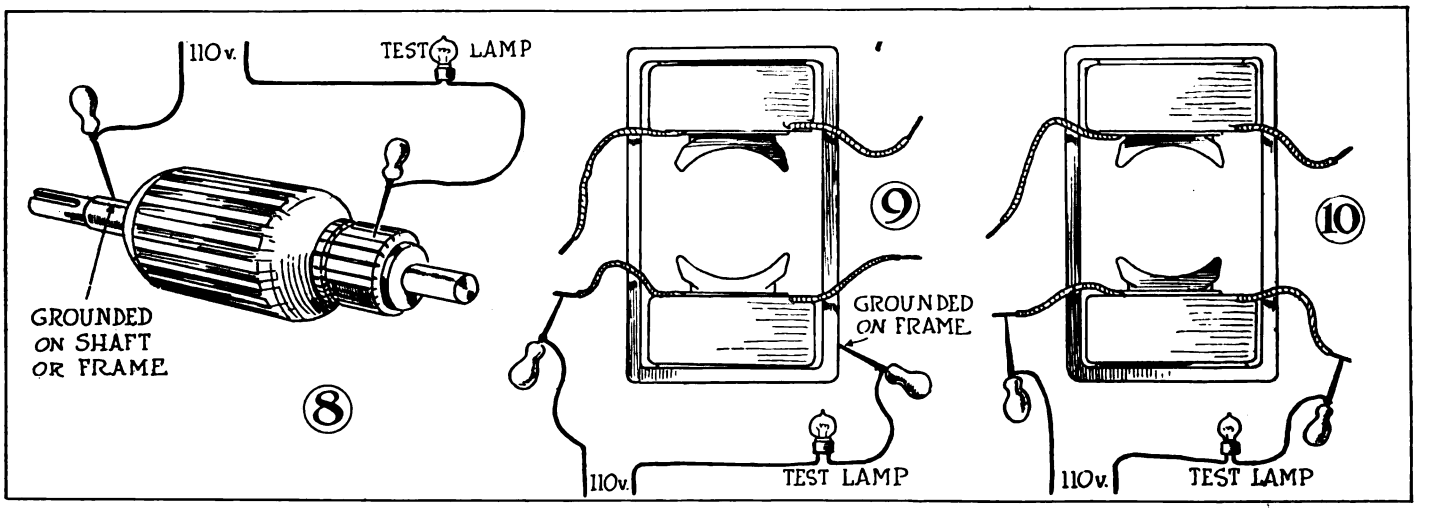

Fig. 8—Left—Commutators and armatures can be tested for grounds by removing the brushes, placing one test point on the commutator and the other on the motor frame. If the lamp lights, the commutator or the armature windings are grounded and must be repaired. To make the test it is not necessary to remove the starting motors or generator from the car. Fig. 9—Center—Field coils may be tested for grounds by removing both ends of the field windings from all connections and then placing one test point on the frame and the other on a terminal of the field coil being tested. If the lamp lights the coil is grounded. Fig. 10 Right—An open circuit in a field coil may be determined by disconnecting both ends of the coil and placing a test point on each. If the lamp does not light, the field coil circuit is broken

Digitized by Google

must first be removed and the wires tested in sequence from their origin at the battery to their termination in the various units following the wiring diagram.

Short Circuits

Any positive and negative wires in the system normally insulated from each other may be short-circuited by contact, and this condition may be tested in the following manner:

One test point is placed on a terminal of one of the suspected wires and the terminal on the other suspected wire. If the lamp lights, a short circuit is indicated between the two and should be removed.

Broken Circuits

Broken circuits are normally indicated by some part of the electrical system refusing to operate, and should be traced from their point of origin from the battery outward. Ordinarily such breaks are caused by loose or corroded connections, and these should be examined first, though they may also be caused by a break in the wire itself. Any wire in the system may be tested by the test points as follows:

1—Place one of the test points on one end of the wire to be tested and the other on the opposite end.

2—If the lamp lights brightly the wire is in good condition; if dim, a partial break has occurred, and if not at all, the wire is broken. In either of the latter cases the wire should be either repaired or replaced. If it is to be repaired the ends should be not merely wound together but soldered and carefully taped. A noncorrosive solder should be used in order to prevent further difficulty.

Testing Armatures

Tests indicative of the condition of an armature may be made by means of separately excited test points, though careful tests require the use of a voltmeter and an ammeter, as will be later described. In Fig. 8 is illustrated the method of testing the armature coils to find out whether they are grounded. This test may be made without removing the electrical unit from the car, in the following manner:

1—Either remove the brushes entirely or insulate them from the commutator by means of cardboard strips placed between them onto the commutator.

2—Place one of the test points on the starting motor frame.

3—Place the other test point on a commutator bar.

4—If the lamp lights in any position of the point on the commutator it will indicate that a coil is grounded.

The remedy here depends on the facilities of the service station where the work is being done, but usually the armature should be removed and a new one substituted unless facilities are at hand for repairing the old one. A grounded coil is often indicated by failure to crank in a starting motor or failure to start in the generator, or a marked drop in the capacity of either to perform its natural work.

Testing Field Coils

Field coils may be tested for grounds in a similar manner, it only being first necessary to remove both ends of the field so that all normal grounds are removed and the coil is left as a separate unit. This is shown in Fig. 9, where one test point is placed on one end of the coil wire and the other on the frame of the car. If the lamp lights, a ground circuit is indicated. The remedy here likewise is to replace the coil.

Open-Circuited Field Coils

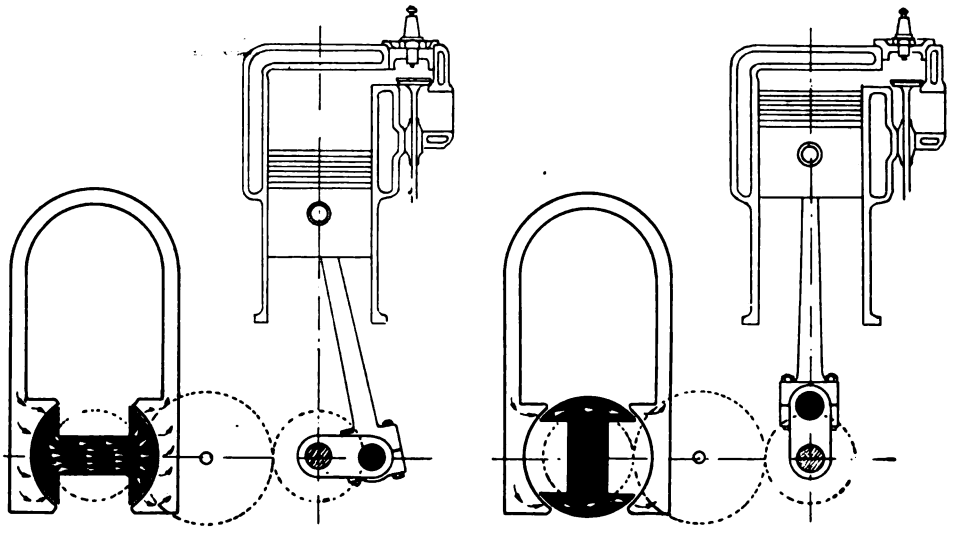
When in good condition the current should flow freely through the field coils, and if the coil is disconnected from all parts of the system, and the test points placed on the two ends of the coil as shown in Fig. 10, the lamp should light. If not, the wire in the coil is broken and the coil should be replaced.

Electrical testing by means of either of the above-described test points is a simple matter provided the mechanic follows closely the principles emphasized. Summing these up briefly they are as follows:

1—Difficulty may be caused by grounds, short circuits, or open circuits.

2—Grounds may be determined by disconnecting both ends of the suspected wires, placing the test points on one end of the wire and the other on the car frame. If the lamp lights, a ground is indicated.

3—Short circuits ordinarily occur between two wires in the system that should be normally insulated, and this condition may be determined by placing one of the test points on one end of the wire suspected and on the end of the other wire, after each is removed from its contact from a terminal or binding post. If the lamp lights the wires are short circuited.



4—An open circuit denotes a break in one wire, and by simply disconnecting both ends of the suspected wire, placing one test point on one end of the wire and another test point on the other it may be tested. Failure of the test lamp to light indicates a broken circuit.

The point that only one wire should be tested at a time should be carried in mind, and these tests should be made starting with the battery and working outward toward the system following the wiring diagram. Only by this method can the mechanic be assured that all parts upon which the part being tested depends are in good condition. If the mechanic is not familiar with the wiring system of the car he should have the wiring diagram supplied by the manufacturers.

One Reason for the Weakening of Magneto Magnets

THE reason why the magnets of a magneto lose their strength is often a mystery to the garage man. This trouble is not always due to poor magnets, but may be caused by defects in the motor, such as bad valves, worn rings or any other thing that would impair the compression of one or more cylinders.

If the motor has good compression it will always stop on the quarter and not on dead center. When the engine crank is on the quarter the armature bore of the magneto extends right across from pole to pole, forming virtually a complete magnetic circuit. This tends to preserve the strength of the magnet. On the other hand, if there is poor compression in one cylinder, the engine will stop with the crank on the dead center. With the crank in the dead center position the armature core is at right angles to the center line of the pole pieces, this corresponding to the firing position of the armature, and the path for the magnetic lines from one pole piece to the other is then very poor. The result is the same as when an ordinary horseshoe magnet is allowed to lay around without its keeper—the magnets will gradually lose their strength.—Thurston W. Turner, Manager of the Willard Service Ann Arbor Battery Shop, Ann Arbor, Mich.

Repairshop Shortcuts

From Motor World Mechanics

No. 1646—WORK SUPPORTS

Supports for long work like pipe, bars, etc., are made of bar iron for attaching to work bench and bent as shown. The adjustable crotch is made from a bolt by cutting off the head, slitting with a saw and bending to a V or a U. The floor support has a pillar made of pipe, spread into anchor feet at the bottom, and concrete molded for a base, using an old bucket for a mold.—Charles H. Willey, Concord, N. H.

No. 1647—REPAIRING BROKEN MAGNETO SHAFT

Where the threaded end of a magneto shaft is broken off, the end is filed smooth, drilled and tapped for a stud. The edge of the hole goes into the half-moon keyway which is cleaned out and a key cut in the stud at the proper place so that the key will prevent the stud from turning and also hold the coupling. —John McGuickin, Stevens & Co., New York City.

No. 1648—LOUD GARAGE BELL

A loud bell for telephone or for calling employees to the office or front door is made from a discarded brake drum. It is placed so that the hammer of the old bell hits the rim of the drum which is supported on a pillar made from a short piece of small pipe and a long screw or lag screw.—William Millard, Millard Automobile Co., Medford Hillside, Mass.

No. 1649—HACK SAW FOR CLOSE PLACES

A hack saw frame to get in close places is made from a piece of ⅜ in. cold rolled steel, bent over at one end and notched, and threaded at the other to take two nuts and the holder for the back end of the blade. The nuts regulate the tension of the blade and a file handle can be made to screw on.—R. E. Brown, Auto Inn, Anderson, Ind.

No. 1650—HOLDER FOR BRAKE LINING

A holder for rolls of brake lining is made like a box with partitions to separate the different widths and kinds. Slots in the side of the box allow the ends to hang out so they can easily be seen and pulled out. A cover may be hinged to the top.—C. C. Spreen, Flint, Mich.

No. 1651—TOOL BOX FOR TIRE REPAIRING

A box mounted on four castors and with hinged lid, containing all necessary tools for tire repairing and tire changing, can be pushed out to the job, and as the two center castors are higher than the others, the box can be easily turned. Lid and side of box may have advertising matter to catch motorist's eye.—L. R. Barnett, East Side Garage, Bakersfield, Cal.

No. 1652—TOW BAR FOR FORDS

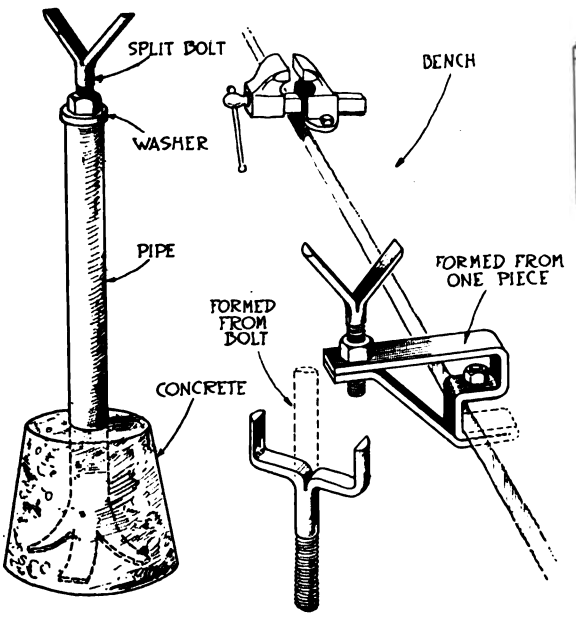
A tow bar by means of which one car may tow as many Fords as the power of the towing car will allow is made from 1½ x ½ in. iron bars and other fittings. The piece to fit over the rear axle is made of two parts, bent to fit the housing and held together with bolts. One of these pieces has an extending ear to which the towing bar is attached. The towing bar has a clevis formed on the forward end, is bent at right angles at the center and pivoted, and the rear end has a hole to fit the front axle clamp and a slot to turn the tie-rod clamp. This makes the towed car follow the touring car.—W. J. Peterson, Mills & Peterson, Akron, N. Y.

No. 1653—BENCH HOLDFAST

A bench holdfast or clamp for bulky work is made of square steel bar stock bent at right angles at the top and with holes drilled an inch apart at an angle of 45 deg. The bench plate is ¾ x 3 in. stock set flush with the top of the bench and with square holes 6 in. apart to fit the clamp. The clamp is pinned at approximately the proper height and the bolt in the top of the arm is tightened to clamp the work to the table.—Charles H. Willey, Concord, N. H.

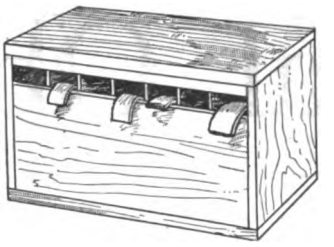
No. 1654—TOOL RACK UNDER LATHE

A tool rack made to fit under a lathe to save steps. Ends are made of 1 in. boards and shelves of ¾ in. stuff. The pan to catch the turnings is placed on top of the rack which can be painted a flat black to match the lathe and prevent dirt from showing. Places are provided for wrenches, dogs, drills, reamers, mandrels, chucks, face plates and rests.—Forest M. Rhodes, Thompson, Conn.

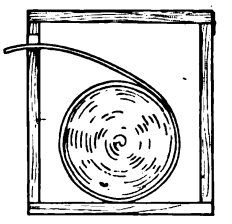


Vesta Batteries Advanced 5 Per Cent

DETROIT, April 25—The Vesta Accumulator Co. will raise its prices on all batteries 5 per cent, to take effect May 10. The reasons given are the higher costs of labor and the difficulty in keeping a labor organization, due to the draft. For these reasons the Vesta Accumulator Co. states that it finds it absolutely necessary to put the advance into effect on all shipments made on or after May 10, 1918, regardless of date that order was placed with the company.



$1 a Shortcut



SHOP men are invited to send in the ingenious kinks they have worked out for saving time and labor in their shop. MOTOR WORLD *will pay* $1 *for each Repairshop Shortcut that is accepted for publication. The only requirements are these:* 1—*Describe the shortcut briefly but clearly, in few words.* 2—*Send a sketch, in pencil or pen, no matter how rough; our artists will finish the job.* 3—*Write on ONE side of the paper only.* 4—*Sign your name and initials, the name of the company your are with, and the town. Write plainly. If your name is unusual, or if there might be any doubt as to the spelling of the name, print it in capital letters with your pencil.*

Editorial Observation

Next Winter's Transportation

YOU have only to mention transportation under winter conditions to have yourself thoroughly understood by the business man. He went through the thing last winter and he may or he may not expect different conditions next winter.

At the recent convention in Chicago of the Chamber of Commerce of the United States it was indicated that conditions next winter will be no better than they were last winter and may be a great deal worse. R. H. Johnston, manager of the White business in New York City, studied truck conditions as they were discussed at this meeting. He sums up the situation with the statement that there will be fewer cars and locomotives built this summer than normally and that conditions next winter will be worse than they were during the past cold season.

This means that the business man should begin now and not next November to pay attention to his cold-weather transportation needs. He is not going to be able to ship all he wants to ship by rail, and transportation within 30 and 50-mile radii of cities is going to depend almost entirely upon motor trucks.

This means that the business man must begin now to plan for meeting these conditions. He must figure out what his needs will be then and secure the equipment now. Securing the equipment in advance does not mean going to a truck dealer in November and endeavoring to buy a vehicle. He may not be able to get what he wants then. There is a possibility that he can get what he wants if he investigates and takes action now and that is the thing he should do.

In this there is a bigger idea for the dealer in trucks. He should familiarize himself with conditions in his territory, study what happened last winter, prognosticate as accurately as possible what is likely to happen next winter and lay this situation before the business men of his community who were hard hit by the recent transportation disorganization. If he does that there is a prospect that he may sell trucks where he might not otherwise dispose of them.

Furthermore, for every truck which sets into the breach next winter and solves the transportation problem, a great credit will redound to the entire motor vehicle industry. The truck will demonstrate its importance in industrial affairs. It will give an upward boost to the business as a whole and every time one dealer sells a truck which stands up and does service it is going to benefit every other.

Talk With Your Newspapers

WHEN will some of the newspapers realize that the motor industry should not be the target of unintelligent attacks?

When the story of the recent "meeting" came out from Washington regarding the proposed 75 per cent curtailment, some of the papers grabbed at it like a hungry fish at an angle worm. One paper carried a motor-car advertisement on the first page, and directly underneath was the curtailment story. Another paper played the story up as follows:

"TO CURTAIL ON PLEASURE CARS

"U. S. BOARDS EXPECT AGREEMENT BY MAKERS TO CUT PRODUCT BY 75 PER CENT"

Then followed a third of a column story. Naturally, it caused some unrest among the automobile dealers. And here is a concrete example of how it works out: One big distributor has an agency near Boston. His dealer was drafted for the war, and a deal was pending to sell the business to another man. Everything was practically closed, and the distributor went out to send a telegram. On returning, the prospective buyer had a paper, reading the curtailment story. "Say, so this is why you are trying to wish this onto me?" he said. "Nothing doing. I'm through." And the deal ended, although the man could have made money at it selling cars, trucks and service.

Some of the dealers have spoken to newspaper men about this sort of thing. The fact that the story was mere rumor made it all the worse. One Boston paper threw the story away because the motor editor has the co-operation of the editors, and nothing of the sort goes in without first being submitted to him; and he realizes the harm, so such stories are banned in his paper.

When the gasoline-shortage bugaboo arrived from Washington last year, he not only killed it but suggested to some of the dealers that they call up the other papers and request that they do the same.

The dealers do not feel that they have any right to censor what newspapers should print, but they feel that articles that are not official, and which hurt business, should be investigated first. In other words, they feel that if the motor editors had a closer understanding with the news editors, and showed the latter how much harm rumor stories did, the yarns would at least be minimized instead of being played up. As a result of the oil-shortage scare a year ago, a number of prospective buyers, right after the shows, refused to order cars.

Letters from Readers

THIS page is for the use of MOTOR WORLD readers with something to say. Letters on subjects of interest to dealers, garagemen, repairmen and jobbers are always welcome.—EDITOR.

Headlamp Legislation

Editor Motor World: As you undoubtedly know, the following states have passed no-glare laws through their legislatures:

*California	*Nevada
*Connecticut	New Hampshire
Delaware	New Jersey
District of Columbia	*New York
*Florida	*North Carolina
Illinois	*North Dakota
Indiana	*Ohio
*Iowa	Oregon
Kansas	South Dakota
Maine	Texas
*Maryland	*Utah
*Massachusetts	*Vermont
Michigan	*Washington
*Missouri	Wyoming
*Nebraska	

Sixteen of these states, indicated by an asterisk (*), specifically mention the 42 in. line in limiting the height at which strong headlight rays may be used. The other states require the use of dimming devices where headlights glare, or specifically prohibit glaring headlights.

There has been considerable rivalry among several of the states in an endeavor to pass the most ideal law. The laws are good, but the trouble is the lack of enforcement, and it seems to me that the automobile trade can do a real public service in bending their efforts to see that their local and state authorities enforce the laws that the people have seen fit to pass.

After examining the various laws, it seems apparent that the motorist can comply with the intent of the law in practically every state by observing the extreme provisions, which would include the use of headlights that are so constructed, treated or equipped as to prevent the beam of light rising more than 42 in. above the ground at a point 75 ft. ahead of the car, yet not so dimming the light but that it will be sufficient to make the roadway clearly visible at least 500 ft. ahead and to provide sufficient illumination to reveal objects clearly at a distance of 250 ft. ahead of the car and 10 ft. to each side of the road at a point 10 ft. ahead of the car.

Of course the object of law making to regulate the operation of automobiles on the public highways is intended to work for the benefit of all, but in reality it compels the observance of ordinary precautions that are dictated by common sense. Persons who fail to recognize these precautions make it necessary to enact such statutes.

Until the time comes when there shall be a federal or at least a uniform law for driving, speeding and lighting in every state in the Union, confusion continues for any motorist who crosses the state line. Aside from this purely political aspect of motoring, however, the ordinary law of the road, or what corresponds to the common law, is made and re-made all the time. Common practices abound among motorists, and so do uncommon practices. The latter may be expected to require even more attention than ordinary measures which merely involve obedience to the existing statutes.

It really is up to the dealers and users in each state to see that their legislature does not pass a law at such variance with the laws of other states that the manufacturers cannot readily comply with their law, and it is really up to the dealers and users in each state to see after such a law is passed that their officials enforce same.

The giving of publicity to such a feeling is, indeed, an industrial service, and the sooner the dealer, jobber, automobile club, motorist, and even pedestrians themselves insist that each and every automobile shall be equipped with a law abiding device in order that they (the motorists and pedestrians) may be protected in their respective fields the sooner the terrible accidents and deaths which have been a result of dazzling and glaring headlights will be eliminated.—E. A. Cassidy Co., L. M. Lloyd, Advertising Manager, New York.

Scarcity of Mechanics

Editor Motor World: In your April 17 issue of Motor World I notice an article written by Stanley Roberts on the scarcity of mechanics. I would like to say that if the right wages were paid there would not be a shortage of mechanics.

Most shops in Toledo are getting 90 cents and $1 per hour for labor and paying their men from $20 to $25 per week. It will be readily seen that this allows the owner one-half or better of what a man really earns. In a shop employing five men that would give the owner an income of $500 per month, besides 10 per cent to 15 per cent on all parts used.

Then, in addition to that, in some shops if a mechanic turns in to the office a labor bill of 30 to 40 hr. on a job, when the car owner comes to pay his bill he is charged 40 to 50 hr.

Of course, you say you have a big rent to pay; that no doubt is true, but in most garages the storage more than pays the rent.

If no storage is kept there is usually one or two makes of cars sold, which offsets the rent expense.

It is true there are no inducements for men to start in the repair business. It is a dirty, greasy job to make the best of it, and a man starting in usually has the dirty, greasy work to do. He can fill grease cups, grease springs, wash parts, tear differentials apart and clean them up for some mechanic to put together, and the worst of it all is they expect him to start in for $10 to $12 per week.

But when a man takes his car to the garage to have it greased he pays the same rate per hour for that work as he would for having his engine overhauled. If garage owners will pay beginners from $15 to $18 per week and mechanics from $30 to $35 per week, I do not think they will have any trouble to find men. I would like to hear from other mechanics on this subject.—C. Richard, 1522 West Bancroft Street, Toledo, Ohio.

Aluminum Pistons

Editor Motor World: We were mighty glad to see in a publication with as wide a circulation as your own some real practical information about the installation of aluminum pistons.

We asked our engineers to comment on this article. The information which I am giving you, which in some cases corrects statements made in this article, is given from the practical experience of men who have manufactured engines in which aluminum pistons were used, as well as the experience of our own men who have been recommending the proper clearances, machining practices and the like for over twenty of America's car manufacturers.

In several places you speak of .015 to .025 per inch of cylinder diameter. Isn't this an error? Didn't you mean .0015 to .0025?

In regard to the fitting of wrist pins, you state "the first step is to obtain a driving fit between the wrist pin and the piston." We do not recommend a driving fit between the wrist pin and the piston. When the piston pin is driven in the piston, the piston when heated in the motor creeps out on the wrist pin and when the piston cools it does not come back, but grips on the wrist pin. This has the effect of elongating the piston in a plane parallel to the crankshaft.

The effect of this out-of-round condition is to make the piston loose in the direction which would cause a piston slap and tight in the direction which would cause the piston to seize. By taking a piston and fitting the piston pin tight, then laying the piston on a piece of hot metal or heating the head with a blow torch and allowing to cool, we find that after this operation is re-

Digitized by Google

peated several times the piston will be as much as 0.005 to 0.006 in. larger in diameter in the direction of the wrist pin, and likewise about the same amount smaller perpendicular to the wrist pin.

We recommend that a hole in the piston be reamed very smoothly, and that the fit be about metal to metal. In other words, the size of the hole should be almost exactly the same as the size of the piston pin. To insert the piston pin, heat the piston by immersing in hot water. The piston should then slide easily into place.

In our experience it has not been found desirable to fit connecting rod bearings more loosely with aluminum pistons. Our experience has been that they should be fitted exactly the same as though cast iron pistons were used.—B. Dyer, Advertising Manager Aluminum Castings Co., Cleveland, Ohio.

Driveaways the Thing

Editor Motor World: I have read with a great deal of interest several of your articles in the Motor World of April 17.

I note that you are laying a great deal of stress on drive-aways.

Last month the writer conducted a party of ten drivers to the Dodge and Buick plants and brought back ten cars, and last night H. J. MacMillan, one of our organization, left for Flint to drive ten Buicks to Wilmington.

We have been getting a few cars shipped, but not nearly enough for our business, and we see a great demand ahead of us for cars in our immediate territory, as the majority of dealers in Wilmington do not see that if they do not go after cars, they will not have them when the demand comes.

Trucks were slow getting started down here, but we have sold about twenty-five Stewarts and Republics, and see a great future in this end of the automobile business.

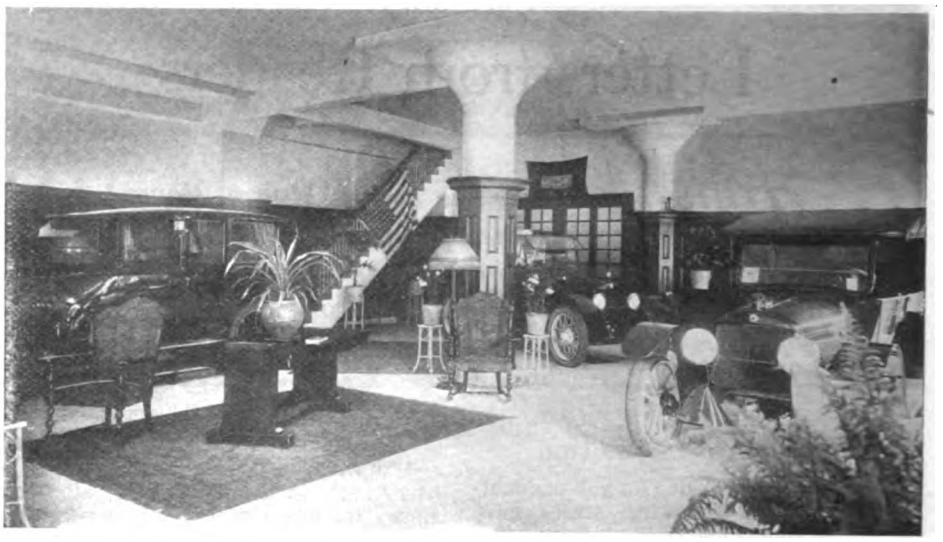
We have the most up-to-date garage in eastern North Carolina, and are entering into every line. Recently we organized a taxicab company, and in this way we are getting our money out of old cars. We have the Willard service station, and have just placed an order for an up-to-date vulcanizing plant. Later we intend to do painting and trimming.

Our garage covers 200,000 sq. ft. of floor space, and we have a front of about 200 ft.—W. D. MacMillan, Jr., Wilmington, N. C., per B. B. Cameron.

P. S.—We believe in Motor World.

Used Car Question

Editor Motor World: The charts and instructions on the used-car problem that you ran during the past summer were a veritable godsend to us, and we are wondering why you do not again run this information for the benefit of new subscribers as well as old, bringing it up-to-date and adding such new ideas as you may have gathered.



We would ask: How are you to go about figuring the present value of a particular model when the company manufacturing it have increased the price a considerable amount and still put out the same car? Should the present war tax on new models be taken into consideration? Should any extra allowance be made for the accessories the owner has put on the car, and if so, how are these to be figured in making the allowance?

We have the case of a roadster purchased last summer, and in excellent condition, which only has to be painted. List price of this car was $650 plus freight. Owner placed about $100 worth of desirable accessories, such as chains, extra tire and tube, tire cover, running-board mats, spot lamp, etc., on the car. All in fine condition. The present list of the identical car is $765, plus war tax and freight. What should we allow taking in consideration painting, which would cost us $40? We make no allowance for commissions to salesmen, and we can handle the car on re-sale for $20. The car when painted will be as good as new.

Another thing; why do you not put the weights of the various cars in your weekly specification charts? This would be of material assistance in many ways. —Cartier Auto Co., Magan E. Cartin, Ludington, Mich.

Answer—Your questions seem to come under about three heads. The first is, should you base your calculation on the present price or the old price? We believe the situation in the used-car field is that used-car values have advanced somewhat in proportion to the advance in new car prices, and that you, therefore, should figure on the present new car value, provided the car is practically the same.

For instance, if a car originally sold at $1,000 and would be worth 40 per cent less than the original price it would be $600. If this price had been advanced to $1,000 on the new car the value of the used car would still be the same percentage off, which would make the used car worth about $1,200.

The salesroom of the Standard dealer in Philadelphia is an excellent example of what can be done by way of beautifying a place of business

The second question seems to be whether you should figure on the value of the accessories that have been added to the car. This depends largely on what the accessories are.

In the case of a starter on a Ford car it would add considerably to the value, but if it is merely a collection of runningboard mats and such things as you have mentioned, we do not believe that the additional $100 value will affect the re-sale price of the used car by anything like that amount. It might affect the price to the extent of $20 or $25.

We believe you will find that, given two cars of the same kind and one with and the other without accessories, the one with the accessories will move a little quicker than the other, but it will not bring any considerable increase in price.

As to war tax and freight, it has generally been found difficult by expert used-car men to make the owner see anything except the advertised retail price of the car. The buyer cannot be made to understand that the freight and war tax are really a part of the price of the car when it was new. So all calculations have to be based upon the retail price, eliminating entirely freight, war tax and other such fees.

In the case of this particular car we believe you should go ahead and figure as in previous cases except that you use the present new car price of the car and do not pay particular attention to the accessories.

Shortcut Writers !

Please don't be uneasy if the Shortcut you contributed is not printed immediately. So many Motor World mechanics have sent Shortcuts in that we have a large supply on hand now. But don't let that stop your sending in your good ideas. Send them along.—EDITOR.

The RETAIL NEWS

PACIFIC COAST

The Bakerfield Tire & Rubber Co. has opened quarters at Chesterfield Avenue, Bakersfield, Cal.

The Exeter Tire & Vulcanizing Co., Exeter, Cal., will move soon to new quarters.

The Central California Electric Co., Exeter, Cal., has opened a branch service station with C. W. Brady in charge.

R. W. Biddlecom and O. W. Shirts have sold their vulcanizing plant in Fresno, and have opened the Biddlecom-Shirts Tire Works at 2057 Merced Street.

O. W. Jones has organized the Victor Tire Co., Fresno, and has opened tire salesrooms at 1216 Van Ness Avenue.

Fred Pierini and E. J. Gray have bought the Totem Sincere Service, Fresno, and have moved to 2061 Merced Street.

The Pacific Kissel Kar Branch, Fresno, has moved to a new building at 1361 Eye Street.

Deron Writer has opened a repairshop at 461 Eye Street, Fresno.

P. A. Hufford has bought the Eye Street Vulcanizing Works, Fresno.

The Giffen-Wolfe Agency, Ford dealer, Fresno, has added a tire department, and specializes in the Kelly-Springfield tire.

The Superior Motor Car Co., Saxon distributer of central California, has opened a branch at Fresno.

Walter W. Cameron, Hanford Cal., has moved his Hudson & Maxwell salesrooms to the Seventh Street Garage.

Hugo Buckner has purchased his partner's interest in the Hanford Garage, Hanford, Cal., and is now sole owner.

The Bush Garage, Hanford, Cal., has been purchased by the Bush Garage Co., Inc.

The N. F. Vulcanizing Works have moved to 306 West Seventh Street, Hanford, Cal.

Spear Brothers Auto Co., Chandler and Dodge Brothers dealers at Hanford, Cal., have leased a new building at Irwin and Eighth Streets.

Phil Shellaburger has sold his interest in the Hanford Garage, Hanford, Cal., and bought an electric service and battery station at 210 West Eighth Street.

R. D. Glick has opened a repair shop at the Tomer Garage, Hanford, Cal.

H. Carlson and R. Bromark have organized the Kinsburg Battery & Vulcanizing Works, Kingsburg, Cal., and will handle Willard storage batteries and Ajax tires.

The Kingsburg Motor Sales Co., Kingsburg, Cal., Ford dealer, has erected a new building on East Front Street.

E. G. Meyers has bought the interest of H. L. Burkhart in the Valley Garage, Lemoore, Cal.

E. O. Walsh has purchased the Lemoore Garage, Lemoore, Cal.

The Samson Tire & Rubber Co. has opened offices in the Van Nuys Building, Los Angeles.

The Mission Garage has bought the Porterville Battery Works, Porterville, Cal.

A. R. Parsons, Porterville, Cal., has opened an accessory and tire store.

Henry Whaley has opened a machine shop in Tulare, Cal.

William A. Baxley has purchased the Tulare Garage, Tulare, Cal.

Lee E. Bigler has opened the Automotive Store at Visalia, Cal.

R. Morey has opened Studebaker salesrooms in Visalia, Cal.

The Visalia Battery Co., Visalia, Cal., has moved to a new building on East Main Street.

The Willimott Motor Co. has opened a service station at Coats' Garage, Visalia, Cal.

The Auto Engine & Repair Co., Seattle, has been opened at 14th and Pike Streets, by William Berry, F. W. Rust and C. B. Campbell.

Griffith Motor Car Co., Tacoma, Dodge Brothers and Chalmers distributer, in Pierce County, has moved into a new 3-story building at 728 Broadway.

Young & Wycoff, Tacoma, Ford dealers, have sold their business to M. E. Young.

Modrall & Kirkman, Tacoma, will open an accessory store at 801 Pacific Avenue, and will distribute Pennsylvania tires.

Gates Tire Agency, Tacoma, has been purchased by F. A. Pierce.

The Wever Motor Car Co., Tacoma, has moved to larger quarters at 223 South K Street.

The Interior Rubber Co., Wenatchee, Wash., has opened new quarters in the Central Building.

Filbert Garage .....Filbert, W. Va.

MIDDLE WEST

C. E. Cox and E. K. Demlow, Champaign, Ill., have opened a tire shop.

The Electrical Testing Co. is erecting a building in Peoria, Ill., which will be used as an electrical service station.

The Pfanschmidt-Marshall Co. has opened a battery service station at Fifth and Vermont Streets, Quincy, Ill.

The Keyt-Herrington & Price Co., Rockford, Ill., has taken over the C. B. Williams Agency for Dodge Brothers and Cadillac cars.

The HI Pressure Tire Repair Co. has been opened as a repairshop and accessories store at 220 Sycamore Street, Evansville, Ind.

Kleidsen Bros., Cadillac, Mich., Buick agents, will open an automobile and machine repairshop in connection with their garage.

E. L. Conklin, Charlotte, Mich., has purchased a half interest in the Fritz Garage, and will have charge of the office and accessories business. His partner, Joseph A. Fritz, will devote his time to the mechanical department.

Dickinson & Quirk, Chasaning, Mich., have leased the Cantwell Garage and Machine Shop at Broad and Chapman Streets.

Philip H. Lichtenberg, Detroit, has opened a salesroom and service station for Columbia trucks and trailers at 14 Benton Street.

The Monroe Garage, Detroit, has taken over the 2-story building at 215 Monroe Avenue, formerly used for White motor truck service. The company will do general automobile painting, top repairing and fender and body repairing.

The Northern Auto Co., Petoskey, Mich., has moved to new quarters in the Van Pelt block. A stock of Ford parts and accessories will be carried and a service station for Ford cars will be maintained.

John J. Kirkpatrick and **John J. Kenny**, Cleveland, have formed the Motor Sales Co. and have leased salesrooms and a service station at 8920 Euclid Avenue. They will distribute Nash cars and trucks.

C. W. Thompson has opened salesrooms at 6504 Euclid Avenue, Cleveland, for the Acason truck.

The Standard Garage, Toledo, has moved into its new home at 316 Erie Street. A supply store will be conduced in connection with the business, carrying tires, accessories and repair parts.

The Doan Motor Car Co. has taken over the retail branch of the Studebaker Corp. in Toledo.

The Throne Auto Co., Toledo, has doubled its showroom and service space by adding the adjoining rooms at 1017 Jefferson Street. The company handles the Chevrolet.

Vincent Forester, Appleton, Wis., has opened a tire, supply and accessory store.

Coughlin & Lette have bought the Fluck Motor Co., Burlington, Wis., from Adolph Fluck.

The Metropolitan Auto Co., Dodgeville, Wis., has installed new machinery and equipment.

Edward Davies, Hartford, Wis., has opened a painting, trimming and upholstery shop for motor vehicles on Rural Street.

Jerome W. Hanks, LaCrosse, Wis., has sold an interest in his business to his brother, B. Guy Hanks. The firm will be styled J. W. Hanks Auto Co.

The Northern Auto Supply Co., Wausau, Wis., has leased a building at Sixth Street and South Central Avenue, Marshfield, Wis., as a branch, supply and accessory store.

SOUTHWEST

George Harvey, Laramie, Wyo., has bought the Anderson garage from Frank O. Anderson.

L. P. Jones, Ray, Ariz., has sold the Ray Motor Co. to H. O. Arnold of San Bernardino, Cal.

M. P. Redondo, Phoenix, Ariz., has moved to new quarters at Fourth Avenue and Jefferson Street.

The Add-A-Tread Tire Co., Fort Smith, Ark, has opened a new retreading plant at Little Rock, Ark., with a capacity for retreading 75 tires per day. W. W. Robb, president of the company, has moved from Fort Smith to Little Rock.

H. B. Hubbard, Beloit, Kan., has leased the Lanborn Garage.

Johnson Bros., Canton, Kan., have bought the Santa Fe Garage.

F. W. Brett, El Dorado, Kan., has bought the vulcanizing and tire shop of A. J. Henson.

Mack Robinson, Hiawatha, Kan., has bought the garage formerly owned by the late Clarence Carter.

Drunnert & McGee, Hutchinson, Kan., will soon move into their new building.

Shinkle's Garage, Lakin, Kan., is the successor to Thorpe's Garage.

Holmes & Carter, Le Roy, Kan., have bought the J. M. Holmes Garage.

Arthur Anderson and **Everett Evans**, Lincolnville, Kan., have purchased a garage in Herington.

Bryan Blake and **Lou Bardwell**, Manhattan, Kan., have purchased the Independent Garage.

Al Fishburn, Marion, Kan., has purchased the Winkley Garage.

Lester Oldham, Pleasanton, Kan., has bought the Pleasanton Garage from Webster Leighty.

O. N. Alley, Yates Center, Kan., has bought the Stoll Garage.

J. R. Yingst, Drexel, Mo., has bought the N. Madin Garage.

Blosser & Nye, Marshall, Mo., are successors to Wm. Blosser.

J. F. White, St. James, Mo., has bought the interest of his partner, J. F. White, in the Johnson & White Garage. In the future it will be styled White's Garage.

Earl Woodrell, West Plains, Mo., has purchased the interest of his partner, Norman Proffit in the O. K. Garage.

Luther G. Ware & Co., Duncan, Okla., have bought the Wasson Steam Vulcanizing Plant.

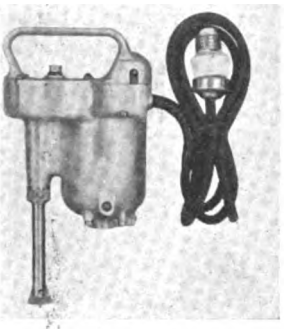
J. T. McCreart and **M. L. Munsey**, Purcell, Okla., have bought the Woolbright Garage.

John J. Giddings, Brenham, Tex., has opened a battery repairshop.

The Corsicana Auto Paint Co., Corsicana, Tex., has opened quarters in this city.

M. F. Crowell, Crowell, Tex., has bought the interest of Albert Schooley of the Schooley & Cross Auto Co. The new firm will operate under the style Federal Auto Supply Co.

The Firestone Tire Service Co., Dallas, has moved to new quarters, 2015 Main Street.



The Apperson Motor Sales Co., Dallas, has moved into its now quarters at Young and Jackson Streets.

The United States Tire Co., Dallas, has moved into a 4-story building at 1300 Jackson Street.

The Emil Grossman Mfg. Co. has opened a southwestern distributing agency at Dallas.

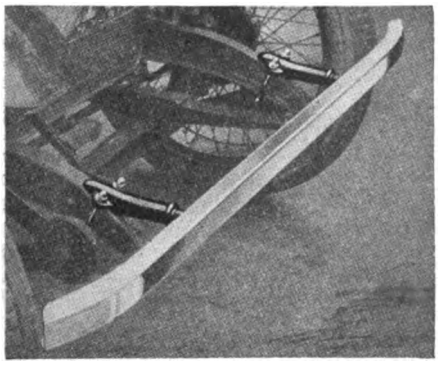
Accessories



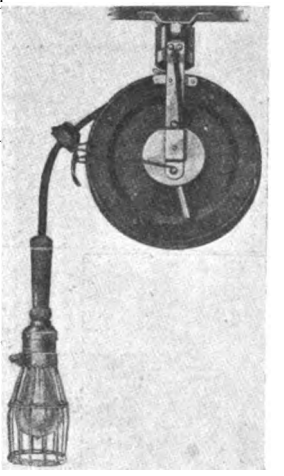
JACKSON ELECTRIC VALVE GRINDER

A motor-operated valve grinder made in three sizes, Nos. 1, 3 and 4. The No. 4 is totally inclosed, and may be operated from either direct or alternating current. Requires .1 hp., reduces time of grinding valves and is claimed to produce a more perfect seat than hand grinding. Price with attachments $40.—Kalamazoo Railway Supply Co., Kalamazoo, Mich.

A. C. CICQ AND A. C. TITAN PLUGS

Spark plugs with porcelain insulators made in all sizes and threads and in different body lengths to fit any engine. Prices 75 cents to $1.—Champion Ignition Co., Flint, Mich.

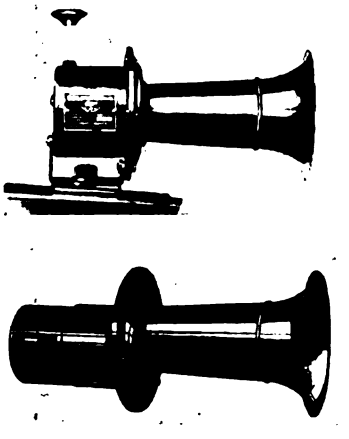
EVERGOOD BUMPERS



Bumpers made with channel, diamond or round bars of cold rolled steel and double spring bars. Made in a number of models to fit different cars, including the "Fitsall," to fit any car; bumpers for Cadillac, Chevrolet "490," Dodge, Ford, Franklin, Packard, Saxon, etc. Prices range from $7.50 to $14.50, depending on style of bar, finish and model. —Emil Grossman Mfg. Corp., Brooklyn, N. Y.

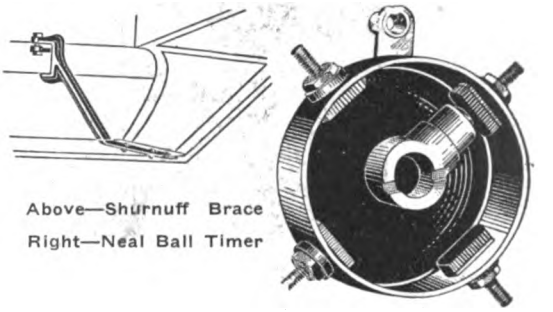
CARBONVOID CARBON REMOVER

A combination of volatile chemicals dissolved in the gasoline to soften and remove the carbon. Dissolved in the proportions of 5 teaspoonfuls to 25 gals. gasoline. Price $1 per can containing sufficient of the material to treat 200 gals. gasoline.—Lloyds of America, Bradley Beach, N. J.



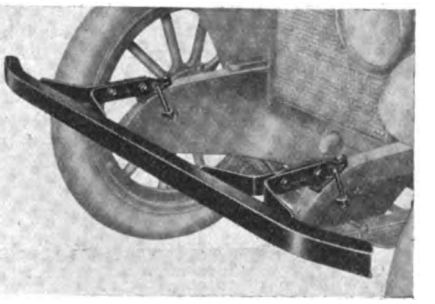
SHURNUFF RUNNINGBOARD BRACE

A runningboard and fender support for Fords, consisting of a metal arm clamped at one end to the chassis frame and bolted under the runningboard at the other, two special bolts taking the place of the regular bolts which fasten fender to runningboard. A lug fastens the arm to the frame. Price of pair of supports complete with lug, bolts, nuts and washers, in carton, $4.50.—Shurnuff Mfg. Co., St. Louis.



AUTOMATIC EXTENSION REEL

A reel for electric light cords in garages, 9 in. in diameter by 2 in. in width equipped with spring on same principle as shade roller and 25 ft. of lamp cord. Head is provided with swivel joint. Lamp can be extended to any distance when a slow backward motion engages with catch. A faster backward motion allows the wheel to wind up the cord. Price with socket handle and lamp cord $12.50.—Cincinnati Specialty Mfg. Co., Powers Street and Sylvan Avenue, Cincinnati.



Stewart Warning Signals

Above—Shurnuff Brace
Right—Neal Ball Timer

NEAL BALL TIMER

This timer has a ball mounted in the end of the rotating member and is of such a construction that the hardened steel ball rolls over the flat hardened tool steel contact only. The ball is retained in a tool steel hardened tip and is supported by a piano steel wire spring. It is claimed that this construction develops a positive action particularly adapted to a short stroke Ford engine.—Tisch Auto Supply Co., Grand Rapids, Mich.

STEWART AUTOGUARD

A rigid bar bumper with full elliptic springs in back. Channel bar high carbon steel, springs, high carbon spring steel. Universal bracket fits almost any make of car. Prices, black enamel finish $9, nickel plated channel bar $10, black enamel for Fords $7.50, nickel plated channel bar $8.50, for Chevrolet $7.50 in black enamel, $8.50 with nickel plated channel bars. Rear autoguard and tire carrier for Fords in black enamel finish $11.50, nickel plated channel bars $12.50. Western prices from 75 cents to $1 higher.—Stewart-Warner Speedometer Corp., 1826-52 Diversey Blvd., Chicago.

STEWART WARNING SIGNAL

A warning signal with cut gears, hardened steel shaft bearings, riveted parts and continuous lubrication. Has patented attaching and supporting bracket to hold signal rigid and pointed straight ahead. Made in two styles, the hand operated signals $3.50 and the motor driven signal $6.—Stewart-Warner Speedometer Corp., 1826-52 Diversey Blvd., Chicago.

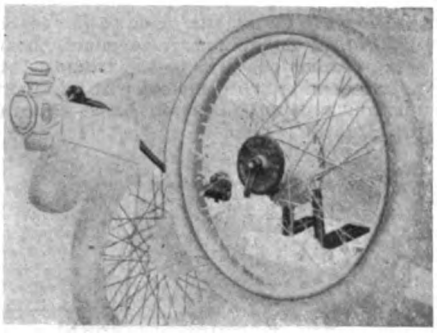
RADIATOR NEVERLEAK

A liquid radiator cement to be poured in the water of the cooling system, and which hardens on contact with the air. Small can for radiators of 4 gal. capacity and less, 50 cents. Large can for radiators of over 4 gal., 75 cents.—Buffalo Specialty Co., Buffalo.

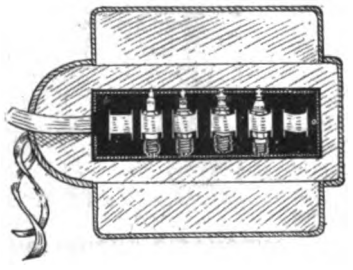
Digitized by Google

REFRIGO CHEST

A sanitary, dust-proof and heat resisting food chest, metal lined and white enamelled inside, with removable galvanized wire shelving. Door is paneled and closes like a watch case against a felt strip making it air and dust tight. Insulated from heat with ¼ in material. Weight 28 lb., size 29 in. high, 17 in. wide, 8 in. deep. Price $13.50.—Refrigo Auto Chest Co., Iron River, Mich.



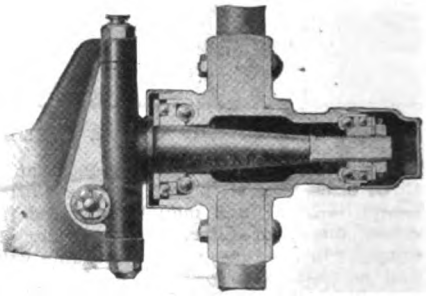
FOSTER GARAGE CREEPER



A garage creeper on which the body of the repairman is supported comfortably on galvanized link-fabric springs. His head and neck rest on a durably covered pillow. Creeper is mounted on ball bearings and can be anchored in position by a small device on the side of the creeper. Made of metal throughout, finished in black japan; price $3.—Foster Brothers Mfg. Co., Utica, N. Y.

NEW ERA WHEEL CARRIER

This carrier is designed to fill the demand for demountable and wire wheel holders on Ford cars. The carrier will take practically all the important makes of demountable and wire wheels adapted to Ford cars, and is made of steel throughout. Angle wires are used where the stresses are greatest, making the carrier sufficiently strong to carry several times the required weight. The carrier is attached to the rear spring clips, there being but four nuts to tighten. A lamp extension is designed to bring the lamp out over the rear fender and is attached to lamp connections now on the car. A hole in the hub bolt is provided for locking the wheel to the carrier. The price is $50, with 10 per cent added west of Denver.—New Era Spring & Specialty Co., Grand Rapids, Mich.



SCHEBLER CARBURETER FOR FORDS

A plain tube carbureter with no air valve and no moving parts. Pitot tube or improved type of gasoline nozzle automatically furnishes a rich mixture for acceleration and thins the mixture when the normal speed has been reached. Double choker is provided for easy starting. Price $17.—Wheeler-Schebler Carbureter Co., Indianapolis.

ROLL-RITE BALL BEARINGS

Thrust type ball bearings to be inserted in the front wheels of Fords and Chevrolet "490" cars in addition to the bearings already in the wheels. These bearings are intended to take the side thrust and so retard wear on the radial bearings. Price $10 per set for the two front wheels.—Fishbourne & Lamb, Charleston, S. C.

RIE NIE ALL-IN-ONE DRESSING

An all around dressing for finishing Pantasote, leather, mohair tops, cushions, slip covers, lamps, runningboards, fenders, radiators, trunks tire covers, etc. Prices, gloss or dull are, half-pints 40 cents, pints 65 cents, quarts $1.10, half-gallons $2.10, gallons $4.—Durkee-Atwood Co., Minneapolis.

POWERS SPARK PLUG CASE

A spark plug case for six plugs made of water-proof leatherette with binding web all around and adjustable web strap for holding any size plugs. Size open 15 by 18 in. Price 75 cents.—Powers Mfg. Co., Waterloo, Iowa.

If I Only——"

D. L. Denise, Brisco retailer in Kansas City, has a story he has told for seven years and it is still effective. It is about an old retired farmer who after saving some $60,000 through the hard work of himself and wife moved to town to enjoy it. They bought a home and settled down to rest. Three weeks later the wife died and this farmer, more than 60 years old, absolutely did not know what to do with himself or how to enjoy his money. He had come to Denise's house to try to find some consolation, to get some suggestion; and he told Denise that if he had it to do over again he would get a little more pleasure out of life as he went along. The story was especially useful in St. Joseph, Mo., where most of the community knew the old farmer; but it was made effective for every use because it was within the experience of the relator. He could tell it with conviction and feeling and every time it was told it had the same good effect.

3 IDEAS

Cutting Short the Interview

One Kansas City salesman says that he has saved fully 30 per cent of his time—consequent increase in net results—while working on the floor, by developing a method of cutting short interviews with visitors. When the visitor is not a prospect it is comparatively simple to bring the conversation to an end, while walking to the door, referring in the most casual manner to duties pending. Such visitors must be got rid of and without giving offense, and it is worth some thought and practice to develop the method.

The time-conserving salesman can dismiss the salesroom prospect by discovering a point concerning which he knows he can get further definite information and assuring the prospect eagerly that he will collect this data and call him up, meanwhile leading the visitor to the door.

Keep Figures on Owners

I have found it profitable to keep an accurate set of books that will enable me to tell on a few moment's notice how much any of my car owners have spent for repairs. I have a system of this kind which is kept complete daily, and if a man bought a car of me fifteen years ago, I can tell him in a very short time just what he has spent on that car.

Car owners frequently enter the salesroom saying that they cannot afford to keep the car because of expensive upkeep. They sometimes make this statement when they are being urged to buy a new car. When a man makes this statement to me, I immediately look up his repair record and show him what he has spent for repairs.

In nine cases out of ten the car owner will be surprised to see how little he has actually spent for repairs when he is brought face to face with the actual figures.—A. W. Buck, of the Brown-Rowan & Buck Co., Indianapolis.

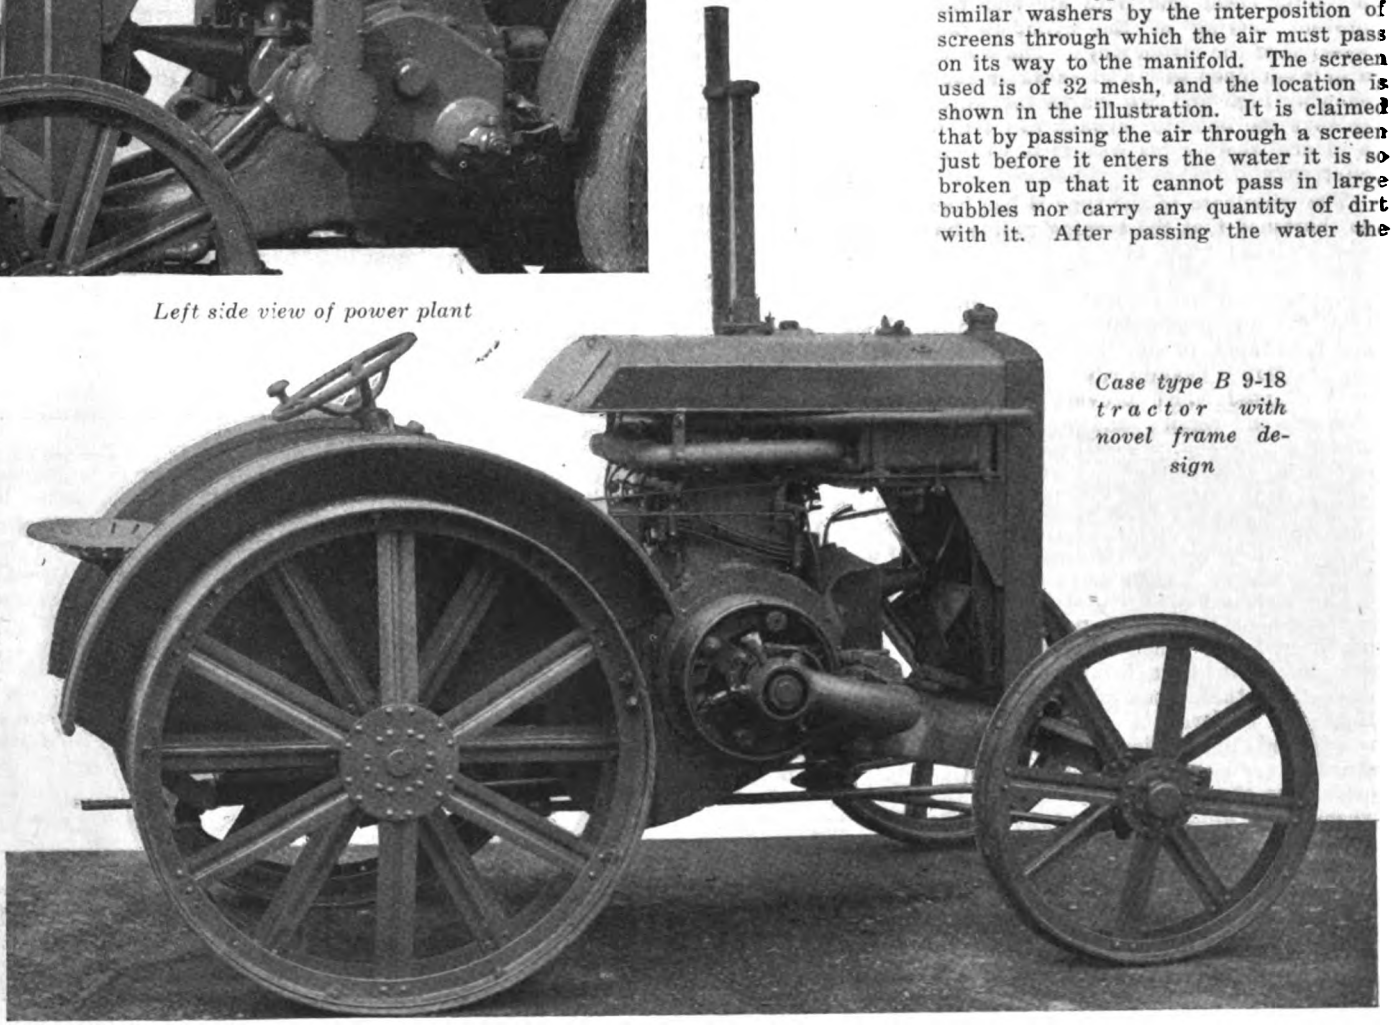
New Case 9-18 Tractor of Simpler Design

One-Piece Main Frame, Including Rear Axle, Transmission and Crankshaft Housing, Maintains Bearing Alignment and Reduces Weight — Shorter Wheelbase Gives Reduced Turning Radius

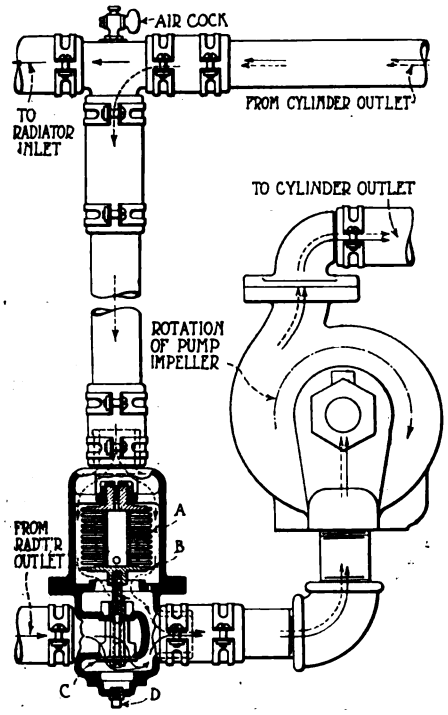
DURING the last 2 years the J. I. Case T. M. Co., Racine, Wis., has been quietly developing a new kerosene burning 2-plow tractor. This tractor, on which quantity production is now under way and on which delivery was begun last week, is not an addition to the Case line, but will replace the already well established type A 9-18. The new machine will be known as the Case type B 9-18 and will sell for $1,225, the same as the old machine, but it shows a distinct advance in design and construction over the type A. The new model has undergone actual field tests under all sorts of soil conditions and in all climates for the last 2 years.

Some of the new features which mark advance in tractor construction are the Sylphon thermostat, the improved air washer, the new frame construction, giving a shorter wheelbase and greater rigidity, and the reduced weight with increased drawbar pull.

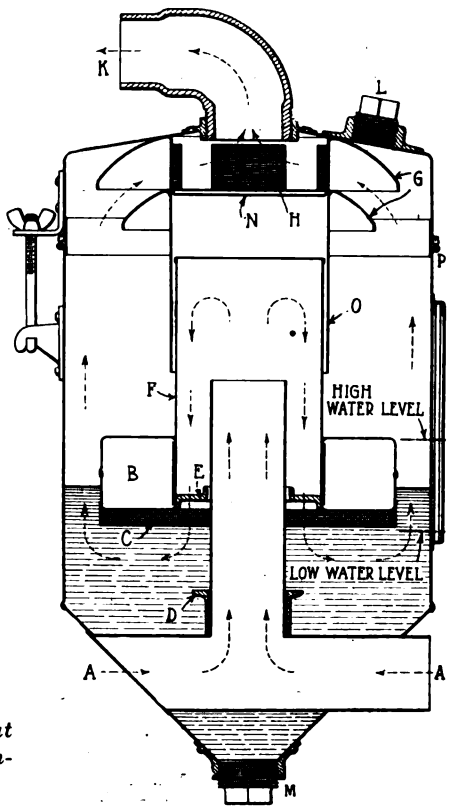


A new feature, and one possessed by no other tractor on the market, is the Sylphon thermostat, which controls the circulation of the cooling system. The manner of installation is shown in the illustration of the engine and radiator. Through the automatic operation of the Sylphon thermostat the engine cylinder is kept hot, thereby improving combustion and preventing raw kerosene from passing the pistons and diluting the oil in the crankcase. The illustration shows the internal construction and manner of operation of the thermostat. The radiator illustrated is not the type which will be used regularly. The standard radiator has a new reservoir, with cast top, bottom and sides, and can be disassembled easily and readily at any time by taking out a few bolts.

Left side view of power plant



Improved Type of Air Washer



On the opposite, or right, side of the tractor is installed an improved type of air washer which is of the company's own design. This is of the water chamber and float type, but differs from other similar washers by the interposition of screens through which the air must pass on its way to the manifold. The screen used is of 32 mesh, and the location is shown in the illustration. It is claimed that by passing the air through a screen just before it enters the water it is so broken up that it cannot pass in large bubbles nor carry any quantity of dirt with it. After passing the water the

Case type B 9-18 tractor with novel frame design

Digitized by Google

Above—Assembly of Sylphon thermostat in cooling circuit. On right—Case improved air washer

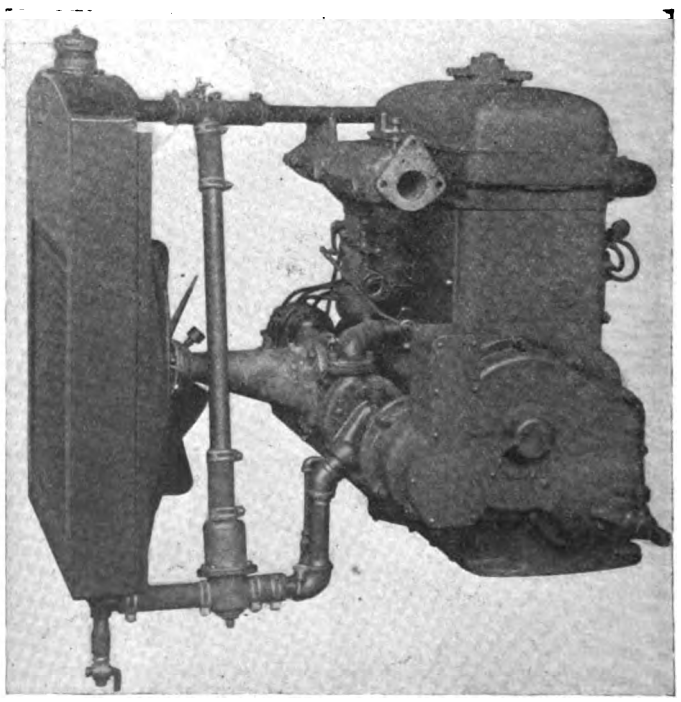
air must penetrate another screen before it enters the manifold. This is to insure perfectly clean and pure air and thus prevent scoring of the cylinders and wearing of the piston rings. The washer also is equipped with a glass water gage, showing high and low marks for water, so that the operator always can tell at a glance whether his washer is working effectively.

The wheelbase of the type B has been so shortened that the turning radius has been reduced from 14½ to 11 ft. The construction of the main frame has been simplified and the engine is so mounted that factory production is accelerated and facilitated. In simplifying the frame construction a heavily ribbed design has been adopted which provides for great strength and rigidity and which reduces vibration. A dust-proof housing for the rear axle, a dust-proof container for the bull pinion shaft and the transmission case and crankcase are all cast integral with the main frame to insure perfect lubrication at all times.

The wheels, both drive and front, are a concession to farmer preference. It has been found difficult at times in the past to convince the farmer of the real strength of the suspended type of wheel. He much preferred to have something which had the obvious appearance of strength and rigidity. To meet this preference the Case people adopted the wheel which appears on the type B. To give both the appearance and the actuality of strength the drive wheels have angle iron felloes riveted to the 9-in. tires. Ribbed flat steel spokes are double riveted to the felloe at one end and at the other are riveted four times to the hub flange. The front wheels are of similar construction.

Weight Reduced

The weight of the type B tractor has been reduced from 3750 lb. to 3310 lb., and is distributed 68 per cent on the drive wheels and 32 per cent on the front wheels. The engine speed has been increased to a normal of 1050 r.p.m. The new machine is conservatively rated at 9 hp. drawbar and 18 hp. belt, the same as was type A. However, the type B will develop 12 hp. on the drawbar, thus providing a reserve power of 33 1/3 per cent for emergency pulls. This reserve enables the type B to pull two 14-in. bottoms set to any desired depth and through any kind of soil and up any degree of grade where a team can pull a single 14-in. bottom. It is figured that with so large a margin of reserve power the tractor is not likely to be overloaded often.



The new model is equipped with a Case four-cylinder, vertical, block engine, 3⅞ by 5 in., placed transversely on the main frame. The engine has a removable head and valves in the head, the latter being 1½ in. in diameter. Fuel is fed by gravity to a Kingston 1⅛-in. carbureter and passes through a heated manifold to the cylinders. The engine runs at a normal speed of 1050 r.p.m., the speed being controlled by a flyball governor. The belt pulley has a diameter of 14¼ in. and face of 5¼ in., and is fitted with a clutch and a brake. Ignition is by a dust-proof Kingston high-tension magneto with impulse starting coupling. The cooling system, which has a capacity of 9 gal., comprises a truck-type radiator with fan and a centrifugal pump, as well as the Sylphon thermostat. Lubrication is by the circulating splash system.

Two forward speeds and one reverse are afforded by the transmission, which has steel gears with machine-cut hardened teeth, the gears being fully inclosed and running in oil. The plowing speed is 2½ m.p.h. and the road speed 3½. Final drive is through a drop-forged and hardened spur pinion meshing with a steel master gear with 2 15/16-in. face, with its teeth cut and hardened. The gear is mounted on a drop-forged bull ring, securely fastened to a spider carrying the four steel differential pinions.

Hyatt roller bearings are fitted on the rear axle, the transmission shafts and the ball pinion shaft. There are removable bushings in the dust-proof hubs of the front wheels, and these are provided with grease cups. Driving wheels are 42-in. in diameter with 9-in. face, and 6 in. extension rims can be furnished on special order at an extra price. The front wheels are 30 in. in diameter and have a 6-in. face.

Los Angeles Republic Branch in Operation

LOS ANGELES, April 29—The new Los Angeles assembling plant of the Republic Motor Truck Co., Alma, Mich., is now in full operation, and before many months the company expects to be assembling a minimum of 250 trucks per month.

The Champion Ignition Co., Flint, has gone over the top for the Liberty Loan. Every one of its employes has subscribed. This is a picture of the Champion float in a parade in Flint recently

N. A. D. A. Supporting Anti-Theft Measure

Offers Help to Association of Secretaries of State in Pushing New Law

ST. LOUIS, April 28—The National Automobile Dealers' Association has offered its assistance to the American Society of Secretaries of State in perfecting a proposed law to stop stealing of motor cars. After the attention of the local "anti-theft committee" was called to the effort of the Secretaries' Association last week, copies of the proposed law were obtained from J. T. Botkin, Secretary of State for Kansas and chairman of the committee, and it will be carefully examined to see if it can be strengthened. The Secretaries' Association proposes to introduce this law in every State at the next session of the Assembly.

The law proposes to make transfer of motor cars exactly like that of land: That all such transfers shall be completed by recording with the proper authority to transfer and identifying the machine by engine numbers and other marks. All machines not so transferred shall be considered stolen property. Machines without engine numbers shall have them supplied by the State License Bureau and they shall be cut into the metal.

Welch Enters Kansas City Trade

KANSAS CITY, April 29—C. J. Welch has organized the Western Trailer Co., bought the plant of H. K. Bascom, body builder, and a garage adjoining, at 1508-10 Holmes Street, and has begun business as motor truck and commercial body builder and motor transportation engineer. Welch is president and general manager of the company. H. P. Wells, formerly chief engineer of the Columbian Steel Tank Co., Kansas City, has been employed as efficiency engineer on construction, and A. S. Page, for 14 years chief engineer of the American Car & Foundry Co., is consulting engineer on trailers and bodies. The company is installing new equipment and rebuilding the two-story structure, preparing for painting and finishing.

St. Louis Wants Sunday Closing

ST. LOUIS, April 28—In keeping with the war requirements the Automobile Manufacturers' and Dealers' Association has appointed H. L. Schnure and Phil H. Brockman as a committee to investigate the plan of having only four service stations open on Sunday and at night in the city. The plan is for all dealer service stations to close at night and on Sunday. The stations selected will be well established service stations.

Vesper-Buick 100 Per Cent Subscribed

ST. LOUIS, April 28—The Vesper-Buick Auto Co. was reported Friday as 100 per cent over the top for Liberty bonds, every person on the payroll being on the bond sale list.

When the bond sale campaign was organized for this Federal Reserve District there was a feeling that a mistake had been made in not organizing it by trades, so that such rivalry would be created. But when the district was the first to "go over the top" all criticism was disarmed. Motor car men are working hard in general committees and get credit along with every other industry.

Oppose Owner Licensing Bill

ST. LOUIS, April 28—An ordinance pending before the Board of Aldermen which would require that each person who drives a motor vehicle of any kind obtain a license from the city each 6 months will be opposed by all automobile owners and dealers associations. Committees already have been appointed by such organizations. A fee of $1 is required to obtain the license. The bill had advanced to second reading before the various clubs learned of it. A hearing has been granted, but the time is not announced.

Soldiers to Get Literature

ST. LOUIS, April 28—President Vesper of the National Automobile Dealers' Association has appointed W. J. Haughey of Denver to superintend the distribution of automobile literature in army camps and cantonments. The Denver association reported to the National that recently the attention of the association was called to the fact that while motorcycle and bicycle literature was at the camps in abundance, there was very little about motor cars. An investigation revealed the truth of this statement, also that about 10 per cent of the men in the army were keenly interested in motor cars, from one angle or another.

A revised set of data sheets showing the various sizes of ball retainers for cup and cone, thrust and magneto type bearings manufactured by the Bearings Co. of America, Lancaster, Penn., has been published. S. A. E. standard inch sizes of thrust ball bearings are also tabulated.

No, this is not a regular tank, though it looks a lot like one. It is a camouflaged Case tractor which was fixed up this way for a Liberty Loan parade at Dallas, Texas. Needless to add, it attracted a lot of attention, and we hope it helped sell a lot of bonds

60,000 Californians See Tractor Exhibit

Demonstration, Staged in Davis, Shows 30 Types in Operation—Outlook Good

DAVIS, CAL., April 25—The first big tractor exhibition ever held in the West came to a successful end at the University Farm here Sunday afternoon. The show, which was originally scheduled for three days, was extended to five days, and over 60,000 farmers, ranchers, vineyardists and other food producers saw the thirty-odd types that were demonstrated.

The University Farm officials in arranging for the exhibition provided in their rules that an exhibitor be allowed to do no stunts. They were allowed only to plow up a certain acreage to a depth of 9 in. This was strictly adhered to and the ground plowed by the tractors will now be planted with experimental seed by the students at the university.

There were no competitive tests between the different types of tractors. The light weight machines of the track-laying design seem to attract more attention than the wheel type, although the latter machines came in for quite a lot of attention.

No prizes were awarded but the demonstrations were regarded so important by the state authorities that a corps of experts from the University of California under the direction of J. B. Davidson, professor of agriculture, conducted a thorough investigation, and gathered data that will be issued to the public through the State Farm in the near future.

That the outlook for the tractor industry is bright on the coast is reflected in the action of one southern California dealer in tractors, who now maintains five automobiles to convey his mechanics to serve tractor owners out in the fields.

In addition to the tractor exhibit one of the features of the Davis show was the display of motor trucks, and while interest in the tractor demonstrations was the more pronounced the power wagon exhibition drew a good crowd, and it was generally agreed from the comments dropped that the motor truck would surely follow the tractor on the farm.

$100,000 For Massachusetts Roads

BOSTON, April 27—The Committee on Roads and Bridges has reported a bill to authorize the Massachusetts Highway Commission to spend $100,000 next winter keeping the highways open for motor truck traffic. It was not done this year because the money was not available, the fees from automobiles being specifically intended by law for road maintenance. Therefore the work was neglected this year. So the commission explained this to the legislative committee and that body presented the bill. The $100,000 will be taken out of the regular registration fees and fines, which now total more than $2,000,000 each year. This will be a good start toward giving the Return Loads Bureau plans in New England a further boost as Connecticut now keeps the roads clear and this will insure complete highways without snow from New York to Boston and from Albany to Boston, as well as to Providence and Portland in other directions and other states may do the same thing.

French Race Drivers Will Not Compete

PARIS, FRANCE, April 2—Reports printed in American newspapers that Arthur Duray, Jean Chassagne, René Thomas, Albert Guyot and others will compete in speedway races are misleading. All these men are either in military service or under military law and cannot leave France. Should one of these racing drivers wish to compete in America, the Automobile Club of France would disqualify him.

Rumors that Duray, Chassagne, Guyot and Thomas have signed contracts to race in America with the Wellman-Pickens group this year are untrue. Not one of these drivers has ever received any communication or offer from the Wellman-Pickens organization.

There is also a scarcity of racing cars in Europe. The only racing Peugeot in France is Duray's Baby Peugeot of 1914, which has a cracked cylinder that cannot be replaced. There are two Fiat and two Sunbeam cars in Europe at present, but neither the Fiat nor the Sunbeam company intends to send them to America. Jack Scales, who had arranged to bring one of the Fiat cars to America last year, is now with the American Army as an expert on Fiat cars used by the American Expeditionary Forces. His team-mate, Fagnano, is under military authority at the Turin factory.

Iowa and Ohio Get Fordson Tractors

DEARBORN, MICH., April 29—Iowa and Ohio have each purchased 1000 tractors from Henry Ford & Son on the same basis as Michigan had bought its order—$750, f.o.b. Dearborn. There are now five states that have bought tractors from this company. Six thousand have been sent to Great Britain. The Canadian order of 1000 tractors has not yet been filled. The first shipments to Ohio and Iowa have left the plant a few days ago and it is expected both will be completed almost simultaneously within 30 or 40 days.

Fordson tractors in Ohio will not be handled by agents, but only by the Bryant Tractor Co., Columbus, to which application must be made.

Interstate To Market Only Trucks

MUNCIE, IND., April 26—The Interstate Motor Co. will place on the market trucks of 1 and 1½-ton capacity instead of passenger cars. The discontinuance in passenger car production is for the duration of the war only. The Interstate plant is now idle, but will soon be in operation again.

Automotive Apparatus Exhibit For Engineers

All Types Designed for War Work on View at Dayton Meeting of S. A. E.

DAYTON, OHIO, April 29—Complete plans have been perfected for the 2-day summer meeting of the S. A. E. to be held in this city Monday and Tuesday, June 17 and 18. Half of the meeting will consist of demonstrations of different types of automotive apparatus designed especially for war use. The other half of the program will be given over to popular papers dealing with new designs of automotive apparatus for the war.

There will not be the usual program of heavy technical articles, as it has been deemed more desirable to make the session of broad educational value and give the members an opportunity of examining airplane engines, different models of airplanes, etc.

The meeting will be held in Triangle Park, which consists of more than 400 acres in the outskirts of Dayton, and is in the immediate vicinity of McCook Field, the Government experimental station for aviation design, in charge of Major Howard Marmon. The society will have the exclusive use of Triangle Park for the two days, and sessions will be held in the large pavilion, which has a capacity for seating several thousand persons.

The demonstrations will include the various aviation engines, among which are all of the German types, such as Mercedes and Benz. The exhibit will also include French aviation engines, with Renault, Gnome, Garrone and Hispano-Suiza made by different countries. There will be such British engines as Rolls-Royce, Sunbeam and perhaps others. There will also be an opportunity of examining the German planes which have been captured, as well as French and English planes.

Among other exhibits of special interest will be demonstrations of machines for manufacturing airplane propellers in operation. There will be demonstrations, with explanation, of synchronizing machine guns which fire between the blades of propellers on fighting planes. There will be demonstrations of formation flying over some of the big Dayton fields, as many aviators will be there at that time.

The program includes demonstrations by many other war departments, which will be announced later, as some of the details in connection with these have not been completed.

On Monday evening, June 17, will be held the annual summer dinner at the pavilion in Triangle Park. There will be seating accommodations for approximately 1000 or more, if desired, at this dinner. Tickets at $3 each are now on sale at the New York headquarters of the S. A. E.

Hotel accommodations are being handled directly by the different hotels, of

Digitized by Google

which Dayton has half a dozen. There is a special Dayton S. A. E. committee, which is giving its complete attention to this work, and between the hotels and one or two other places it is hoped to accommodate over 1000 members and guests. The Dayton committee is being handled by F. H. Hoover, 137 North Ludlow Street, who is acting as secretary.

Members should write direct to the Dayton hotels for reservations. This list of hotels includes Miami, Holden, Algonquin and Beckel. In addition to these it is planned to accommodate many members at the Country Club and also at St. Mary's College.

From the starting of the daily sessions at 10 o'clock until the completion at night the entire program will be carried on at Triangle Park, where luncheons will be served each day. There are ample garaging facilities at the park.

Suggest Special Engine Design for Burning Kerosene

CHICAGO, April 27—Need of special engine design to take care of the peculiar problems involved in the use of kerosene as a fuel for tractors and the possibility of a return to make and break ignition for slow-speed tractor engines were the main features brought out in the technical session of the Mid-West section, S.A.E., at the Chicago Automobile Club, last night. "Magneto ignition for Farm Tractors" was the title of the paper presented by J. G. Zimmerman, service engineer, Sumter Electrical Co. This was illustrated by special slides showing oscillographs of the building up of current voltage and power in spark gaps of different lengths and sparks produced by different ignition devices. H. T. Sward, sales engineer, Fairbanks-Morse & Co., presented a paper on "The Oil-Burning Tractor Engine," in which he described in particular the engine used in the Fair-Mor tractor. Officers were elected as follows: Chairman, G. W. Smith, assistant chief engineer, Nash Motors Co., Kenosha, Wis.; treasurer, Lon R. Smith, sales engineer, Buda Co., Harvey, Ill.; secretary, Darwin S. Hatch, editor *Motor Age*, Chicago. C. S. Whitney, past chairman, automatically becomes vice-chairman, and George L. Lavery, as past-treasurer, is the fifth member of the Executive Board.

Car Stolen by Ruse

POUGHKEEPSIE, N. Y., April 26—A man walked into the Van Benschoten Garage here yesterday morning and said he had been sent to overhaul one of the cars. After making a few minor repairs he took the car out, saying he would drive it around the block and return.

He failed to return.

The theft of the car was not noticed until its owner came to the garage to take it out.

John Van Benschoten, owner of the garage from which the car was stolen, has sent details of this case to Motor World as a warning to other garage owners, and suggests that a duplicate receipt be presented before any car may be taken out.

John D. Ryan Is Made Airplane Board Head

Coffin to Resign and Board to Be Reorganized—Divorced From Signal Corps

WASHINGTON, April 29—Howard E. Coffin will resign as chairman of the Aircraft Production Board, and a complete reorganization of airplane activities will take place.

John D. Ryan, president of the Anaconda Copper Co., and who has been prominent in Red Cross activities in France, has been slated as administrator of aircraft activities. He has agreed to accept the position. Coffin was offered a position in connection with the revamped aircraft activities, but has refused to accept it.

Under the reorganization, aircraft activities are being entirely separated from the Signal Corps. Brig.-Gen. Kenley is returning from Gen. Pershing's organization in France to assume complete charge of aviation training in this country.

Ryan is closely associated with Edward R. Stettinius, Second Assistant Secretary of War, and also with Bernard M. Baruch, chairman of the War Industries Board. While not actively connected in business organization with the Morgan interests, he has always been very friendly with that group of financiers.

President Wilson has not yet given out the Marshall airplane report, which has been expected for several weeks, and which may not be given out until the complete airplane reorganization has been effected. It is known that the President has gone through the Marshall report very carefully with Stettinius, with whom he has discussed the complete plans for the reorganization of the administration.

Major-General George O. Squier, who has been chief signal officer of the army, and head of the Signal Corps, which has controlled aviation, is displaced as head of the aviation section by General Kenley. In future General Squier will confine his activities to what is known as the administration of signals; in other words, this representing the separation of the aircraft activities from the Signal Corps.

William C. Potter, who has been active with the Aircraft Production Board, and who is now head of the equipment division, will continue to have charge of this aspect of aviation work.

While the special aviation report of H. Snowden Marshall, who visited the aviation factories, at the request of President Wilson, has not been made public, it is understood that the President has followed the recommendations of the board in separating aircraft production from the Signal Corps, and in also separating aircraft production from aircraft operation. It was hoped that the entire aircraft administration would have been placed under one man, but, according to the announcement, this has not been done, as production will be under Ryan, and training, etc., under General Kenley.

Tires Coming From Texas

DALLAS, TEXAS, April 29—The Universal Tire and Rubber Association has been organized at Dallas, Texas. The officers are: S. Reele, chairman and organizer, Dallas; O. A. Ryfle, director of sales, Dallas; F. A. Doran, director of merchandising, Dallas; Francis X. Schuler, tire construction expert, Dallas. Members of the advisory board are: Col. S. E. Moss, Dallas; W. C. Forbes, Fort Worth; R. C. Darrah, Fort Worth; J. R. McEntire, McKinney; J. W. Smart, Hawkins, William T. Wood, Kemp; F. M. Compton, Waco; F. J. Woerner, Dallas, and T. J. Pinson, Forney. The organizers plan to establish at Dallas the largest tire manufacturing concern in the Southwest. It has not been incorporated. Tires with a guarantee of 4000 miles are to be made.

$1,000,000 for New York Army Truck Road

NEW YORK, April 29—One million dollars has been provided for the maintenance of the main army motor truck road between Buffalo and New York in a bill presented in the New York Legislature by Senator Sage, and which has passed both houses and now awaits the signature of Governor Whitman. Opinion in Albany is that the bill will become a law before the end of the 30-day period which the Governor is allowed for all measures not signed before the closing of the Legislature, which occurred on Saturday, April 13. With this appropriation New York will spend more money for road maintenance in 1918 than in 1917, even although less money has been appropriated for general road maintenance this year. In 1917 $4,500,000 was appropriated for general maintenance while for this year the appropriation is only $3,750,000. To this latter sum must be added the $1,000,000 which will undoubtedly be appropriated for the military highway, thus making a total appropriation of $4,750,000 or $250,000 more than the total of 1917.

Auction Hal Remains

CLEVELAND, April 27—The remaining property of the defunct Hal Motor Car Co. was auctioned in Cleveland yesterday. One item of stock was ten finished cars, and there was also considerable in the way of accessories, machinery and furniture. The inventory value of the property was placed at approximately $200,000.

Help Short in Hartford

HARTFORD, April 29—Scarcity of labor has hit hard in this section. Service stations are advertising daily for expert mechanics, but they do not seem to be available. Even the factories are having a hard time of it because industries directly connected with the war offer far more lucrative employment.

News of the Liberty Loan

Milwaukee After $20,000,000

Milwaukee, April 29—A total subscription of not less than $20,000,000 to the Third Liberty Loan is being sought by the Milwaukee city committee, which already has exceeded its minimum quota of $14,600,000 by $4,000,000. The motor car, truck and parts group also has exceeded the informal minimum fixed for itself. One of the largest subscribers in addition to those previously reported is the Wisconsin Motor Mfg. Co., with a purchase of $80,000. Others include: Jonas Automobile Co., $10,000; Davis Mfg. Co., $15,000; Julius Andrae & Sons Co., $12,500; Goodyear Rubber Co., $15,000. Rudolph Hokanson, general manager of the Nash Sales Co., Milwaukee, made a personal subscription of $10,000.

Greensboro Is Oversubscribed

GREENSBORO, N. C., April 29—Greensboro has already oversubscribed its quota to the third Liberty Loan, and a strong drive is now being made in Guilford County to put the whole community over the top and in the class of the favored localities that are receiving honor flags in recognition of the merit of their achievement. If the people of the county measure up to their requirements in the same proportion as have the people of the city there is no doubt of the result.

The drive in the county reached its climax last week, when a committee of canvassers, accompanied by a corps of speakers, held mass meetings at practically every school house in the county, when addresses on the subject of bonds were delivered and the people offered the opportunity to loan their savings to the government. Lists were made of the householders in each community who were not present at their meetings, and members of the committee will make a personal canvass of these later.

Philadelphia Holds Parade

PHILADELPHIA, April 28—In Saturday's "March of Democracy" to boost the Third Liberty Loan, "Automobile Row" was well represented in the arrangements for the pageant. Thirty-five thousand uniformed participants paraded. E. J. Berlet, president of the newly-formed Stability Motors Co., distributer for Atlas, Atterbury and Old Reliable trucks, United Haulage tractors and trailers, was director general and grand marshal; Lee J. Eastman, of the Packard Motor Car Co., was chairman of the committee on decorations, while the vice-chairmen were John D. Howley, of the White Motor Truck Co., and A. E. Maltby, of the Winton Motor Car Co., and president of the Philadelphia Automobile Trade Association. Associated on this committee were: C. R. Cunliffe, of the Cadillac Sales Co.; E. H. Fitch, of the Goodrich Tire Co.; J. E. Gomery, of the Gomery, Schwartz Co.; W. S. Kip, of the Buick Motor Car Co.; A. S. LaRoche, of the Velie Motor Co.; W. Ross Walton, of the Firestone Co., and Edward Wilkie, of the Buick Used Car Co.

Cleveland War Industries Commission Formed

CLEVELAND, April 29—Cleveland industries have been urged to join the Cleveland War Industries Commission, formed by local manufacturers to organize all the industries of the city into one unit for the purpose of more efficiently helping the Government. To present intelligently to government officials the things Cleveland producers sell and to keep Cleveland informed daily of what the Government wishes to buy, a Cleveland bureau has been established at Washington with a sales force and an engineering force. This bureau, however, will not negotiate contracts. The purpose of the commission is to keep within immediate call of the Government, informing it with details of what Cleveland can make, large or small, and advising it of the facilities it has for quick delivery in the particular line.

New Receiver for Pope

HARTFORD, April 29—Arthur L. Shipman was this morning appointed receiver of the Pope Mfg. Co. to succeed the late Colonel George Pope, who died last week. The bond was set at $10,000. The new receiver is a member of the law firm which was counsel for the late Colonel Pope as receiver of the Pope Co. William F. Henney who represented various creditors, said the appointment of Mr. Shipman was in accordance with the wishes of all parties interested.

Drive-Aways Slackening

DETROIT, April 29—Manufacturers are still sending out cars overland to nearby points, but drive-aways to more distant sections have been materially reduced owing to the temporary relief of the freight congestion on outgoing shipments. The Paige-Detroit Motor Car Co. has reduced its drive-aways 50 per cent, as a number of others have. The Dort Motor Car Co. drives away 40 per cent of its production, and the Oakland 50 per cent. Dealers are coming to Dodge Brothers faster than the company can supply them.

The daily production of the manufacturers in this territory is very unsteady, fluctuating according to the amount of materials and parts available. Taken as a whole, the output has had a marked decrease. This lack of sufficient materials and parts to work is caused by the inability to get them to the place where they are to be fabricated. Although the outgoing shipping is in a better condition a great deal of difficulty is still experienced on incoming freight, this, to a great extent, being the controlling factor in the production schedule. The other element that is retarding production is the want of labor.

Time Payment Company for Louisville

LOUISVILLE, April 29—A banking business to finance the purchase of motor vehicles is the newest institution to appear on Louisville's business horizon. The organization is called the Kentucky Finance Corp. and has the backing of some of Louisville's most substantial business men. A suite of offices has been opened in rooms 901-902 Inter-Southern Building, with C. H. Allen, fiscal agent, in charge. Officers of the corporation are: James Norton, president; Dr. R. M. Jones, vice-president; T. E. Boswell, secretary, and Phil. B. Thompson, treasurer. With the addition of Norton L. Gray, the officers named make up the directorate. The Kentucky Finance Corporation is incorporated under the laws of Delaware and has an authorized capitalization of $1,000,000.

Overland Proceeding With War Work

TOLEDO, April 25—The Willys-Overland Co. is now ready to proceed with the manufacture of war products on an enlarged scale. The company plans to increase its working force from 12,000 to 15,000 men at once. For some time past Overland has been installing special machinery and reorganizing parts of its plant for government work, for which it is stated the company has contracts aggregating more than $27,000,000. The company is manufacturing airplane engines and gun carriage parts at its Toledo factory, and has a large shell contract. Officials announce that a new building will be started shortly in which the shells will be manufactured.

During March Overland produced and shipped 832 Curtiss training motors. Unfilled orders for passenger cars greatly exceed those of a year ago at this time, aggregating 18,000 cars. The present output is 500 cars a day, and it is expected that the output will be greatly increased. Production for the present year is placed at 115,000 cars, as compared to 140,000 last year.

Regal Business to Be Sold

DETROIT, April 27—As a result of a meeting of the larger creditors of the Regal Motor Car Co. it was recommended that the receiver sell the business at public auction the latter part of June. The service business will be continued in the meantime and will be sold as a going business.

Everybody Wonders What About Rubber

Talk of Restriction of Importation, But Nothing Has Happened Yet—Stocks on Hand Good

NEW YORK, April 29—The rubber situation in the United States is inseparably linked up with ship tonnage, and for this reason the rubber trade would not be surprised if a partial embargo were placed on imports. As yet no official commuication has been made with regard to this matter.

The Shipping Board is understood to be still considering the data and information placed before it as a result of the hearing given the rubber trade last week.

In the interim reports have become current that rubber mills will be requested to devote a considerable proportion of their production facilities to the manufacture of rubber footwear for the army. It is not clear exactly where this report originated Rubber manufacturers, however, are not greatly concerned over it for the reason that only about 10 per cent of the rubber imported is used in producing footwear.

The production of tires takes about 70 per cent and the balance goes for mechanical devices and sundries.

The United States Rubber Co. is the largest producer of rubber footwear and this company together with the Hood Rubber Co. produces probably 90 per cent of all the rubber footwear consumed.

It is pointed out by rubber importers that any kind of rubber can be used for footwear whereas certain grades are most suitable for tires; the use of these grades for footwear would be poor efficiency.

The transportation difficulties which up to the present time have checked the receipt of rubber in Akron and other centers are rapidly disappearing. Akron is receiving shipments quite freely from the Pacific Coast, where the bulk of the imports are received. It is stated that the principal rubber mills have good stocks on hand and that even though a partial embargo amounting to 20 per cent were placed on imports this would not compel an immediate restriction of output. The mills could run along for a number of weeks at their present capacities.

During 1917 the United States consumed 182,000 tons of rubber which was about 71 per cent of the world's production, which was 257,000 tons. Of this total approximately 20 per cent was wild rubber, the balance being plantation product. The production of plantation rubber has increased from about two per cent in 1907 to 30 per cent in 1917.

Girl to Resign from Transport Service

WASHINGTON, April 29—Christian Girl, having practically completed his Washington duties, and heeding the urgent demand for his services in the industrial world, is planning to resign within the next few weeks from his position as Director of Motor Transport Service for the Quartermaster Corps.

Girl, who came to Washington last fall, and assumed charge of engineering, purchase, procurement and maintenance of the standardized war trucks, has created an efficient organization composed of skilled automobile engineers, production men and specialists. He has witnessed the beginning of quantity production of the standardized truck. Nine hundred and sixty Class B trucks have been completed and more than 1300 will be finished by the end of this month. The design and contracts for the A and AA trucks have been completely arranged for.

In consequence, Girl believes that he has completed his obligations here, which he assumed at a considerable financial sacrifice, and he now contemplates a return to his usual business affairs. He will remain in Washington, however, until a successor is appointed who can take over his work and tend to the completion of the details.

Brig. General Chauncey B. Baker, who has been holding rank in the U. S. A. Reserves and has been in charge of the Motors Division of the Quartermaster Corps, was to-day appointed colonel in the National Army. Gen. Baker has asked for a transfer for active service in France, repeating a previous request which was refused on the ground that he was necessary here. For the present he still remains the head of the Motors Division.

That the Quartermaster Corps will retain control of the pooled truck activities of the army is definitely assured by the orders signed last week by Maj. General P. C. Marsh, Acting Chief of Staff.

Michigan Takes 552 Fordson Tractors

LANSING, MICH., April 30—At the close of the Michigan War Preparedness Board campaign for the sale of Fordson tractors to farmers in the State of Michigan, a total of 552 orders had been received. Therefore, only a trifle more than half of the 1000 tractors apportioned to Michigan will be taken, as the State assumed no obligation to deliver more than those actually ordered and paid for at the close of the drive. About 12 carloads still remain to be shipped from the Ford factory, but these will all have been delivered to the buyers within a few days.

Chicago Goes Over the Top

CHICAGO, April 29—The motor car industry in Chicago has about gone over the top on the third Liberty Loan. The dealers have practically all reported sales. Over 100 of them reported 100 per cent or over. Among the factories, Stewart-Warner employees have subscribed for $21,400, 1637 employees out of 2200 taking bonds; Vesta Accumulator has a record of 100 per cent with a total of $17,000. Diamond-T has subscribed $12,000, 75 per cent of its employees being represented. Parrett Tractor is 95 per cent.

Federal Order Placed for 20,000 War Trucks

List Includes 8,000 Class B, But Class A Apparently Has Been Sidetracked

WASHINGTON, April 29—Orders for 20,000 motor trucks for war purposes have been approved by the Board of Control, recently appointed to supervise truck activities. The list is made up of 8000 Class B standardized trucks; 8000 four-wheel drive trucks, which is made up of 3500 Jeffery Quads and 4500 F. W. D. In addition, there are 1500 ¾-ton G. M. C. chassis, intended for ambulance work, and lastly, 2500 1½-ton chassis which are to be of standard designs.

The ordering of 1500 G. M. C.'s and the 2500 1½-ton commercial chassis can be taken as an indication that the A and AA standardized trucks of the Quartermaster's Department have been effectively side-tracked and apparently permanently shelved, as has been expected. It has been known for months that great opposition has been aimed at the AA and the A, as well as at the Class B truck, by not a few manufacturers who have opposed the standardized truck program. This order is the first definite indication that these manufacturers have succeeded in blocking the standardized truck program so far as the ¾ and 1½-ton models are concerned.

While the purchase of these 20,000 additional trucks has been approved, no orders have as yet been placed.

Postpone Production Committee Meeting

NEW YORK, May 1—The meeting between the Automobile Production Committee and the War Industries Board which was scheduled for yesterday has been postponed one week, to May 6. This was the meeting at which it was proposed to discuss a further curtailment of automobile production. It is expected that a definite decision will be reached at the meeting next Monday.

Detroit-Buffalo Boats May 6

DETROIT, April 29—Drive-aways to the eastern region will be simplified after May 6 through the opening of navigation between Detroit and Buffalo by the Detroit & Cleveland Navigation Co. Two big steamers, the City of Cleveland III and the City of Detroit III, will undoubtedly be taken up almost entirely by automobiles.

Nelson to Ship New Models

DETROIT, April 29—The A. E. Nelson Co. expects to start its first shipment of new cars in a few days. The chassis are all ready; immediately upon the arrival of the bodies which are ordered and expected any day the cars will be ready to go out.

Prominent Tradesmen Assume New Duties

Resignations and Promotions Place Workers in New Places

Charles Johnson, formerly sales manager of the Maltby Auto Specialties Co., and for many years special representative for the Lovell-McConnell Mfg. Co., Newark, has been appointed fiscal agent for the states of Michigan and Ohio for the Square Turn Tractor Co., Chicago.

W. Ashley Gray, prominent in the motor car business in St. Louis for 15 years, has resigned from the Packard Missouri Motor Car Co. to take up insurance work.

Thornton Rogers, formerly of the sales force of the Baltimore branch of the Chevrolet Motor Co., is now Captain Rogers of the Headquarters Co., 115th Infantry, N. A., Camp McClellan, Anniston, Ala.

D. W. Schilling, former service manager for the Baltimore Chevorlet Motor Co., is now Lieutenant Schilling, of the motor section 104th Ammunition Train, Camp McClellan, Anniston, Ala.

H. D. Coulson has joined the sales force of Blair Motor Car Co., Baltimore, Saxon and Gramm-Bernstein distributers.

A. Rubinstein, who was for a time with the Union Motor Car Co., Baltimore Maxwell distributer, has rejoined the sales force of the United Auto Sales Co., Studebaker and Garford distributer.

L. R. Scafe, secretary and treasurer of the Saxon Motor Car Corp. the first 2½ years of the company's existence, has been appointed comptroller of the Dayton-Wright Aeroplane Co., Dayton, Ohio.

Wesley Deem, formerly production manager of the Columbia Motors Co., Detroit, has been appointed production manager of the Lane Motor Truck Co., Kalamazoo, Mich.

J. E. Buckley, formerly assistant manager of the Buffalo, N. Y., branch of the Ford Motor Co., has been transferred to the Fargo branch as manager.

Charles C. Traphagen, Firestone Tire dealer in Richardson, Tex., has sold his business and has joined the aviation section of the army.

W. C. Freeman, Dallas, Tex., has been appointed manager for the Quick Tire Service. F. E. Morriss, whom he succeeded, has been transferred to Tampa, Fla.

E. O. Thackston has been appointed Texas manager for the American Motors Co. His headquarters will be at Dallas.

John H. Miller, tire manager for the F. L. Shaw Automobile Co., Studebaker distributer, has gone to Chicago, where he has taken over a Ford agency.

Charles Johnson, formerly sales manager of the Maltby Auto Specialties Co., and for many years special representative for the Lovell-McConnell Mfg. Co., Newark, has been appointed fiscal agent for the states of Michigan and Ohio for the Square Turn Tractor Co., Chicago.

Jack Griffin has been appointed advertising manager of the Chevrolet Motor Co. of California, with headquarters in Oakland. He has been in the publicity business for many years.

Lester I. Weiss, St. Louis, connected with motor car selling for 18 years, beginning as office boy, has jointed the Cadillac salesforce in that city.

Joseph O. Welker, St. Louis, has been made manager of the Gramm-Bernstein truck department of the Welling Motor Co., 5033 Delmar.

George Dunville, St. Louis, has been made manager of the new used car department of the Tate-Gillham Motor Car Co.

Charles Reuchard has joined the sales staff of the Harry Newman, Inc., St. Louis.

Benjamin Briscoe, who left the Briscoe Motor Corp., Jackson, last year to answer his country's call, is now a lieutenant commander in the United States Navy, with headquarters, presumably, in Paris. He is in charge of the assembly and maintenance of the hydroplane service for chasing submarines and is director of several large plants at various points abroad.

R. A. McNamee has been appointed traffic manager for the Liberty Motor Car Co., Detroit.

Vesper Talks in Cleveland

CLEVELAND, April 25—President F. W. A. Vesper of the National Automobile Dealers Association addressed a business confidence meeting of the northern Ohio dealers in this city to-night. He told of the progress being made by the association and explained the war service recommendations made by the war service committee, as told in Motor World last week.

Scrap Metal and Rubber Prices

NEW YORK, April 29—Following are scrap metal prices paid by New York dealers during the past week. They are from *Iron Age:*

	Cents per lb.
Copper, heavy and crucible	23.50
Copper, heavy and wire	23.50
Copper, light and bottoms	21.00 to 21.50
Brass, heavy	16.25 to 16.50
Brass, light	12.00 to 12.25
Heavy machine composition	23.75 to 24.00
No. 1 yellow rod brass turnings	13.00 to 13.50
turnings	19.00 to 20.00
No. 1 red brass or composition	
Lead, heavy	6.50
Lead, tea	5.50
Zinc	5.75

Prices paid by reclaimers for scrap rubber are:

	Cents per lb.
Automobile tires	5-5½
Inner tubes No. 1	21-22
Inner tubes No. 2	10¾-11

Trucks to the Rescue When Detroit Strikes

Factories Never Missed the Trolleys —Trucks and Cars Replaced Them

DETROIT, April 27—In this day of automotive transportation, means of getting to work does not entirely depend on electric cars, as was well illustrated during the recent street car men's strike in Detroit.

As soon as it was learned that the city might be without electric car transportation, that it was probable the street car men would walk out, steps were at once taken to arrange for truck routes throughout the city. Nearly every manufacturer as well as those industries engaged on war work brought into play all the available trucks to gather up their workmen. Announcements of truck routes were placed in the daily papers and posters were placed around the factories.

Henry Ford & Son, Lincoln Motor Co., and the Continental Motors Corp., each had space in the newspapers announcing the routes of the trucks. The Packard Motor Car Co. placed notices on the bulletin boards in its factory. Arrangements were made to pick up both the day shift and the night shift. At the time these posters or notices were hung it was not known that a strike would be called but these plans were instituted in order to have everything in readiness should a strike be called outside of regular working hours.

As a result the companies were able to take care of a big percentage of their employees in the matter of transportation. No serious loss in production was felt.

4-Ton Packards Coming

DETROIT, April 29—It is reported that the Packard Motor Car Co. will put 400 4-ton trucks on the market in July.

Return Loads Bureau For All New England

PROVIDENCE, R. I., April 29—One of the biggest steps yet taken in the development of Return Loads Bureaus in the United States was made here to-day at the Providence Chamber of Commerce when the New England Highways Return Loads Association was formed.

This organization will establish Return Loads Bureaus throughout all of New England, but more particularly at the present time in Rhode Island and Massachusetts. Connecticut already has a very efficient Return Loads Bureau organization in operation, and the various bureaus in Connecticut will co-operate with those to be established in Massachusetts and Rhode Island to the end that the entire New England district will be served by its motor trucking equipment to the best possible advantage during the summer of 1918 and this fall and in the spring of 1919.

Officers of the new association were elected as well as an executive committee of six made up of two members from each of the states of Connecticut, Massachusetts and Rhode Island. The working organization is now being planned and letters being prepared to be sent out to shippers and truckmen for the necessary information.

To-day's meeting was attended by forty-two men interested in the Return Loads Bureau from the angle of either the shipper or the truckman. The various government departments were also represented.

The members of the executive committee for the three states are as follows:

Rhode Island

Ex-Governor C. D. Kimball.....Providence
E. C. Southwick.....Providence

Massachusetts

E. F. Rowe.....New Bedford
John C. Robinson.....Springfield

Connecticut

W. S. Conning.....Hartford
M. B. Russell.....Bridgeport

Insurance Man for Service Man

THE Utica Motor Car Co., Utica, selling the Cadillac and Reo, has a former insurance man for service work. He is the man who greets customers when they come into the place, checks the cars and sees that everyone gets real service, which is about 90 per cent prompt attention.

To Make Line of Trucks

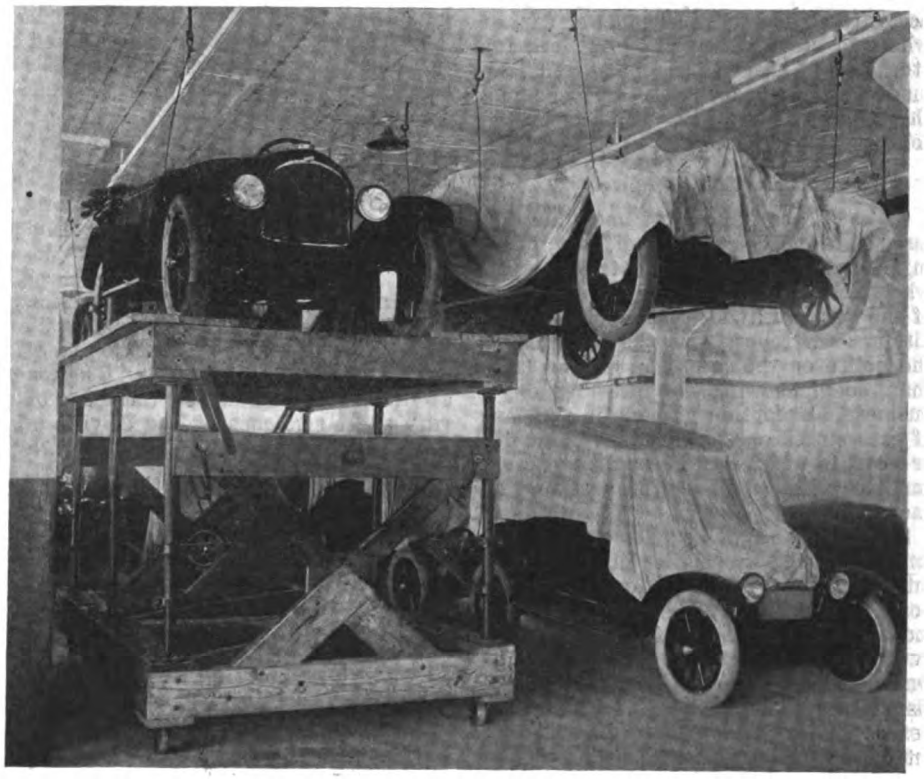
DETROIT, April 28—The Power Truck & Tractor Co. has been incorporated with a capital stock of $2,500,000 to manufacture 1, 2, 3½ and 5-ton trucks. Standard units will be used. The company will also manufacture two tractor models. It is also stated that the 1-ton model truck the company has adopted is now being placed on the market, having been in use the last year and a half. The personnel of the company will be announced later. A factory building has been purchased in Detroit. The company plans to build 3000 trucks and 3000 tractors this year.

Starts Movement For Literature For Soldiers

DENVER, April 29—Harry G. Moock, secretary of the Denver Automobile Trades Association, has instituted a movement to collect books and technical automobile magazines to present to the automobile men who have gone from dealer organizations to the army. A committee has been appointed consisting of W. J. Haughey, W. W. Barnett and Wells Littlefield, who will take the matter up with the factories and different automobile trades associations and make it a nation-wide movement. Publicity asking for books and trade papers is being run in newspapers in this section. The plan is being conducted with the co-operation of the American Library Association through the Liberty War Service with headquarters in Washington. The books and magazines desired are those referring to automobile construction.

Lane Motor Truck Increases Production

KALAMAZOO, MICH., April 29—Preparations are now being made at the Lane Motor Truck Co. to greatly increase the production of worm-driven trucks of 3, 5 and 7 tons' capacity. These trucks are all fitted with electric lighting, high-tension magneto, electric starting, cabin curtains, windshield, bumper and with all regulation chassis equipment. W. W. Lang is vice-president and L. W. Hamilton is secretary-treasurer and general manager.



How One Dealer Stores His Stock of Cars

STORAGE of cars during the winter months and other seasons of the year for that matter is something of a problem. Making the most of the available space has been very sensibly worked out in the new home of Willys-Overland, Inc., at Hartford, Conn. The building, which is of concrete with brick facings, when erected was fitted with plugs in the ceilings into which screw hooks are placed for suspending cars.

The shop superintendent constructed a traveling loader. Telescoping iron pipes of large diameter form the four supporting posts. Another iron pipe with suitable handles provides the means of raising or lowering the traveling platform.

Cars are brought up on the elevator which is stopped even with the traveling platform. When the car has been rolled on the platform the latter is wheeled to the position in which the car is to be suspended from the ceiling. The hooks and cable attachments are secured to the car and the platform is lowered enough to take up the slack.

Then the platform is moved from in under the car which hangs from the ceiling. The necessary suspending hooks threaded at one end are made by the blacksmith in the company's own plant.

Philadelphia Against Proposed Police Law

Would Require Garagemen to Report Every Day to Police Cars Left for Storage

PHILADELPHIA, April 29 — The Philadelphia Garage Association at its latest session added thirteen members to the roll and a demand has been made for many more application blanks. At the next meeting, which will be in May, officers for the year will be elected. Plans for the July motor run to Atlantic City were discussed, but no further action was taken.

Association members are not kindly disposed toward an ordinance introduced this month in Select Council by C. Lawrence Smith, which, for the benefit of the police, requires the making of daily reports by public garages to the police department and provides a penalty of $25 for each violation. The ordinance is now in the hands of the law committee.

Police Are Criticised

The police department, especially the bureau for recovering lost and stolen motor cars, recently dissolved, has been the recipient of much caustic criticism from motor car owners, associations and the daily press and it was largely in the hope of aiding the department to recover lost prestige in this regard that the ordinance was introduced. Motor car thefts have been so consistently frequent that there have been a number of shifts in the department.

The objectionable ordinance, so considered because entailing unnecessary annoyance and work on garage owners, in substance provides that from July 1, next, owners or managers of garages for public use in Philadelphia must keep an accurate record of each motor car of whatever kind which shall be left for storage and that daily reports must be made on blanks or forms furnished by the police department, containing the following information:

Information Required

Make of car, year of manufacture, number of cylinders, color of body, parts injured or missing, license tag number, when left and when called for and name of the person leaving the vehicle. In addition, each report must be returned to the police on the following day no later than noon, showing the previous day's business. Exception is made in the case of cars stored on contract by the month, or year, in which case it would be necessary to report only on the first day of each month.

Some time ago garage owners belonging to the association in their own interest framed a statute for making reports of a protective character every six months, the plan being for each garage owner to be licensed by the state highway department. It is regarded by association members as likely that the proposed "police protective" ordinance just introduced will die in committee.

The High Cost of Cars in Australia

AMERICANS who protest against the increased cost of motor cars in the United States may take some comfort in the prices which prevail for the same vehicles in Australia. The dealers in Brisbane are offering six-cylinders touring model Buicks at $2,675, the six roadster at $2,625, the four-cylinder touring at $2,100, and the four-cylinder roadster at $2,020. The Chandler six is priced at $2,750, and the Grant at $1,975. Overlands, which have been used for two years, are advertised at $1,000.

Class Journal Buys Horseless Age

NEW YORK CITY, April 30—The Class Journal Co., publishers of Motor World has purchased *Horseless Age* of New York City, the oldest motor car publication in America. The publication of *Horseless Age* will be continued under the new management. The Class Journal Co. also publishes *Automotive Industries, Commercial Vehicle, Motor Age* and *Transfer and Storage.*

Wilmington After Return Load Bureau

WILMINGTON, DEL., April 29—An effort is being made by a number of truck concerns handling freight between New York, Philadelphia, Wilmington, Baltimore and Washington to develop an intermediate return load service. Stops are being made in some of the more important towns, where merchants are interviewed and arrangements made for handling shipments in either direction. Some of the trucks go through with conspicuous placards inviting the townspeople to patronize the service.

It is believed that it will be possible to build up this traffic to such an extent as to warrant short-haul as well as long-haul trips.

So far as Wilmington is concerned it is already well supplied with these facilities, in addition to having unusual rail and water facilities.

Buffalo-New York Route

BUFFALO, April 24—The following route has been laid out and recommended for drive-aways en route from Buffalo to New York, through Batavia, Hornell, Elmira, Binghamton and Middletown. The distance along this route is 430 miles, or about 75 miles shorter than the Mohawk valley route via Albany. The roads are all hard-surfaced, and there are only very short stretches of bad driving, aggregating not more than 15 miles. New York City is entered via the Fort Lee ferry. The road is easily found all the way from Buffalo and may be covered in from 18 to 20 hr. actual running time.

Wilmington Dealers See Tractors Tested

Five Different Makes Put Through Their Paces by Department of Agriculture

WILMINGTON, DEL., April 27—According to figures furnished by R. O. Bausman, county farm agent, in co-operation with the Department of Agriculture and Delaware College, in a test of tractors on farm work—the first of a competitive nature in Delaware—made last week near Dover, it was readily proved that in every case the fuel cost per acre was less than the cost of horse or mule feed for plowing on an acre basis. Six tractors were in competition, as follows:

Huber Light Four, kerosene burner, 12-25 hp., demonstrated by N. C. Rose of Bridgeville, local dealer.

I. H. C. Mogul, kerosene burner, 8-16 hp., Charles H. Hardesty, Dover.

Case, kerosene burner, 9-18 hp., Hope Hardware Co., Dover.

Cleveland, gasoline burner, 12-20 hp., Standard Motor Sales Co., Salisbury, Md.

Knickerbocker Form-a-Tractor, gasoline burner, demonstrated by Drysdale & Burton of Dover, and Hercules Motor Co. of Wilmington.

Below is the record made by the tractors which took part in the fuel test, in which two acres were plowed.

The Case plowed about half an acre with an obstruction on one of the plow points, which may have added slightly to the amount of fuel it required. Before starting on the test all fuel tanks were filled and after the plowing of the two-acre plot was completed the fuel tanks were refilled. The amount required in refilling was the amount of fuel used in plowing the two acres.

The test took place under ordinary conditions, the ground being level and the soil a combination of clay and sand, on a farm which had been in use for many years.

The first of the three days was devoted to simple plowing by each machine on a plot laid out for it. The demonstration, while under the auspices of the Kent County Farm Bureau, was for the benefit of the farmers of the entire State.

Gasoline Increases in Detroit

DETROIT, April 29—The price of gasoline in Detroit has gone up 1½ cents. The new price, which became effective April 18, is 23.2 cents per gallon. Kerosene is now 12.2 cents per gallon instead of 11.2 cents.

Results of Tractor Tests by Delaware Department of Agriculture

Make	Plows	Time, h. m.	Fuel Required	
			Kerosene	Gasoline
Huber Light Four	3	2-05	4 gal. 3½ qt.	1 qt.
Case, 9-18	2	2-40	5 gal. 2¾ qt.	¼ qt.
I. H. C. Mogul, 8-16	2	2-57	5 gal. ¾ qt.	1⅛ qt.
Cleveland Caterpillar	2	2-52	.....	5 gal. 1 qt.
Knickerbocker	2	3-33	.....	5 gal. ¾ qt.

Blue Books Ready

NEW YORK, April 29—The 1918 volumes of the Automobile Blue Books are now ready. New roads, the reconstruction of old ones and the reclamation of many others that formerly were impassable compelled the redrafting of 167,103 miles of roads for the books.

Special routes to all of the cantonments have been included in the new volumes. The logging of these roads was in most cases made from cities nearest to which the camps are located, so that the tourist who plans to visit any of them need only take his Blue Book way to the large city near the cantonment to find in the same volume detailed guidance to the camp which has his particular interest.

The maps have been completely revised. Hundreds of new ones have been added, and besides the redraftings of old ones most of them have been enlarged, new detail added and larger area covered. Head-notes are a feature. They summarize in short paragraphs the kind of road, how much of it is traveled, nature of the country—whether hilly, mountainous or level—and which sections are difficult or impassable.

Garages, service stations and hotels have been classified in a special index. Populations of towns, their altitude and their situation as regards scenic or other charm are also indicated. Automobile laws and traffic regulations of various states and cities are incorporated. They keep the traveler in constant touch with what civil and state authorities will require of him.

Volume 9, just added to the series—and which last year was part of Volume 8—brings the total number to eleven special territories covered for the motorist's guidance. The new volumes are divided as follows:

VOLUME 1—New York State and Adjacent Canada. Including Long Island and adjacent States as far as New Haven, Danbury and Waterbury, Conn.; Pittsfield, Mass.; Rutland and Burlington, Vt.; Cleveland, Ohio; Pittsburgh, Wilkes-Barre, Scranton and Delaware Water Gap, Pa.; Trenton, Asbury Park and Atlantic City, N. J.

VOLUME 2—New England and Maritime Provinces. Including Long Island, New York City and Eastern New York State as far as the eastern shore of the Hudson; also Albany, Lake George and Lake Champlain Section, Montreal and Quebec.

VOLUME 3—New Jersey, Pennsylvania, Delaware, Maryland, District of Columbia and West Virginia. Including all main highways out of New York City with extension routes into Southern New York State, Eastern Ohio to Canton and Cleveland and Northern Virginia.

VOLUME 4—Michigan, Indiana, Ohio and Kentucky. Including extension routes into adjacent States and trunk-line routes across Illinois to Chicago, excepting Upper Peninsula of Michigan, which is included in Vol. 5.

VOLUME 5—Illinois, Minnesota, Wisconsin, Iowa and Missouri. Including Upper Peninsula of Michigan and extension routes into all adjacent States.

VOLUME 6—The Southeastern States. Including Virginia, West Virginia, North and South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana and Tennessee with extension routes into adjacent States, including Washington, D. C., and a single trunk-line route to New York City.

VOLUME 7—Montana, Wyoming, Colorado, New Mexico, Texas, North and South Dakota, Nebraska, Kansas, Oklahoma, Arkansas and Louisiana. With extension routes to Spokane, Salt Lake City and Phoenix, and trunk-line routes eastward to the Mississippi River.

VOLUME 8—California, Nevada, Utah and Arizona. With extension routes into Oregon, Texas and New Mexico.

VOLUME 9—Washington, Oregon, Idaho and British Columbia. With extension routes into California, Montana and two trunk lines to Salt Lake City.

VOLUME A—New York City Metropolitan Blue Book. Two hundred round trips within [illegible] miles of New York—half-day, full-day, week-end and three-day runs.

VOLUME C—Chicago Metropolitan Blue Book. Two hundred round trips within a radius of 100 miles of Chicago—half-day, full-day, week-end and three-day runs.

The War Tax

We never say anything about war tax. If the subject comes up and threatens to spoil our chance for a sale we say in effect, "Surely you are not trying to buy a truck and beat the Government out of its war tax, are you?" When he sees he is caught then there is no doubt that he can be sold.—R. Satterthwaite, Pacific Kissel Kar Branch, Seattle.

Charleston Adopts Credit Terms

CHARLESTON, W. VA., April 27—Eighteen firms, constituting the Automobile Trade Association of Kanawha County, at a meeting held last week adopted credit terms in dealing with customers as a means of stopping the abuse of credit here. Under the rules adopted all customers will be required to settle their accounts on the first of the month following that in which they were contracted, and failure to pay by the 30th of the month will be met by a refusal to extend further credit. All accounts outstanding March 30 are to be settled before April 30.

Books Received

"History's Lesson of the Motor Truck" is the title of a booklet written by P. W. Litchfield, vice-president and factory manager of the Goodyear Tire & Rubber Co. It is shown how pneumatic tires have supplanted solid and steel tires, first on bicycles, then on carriages, and motor cars. The corollary is that pneumatic tires will supplant solid tires for trucks as well.

The Studebaker Corp. has published and is distributing a history of the company written by Albert Russel Erskine, its president. The book gives in an interestingly lucid way the biography of the Studebaker brothers and the history of the business they started and developed. There are a number of pictures of the plant, which was no more than a small frame building in 1856. Other pictures show its continual growth, as well as the addition of branches and salesrooms.

The Racine Auto Tire Co., Racine, Wis., is distributing mileage record booklets, containing a small table to be filled out, by which a car owner can tell the record of his tires.

Harrisburg Buys Bonds

HARRISBURG, PA., April 29—The Harrisburg Motor Dealers' Association, which bought $200 of the first Liberty Loan, has taken $500 of the third. The Motor Club of Harrisburg has $1,000 in each of the first and third.

Eastern Office for Bergie

NEW YORK, April 29—The Bergie National Spark Plug Co. has opened an Eastern sales branch here in the Buick Building, 1737 Broadway. R. M. Hodes, the company's Eastern territory manager, is in charge.

Bob Lee Takes a Partner

ST. LOUIS, April 29—Announcement is made of the marriage of Capt. Robert E. Lee to Ruth Medora Snyder, this city. Lee is secretary of several motor trade associations in this city and is manager of the St. Louis show.

Specifications

ON the pages that follow are three tables of specifications—passenger cars, lamp bulbs and motor trucks. The table of tire and tube prices, which has always been an important part of the monthly Motor World Guide, is omitted because of the great number of changes in prices made by manufacturers during the past 10 days. Many makers have not yet prepared their new lists; others have not definitely decided whether their prices will change or not. In view of these facts, it was deemed wise, in order to preserve the accuracy of the table, to omit it from this issue. It will appear, corrected to date, in the issue of June 5.

Coming Events

Racing

Uniontown, Pa.	Uniontown Speedway Assn.	May 16
Sheepshead Bay, N. Y.	Championship	May 30
Chicago	Chicago Speedway	June 22
Cincinnati	Cincinnati Speedway	July 4

Conventions

Lima, O.	Ohio State Automobile Assn.	May 3-7
Hot Springs, Va.	Convention National Association of Automobile Accessory Jobbers.	June 5-12

Portable Tank and Pump

Air on Wheels

LECTROFLATER
ELECTRIC AIR COMPRESSORS

Note These Important Features

1. No. 2 LECTROFLATER Electric Air Compressor; the quickest, most economical and most powerful electric compressor of its size in the world. Will compress sufficient air to inflate ten tires at a cost of one cent for current—*one hundred tires for ten cents.* Guaranteed to pump only cool, clean, dry air. Grease—not oil—lubricated. No oil level to maintain. Air cooled by forced draught. No liquid to freeze or evaporate. All working parts self-contained under one housing. No exposed belting, shafts or gears.
2. Automatic Pressure Switch: Starts the compressor refilling tank when pressure drops under 130 pounds and "cuts out" when pressure reaches 150 pounds.
3. Welded and brazed in all seams. Tank tested to 300 pounds hydraulic pressure. Will contain enough air to inflate ten tires from 40 to 80 pounds pressure without refilling. Finished in green and black enameled with nickel trimmings.
4. To fill attach electric cord connection to any electric light socket; that's all. Uses either alternating or direct current. Pump controlled by automatic pressure switch. Fifteen feet of electric cord furnished.
5. Large accurate pressure gauge indicates pressure in tank at all times.
6. Twenty-five feet high pressure hose fitted with standard tire chuck.
7. Furnished with husky metal wheels for hard service on cement floors or with rubber tires for use on hardwood or tiled floors, sales rooms, show rooms, etc.

Rain or shine, indoors or out, in the garage or salesroom, on the curb, in the street—the Portable Tank and Pump, weather-proof and fool-proof, is always ready to pump cool, clean, dry air into needy tires.

When filling the tank it takes its power from the nearest electric light socket and automatically cuts out when full.

One tank full inflates ten tires (33x4) at a cost of one cent for current. That's cheap enough, and it does it quickly, too —one tire from flat to full in two minutes.

A great pump for you—it's staunch, well built and handsome in appearance. It will last you a lifetime.

There's a Lectroflater outfit or combination for every need ranging in price from $65.00 up.

Write for catalog.

"NORMA"
PRECISION
BALL BEARINGS
(PATENTED)

To attain leadership is an achievement —to maintain it in face of competition is a greater achievement still. And what folly can be greater than that which hazards a leadership by a short-sighted sacrifice of even one of the so-called minor details upon which achievement has been built? A business structure built through the years may be destroyed in a day.

The proved super-service qualities of "NORMA" Precision Bearings, revealed in the records of hundreds of thousands of super-service ignition and lighting apparatus the world over, have beyond question been vitally contributive to the consistent performance of these accessories.

A letter that speaks for itself

Selden Truck Sales Company
Rochester, New York

Gentlemen:

The writer wishes to express his sincere appreciation of the courtesy shown him by the Officers of your Company and the heads of the different departments.

It is a real pleasure to meet men such as you have in your organization, and I am only sorry that I did not visit your factory a long time ago.

As to your factory, I will frankly say that it was far beyond my expectations as to size and modern equipment for manufacturing motor trucks. I was amazed to see the number of trucks under construction at one time and the amount of stock that you have on hand in the line of parts.

Any man contemplating the purchase of a motor truck should without fail see a factory such as yours, and he will be thoroughly convinced that the truck is built by a concern that is reliable from all angles.

Again thanking you for the favors shown, we beg to remain

Very truly yours,

SPRING GARDEN AUTO & MACHINE CO.

How One Dealer Is

Putting the Tractor Over

Williams Believes Car Dealer Should Sell Tractors
He Has Gone at the Business in a Real Way
He Sells Each Farmer What He Ought to Have
He Keeps the Tractors Running by Quick Service
He Carries a Stock of Tractors and Parts
He Sees a Wonderful Future for the Automotive Dealer

C. U. WILLIAMS of Bloomington, Ill., believes there is a big business for motor car dealers in selling cars, trucks and tractors to the farmer—and so he is doing it.

He is developing a big business in tractors. He sees great possibilities in the future. He believes real merchandising among farmers can build a big business, so he is merchandising in an aggressive way to his own great profit.

He tells how the motor car dealer can be a better tractor dealer than the influential man.

The C. U. Williams & Son Tractor Co., an unincorporated subsidiary of the C. U. Williams & Son Co., automobile distributer in Bloomington, has been in the tractor business only since December, 1917, but already the company is recognized as one of the most progressive and aggressive, as well as most successful, of the tractor-selling organizations in the State of Illinois.

Tractors are handled by the company at both wholesale and retail in practically the entire northern half of Illinois.

The C. U. Williams & Son Co. originally was incorporated at Bloomington on Feb. 14, 1912, for the purpose of selling automobiles. As the business grew and prospered the company ultimately became distributer of the Overland, with which nine counties now are covered. The decision to engage in the tractor business as an addition to the already prosperous automobile business was based upon practical considerations which appealed strongly to C. U. Williams, the senior member of the company.

"There were certain fundamental assumptions upon which we based our conviction that we, as automobile distributers and dealers, ought also to handle tractors, and which finally decided us to go into the business," said Williams.

Car Man the Logical Dealer

"Acquaintance with the trend of agricultural development assured us that *the complete motorization of the farm was not only a possibility but an inevitable necessity.* This appeared to us to open up tremendous trade possibilities for the man who might be expert with motors, who had the equipment to give the degree and amount of service which would be required and who had the ability to organize and administer a business of such magnitude as the motorization of agriculture would bring about.

"Also we believed that the tractor, the motor truck, the motor cultivator and other specialized self-propelling farm equipment, all were essentially nothing more than modified automobiles; hence we, as experienced automobile dealers, logically should handle them.

"In other words," continued Williams, "we were profoundly convinced that the logical and legitimate medium for the ultimate distribution of the tractor and all other sorts of motorized equipment, as well as for the specialized power operative equipment which must be used with tractors, *is the automobile dealer.*

The Reasons Why

"This for many reasons. First, he is not afraid of numbers; he is accustomed to carrying a stock of cars, accessories and repair parts adequate for the requirements of his territory; hence he is not likely to balk at putting in an adequate stock of tractors.

"We believed he would be the ultimate tractor dealer because he knows the automobile and has a clear conception of the qualifications which are required of the man who is competent to give satisfactory service on motors. Also he has the material equipment in his garage and repairshop, as well as the personal experience, to enable him to render the sort of service which will be required.

"These considerations appealed to us as respected our own qualifications for handling the tractor trade in a retail

Letter Inviting Dealers to Tractor Demonstration

We are writing to inform you that there will be a demonstration of an INTERSTATE TRACTOR at San Jose, Ill., on Monday the 22nd inst. This demonstration will be under the direction of our dealer there, Mr. Geo. B. Weimer, and he will be assisted by some of our representatives.

We are particularly anxious to have you go to this demonstration and take such people with you as are interested in a good substantial tractor, even though they are not immediate buyers.

We are doing everything we can to make this demonstration a success, and the only thing necessary will be the support of the dealers in the surrounding territory. We know the enthusiasm that is stirred up will help you, and our whole purpose in pulling off such occasions is to help the sale of the INTERSTATE TRACTOR.

Will very much appreciate your reply as to whether you can attend this demonstration, and we believe you would find your time well spent. Thanking you for consideration, we remain, Yours truly,

C. U. WILLIAMS & SON TRACTOR CO.

Digitized by Google

When Williams wishes to get a sales start in a certain section he puts one of his tractors at work and invites the farmers and dealers for miles around. He puts a farmer on the seat, teaches him to operate the machine and thus demonstrates to all the onlookers that it isn't difficult for the farmer to take hold of operating the tractor

way in our immediate vicinity, and we could see no reason to doubt their validity if we applied them generally. *These were the reasons which decided us to go into the tractor business both in a retail and a wholesale way.*

Got Good Line

"Our first consideration, as it must be that of every firm which engages in the tractor business, was to select a line of tractors which best would meet the agricultural conditions and needs of the territory we intended to cover. We have done some experimenting and we have made some mistakes no doubt, but we have settled down upon at least a part of the line we shall continue to handle.

"We represent the Lauson tractor over a considerable portion of the northern half of Illinois. In a territory not exactly alike we represent also the Plow Man and the Plow Boy tractors. In a territory which practically comprehends the other two we sell the Jim Dandy motor cultivator. We still have need for another tractor of two-bottom capacity, which we shall add later.

"In order to secure proper management of our tractor business we decided to divorce it entirely from our automobile business. Therefore we organized a subsidiary company, the C. U. Williams & Son Tractor Co., and further subdivided this latter company into two distinct departments, wholesale and retail.

"Three separate sets of books are kept, and it is possible for us at any time to tell just exactly how each department of the business stands. My son, Walter W. Williams, who is an expert motor mechanician, was my able assistant in perfecting this organization. His country called him, however, and to-day he is master signal electrician at the Government post at Rantoul, Ill. This leaves me as the executive head of the three departments of my business and makes of me some busy man. It has made imperative the hiring of competent men.

"In seeking dealers we always try to get the automobile dealer. In the smaller towns 90 per cent of the men in the automobile business came from the farm, know its needs, understand the personality of farmers and talk the farmer language. They understand motors and the application of the motor to farm equipment. Likewise they usually are the only men who have the equipment for giving service. In addition, we always try to secure that man who has given evidence of the possession of business ability.

Selling the Dealer

"We go to these men and we say: 'You have the plant and the motor experience. *Your overhead is practically a fixed amount and you easily could do more business without increasing it.* The tractor offers you the opportunity. Put a tractor on your floor and increase your volume of sales for the year by from $10,000 to $20,000 without materially increasing your overhead.

How Williams Keeps Interest of Employees

We have planned to have an OUT-OF-DOOR DEMONSTRATION AND EXHIBIT SATURDAY, APRIL 27th.

If you are a shop employee, you may think this will be of no special interest to you, but we are going to get this information to every one, so they can tell their friends and talk it to everybody they see, so we will get the full benefit of the entire organization in the line of "word-of-mouth advertising."

If you tell ten people of this Out-of-Door Exhibit and they each tell ten more, there will one hundred people know of it, and you are the cause of this information. If fifty of you do this, you can see how many people will know of this without any burden whatever or expense on the house. Do your best to spread this news.

We are going to have 16 or 18 Overland cars on the street, one of each Model. They will be backed up along the curb between East and Prairie St. on Washington St. There will also be a line of Tractors and a Motor Cultivator. The Cultivator will be driven. There will be considerable doing. The only thing necessary is that you do your part toward spreading the news. Talk it to everybody you meet. This together with good weather will make the day a success.

Hope you will do your part.

Yours truly,

C. U. WILLIAMS & SON CO.

Salesman..... **MY WORK TO-DAY** *Date*.....

ASSIGNMENT			REPORT	
PROSPECT'S NAME AND ADDRESS	NOTATIONS LAST CALL / MODEL	Length of Call	Next Call	RESULTS

This is the record that gives Williams every day a summary of the day's work of his tractor selling organization

"'*Sell also the special power implements which must be used with the tractor*, particularly the engine plow, for the reason that fully 80 per cent of your tractor sales will carry a plow sale. Why sell the tractor only and let the other fellow sell the plow? Your past experience on the farm gives you all the specialized knowledge you will require to take care of the plow, and if it does not we are only a short distance away and our expert facilities are at your service.

"'We also carry a complete stock of repair parts and accessories, and you will not be compelled to make a customer wait for something while you send to the factory. Our service is prompt and accurate. By taking on a tractor you are putting yourself in line for a tremendous trade which surely will come.'

"We say to them also: 'Subscribe for trade papers which tell you about tractors and then read them carefully. If possible, visit tractor factories. If you cannot do that come to Bloomington frequently and spend some time with us. Read up on tractors—read everything you can lay your hands on and gain as clear a conception as possible of the possibilities of tractor employment on the farm. Particularly study up on your competitor's tractor, for it as necessary for you to know all about that as it is for you to know all about your own. Then go to it.'

"I have said we try to show prospective dealers the proportions of the trade they will open up by adding tractors to their line. Did you ever think how tremendous this is? It is so vast the mind almost refuses to grasp it.

Hundreds of Prospects

"*We consider every farmer who farms* 100 *acres or more a tractor prospect.*

"If he is not an active prospect now he can be developed into one. After he has bought a tractor he will realize that he cannot thereby dispose of his horses; he must retain enough to cultivate his row crops, for the three or four-bottom tractor cannot ordinarily be used for that purpose, and he needs some horses also to do his hauling.

"As the idea behind motorized farming is the attainment of economy in operation, the farmer very soon realizes that he must motorize further, and we figure that at least three-fourths of the tractor purchasers will become prospects for the motor cultivator.

"With the motor cultivator he cultivates his row crops, and with the beams removed he has a practicable power unit for pulling his binder and his manure spreader and for taking care of all the mechanical operations in his hay field.

"*Obviously, the motor truck with the dump body to do his hauling comes next, and the farm is completely motorized.*

"Motor trucks on the farm Not many yet, but a good many of our best farmers are considering them seriously, and they are bound to be in demand soon.

Sales of Farm Equipment

"Then there comes up the certainty of the individual ownership of power-driven equipment—the small grain separator, the silo filler, the corn sheller, the hay baler and all the other machines which are operated by belt. Advantage and economy dictate individual ownership of all these things, *and ultimately the dealer who sells the tractor will sell them also.*

"Take our own case, for instance. We sell the tractor, the motor cultivator, the engine plow and the motor truck. We intend taking on the small grain separator, the silo filler and other power-driven equipment just as rapidly as our trade develops up to it.

"*As I see it the day of the general line implement dealer is passing. Soon there will be nothing but power farm machinery in demand and the dealer who sells the tractors—and we believe this will be the automobile dealer—will sell all these other power machines, and will thereby become the mechanical outfitter for the farm. See what wonderful possibilities lie in the future?*

How He Does It

"In handling our retail tractor trade we go at the matter systematically. I have said that we consider every farmer of 100 acres or more an actual or potential prospect for a tractor. *We take township maps of our territory and make alphabetical lists of every farmer in every township who farms* 100 *acres or more.* This list then is systematically covered by mail and is canvassed systematically by our canvassers, who spend all of their time in the field calling upon prospects who are known to be active, or in developing new ones.

"When the canvasser leaves the salesroom for his daily trip he takes the names of as many farmers as he is likely to see in a day, part of them men already on our active card index of prospects, and the names of undeveloped prospects in the same neighborhood.

Cut Out Time Waste

"*These are arranged geographically so that no time is wasted in making the calls.* At night, upon his return, the canvasser makes a complete report covering his day's work, using a blank of the form shown herewith.

"One of the office employees then enters each prospect reported on two cards. One, form No. 1, shown herewith, goes into a tickler file and comes up on future dates for follow-up.

"The other card, No. 2, also shown, goes into a permanent office file in alphabetical order, and on it ultimately will be found the complete record of the sale. In addition to using these card files ourselves we try to induce our dealers to adopt the same system.

Giving Real Service

"We carry a large stock of tractors constantly on hand, a line of tractor accessories and a complete stock of repair parts. We draw upon this stock for both our wholesale and retail trade. Nor do we hesitate to rob a stock tractor when there is imperative need for a part and we do not happen to have it on hand. We take it that we better can afford to take the risk of waiting while the part comes from the factory than to force our customer to lose his time waiting its arrival, when delay of any kind may be critical or serious for him. We aim to keep every tractor we sell continuously working. We keep two expert repairmen and two cars constantly ready to respond to calls, and we give personal expert attention to any trouble anywhere within 50 miles of Bloomington. In short, we make our service a dependable feature of our business policy.

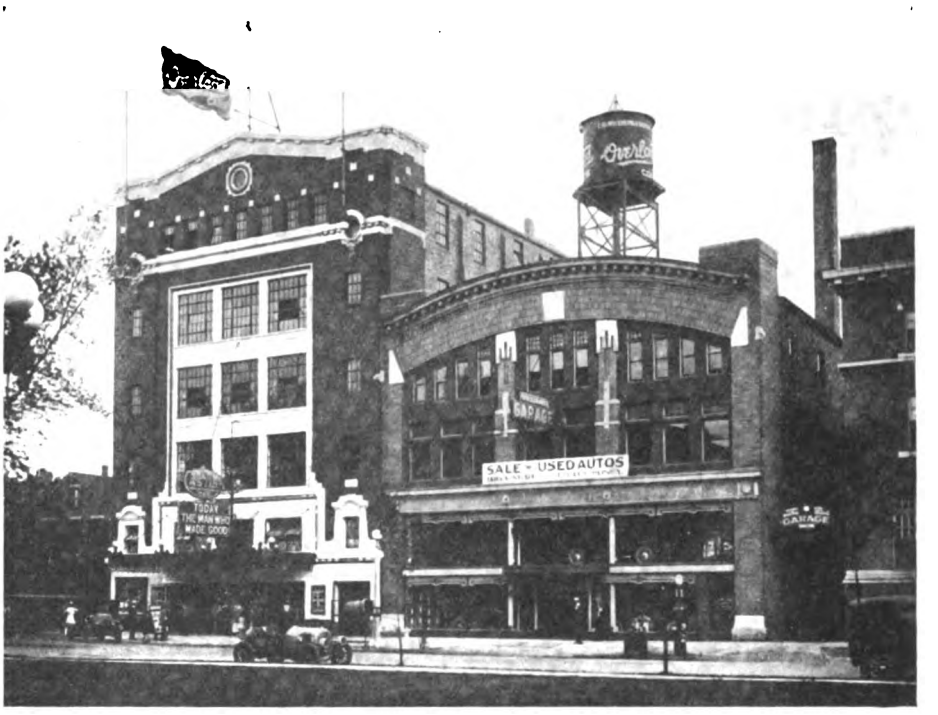
Digitized by Google

"We extend our idea of service to recommending the type and size of tractor a farmer buys. *We investigate his needs and insist upon his buying an outfit which corresponds. We will not allow him to buy a tractor from us which obviously would be a misfit on his farm.*

"To make a sale of an outfit which does not correspond to the conditions it will have to encounter just because the farmer thinks he wants that particular outfit, or just to make a sale, is, in our judgment, mighty poor business policy. We intend every sale to be satisfactory, not only for the sake of the man to whom the sale is made, but because of its effect upon other prospects in the neighborhood.

At It All the Time

"Sometimes we make mistakes in fitting the tractor to the job, and we do not realize it until after the tractor is at work. However, when this happens we rectify it at once, no matter at how much trouble to ourselves. We have in a number of instances exchanged tractors or plows in order that the customer might be perfectly satisfied.



"Our selling campaign never falters for a day. Every working day of the year something leaves this office in the way of advertising or follow-up. We believe in activity during the off season. *If we don't keep busy then we find when the active season opens that some one else has been working while we loafed.* Thus we never let up.

"For instance, we are campaigning actively now ourselves, and are helping our dealer agents to campaign for tractor sales for delivery in July and August, when they will be needed for fall plowing and belt work.

Gives Demonstrations

"Probably our best means for inducing sales is the practical demonstration. We are committed to this as having the greatest influence upon the prospect. Commencing very soon, we shall give weekly tractor demonstrations upon a piece of land we have secured just outside of Bloomington. To these demonstrations we shall invite the farmers who live within our retail sales territory and also the dealers from our wholesale territory. Also we constantly are arranging for and assisting at demonstrations under the immediate direction of one of our dealers. To these we always send one or two of our representatives and, in addition, we extend a special invitation to 50 or more of the surrounding dealers to be present.

"In the case of these dealer demonstrations we rely upon the dealer in every instance to get his own farmer prospects to attend. We tell him how to go about making his arrangements and then we put it up to him. Several days in advance of a dealer demonstration there goes out from this office a processed letter, filled in, to as many dealers in contiguous territory as we think it advisable to invite, asking them to be present. The results at such demonstrations as we already have held this spring have been very satisfactory.

This is the Williams building in Bloomington. It is next door to a theater, a fine location. The business has been built by consistently aggressive methods

"Our San Jose demonstration was typical. Attendance was somewhat smaller than usual due to the fact that the demonstration was postponed once or twice on account of rain and again on the morning of the twenty-fourth it was threatening. This adversely affected the attendance of both dealers and farmers, especially dealers.

"The San Jose demonstration was confined to the Plow Man tractor, two models being operated, and was given on the farm of John Deers, one mile east of San Jose, under the auspices of George B. Weimer, automobile-implement dealer at that place.

"A Janesville engine gang plow of three 14-in. bottoms was used. The outfit was worked continuously all day, one of the employees of Weimer and John Deers himself alternating at the throttle. This was to make the conditions of the demonstration conform as nearly as possible to actual field work. In fact, it was actual field work, since the farmer himself operated the tractor and the field he plowed was in preparation for corn planting.

Taught the Farmer

"The forenoon was devoted principally to tuning up the tractors, of which there were two, and in scouring the plows. A representative of the Janesville Machine Co. was present to insure the proper hitch and set of the plows and to insure satisfactory results. During the forenoon also, the farmer, who was trying for the first time to operate a tractor, was given practical instruction in its operation. So tractable did he prove to be that long before the noon hour he was taking the outfit around the field and doing most excellent work.

"Soon after noon neighboring farmers, some of them coming from quite a distance, began to arrive, all in automobiles, and each automobile carrying from two to four interested observers. At no time during the day were any great numbers present at any one time, as most of them had too much work at home to be long absent, but all the afternoon they continued to come. Interestedly they followed the tractor around the field, talking learnedly and technically about soil conditions, commenting knowingly upon the quality of work the outfit was doing and intelligently discussing the mechanical construction of the Interstate tractor and others. The interest manifested was not merely curious; it was essentially practical.

Netted Two Sales

"Incidentally, it might be mentioned that the demonstration at San Jose netted two sales for Weimer—one to the farmer upon whose farm the demonstration was held, the other to one of the prospects who came to observe and remained to buy."

This, too, is the sort of thing the C. U. Williams & Son Co. is encouraging and promoting throughout its territory. On the same day the San Jose demonstration was held two other similar events were put on at distant points in the territory. It is the purpose of the company to give at least one demonstration at every point where the company has local representation.

Including both organization, the automobile and the tractor, the C. U. Williams & Son Co. employs about 50 men. Well conceived and executed plans are pursued to keep the organization inspired with an esprit de corps which is productive of real results in sales.

When and How to Use a Lawyer

By Harry J. Hibschman

Select a Lawyer

1—Who knows law
2—Who knows human nature
3—Who knows your line of business
4—Who is businesslike
5—Who is worthy of your confidence

JUST as the present war began a New Yorker was walking down a street on the East Side with an English friend of his, when they passed a beggar who was minus both arms and both legs and presented a pitiful appearance. The American gave the beggar a quarter and then asked him how he got hurt. When he answered that he received his injuries in a mine accident, it was quite apparent from his speech that he was a native of Germany. Immediately the Englishman gave him a dollar. This surprised the American to such an extent that he made some remark about his friend's liberality and asked why he gave the cripple such a large amount.

"Well," replied the Englishman, "I don't mind telling you that he's the first German I've ever seen trimmed to my taste, and I was just expressing my appreciation."

When one speaks of lawyers to the general public, one expects to encounter an attitude similar to that of the Englishman quoted above. As one man expressed his answer to the question suggested at the top of this article, "Boil him in oil, and do it as quickly as possible."

Choose Right Lawyer

In spite of this general attitude, or perhaps to some degree because of it, the writer believes that it would be profitable for business men to give thoughtful consideration to the subject suggested.

In that connection the first thing to be determined is the kind of lawyer one should use.

Of course, the fact that the Supreme Court has granted a man permission to practice if he can get anything or anybody to practice on, is no sign that he is a lawyer. The court only professes to license attorneys and counselors-at-law. The lawyer's license comes from the Lord in the shape of certain natural gifts and from within himself by reason of hard work, experience and perseverance.

The real lawyer of the present day is a man of varied qualifications, and it is wasteful to employ any other.

To begin with, a lawyer needs to be versed in law. That is the first requisite. But at the same time it does not mean that he must be able, offhand, to answer at a moment's notice any question that may be asked him by a client. It means rather that he shall have a good, broad knowledge of the principles of law and the knowledge and training enabling him to use the books containing the many thousands of decisions upon which the solution of legal questions in the final analysis depends.

Next in importance on the part of the lawyer is a knowledge and understanding of human nature, for, after all, the personal equation is a decisive factor in most of the matters in connection with which a lawyer's aid is required. How, for instance, can a lawyer measure judges, jurors and witnesses in the trial of your cause unless he has had a wide experience with men and actual contact with them? Or how can he advise you reliably concerning a business deal unless he can measure it by the law of human conduct as well as by legal principles?

Two Examples

Two examples occur to the writer of the idea he has in mind. In the trial of a certain case a witness had testified to the exact time of a certain occurrence which it was important to fix precisely. On cross-examination he was asked how he was able to fix the date, and answered that he made a record of it at the time.

"You keep a diary then, do you?" inquired the attorney.

"Yes, I do," said the witness.

"And before you came to court I presume you examined your diary and positively fixed this date," suggested the lawyer.

"I did," said the witness.

"Of course," continued the lawyer, "in keeping a diary you make a complete record for the day in the evening of any particular day, don't you?"

"I fill out each day's page the last thing before I go to bed every evening," said the witness.

"Is there not a possibility," insisted the lawyer, "that some days you overlook making your notes and that then you do it the following day or even later?"

"None whatever," emphatically replied the witness.

"Where is this diary?" asked the lawyer.

"At my home," was the answer.

"But you are positive," again asked the lawyer, "that you make each day's entry each day, and that if the book were here it would show that you were in Chicago on the day in question?"

"It surely would," answered the witness. "I must have put the fact down in my diary that evening, right in my room in the hotel in Chicago."

"Please bring that book to court this afternoon and let us see it," requested the lawyer.

In the afternoon it was produced and the entry for the day in dispute read: "Oct. 10—In Chicago, buying machinery. Returned home *the next day*."

Of course the last expression absolutely discredited the testimony of the witness.

Afterward the lawyer was asked whether he was not taking quite a risk in having the book produced, as it seemed likely that it would strengthen the testimony of the witness.

"Possibly there was some danger," was his reply; "but I figured that no man of his general characteristics would fill out a diary before he went to bed on a visit to Chicago. My guess was that his mind would be too muddled or too filled with other things to allow him to look after a thing like that."

Haste Creates Suspicion

The other incident involved a real estate transaction. The agent had been instructed by one of the parties to leave the abstract of title and the deed with the latter's attorney. When the agent handed them to the attorney he said: "Moyer wanted me to leave these with you. Wish you would rush them so we can close the deal this afternoon. I know the title's all right. The First National Bank made a loan on it only a few weeks ago; so, of course, it must be."

The abstract was apparently without a flaw, showing title to the property in a man by the name of Bert W. Knowles. The deed presented had been signed and acknowledged the day before by Bert W.

And Then

1—Use him *before* you get into trouble
2—Pay an annual retainer
3—Consult him often
4—Be frank with him
5—Trust him

Digitized by Google

Knowles and Mary E. Knowles, his wife. Nevertheless the attorney telephoned his client to come to his office; and upon his arrival the lawyer asked him why there was any need of closing the deal that afternoon. The client replied that he knew of none. He had paid a thousand dollars as earnest money and could not refuse to complete the purchase.

"If that's the case," said the lawyer, "I can't understand why that agent wants to rush it through. But I have a 'hunch' that there is something wrong. I may be foolish, but I don't want you to close that deal to-day. Put the blame on me. Tell them I didn't examine the abstract."

The lawyer went to the notary public who had taken the acknowledgment for the deed and asked him whether he knew Knowles. He said he had never seen him until the day before, when the real estate agent who was handling the deal with Moyer had brought him and his wife into the office and introduced them. The notary said he had known the agent a long while, as they had offices in the same building; but the notary did not think he had ever taken any acknowledgments for the agent before.

Secured Description

The lawyer then got a careful description of Knowles and his wife; then he went to the bank through which the mortgage transaction had been handled. There he learned that Knowles lived in a different locality, and the description he received was so different from that given by the notary that he became convinced they were not the same parties.

The next day the agent and the man who had signed the deed were arrested on a fraud charge, and Moyer got back his money. The value of the lawyer's services lay in the fact that his experience with men had developed a keenness of mind that led him to suspect something was wrong merely from the slight impatience of the agent, when there was no apparent reason for haste.

Of course a lawyer to be of real value to a business man should be familiar with business affairs and business methods. He cannot be of real assistance, for example, in forming a corporation to engage in a certain line of endeavor unless he has some conception of what other similar concerns are doing. The proper application of the legal principles with which he may be very familiar can only be made if he understands the nature of the business and the methods used to conduct it.

Should Know Bank Bookkeeping

In court he is but a poor representative if he lacks in these respects. Take him in a case involving the books of a bank. How can he present his case if he has no knowledge of the methods of bookkeeping employed by the banks? The writer has a vivid recollection of an argument made a few years ago by a lawyer in a certain case to the effect that on a certain day his client had more than five hundred dollars in a certain bank. In support of his contention, the lawyer offered a statement prepared and furnished by the bank. It showed a balance in the amount claimed, but it showed the balance as an overdraft; and the lawyer was too ignorant of bookkeeping to realize that fact.

Then the lawyer to be employed must be a man of character. He must be a man who uses business methods in his work; and he must be able to do creditable trial work.

Should Be a Good Business Man

Particularly should it be emphasized that it is a mistake to employ a lawyer who conducts his business without the same system that a good business man in any other line would consider essential. The lawyer's work requires the doing of many things for which the law fixes a particular time. Thus, after a suit is started an appearance must be entered within a given time. If it is neglected, a default may be entered and the client's opportunity to present a defense lost. Or it may be important to prepare a transcript on appeal within a certain time. Failure to do so, forfeits the right to appeal.

Examples without end could be cited. But to any reader who will only think for a moment, no further citations are necessary. He need only apply the same tests in this respect to a lawyer that he would to any one else he wished to employ. Would he employ as a manager in his business, for example, a man whose desk was covered with a disarray of papers and unfiled letters, who failed to keep appointments, who was guilty of losing valuable papers, and who neglected to do things when they should be done? If not, then let him apply the same tests to the man he employs as a lawyer, for the mistakes of the latter may not only be expensive; they may be absolutely ruinous to one's business and destructive of one's reputation.

Having selected a lawyer who is worthy of confidence, the business man may well consider how he should use him.

Forestall Trouble

The writer's suggestion is almost trite: Use him before you get into trouble.

Every day brings proof into a lawyer's office that this is absolutely the best advice that can be given on the subject. Every day brings examples of the cost of failing to follow this simple and sensible suggestion.

The writer recalls a case in which a bank advanced money to a corporation for the purchase of machinery bought under a conditional sale contract. Payments were made as the installation of the machinery proceeded until there was only a balance of a thousand dollars due. Then the bank paid this amount direct to the vendor of the machinery and took an assignment of the contract, which, in the usual manner, reserved title in the vendor until the full purchase price should be paid. This contract, assigned to itself, the bank held as security for the entire amount advanced to the corporation, nearly ten thousand dollars. Later a receiver was appointed for the latter, who contended that the lien of the bank was limited to the thousand dollars due the vendor at the time the contract was assigned to the bank.

The matter was taken into court, and the receiver's position was sustained. The bank lost nearly eight thousand dollars by its failure to take enforceable security, which could easily have been obtained at the time it took the assignment of the vendor's contract. The officers of the corporation could and would have executed a mortgage without hesitation at that time.

Another case recently decided by the highest court of one of our states illustrates how easy and cheap it would have been to prevent the loss of a substantial sum of money. A real estate broker listed a piece of property owned by a man by the name of Holmes. In the state in which they lived and in which the property was located, there is a statute which provides that a contract for the payment of a commission for the sale of real estate is valid only if in writing. Holmes signed a contract for the sale of "16 lots in block 10 of the original town of ——;" and later the agent found a buyer, and the deal was closed. Holmes failed to pay any commission, and the agent sued on his contract. His case was thrown out of court because there were twenty-four lots in block 10, and the contract was insufficient under the statute, as the lots which Holmes intended to list could only be determined by oral evidence. The same point had been decided long before this particular contract was made, and any real lawyer could have drawn a binding contract for the agent, one that would have protected him.

Annual Retainer Best Arrangement

The writer's opinion is that the most satisfactory arrangement that can be made between a business man and his lawyer is one providing for an annual retainer in consideration of which the lawyer's advice can be asked at any time upon any subject connected with the client's business. Extra charges are contemplated, of course, for litigation.

Under such an arrangement when the client is in doubt he can turn to his telephone and frequently avoid costly mistakes by a few minutes' talk with the attorney; and he can have his contracts and other documents passed upon before spending money by virtue of them.

The writer recalls a striking illustration of the idea he is trying to impress. He had an arrangement like the one mentioned with a bank. One day the cashier telephoned him and said: "Walters, the automobile man, is asking for a loan and offers as collateral security two notes. The first is to be executed to-day by Jones, the broker, and the other is secured by a conditional sale contract under which Dr. Wilson bought an automobile. We know Jones is poor pay, and we are wondering how to protect ourselves on the Wilson note."

"So far as the Jones note is concerned," said the writer, "just make it payable at his own bank. He is slow, but he usually has money on hand, and the note made payable at his bank will be good as a check. As to the Wilson note, if you

Digitized by Google

take that as collateral you must also take a bill of sale from Walters for the car, subject to the contract of sale."

After some further discussion the matter was arranged as suggested.

On the day the Jones note became due, he paid no attention to it; but a few minutes before the close of the bank, the note was presented at the one where Jones kept his account and where it was made payable, and payment was demanded as of a check. The paying teller refused to honor it, but admitted that Jones had more than enough money to his credit to pay the note. The matter was taken up with the cashier and other officers; the bank's attorney was consulted, and the note was paid.

With reference to the Wilson note, the writer's advice was based on a case in which a vendor under a conditional sale contract had taken notes representing the balance of the purchase price; and he had used these notes as collateral security, without even telling the bank where he used them that there was a conditional sale contract in existence. Later he paid the bank and recovered the notes; and still later he tried to replevin the article covered by the contract, an automobile. He lost his suit because the court held that the use of the notes as collateral security constituted an election to look to the notes rather than to the provisions of the contract and was a waiver of the latter.

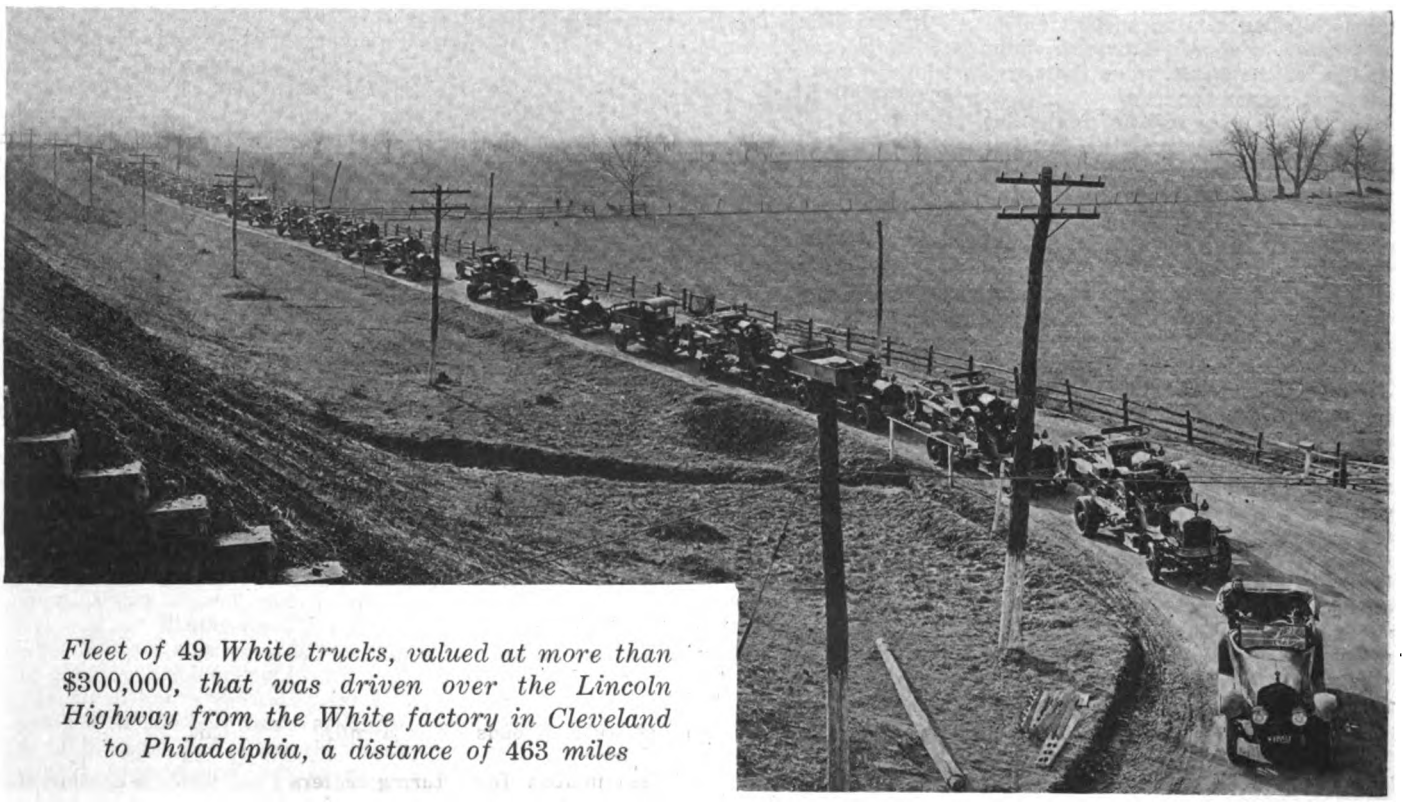
The fact is that a reliable lawyer should be used by every important business man or corporation as a part of the concern. His advice should be freely sought, and he should be kept in close relation with the business.

In that connection it must be emphasized that to use a lawyer to advantage one must be frank with him. He cannot give an opinion worth following unless he has all the facts.

The writer recalls in that connection with chagrin how he advised a man some years ago that he could undoubtedly recover a certain piece of real estate upon the facts stated, only to be confronted later in court with an unrecorded quitclaim deed signed about six years previously by his client, about which, of course, the latter had remained absolutely silent.

It is hard to understand how men expect to gain anything by hiding facts from their lawyers; or how they hope for success in litigation when they deceive the very men upon whose skill and knowledge victory must depend.

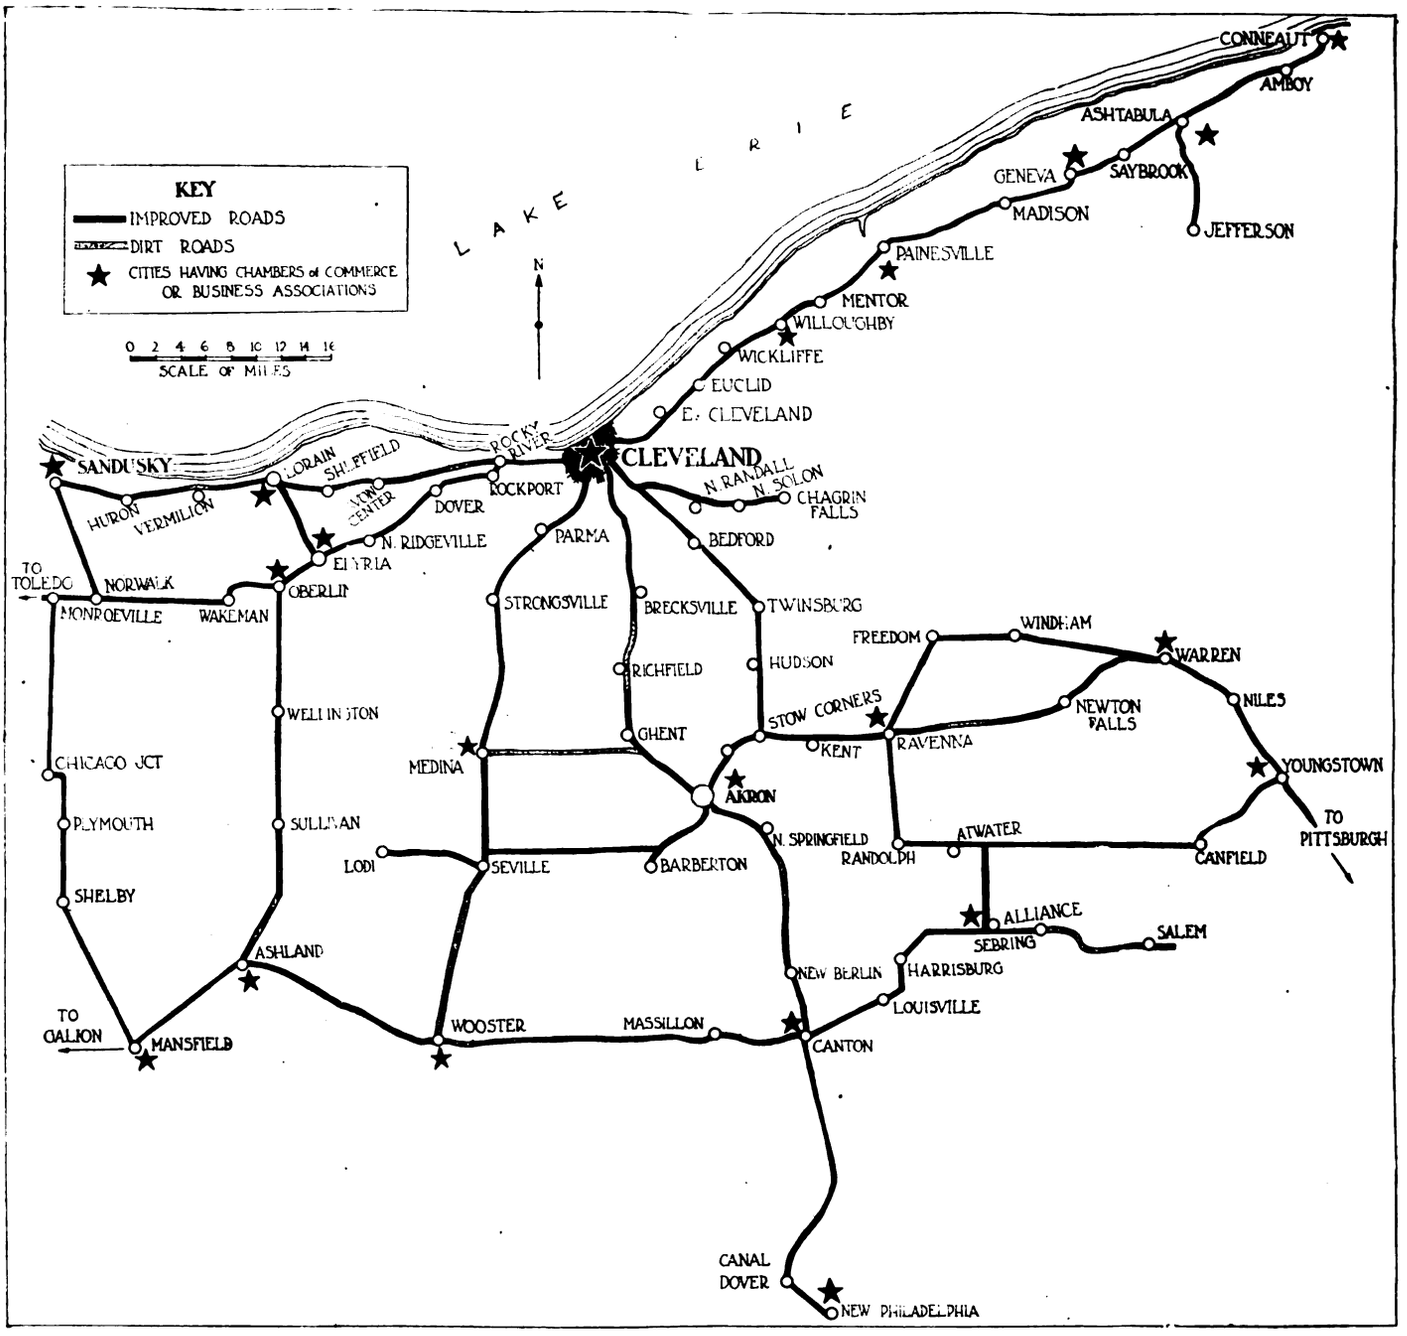
The proper directions for using a lawyer in litigation can be summed up in eight words: Tell him, help him, trust him, obey him.



After you have given him the facts frankly, find out what more you can do. Then do it. Witnesses may have to be located and brought back; papers and letters may have to be produced; additional evidence may have to be unearthed. If so, do your part under your lawyer's directions. Then trust him.

Don't imagine that you have to tell him over again each day what the facts are. It is his business to know your case better than you do after you have given him the facts once. Tell him anything new that you discover, but don't annoy him with "vain repetitions." Neither imagine that he is not taking care of your case if he doesn't report its progress every day. Many things happen in a case before it is ready for trial that are of no importance so far as the final result is concerned, and that no one but a lawyer really understands. It is not necessary that the client should be accurately informed continually regarding these details. He has a right to assume that his lawyer will take care of the case after it is entrusted to him. If the client cannot act on that assumption, he should retain another attorney.

Finally, in the trial of his cause, every man must be willing to trust the conduct of the case to his attorney. If he cannot do so, he has either made a poor choice or he is not a desirable client. Let him remember that the lawyer is supposed to know how to protect his client's interest and how to conduct his case. Let him refrain from dictation.



Some of the saddest incidents one sees in court occur when the client's insistence causes a course of action that the attorney's judgment opposes. Thus an important case involving a man's liberty was lost because he insisted that his attorney should ask a witness for the state whether or not the person he saw coming out of a building that had been robbed had a mustache. He answered without hesitation that the man he saw wore a mustache. The client was smooth-shaven and thought himself very clever in compelling his attorney to ask the question which brought such a response. Instead the result was to give the prosecution a new clue, and the next morning a barber was produced who testified that he shaved the defendant, removing a mustache, the day after the day of the crime. This made identification certain that before was very weak.

To sum up the entire matter, use the same judgment in hiring a lawyer that you use in hiring any one else. Get one who is qualified and dependable, use him before you get into trouble; but if you are compelled to go to court, tell him the whole truth, then help him, trust him, obey him and back him to the limit.

Fleet of 49 White trucks, valued at more than $300,000, that was driven over the Lincoln Highway from the White factory in Cleveland to Philadelphia, a distance of 463 miles

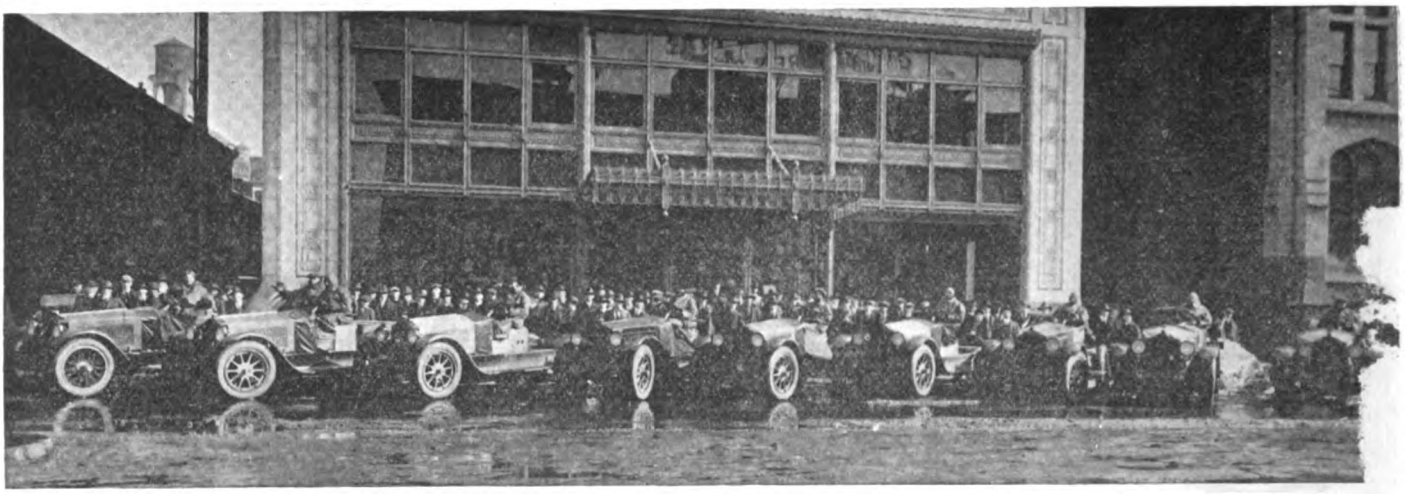
Map of Ohio showing the large industrial centers now being served by motor trucks, and the class of roads over which the vehicles must run. The stars indicate the points at which return load bureaus may be established

THE State of Ohio is taking active steps toward the perfection of a return loads system which will go far toward relieving freight congestion, increasing the use of motor trucks and greatly multiplying the possibilities of selling trucks within the state.

Ohio has now no return loads bureau. However, the first steps toward the establishment of such a bureau were taken early in March when a special sub-committee of the Ohio Defense Council was formed to work out the development of motor truck transport in Ohio as a war measure. Since that meeting, however, not a great deal has been done in developing the system. J. G. Young, who is secretary of the committee, plans first to work out a simple return loads bureau in Columbus, and with this in operation to extend the system to other cities.

Ohio Needs Return Loads Bureaus



Both east and west of Cleveland, which is the largest manufacturing center in the state and has more motor trucks bringing goods into and taking them out of its confines than any other, with the possible exception of Akron, there are a dozen important centers where return loads bureaus might be established. Yet there is not a single bureau. This, despite the fact that practically all of these centers are connected by some form of improved roads.

Cleveland itself has no return loads bureau, though an analysis made recently shows that there are approximately 100 trucks in service to and from Cleveland at this time, and approximately 100 more which could be quickly transferred for haulage between this center and nearby points.

About 1500 tons of freight daily are being carried by these 100 trucks from such points as Akron, Youngstown, Canton, Sandusky, Conneaut, Ashtabula, Alliance and Mansfield. Few of these are carrying full loads in both directions. The establishment of return loads bureaus in these cities would make it possible to almost double the present tonnage carriage without the addition of further equipment.

That the State of Ohio should have a state-wide return loads bureau organization admits of no doubt, for the state has a large number of important manufacturing centers from which a considerable tonnage of goods is shipped in and out.

Packard trucks carrying passenger chassis arriving in New York after a drive from the factory in Detroit

Getting Cars In Over the Road

Some Dealers Make One Car Tow Another—Others Double-Deck Them, and Two Firms Are Using Girls

WITH the freight situation remaining almost as completely tied up as it was a month ago, dealers in New York are driving cars in from the factories in constantly growing numbers. Although there have been increased deliveries of cars this week from lots shipped a long time ago, the general opinion prevails that there is little or no improvement in the movement of freight.

In the first place, only a small allotment of freight cars is available at any time for shipping cars, and there is no certainty as to when they will be delivered. Another drawback is the fact that practically no cars can be delivered close to the city. They are dumped at Dover, Albany, Elizabethport and various points from 10 to 50 miles away and have to be driven in from there. As no decided improvement can be looked for this summer several of the larger dealers have organized regular crews with captains, road inspectors, etc., and are bringing in from 75 to 100 per cent of their cars by road.

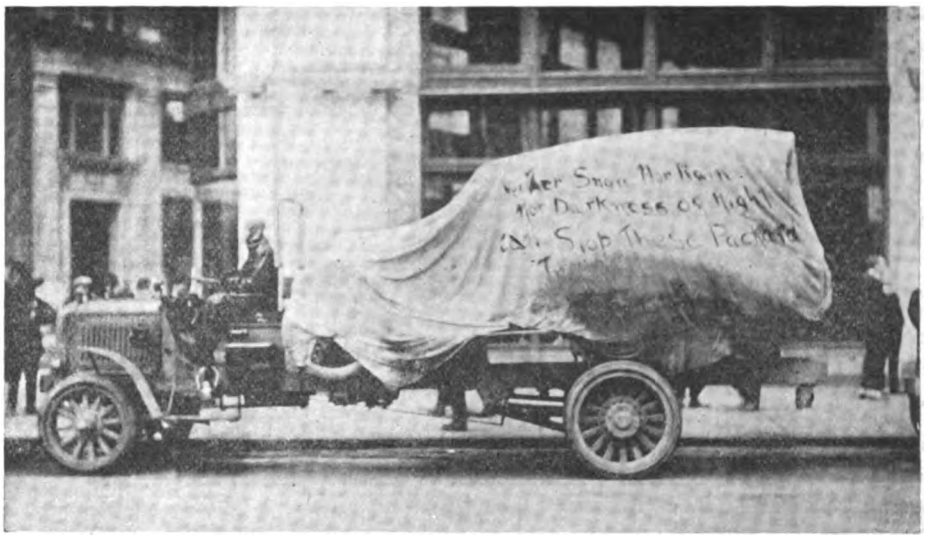
These girls drove a fleet of Chandler cars from Cleveland to New York. The photograph was taken in Central Park after the finish of the run, and they do not seem to have suffered much from the ordeal

Since the snows, the roads in general have been pretty good. There are bad stretches here and there, but these do not represent a very large percentage of the distance. One particularly bad stretch is from Gettysburg to Philadelphia. Some of the cars have been making a detour south from the Lincoln Highway at Gettysburg to Baltimore and from there on up through Philadelphia and Trenton.

The route that seems to be reported in the best shape for the whole distance is the one along the southern shore of Lake Erie, through Cleveland, Geneva, Westfield, and turning there to Hornell, Elmira, Binghamton, Liberty, Tuxedo and Hackensack.

To Employ Canadian Route

Another deviation from this route continues on from Westfield to Buffalo and into the city through Albany, or Buffalo can be avoided by turning off at Batavia and using the remainder of the route through Liberty. Now that the snows have disappeared, the Canadian route from Detroit and the Michigan cities will be largely used. It is fully 200 miles shorter, and the roads are in very good shape. In making use of this route, it is necessary to have a pass and papers to show to the customs officers when entering Canada and again when entering the United States at Niagara Falls.



As soon as the lake boats start to run for the summer many dealers will make use of them for a part of the distance. Boats run from Detroit to Erie and to-

Digitized by Google

Buffalo, and this will cut down the driving distance considerably.

The necessity for driving cars in from the factory has brought about a demand for a class of employees not hitherto much employed by the dealers. It is either impossible or inconvenient to take men from the regular organization to bring the cars in, so outside help has been obtained in various ways. Some of the drivers secured were far from satisfactory. Some considered the thing as a joy ride, others turned out to be lovers of "nose paint" and some abhored the thoughts of getting up in the morning. These undesirables have been eliminated as fast as possible.

The Chandler and Reo dealers have found it advisable to use girls for drivers, although the general opinion seems to prevail that they are not practical for this sort of work. Others may come to it later if they find it impossible to get a satisfactory class of men. The greatest

A Packard carrying passenger chassis. The sign on the cover reads, "Neither snow, nor rain nor darkness of night can stop these Packard trucks"

Summary of the Drive-Away Situation as Viewed by New York Dealers

FLINT TO PORT HURON AND SARNIA

Flint, Lapeer, Imlay City, Capac, Emmitt, Port Huron to Sarnia. At Port Huron take Ferry to Sarnia where you show pass and papers from factory showing driveaway and get clearance papers from Canadian Custom Inspectors. Stop at Sarnia for night.

SARNIA TO HAMILTON

Leaving Sarnia in the morning lunch at London which is sixty miles out. Pass through Ingersoll eat supper at Bransford making Hamilton which is about 25 miles further out the night stop.

HAMILTON TO BATH, NEW YORK.

Leaving Hamilton in the morning go to Suspension Bridge where the Custom Officials will look over your passports before crossing into the States. At the American side of the Falls inquire for the location of the brick road leading into Buffalo about 18 miles out on this road inquire for directions to Batavia, follow this route avoid going through Buffalo. At Batavia inquire for directions to Avon leaving Avon to Mt. Morris, Dansville, Hornell and to Bath the night stop.

BATH TO LIBERTY

Leaving Bath go to Elmira eat lunch in Binghamton, Binghamton to Windsor, to Deposit, Hancock, Livingston Manor, Liberty for the night stop.

LIBERTY TO NEW YORK.

Liberty to Monticello, to Middletown, to Goshen, to Tuxedo, Suffern, Fort Lee Ferry to New York City.

Reproduction of the typewritten route sheet furnished to drivers and captains driving in Buick cars

precautions have to be taken to insure that the cars will be carefully driven so that they will arrive as nearly like new cars as possible.

In general, the cars are driven in groups or fleets of five or six, the fleet being in command of a captain who is more of an expert than the drivers, and who can fix up any minor mechanical difficulties that the cars may get into. He must be able to take command of the men and get the most out of them, and at the same time not be too autocratic.

As these fleets are going through all the time, it is necessary that a favorable impression be created for the men in the minds of local officials, hotelmen and others with whom they come in contact. The Buick company has road inspectors who seek to smooth out any roughness that may occur.

These road inspectors also keep tabs on the crews and appear anywhere along the road at odd times. The men know of the existence of these inspectors, and this tends to keep them on their best behavior. The Buick has had as many as 100 men on the payroll at once as drivers, and the drive-away business is brought up to as nearly perfect a system as possible.

Urge Customers to Drive Cars

Many of the dealers are urging their customers and the customers of their subdealers to go out themselves and drive the cars in. This idea appeals to many, especially in the cases of new owners. It gives them a chance to visit the factory where the car is made, and to drive the car the first few hundred miles under the supervision of an expert.

Ernest V. Derks, service manager of the New York branch of the Buick Motor Co., has prepared an agreement which all the drivers are required to sign before taking up their work. He says that with this agreement, the fleet captains and the road inspectors, they have practically no trouble with the men. The agreement follows:

I.....do hereby agree to serve the New York Branch of the Buick Motor Co. in the capacity of automobile driver from Flint, Mich., or any other given point to destination as specified by said company's representative. I further agree:

First: To obey all speed laws or traffic regulations, and promise that at no time will I exceed a speed of 30 m.p.h., and will only travel at this rate after the car is thoroughly limbered up and on good roads, otherwise my speed will be limited to 25 m.p.h. These limits are only to be reached when within the speed law and condition of the road warrants it.

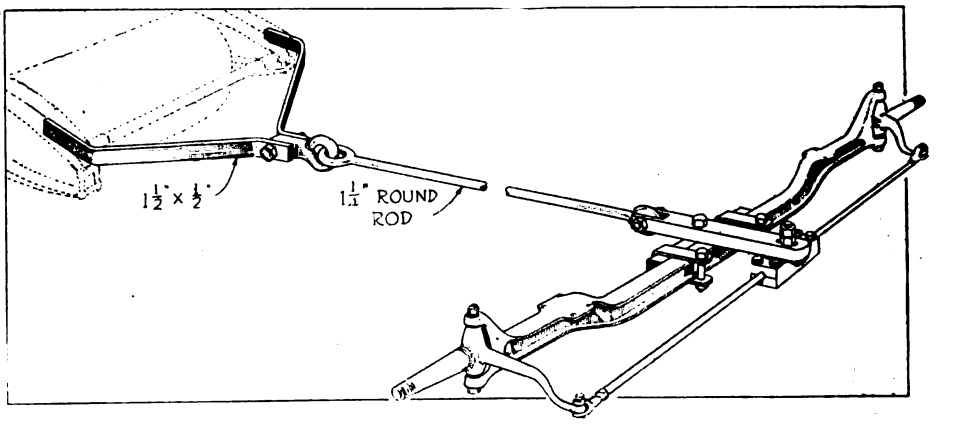
Second: I promise to keep in my respective position when driving and to keep 100 ft. distant from the car in front of me. Should my car be disabled, I will signal the horn three distinct times, in which case all drivers should stop. I promise that at no time will I separate from the rest of the crew that I was sent with unless authorized by the captain to do so.

Third: I promise to look presentable and act gentlemanly, and at no time use profane language when in hotels, restaurants, trains, or at any time coming into contact with the public. I will also make as little noise as possible when coming through towns, and will not raise any disturbance whatever.

Fourth: I promise to take care of the car I am driving to the best of my ability. I agree to lubricate the car thoroughly or any part thereof whenever conditions warrant it. Cut-out never to be opened. I will also see that the tires are inflated to the proper pressure at all times, and will not run my car unless it is in proper condition. I promise not to drive my car unless both foot and emergency brakes are in proper condition. I will not lower the side curtains unless authorized by the captain to do so, and in addition to taking the best care of the car, I will also bring in complete all tools, accessories, or any other material which is given to me for that purpose. I will not make any marks or impressions upon the top, body or other part of the car. I promise to be of whatever assistance I can be to the rest of the men of the crew in helping bring the cars in as near brand new automobiles as possible.

Fifth: Should I be arrested for violating any of the State, city or county laws, I agree to pay the fine wherever same is imposed, and where there is an alternative of serving the time, I will not do so. If I have no means of settlement, I will let the captain settle, and the amount incurred will be deducted from my salary.

Sixth: I promise to obey all orders issued by the captain, and should my services not prove satisfactory, the said company's representative has permission to discharge me on the road and pay me my salary up to that time. Said company is not obliged to pay me any further compensation, or to pay any of my traveling expenses after I have been discharged.



In consideration of all the above, I am to receive daily or weekly compensation, and hereto attach my signature in acceptance thereof.

(Signed).....

One Car to Tow Another

Another interesting feature of the drive-away is the coming use of devices whereby two cars may be brought in by one driver. A towing bar, attached to the rear of the driven car, pulls the towed car by a clamp in the front axle. The bar extends behind the axle, and a stud on a clamp on the tie rod goes in a hole in the bar. In this way, when the bar turns, it moves the tie rod, and the towed car follows its leader.

At present the Packard branch is driving in no passenger cars, but each truck driven in carries either a smaller truck or a passenger car chassis. There seems to be no logical reason why this idea cannot be extended.

Towing device used by the New York Buick Branch, so made that the towed car is steered by the towing bar. Device weighs about 50 lb. and could be made for about $15

Two Men

Where Last Year You Were Only One

By Ray W. Sherman

"WELL," beamed Reilly, hanging up his coat and hat and hustling towards his desk, "I got it!"

"What?" said Tommy Trumbull, looking up from the letter he was reading.

"Why, that Sayanna truck I was talking about the other day," exclaimed Reilly. "Didn't I tell you we were going to sell trucks?"

"Yes——," Tommy hesitated. "You did say so—but I didn't think you were going to jump right into it offhand."

Reilly laughed. "Oh, you didn't? Well, we're here! See!" And Reilly held in front of Tommy's eyes a distributer's contract for Callawassa, the county and then some.

Will Make Things Hum

"We're going to sell 'em—a lot of 'em. We're only a half a hundred miles from Sayanna, where the factory is located; we can get a lot of trucks if we keep after them. There is a big chance to sell them and we're going to make things hum. The old Sennett factory at Sayanna can't give us as many cars as usual this year. We need more volume. Furthermore, even if we could get all the cars we want, it is up to us as good business men to corral this volume that is lying at our doors waiting for us to pick it up."

"Who's going to sell the trucks?" inquired Tommy.

"Who? You—and the rest of the boys. Why?"

"Do you—can our car salesmen sell trucks?" Tommy cautiously put out a feeler.

"Why not?"

"Well—they say—some folks think that a passenger car salesman can't sell trucks."

"I know it!" retorted Reilly. "Some passenger car salesmen think so—and that's why they can't sell 'em. Generalissimo Foch says no battle is lost until you think it's lost. It's the same way in selling trucks. Salesmen and sales managers think salesmen can't sell trucks because they tried it and the salesmen didn't sell trucks. And the reason the salesmen didn't sell them is because they were accustomed to thinking of only one thing at a time. They didn't make sufficient effort to acquire minds trained to grasp and handle more than one subject."

"Maybe," was Tommy's admission.

"I know," Reilly agreed, "we have talked this thing over in the trade for years, and most of us have come to the conclusion that a passenger car man can't sell trucks. Much of the conclusion is based upon the data of a few dealers who tried it and decided it didn't work well. Therefore, the conclusion is that no passenger car salesman can sell trucks.

A Matter of Mental Attitude

"But I don't believe it, Tommy. It is largely a mental condition. Those who believe it can't be done declare that it requires the salesman to think along two entirely different lines—and that he isn't capable of doing it. I agree with the first part, but I won't admit that the motor car salesmen—at least those you and I have picked and trained—are so low in mentality and intelligence that they can't think of both cars and trucks.

"If left to their own devices they might drift along in the old way, thinking of cars only and believing they couldn't think of both lines, but I propose to give them a lot of help and try to teach them to think along both lines. If some of them can do it and others can't we shall have to investigate and learn if those who can't are hot enough on the one line to justify our keeping them.

"We shall start in by putting one man on trucks entirely, and as the business grows it probably will so be that others will be exclusive truck salesmen, but all the way through the business I propose to see to it that every man in the whole organization has his eyes and ears and mouth open on our whole line of products and sells them. Isn't it a foolish idea for a car salesman to go around through the city every day, stumbling over truck prospects and saying nothing about it? And vice versa?

Must Adapt Themselves to Conditions

"Where would the business get off if all I could think of was selling? Who would look after the figures end? Who would do the buying? Who would watch the service station to prevent losses? If I can think along four or five different lines why can't a salesman—many of whom are just as smart as I am—think along two lines? Everywhere in business we see men thinking of more than one thing—and making a success of it. Why can't our salesmen do it?"

"Maybe they can," admitted Tommy. "Let's try it anyway."

"Attaboy!" enthused Reilly. "I'll tell you, Tommy, we've got to do some of these things—or try them at least. Conditions are changing. They have changed more in the last year than they would have changed in several years had times remained normal. We must change with them or we're back numbers—down-and-outers.

"We have all preached the gospel of greater effort and greater efficiency. We

Dealers Getting Cars With New Continental Engine

Model 9N Is Successor to 7N and Has Longer Pistons, Hotspot Intake Manifold and Heavier Crankshaft

THE Continental Motors Corp. has brought out the 9N engine to succeed the 7N, and cars equipped with the new model engine are now being supplied regularly.

The 9N is similar to the 7N but incorporates certain refinements such as longer pistons, a hotspot intake manifold and a heavier crankshaft. The new manifold is so arranged that a portion of the intake is integral with the exhaust, thus giving the hotspot feature which has been found to be beneficial in shortening the warming up period with present-day fuel. It also aids in the evaporation of the heavier particles of the fuel, since it carries the intake temperature to a sufficient degree to boil off the heavier constituents.

As in the 7N the inlet passes between the cylinders, which tends to keep the mixture in the gaseous state, and more heat is imparted to the mixture in the inlet passage by its contact with the thin wall of the exhaust manifold. The crankshaft is heavier, particularly as regards the crankpin. The pins are now 2¼ in., whereas they were 2 in. on the former model. To compensate for this the cheeks of the cranks are also heavier.

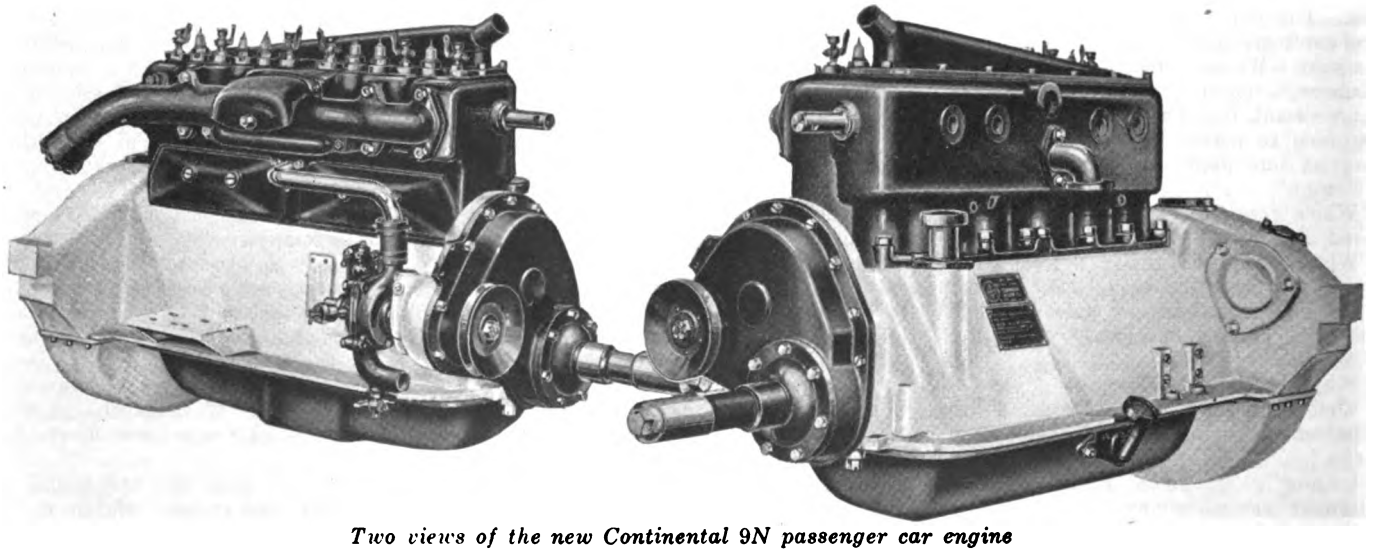
The Continental 9N six has a displacement of 303.06 cu. in., and was designed to meet the demands for an engine of medium power output and particularly adapted to the needs of the assembled car makers, being standard in every respect as regards accessories and clutch and transmission attachments.

The six cylinders are cast in block from reverberatory air furnace iron, which is rough bored and aged before the finishing machine work is carried out on it. Cylinder manufacture includes a finish-bore and grinding to standard size. The water jacket head is cast separately and is retained by screws, which gives a simpler casting and permits of greater uniformity in the cylinder core and tends to a very small percentage of loss in production.

The crank case and oil pan are separate, the crank case being an aluminum casting and the oil pan pressed steel. The bearings are all carried in the crank case and can be reached by dropping the oil pan.

The valves are actuated in accordance with standard L-head practice. They are all of the same size and enclosed. The valves have nickel steel heads electrically welded to carbon steel stems. The heads and stems are ground to size and the clearance around the valves is ample to secure the desired efficiency. The ends of the valve stems are hardened to reduce wear against tappet action and the valves are fitted with oil tempered springs.

The valve stem locking device used on this engine is similar to that on the other Continentals, being a patent design and readily detached. The removable metal plates which cover the valves are also quickly detached and act as a dust-proof housing, as well as a means of keeping the engine quiet.



The pistons are made from the same grade of iron as used in the cylinders. They are ground to size and fitted with three diagonally split concentric expansion rings. These rings are ground on both face and sides. The rings are fitted in the piston grooves and are run into the cylinder by a belting-in process before the engine is run under its own power.

Oil grooves are turned on the outside of the piston for collecting and distributing the oil splash. As is customary, the pistons are weighed and balanced so that the piston sets entering each engine correspond in weight.

The piston-pin is made of No. 3 annealed steel tubing, hardened and ground to size. It is held stationary in the piston bosses by means of a locking device, and has its bearing in a bronze bushing which is pressed into the connecting rod. Lubrication of this bearing is obtained through an opening in the upper end of the connecting rod in which oil from the splash is trapped.

The connecting rods are of I-beam construction and are made of 0.35 carbon steel, drop-forged and heat-treated. Connecting rod caps are held in place by nickel steel bolts, secured by a locking device.

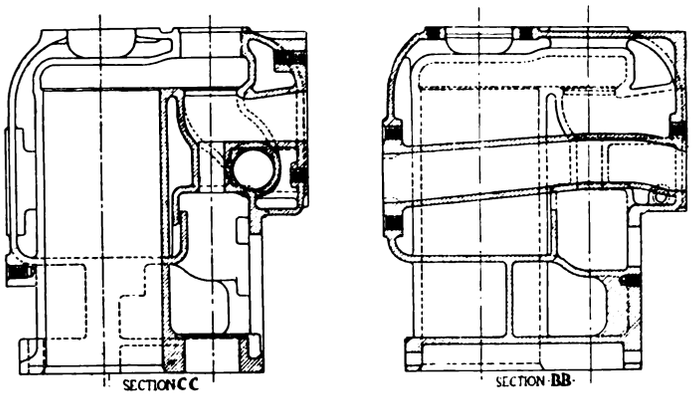
The camshaft is drop-forged from low carbon steel, the cams being integral with the shaft. This shaft is carried in white bronze bearings which are lubricated by oil that is forced to them by the oil pump, as will be afterward explained. The camshaft is heat-treated after the rough machining and annealing processes. The shaft is heat-treated all through and is finish-ground to accurate size on a cam-grinding machine. One of the points regarding the main-

Two views of the new Continental 9N passenger car engine

Digitized by Google

tenance of this Continental engine is the fact that the camshaft may be readily withdrawn by removing the gear case cover. The camshaft acts directly on mushroom type followers, with heads and stems that are ground to exact size.

One of the differences between this engine and the 7N is in the more careful balancing of the crankshaft, due to new methods by means of which the crankshaft revolves at high speed by an air blast. This air blast is directed against paddles attached to the shaft on a collar, thereby relieving the shaft of any complications due to a driving mechanism which would be necessary to rotate the shaft in balancing it. The material for the shaft has a tensile strength of 80,000 lb. per square inch. It is a drop-forged unit, heat treated, with flanges on both ends to take end thrust which may be imparted from the clutch or from any other outside mechanism.



The timing gears are helically cut on automatic hobbing machines. In order to secure the desired quietness, the center distances are held within close limits. Three gears of the timing gear chain are a crankshaft gear, camshaft and a pump shaft gear. These timing gears are housed in the usual case on the front of the motor.

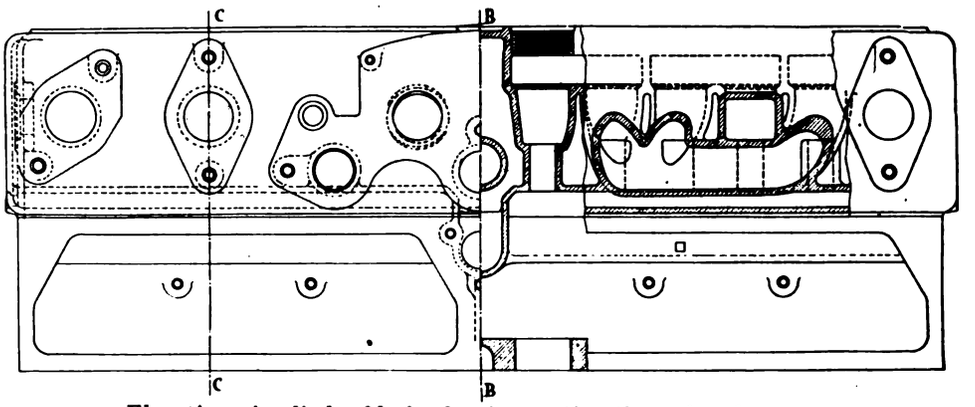
The bearing work is such that the maintenance is a thoroughly simple proposition. Crank, cam and connecting rod bearings are of nickel babbitt. Connecting rod and crankshaft bearings are backed with bronze, which, being a good conductor, aids materially in keeping the bearings cool. These are held in place by brass retaining screws. All of the bearings, after being fitted, are expanded on special arbors, reamed and finished with a slow-running spiral-cut power burnisher, which is claimed to give 98 per cent of actual bearing surface. The connecting rod bearing adjustment is secured in the usual manner by removing one or more of a number of punched steel shims.

The flywheel is attached to the crankshaft on the drop forged flange and is held in place by six steel bolts. It is made of iron, carefully turned and balanced.

Water circulation is by means of a centrifugal pump fitted on the engine and provided with two large bearings fitted with stuffing boxes and equipped with a drain cock to draw off the water in freezing weather.

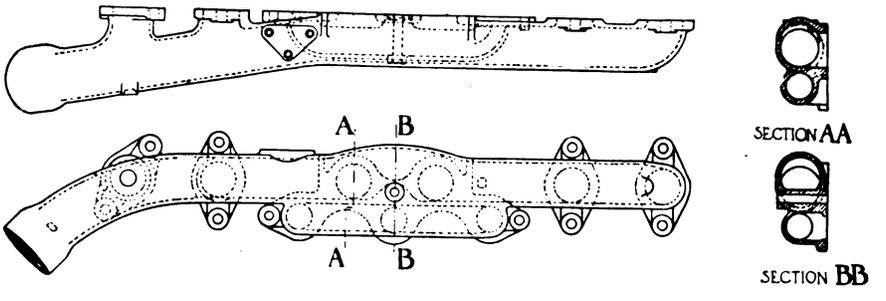
Lubrication is by a force feed and splash system in which circulation is maintained by a horizontal plunger pump driven by an eccentric from the camshaft. This forces oil through copper tubes direct to the timing gears and all main crank and camshaft bearings. The oil then drains back into the oil pan, thus maintaining a proper level for the splash lubrication of pistons, piston pins and connecting rods.

Cross-sectional views of cylinder block



In fitting the clutch and gear set either a cone, multiple disc or plate clutch may be used. Clutch and transmission units specially designed for installation on this engine are manufactured by practically all transmission manufacturers.

The Continental company furnishes with every engine, unless otherwise specified, water fittings, complete, adjustable fan bracket, fan pulley for V belt and port plug wrench. Provision is also made for the application of a power tire pump.



Specifications of the Continental 9N Engine

Type.....Six cylinder vertical—L-head
Size.....3½ in. (88.9 mm.) bore by 5¼ in. (133.4 mm.) stroke
Displacement.....303.06 cu. in. (4967.15 cu. cm.)
Horse-power.....S. A. E. rating 29.4—B. H. P. at 1000 R.P.M. 31, at 2000 R.P.M. 55
Weight.....600 lb. with standard equipment
Cooling.....Centrifugal pump
Lubrication.....Combination pressure feed and splash
Carbureter...Side outlet type, 1¼ in. (31.75 mm.) S. A. E. standard vertical outlet type can be used
Ignition.....Magneto or battery
Lighting Generator.....Any standard make
Electric starter.....Any standard make
Clutch.....Multiple disc or 10 in. plate
Transmission.....Any standard make, having semi-No. 3 S. A. E. bolting flange
Type.....For unit power plant construction only
Suspension.....Can be mounted either 3 or 4 points

Model 9N Dimensions Follow:	Inches	Millimeters
Camshaft diameter	1¼	32
Camshaft bearing, front	2-19/64 x 1-11/16	58 x 43
Camshaft bearing, center	2¼ x 1-1/8	57 x 29
Camshaft bearing, rear	2-13/64 x 1¾	56 x 44
Connecting rod, length	10¼	260
Connecting rod bearing	2-3/8 x 1-13/16	60 x 46
Crankshaft bearing, front	2-25/64 x 3¾	60 x 70
Crankshaft bearing, center	2-11/32 x 2¼	60 x 57
Crankshaft bearing, rear	2-19/64 x 3-5/32	58 x 80
Piston length	4½	114
Piston pin bearing	1-5/32 x 1⅛	29 x 38
Piston rings, 3 in number, width	3/16	5
Valve diameter	1-11/16	43
Valve stem diameter	3/8	10

How to Lay Out a Building—4

THIS is the fourth of a series of articles which take up in detail the layout and arrangement of buildings for the dealer, garage and repair shop.

By Harold F. Blanchard

Plan No. 3

Specifications: Plot, 60 x 150 ft.; four-car showroom; larger store; ladies' rest room; private office; garage for 31 cars; shop for five cars; shop lavatory; tool closet; four machine tools; two specialty rooms.

THIS is a splendid design, Fig. 13, just as it stands, for a man with a well rounded out business of fairly large size. The showroom takes four cars comfortably; the garage houses thirty-one cars in a minimum space; the shop holds five cars with provision for all the usual machine tools and two specialty rooms, making it possible to concentrate efficiently on any two of the following: Welding, electrical repairs, vulcanizing, carbureter repairs, etc.

Plan Is Flexible

It goes without saying that this building may readily be made any number of stories, with the elevator placed on the same side as the washrack. No alteration in the shop is necessary if it is placed on another floor.

From preceding examples it should be clear that this plan may be adapted to any plot more than 40 ft. wide, although, as previously stated, it is not advisable to use it on a plot less than 50 ft. In order to keep the room areas the same it would be necessary to make the various departments somewhat deeper to compensate for a narrower plot. Likewise if the plan is used on a wider plot the rooms might be made somewhat shallower. However, if the plan is employed on a plot less than 55 or 60 ft. wide only two rows of cars can be stored.

Accessory Store Important

The accessory store is considerably larger than any shown heretofore. Also it is the first store entirely separate from the showroom.

Only one small door is used for an entrance to the showroom and store. Cars are introduced through a sliding door at the rear corner. The oblique position of the door is necessary in order to allow sufficient clearance for a car. This modification may be employed on any of the plans shown so far and most of those which follow. It is an economical way of giving an inside car entrance to the showroom where this is deemed necessary.

The rest room is a convenience for ladies which will be appreciated mainly by tourists. In a large city it would undoubtedly be wiser to use this space for some other purpose; for example, it might be employed as a conference and prospect closing room.

Fig. 14 shows the same plan slightly changed for a corner plot. The driveway space is used up by allowing a somewhat larger store, a considerably bigger stock room and a showroom that has a much greater area.

Double doors have been substituted in front so as to allow the entrance of a car, since the elimination of the driveway precludes the use of the obliquely placed door shown in Fig. 13.

Cars are arranged crosswise, as might be expected in a corner garage.

The repairshop is identical with the one in Fig. 13.

Locating the Elevator

If the building is more than one story the elevator location and layout of the second floor are usually best arranged as shown in Fig. 15.

For the sake of showing a variation in washrack layout the one in this plan is built double. Two cars may be washed at one time and there is space for storing four cars.

Digitized by Google

It should be evident by now that any of the three units—showroom, garage or shop—may be exchanged with any of those shown in previous plans.

Wants Three Entrances

Editor Motor World: Please give plans and specifications on a garage with workshop, office, salesroom and storage, same to have outside dimension of 60 by 120 or 130 ft. with three entrances, south, front. North entrance to be alley and west by side street to be constructed of tile brick.—H. H. Haskin, Frankfort, Kan.

Answer—At the present time we are unable to furnish you with complete specifications for your building but we are enclosing a plan as requested.

The showroom and store have a single door entrance at the front. Cars are brought into the showroom through the double doors at the side.

The cars indicated in dotted lines show how the front and rear garage entrance space may be used for the storage of cars late at night.

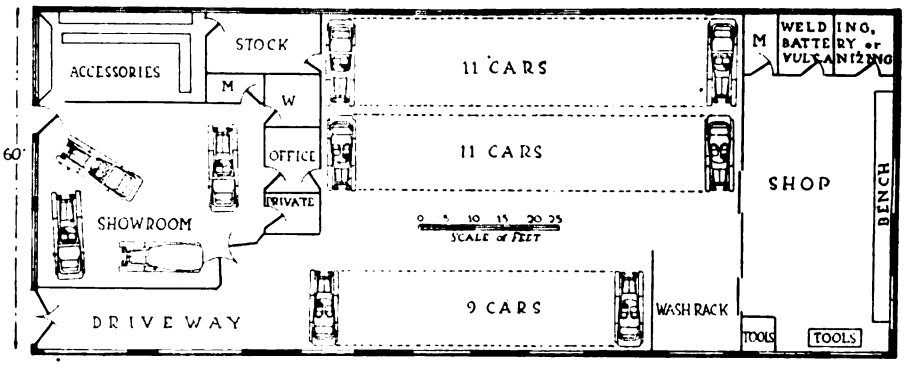

Fig. 13—This lay-out is for a building 60 x 150 with showroom for four cars, office, ladies' rest room, garage for 31 cars, repairshop, etc.

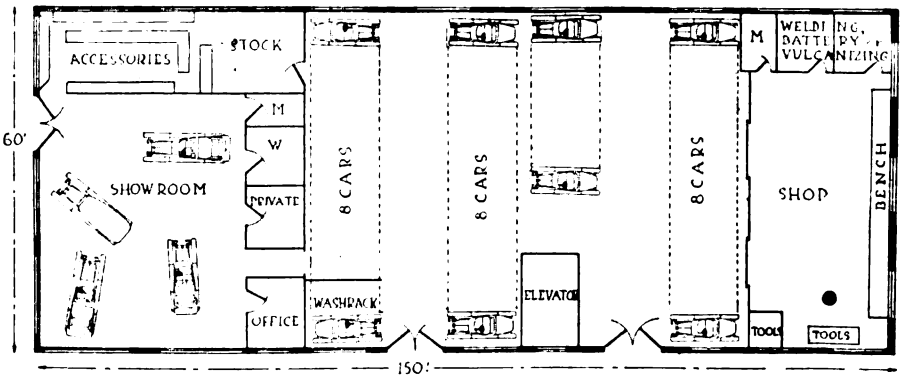

Fig. 14—Here is an alternative arrangement for the same size building

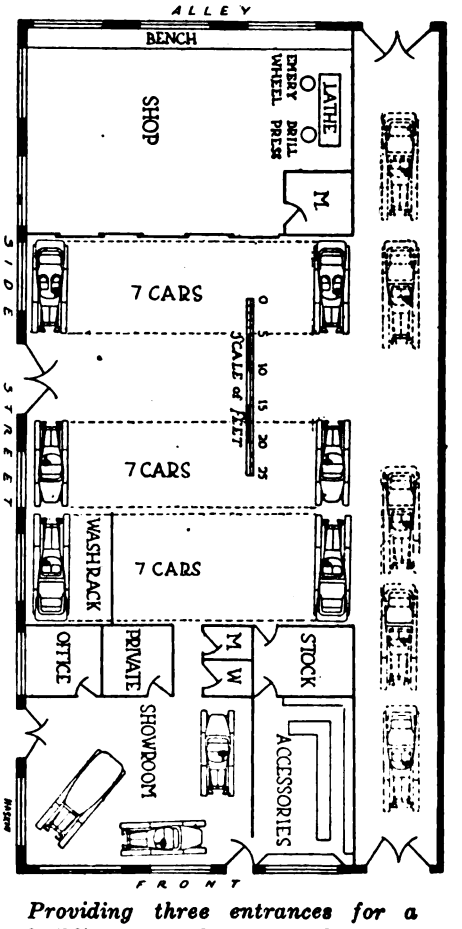
3000 Motor World Systems



NEW YORK, May 7—The manufacturers of the Motor World Simplified System of Accounting, which was put on the market two years ago, have just completed the manufacture of their 3000th system. Practically this whole number is now in operation by dealers and garagemen in the motor car trade.

The system, which is now handled by the U. P. C. Book Co., one of the companies that is affiliated with the publishers of Motor World, does annually a large business in supplying forms to the users of these systems and in addition operates a service department for giving advice and instruction to those who have purchased the outfit.

In some cases users of the system have sent their entire records for a month to this service organization, with a request that the system expert straighten out the figures and show the dealer just why he is not arriving at the results at which he aims. Generally it has been due to some small error in handling the work, and it has not been difficult to straighten the user out and start him on the road to better business and greater profits.

American Brass Spelter Solder

A booklet issued by the Waterbury Brass Branch of the American Brass Co., Waterbury, Conn., gives interesting and instructive details regarding the different meshes, alloys and melting points of brass spelter solder. The practice in mixing spelter solder for use in brass and steel tubes is of interest to the dealer who does his own brazing. To prepare the borax, put a sufficient quantity in the pan to cover the bottom, heat over a slow fire for about an hour to dry out the borax, which should crumble in the fingers to fine powder. To prepare the solder, mix it with the burnt borax in the proportion of 10 lb. solder to 1 lb. borax and add enough water while pounding to bring to the consistency of putty. This mixture will serve as the supply.

Providing three entrances for a building on a plot of standard size

To use, place a small quantity in a brazier's dish, thinning with water to about the consistency of cement for grouting. Apply this mixture to the article.

Brass spelter solder is made in a number of different grades of fineness of mesh, suitable for different classes of work, and also in different alloys, the melting points varying from 1420 to 1600 deg. Fahr. Success in brazing depends largely on the selection of the proper grade of spelter solder.

Minneapolis Association Takes $10,000

MINNEAPOLIS, May 5—The Minneapolis Automobile Trade Association bought $10,000 of Third Liberty Bonds. The members of the trade did not work as a body and only a few served on teams to solicit purchases. L. M. Browne of the Anderson Electric Car Co. was automobile member of the committee which solicited purchases on Motor Row.

Wilmot Succeeds Simning

MINNEAPOLIS, May 4—Walter Wilmot has succeeded R. B. Simning as assistant secretary of the Minneapolis Automobile Trade Association. Wilmot will have the same offices in the Andrus building. He has been show manager many years for the association. Simning has removed to 533 Metropolitan Life building, with the American Securities Corp.

THE LAW

By George F. Kaiser

As It Applies to
Dealers
Repairmen
Garagemen

Some Definitions

From time to time I am asked by dealers as to the legal definition of words and phrases. I am therefore setting out a few of the words which I find have been legally defined.

A word which is naturally of great interest to dealers is the word *"dealer."* This has been quite generally defined in the various state motor vehicle laws to mean "a person, firm, association or corporation having in his, its or their possession vehicles for sale or trade and for use and operation pursuant thereto."

A concise definition of the word *"garage"* as contained in some of the state motor vehicle acts is, "Every place of business where motor vehicles are received for housing, storage or repair for compensation."

The words *"motor vehicle"* are defined to mean, "All vehicles propelled by any other power other than muscular power, except motor bicycles, motorcycles, traction engines, road rollers, fire wagons and engines, police patrol wagons, ambulances and such vehicles as run only upon rails or tracks."

The word *"chauffeur"* is generally defined to mean "Any person operating or driving a motor vehicle, as an employee or for hire."

The definition of the word *"operator"* is "Any person, other than a chauffeur, who operates a motor vehicle."

The term *"omnibus"* usually includes "Any motor vehicle held and used for the transportation of passengers for hire."

In addition to the above words a number of terms like *"as is,"* which was so popular a few years ago, have been defined by the courts of the various states.

"As is" as applied to a motor vehicle has been held to mean the condition a vehicle is in at the time of the sale.

The words *"fully equipped"* were defined in a Canadian case to mean that a car was equipped with such accessories and equipment as it was usual to equip a car with in the motor trade.

The words *"A1 shape"* have likewise been legally defined by a court, and it was decided that the words "A1 shape" meant "First class condition, and that when a car had a knock in the engine, and the brakes were defective, it was not in 'A1 shape.'"

In another case it was decided that the words *"in good running order"* are not the same as "fair condition," as "good running order" means "first class condition," while "fair condition" is not "first class condition."

Even the word *"repairing"* has been defined by the courts, and it has been held to mean "Restoring to a good sound state after decay, injury, dilapidation or partial destruction."

He Can Sue

The New York Supreme Court decided recently that a person who buys an automobile under a conditional bill of sale has a right to sue for damages to the automobile caused by the negligence of another.

The court held that the buyer has this right even though it is provided in the conditional sale agreement that the title is to remain in the seller until the full purchase price is paid because the buyer is under a duty to keep the property safely and to pay the seller for it, and being liable for damages to it he has a right to get back the damages which he may have to pay from the person whose negligence causes the injuries.

License Tangle

Editor Motor World: Can you tell me how to compel by legal proceedings the Secretary of State's office, Buffalo branch, to correct my chauffeur's license?

I have had a license for a number of years, and the type of car has been indicated by the abbreviation "Pl," which I understood to mean Pleasure. This year the card is marked Planetary, and when I took this up with the Buffalo office I was informed that Planetary meant Ford.

Now, as I have never driven a Ford 10 miles in my life, but have always driven a sliding gear car, except driving an old Overland to learn, and my road tests by the examiner being with a sliding gear car, I do not see any reason why I should now be restricted to a Ford, which I have never driven. I have driven a sliding gear car probably about 75,000 miles.

I asked the Buffalo office to correct the card, but it was returned without any correction.—Otis Doty, Canisteo, N. Y.

Answer—You are quite correct when you say that the abbreviation Pl on your chauffeur's license stands for planetary, and that this license will not permit you to operate anything other than a Ford car.

The New York office of the Secretary of State suggests that you write to the Buffalo office and explain to them that you took your tests on an Overland car, and request them to alter your license. It may be that they do not understand that you took your tests on an Overland car.

If this does not clear up the matter please write to us again, and we will see what we can do for you. We shall be glad to do everything we can to assist you in getting the matter straightened out.

Somewhat Mixed

Editor Motor World: I am with a local firm handling a popular car in this territory, but I am not a salesman. A friend of mine owning one of our cars and keeping it in our service station asked me if I could sell his car. I said I thought I could, and with that he said, "Go ahead and sell it." He did not tell me not to. He just said, "Go ahead and sell it." One evening after business hours I gave a prospect a ride in the car, which he bought after the demonstration. I told my friend the next day and he said, "Fine." He received his check and went away happy.

Did I have a right to demonstrate that car on the road or not? Was my firm responsible in any way for damages that might have come to the car whilst in my hands, and have they any claim to a commission?—R. L. M., Hartford, Conn.

Answer—The right of your firm to a commission on this sale depends, of course, on your understanding with the car owner. If you had no understanding regarding a commission but were regularly employed in selling used cars on a commission basis you would probably be able to recover. You undoubtedly had a right to demonstrate the car in order to sell it.

The question of responsibility for an accident would depend, of course, on whether or not you were acting for the owner or for your firm. I think that if you had been entitled to a commission your firm would have been responsible for damages. As you apparently are not entitled to a commission, and it was not a firm matter you were engaged in, I do not think your firm would be held responsible.

Simple Electrical Testing—2

Use of Voltmeter and Ammeter in Making Simple Tests on Starting Motors and Generators

THIS is the second of a series of three articles on simple electrical testing. The articles have been written with a view to assisting the garageman and repairman to a better understanding of the electrical equipment of the modern car so that he can be of greater service to his customers. Save all the articles for future reference.—EDITOR.

IN a previous article the method of testing electrical circuits by means of a test lamp was described in some detail. It was shown at this time that field coils, armatures, etc., might be tested in a similar manner. However, such tests made by a test lamp are not accurate, being simply qualitative and not quantitative in their nature. For making the accurate tests necessary for intelligent repair of the electrical system, certain standard instruments are necessary. Perhaps the instrument best suited for this purpose is a combination volt-ammeter. This may be used to measure high or low voltages, and by employing a shunt may be used to measure amperage. Such an instrument may be purchased from any reliable electrical supply house, which will furnish the proper instrument upon description of the purpose for which it is to be used.

SIMPLE VOLT-AMMETER READINGS

The three common methods of connecting the volt-ammeter in the circuit for taking either the voltage or amperage readings are shown in Fig. 1. A and B show the methods of taking the voltmeter readings and C the connection when the instrument is used in connection with a shunt as an ammeter.

Always in connecting an electrical instrument into a circuit, it is the rule to so connect that the needle will register on the largest scale—particularly so if the approximate voltage is not known. For example, in Fig. 1 A the connection when taking a reading up to 30 volts is illustrated. If the voltage is found to be less than 3 volts and an accurate reading is desired, the connection can be transferred to a 3-volt terminal on the meter as shown in B, Fig. 1. However, were the connection first made on the 3-volt terminal and the voltage amounted to more than 3 volts, the needle would be deflected beyond the scale and the instrument might be damaged.

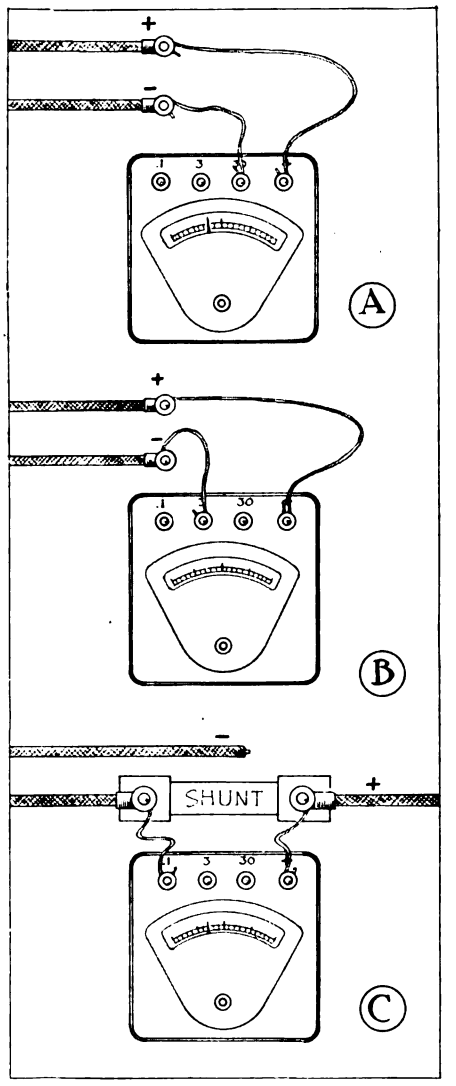

Fig. 1—The three common methods of connecting the volt-ammeter to a circuit are shown above. A shows the connection when taking a reading up to 30 volts; B, up to 3 volts, and C, the method of using a shunt for ampere readings

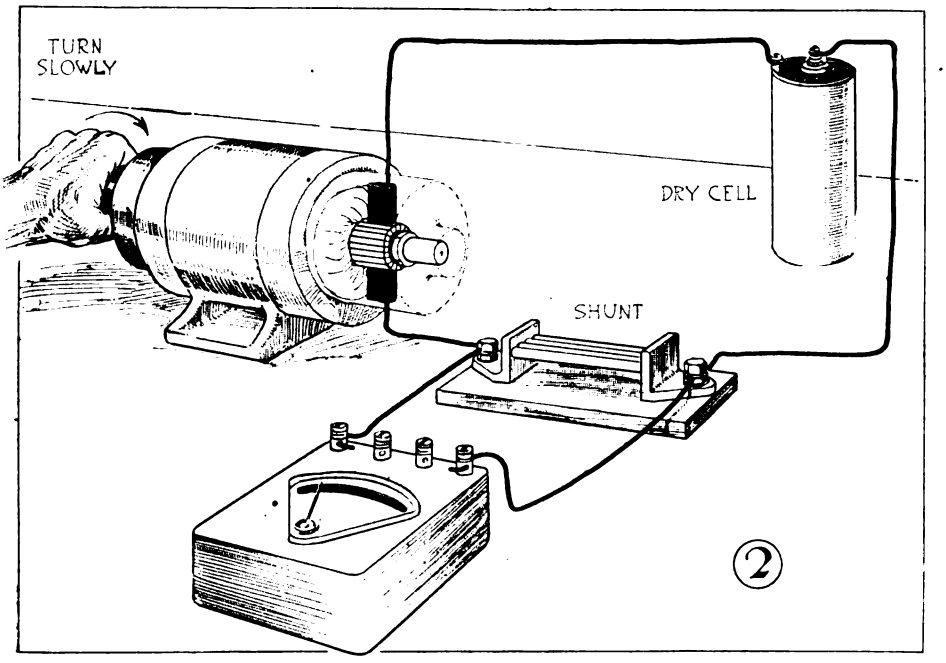

USE OF THE SHUNT

Usually three shunts are provided with the meter permitting it to be used as an ammeter. The largest generally has a capacity of about 300 amp., the second of 30 amp., and the third of 3 amp. These are connected in series with the line and transmit the larger part of the current, the smaller part passing through the instrument. Here, likewise, the largest shunt should be connected first, otherwise the instrument may be injured because of the large amount of voltage applied to it.

The method of connecting the shunt in the circuit is shown in Fig. 1, C. It will be noted that the .1-volt terminal on the meter is used. If the resulting deflection of the needle is found too small when the largest shunt is used, the middle shunt is next employed. If this, too, permits a small deflection, the smallest shunt may be used, but the smallest shunt should not be used unless it is known absolutely that the current flow is less than the capacity of that shunt.

The volt-ammeter described above is the one recommended for general electrical service work. However, many electrical service men state that their choice of instruments would be a 15 scale voltmeter and a 30 scale ammeter reading both to right and left of the zero mark, together with the necessary shunts. The use of these instruments is practically the same as that of the combined instrument, and the following instructions apply equally to both:

Digitized by Google

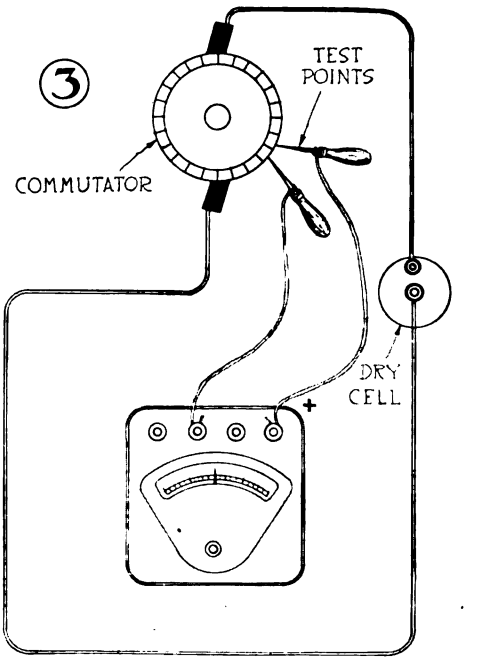

Fig. 2—Left—Coils of the generator armature may be tested by the use of a voltmeter, shunt and dry cell connected in the above manner. Fig. 3—Right—Individual generator coils are tested for short or open circuits after the voltage has been applied to the coils from a dry cell. Voltmeter readings are taken from each pair of commutator bars in the manner shown

To test a generator armature coil it is not necessary to remove the generator from the car, though it is often advisable to do this for the sake of accessibility. The first step is to disconnect the battery from the system so that there is no conflicting current source to affect the readings and perhaps damage the instrument. From the wiring diagram of the particular generator in question, the shunt field terminal should be located and disconnected from the brushes. The voltmeter is then connected into the system as shown in Fig. 1, using a single dry cell as a source of current. The armature is then turned over slowly by hand in the normal direction of rotation and the meter readings noted.

Providing the brushes are in good condition and the commutator is not grooved, no particular change in the meter readings should be registered. However, if the reading suddenly drops or increases a defective armature coil is indicated.

Each of the armature coils may be tested in turn in the manner shown in Fig. 3. The field coils are disconnected from the brushes and by means of a test point readings are taken between each two adjacent commutator bars. A marked increase in the meter reading shows an open circuit in that set of armature coils.

If on holding these test points on two adjacent bars and turning the armature slowly it is noted that at any particular point the reading drops very nearly to zero, a short circuited coil is indicated.

The diagram, Fig. 4, may help to make these tests clearer. Fig. 4 A shows the diagram of a commutator with the carbon brushes which supply the current during the test arranged at top and bottom.

With the current flowing it will be seen that it divides equally from the upper brush passing down each side of the armature winding circuits and out at the lower brush. If the windings are in good condition, the voltage drop between any two commutator bars will be the same and therefore the reading on the meter when the two test points are placed on any adjacent commutator bars will be uniform. If, however, there is an open circuit in one of the armature windings as at X Fig. 4 B there will be an interruption in the path of the current on that side of the commutator, and if

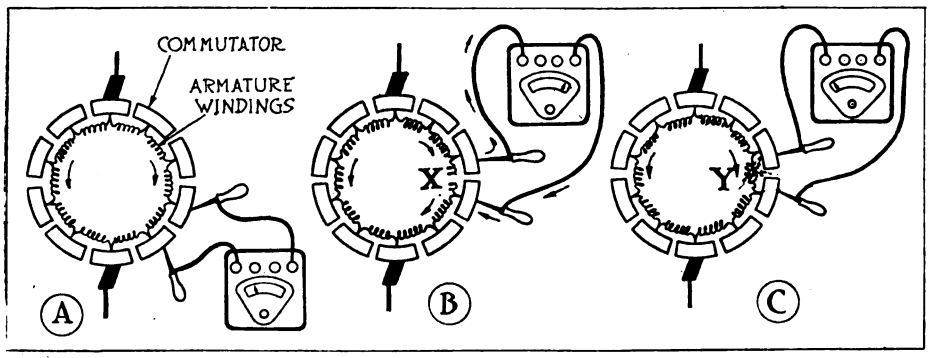

Fig. 4—Diagrams of commutator and armature windings under tests showing the effect on the meter of a short circuited coil B and a broken circuit C in the armature windings

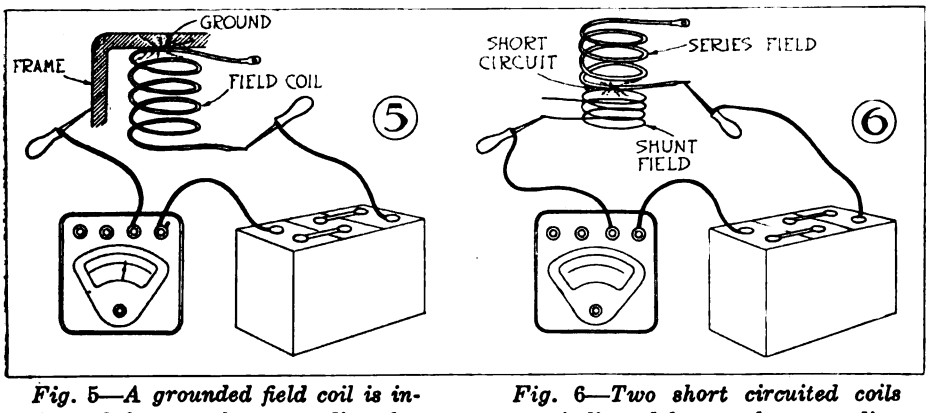

Fig. 5—A grounded field coil is indicated by a voltage reading between one end of the coil and the frame

Fig. 6—Two short circuited coils are indicated by a voltage reading obtained between their free ends

Digitized by Google

the test points are placed on the two bars connected to the defective winding, there will be a big deflection of the needle since the meter will carry all the current flowing down that side of the armature winding. Note that if the test points are placed on any other pair of adjacent commutator bars on that side having the defective coil there will be a zero reading.

In the case of a short-circuited armature winding Fig. 4 Y the reading on the voltmeter placed across the two commutator bars connected to that coil will be practically zero, the short-circuited coil having the effect of a shunt across the terminals of the instrument. There will, however, be a slight reading as current is flowing around that half of the armature winding, although the drop in voltage between the two commutator bars connected to the defective coil will naturally be very much less than the normal drop between the ends of a coil that is in good condition.

If the combination instrument first described is being used, connections should be made to the .1-volt terminal, so that the voltage drop may be more accurately measured. The readings on the commutator bars during this test should be approximately the same providing the armature is in good condition.

It is only a special or trained mechanic that can repair a defective armature coil and the most advisable method is to return the armature complete to the manufacturer and install a new armature known to be in good condition.

Testing Field Coils

Field coils may be tested by means of a voltmeter and a 6-volt storage battery in much the manner that tests are made with a test lamp. The common method for testing a field coil for an open circuit is shown in Fig. 5. The two ends of the coil are located from the wiring diagram of the particular equipment at hand and these ends disconnected from contact with any part of the frame. The storage battery is then connected in series with the voltmeter and the test points, and one test point is placed at each end of the field coil being tested.

If the field coil is in good condition the voltmeter reading will be approximately the same as that when the two ends of the test point are placed together. If no voltage reading whatsoever is registered, it is because of an open circuit caused by a break in the field coil. This necessitates a replacement or repair of the coil.

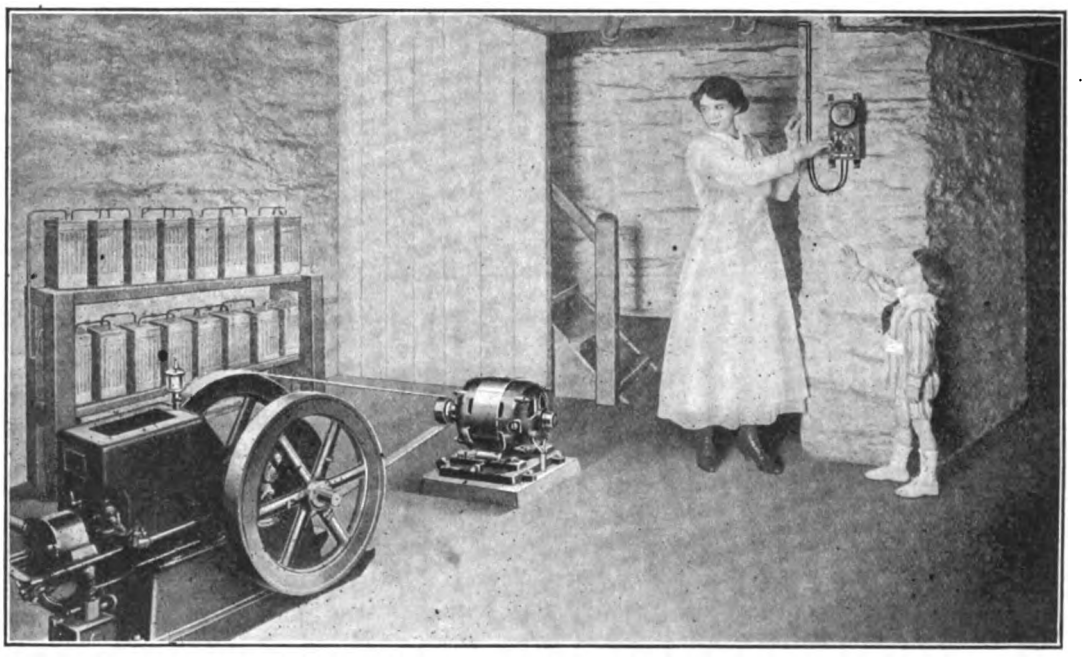
It is possible that some part of the field coil is grounded on the frame of the generator. This condition can readily be determined by placing one test point on the frame of the generator and the other at one end of the field coil, Fig. 5. If both ends of the field coil are free from contact from the frame or from any binding posts, a reading on the instrument indicates that the field coil is grounded. This condition necessitates replacement of the coil or else a repair of the insulation.

One of the possibilities present is that of a short circuit between the shunt field and the series field coils, providing both are present. The method of testing is indicated in Fig. 6. Both ends of both coils are disconnected from their terminals and from contact with any part of the frame or each other. One test point is then placed on a free end of the shunt field coil and the other test point on a free end of the series field coil. Providing the two coils are not short circuited there will be no reading on the instrument and if such a reading is present the coils are short circuited. Replacement or repair of the defective insulation is necessary and this should be done by the factory or by some mechanic skilled in the particular equipment at hand.

From the above it will be noted that the following general rules for electrical testing may be derived:

1—Start with the assumption that the highest possible voltage or amperage is to pass through the instrument and make the connections accordingly. Otherwise the voltage or amperage applied may be in excess of that for which the instrument was designed, resulting in destruction or injury.

2—Disconnect the storage battery of the car on which the equipment is being tested so that it will not interfere with the test.



3—Test only one part of the apparatus at a time and remove both ends of the circuit being tested from contact with the frame or with any other circuit at its point connection with the terminals. Otherwise the test can not be isolated to the particular circuit in question.

Western Electric Power and Light Outfit

A NEW type of power and light outfit is being marketed by the Western Electric Co., 195 Broadway, New York. The outfit is simple, compact and easy to operate, being of the belted type with an automatic regulator. It consists of three parts—generator, storage batteries and a panel on which the regulator is mounted. There are two sizes, differing only in the capacity of the storage batteries, 7-R-90 and the 7-R-180, having batteries of 90 and 180 ampere hour capacity respectively. The generators in both cases are 700-watt machines.

The switch panel, which is the main point of interest in the outfit, is 5 x 10 in., with the automatic regulator at the top. Below is a single-pole, double-throw starting and running switch which throws in the generator. This switch is thrown into the run position when current is taken either from the batteries or generator. There are also two battery protecting fuses on the panel, one to protect from excess line current and the other to protect from excess generator current.

When the engine has been started by throwing the switch first to the left and then to the right after getting up speed, the automatic regulator takes full command of charging the batteries. There is neither ammeter nor voltmeter to read. As soon as the batteries are charged, a magnetic device inside the regulator automatically tapers off the current. The selling price is $325 for the 7-R-90 and $385 for the 7-R-180, both prices being without engine.

Repairshop Shortcuts

From Motor World Mechanics

No. 1655—TO WEAR IN FORD BEARINGS

Ford main bearings, connecting-rod bearings or oversize pistons are worn in by bolting the cylinder block to the drill-press table, with cylinder head removed and four ½-in. pieces under the corners between head and table to give clearance to pistons. A flywheel of the bolted-on type is drilled to fit the flange of the Ford crankshaft and bolted on. The table is turned so that the flywheel lines up with the drive pulley of the drill press and is then belted up. An elevating screw is used to tighten the belt.—C. L. Bloxham, Etna Garage, Etna Green, Ind.

No. 1656—PISTON-RING TOOL

A tool for removing and replacing piston rings is made by grinding down an old table knife, preferably one with a metal handle, till it is about ⅜ in. wide and has a rounded section. This is slipped in back of the ring at the ends, and as the ring comes out it is guided over the piston flats with the other hand. In replacing the ring the center is placed in the groove where it belongs, and the tool slipped under the ends will guide them.—Eugene E. Geoffrey, Silent Knight Motor Repairshop, New York.

No. 1657—REMOVING OLD TIRES

A quick way to remove old, worn-out solid tires from truck wheels is to cut the tires and rims off with a power hack-saw, having a face plate on the front to which the wheel is clamped with a stud and hand nut. A wooden platform with a ramp is placed in front of the face plate and the wheel is rolled up the ramp. Different height platforms allow different diameter wheels to be clamped on to bring their tops to the level of the saw.—George E. Wilhelm, B. F. Goodrich Rubber Co., New York City.

No. 1658—REMOVING FORD TRANSMISSION DRIVE PLATE

In removing the Ford transmission drive plate the first cap screw removed is placed under the clutchshift to remove the spring tension from the clutch fingers. The clutchshift is pried up and the screw left in this place until ready to reassemble the drive plate.—Robert B. Murphy, Ford Motor Co., Detroit.

No. 1659—SPARK-PLUG TESTER

A spark-plug tester to ground two plugs at once is made by bending the blade of a screwdriver 8 or 10 in. long, filing a flat and drilling two holes for bolts or machine screws to hold a flat piece of metal bent as shown. By resting this instrument on two adjacent plugs of a four-cylinder engine, a third plug can be grounded with an ordinary screwdriver, allowing the engine to run on one plug. If this plug is not at fault the tools can be shifted.—Alfred Statlander, Colt-Stratton Co., New York City.

No. 1660—CONCRETE DOOR PROTECTOR

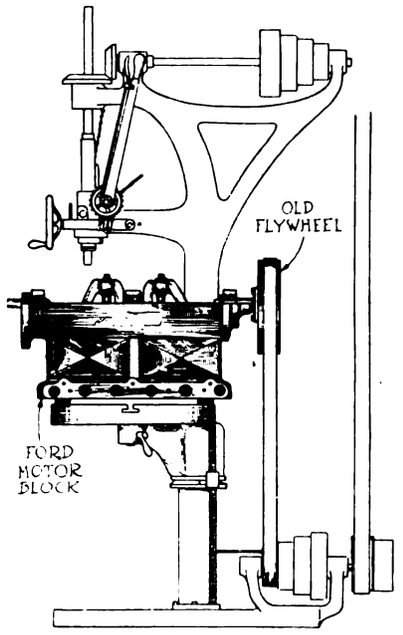
Where garage doors are hinged and open inward a rounded lump of concrete placed opposite the end of the door in its open position prevents cars from backing into the door. The lump is made of such size and shape that if it is hit squarely it will stop the car, and if hit near the side it will shift the car over to the driveway.—United Motor Service, New York City.

No. 1661—CRANKSHAFT HANDLE FOR FORDS

A handle for turning a Ford crankshaft when the bearings are being blued is made from an old rear radius rod cut about 2 ft. long, straightened out and with two flywheel bolts held in the holes by nuts.—William D. Crawford, Duncan Garage, Clovis, Cal.

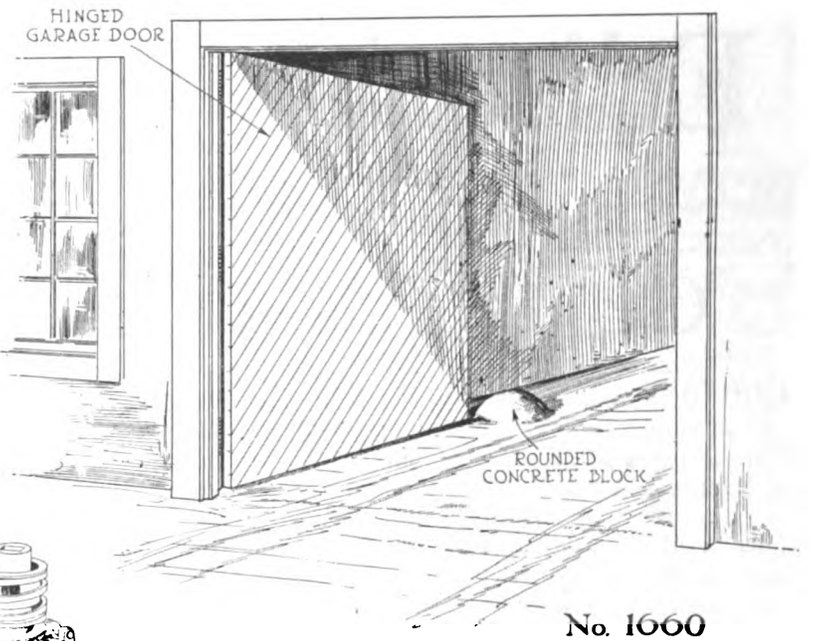
No. 1662—REPLACING A CLUTCH LINING

To force a one-piece clutch lining on a cone clutch insert a rat-tail file in a bit brace. Force the lining on as far as it will go with the file, which should be a coarse one, and by turning the bit brace the file will roll the lining into place.—S. N. S., Rockland, Me.



No. 1663—DRAWERS FOR WORKMEN'S TOOLS

Drawers for tools that are of such size and shape that they are convenient to carry around from job to job, and when not in use can be pushed into their slides under the bench and locked with hasp, staples and padlock over night or whenever desired.—Maxwell Motor Co., New York City.



$1 a Helpful Kink

HOW often have you been compelled to rack your brain to overcome some difficulty? But when you did find a solution—what a satisfaction it was! Well, here's a chance for you to dig some of those life-savers out of their hiding places and put them to work for your fellow-craftsmen. Send them to Motor World. We will pay you a dollar for every one accepted for publication. The only requirements are these: 1—Describe the shortcut briefly but clearly, in few words. 2—Send a sketch, in pencil or pen, no matter how rough; our artists will finish the job. 3—Write on ONE side of the paper only. 4—Sign your name and initials, the name of the company you are with, and the town. Write plainly. If your name is unusual, print it in capital letters.

Editorial Observation

Get the Used Car Men Together

CHICAGO'S used car managers, from a dozen to 20 in number, have formed an association for the betterment of their section of the business along Michigan avenue.

It is an idea worthy of imitation.

These used-car men operate as a semi-business, semi-social group within the Chicago Automobile Trade Association and meet about twice a month to discuss the used car business.

One of their big objects is to uplift the business in which they are engaged. They realize that an evil odor has attached itself to the used car trade, and they propose to remove it, just as the parent association aimed at this end in holding its high-class used car show.

These used car men are the row's experts. They are the men who are called upon to act on the appraisal committees when a used car is held.

Each dealer considers his own man an expert and believes the used car manager is one part of the solution of the dealer's used car problem.

Therefore, when this group of mechanical wizards gets together it represents the assembly of the best used car brains in the second biggest city in the United States.

Probably this one group represents more used car knowledge and experience than any other aggregation in the world. From its meetings should come something valuable in used car ideas and plans.

The dealer himself is a many-sided man. He thinks of all departments. These used car men are specialists. They think of but one department and that the department of which the trade generally admits it knows the least.

In every dealer's organization there is some one man—maybe it is the dealer himself—who pays most attention to the used car end.

It would be worth while in every city in the country if there could be a formal or informal gathering once or twice a month for the consideration of used cars and nothing else.

It would give every dealer the benefit of the ideas of all the others and might put stability and profit into what is in too many towns a serious business situation.

The "Cops" and the Drive-aways

FROM several parts of the country have come reports that the drivers of cars from the factories are being unreasonably molested by the police. Generally it is the over-officious arm of the law in some lesser community, whose chief glory and object in life is to display his badge and march down Main Street to the "hoose gow" with a "prisoner." Authority always does go to the heads of some people, b'gosh!

One would believe that an officer of the law would, above all things, have at heart the welfare of the whole country and that he would be big enough to realize that a drive-away is only a war-time freight train; but we all know human nature, and we all know the "cop" has no such conception of his job or his duty to his country. If he were capable of such conceptions he wouldn't remain a small town "cop."

Therefore, it seems necessary that the dealers give serious attention to this matter. Every driver who is molested while en route from the factory should make that fact known to his employer. The dealer should at once communicate with the trade association in his own town.

This local trade association should then take the matter up with the National Automobile Dealers' Association, or, if a local man happens to be a national officer, it should get this local trade association representative on the job and representations should be made to the proper authorities. It is all nonsense that a small town official should be permitted to obstruct such a national benefit as the motor car drive-away.

In Pennsylvania practice similar to that outlined above was followed with the result that the state authorities ruled that the first and last cars of the drive-away should carry tags, thus running the train as one car, and that the cars in between should travel a certain distance apart and carry temporary markings only. This ruling was communicated to all the police officers of the state, with the result that there is no more interference by country constables.

The Pennsylvania representative of the national association is now taking the matter up with the police of a New York State city where similar trouble occurred.

The big point is that ALL such cases should be reported to some one and some action taken. Appeal by an individual dealer is not of much use. Action should come through an organization. Furthermore, if there is much trouble the associations should go to the state authorities and not monkey with petty officers.

Don't forget this: It is a two-sided matter. While real state officers may be willing to wink at a strict interpretation of the law so far as licenses are concerned, there is no excuse for drivers violating the speed laws. The dealers will only get themselves in wrong if they uphold what is clearly illegal and against the public welfare.

A driver who can't drive according to orders should not be permitted to drive. And the orders should be that driving should be at a moderate speed and at all times with safety to the public. If the drive-aways become speed carnivals it will not be long before they will get undesirable publicity and will be restricted everywhere. It's two-sided. Ask for reasonable law enforcement and not for privilege.

Letters from Readers

THIS page is for the use of MOTOR WORLD readers with something to say. Letters on subjects of interest to dealers, garagemen, repairmen and jobbers are always welcome.—EDITOR.

Three Cars Per Driver

Editor Motor World: The Arkansas Valley Auto Co. of Pueblo, Col., Ford agent, enjoys the distinction of making the first interstate trip, handling three automobiles for each driver. The trip was made from Kansas City, Mo., to Pueblo, Col., by W. K. Hurd, proprietor; Wayne Torrey, service superintendent, and Jim Findley, mechanic, for the above firm.

The trip was made in 5 days, and one day was consumed in getting the cars in shape to travel, adjusting equipment, etc., leaving about 4 days for the 650 miles.

Three cars were handled by each driver, being connected with pull or towbars made up special in the shop.

The second motor, as well as the first, was run. This was accomplished by disconnecting the carbureter pull rod and putting a small spring on the carbureter to close it automatically. Then we attached a flexible wire cable to the carbureter through the engine in place of the pull rod, attaching a small pulley on the left-hand side of the motor, running the wire cable through this to the front car, so the driver in the front car could open carbureter as much as necessary, thus giving two powerplants for the three cars. From the third car we removed the universal joint (putting a short bushing in its place), and brakeshoes, so that it rolled very easily.

The trip was an entire success, and saved six drivers on the nine cars and quite a sum in money. In fact, it worked out so satisfactorily that Mr. Hurd is now handling all his cars from Denver in this way, and not only saves considerable money in transportation, meals, lodging, etc., but can keep his help down to the minimum during the war, which is a help to the country.—Arkansas Valley Auto Co., Pueblo, Col.

Lest You Forget

Editor Motor World: We enclose herewith tag, "Lest You Forget," which the Thermoid Rubber Co. furnishes for the dealer to tie on the steering wheel after he has installed new brake lining on a car.

You will note there are 18 inspections that every motorist should make regularly in order to keep his car in perfect condition.

We find that the dealers are very favorable to putting this tag on, as it refers to various items that mean business to them.—J. Walter Thompson Co., New York.

This is the tag the Thermoid Rubber Co. is supplying dealers to assist in the merchandising of brake lining

Entering Truck Business

Editor Motor World: I come to you for advice on a subject of vital importance to me, because I feel that whatever advice you can give me will be authoritative. And I assure you of my appreciation of the favor.

I am contemplating going into the motor truck business, yet I have no experience in that line of business. At present I am connected with one of the largest manufacturing concerns of its kind in the country as assistant advertising manager. I have in the past been assistant sales manager and advertising manager. So you will see that I have had a thorough business training.

Do you think it advisable, under the circumstances, for me to go into the motor truck business?

Would I require any preliminary training in that particular line?

What amount of capital would be required for the sale of a good, reputable truck in a city, say, like Cleveland?

Would you consider this a good time to go into the motor truck sales business, everything considered?

Would you advise trying to secure the agency for an electric truck instead of a gasoline truck in view of the threatened gasoline shortage or possible embargo?

Would it be possible to arrange with a motor truck manufacturer on a branch house basis instead of an independent dealer basis? Which arrangement do you consider best?

I trust you will pardon this intrusion on your time, and thank you in advance for the courtesy. Enclosed find stamped return envelope.—H. A. G., Canton, Ohio.

Answer—As to the advisability of entering this business it is hard to answer the question. You really will have to do that for yourself. This much we can say, however, that the truck business is now showing greater possibilities than it has shown for years, and from now on doubtless will be a fast coming business proposition.

As to preliminary training, we believe you would save yourself a great deal of worry and expense if you investigate the truck business quite thoroughly before starting in it.

It is difficult to answer your question as to the amount of capital. I have

The Arkansas Valley Auto Co. hooked three cars together in a recent drive-away, using the power plants of only two. The trip was an entire success

Digitized by Google

had correspondence with several bankers lately on the question of their relation with automobile dealers, and one of the things they mention is the under-capitalization of the dealers. I suggest that you have a good talk with some banker whom you know on this subject, because he is the man you will have to meet a great many times while you are in business, and you might as well start in right with him.

As to the opportuneness of the present day for starting in the truck business, a good deal, of course, depends upon conditions, but it is true that the truck dealers are doing well to-day.

We do not believe the gasoline shortage should cause you to take on an electric instead of a gasoline truck. The situation does not seem that serious.

If you become a branch manager you will be on a salary and commission, whereas if you open up as an independent dealer you will derive all of the profits of whatever business you build.

Nine Hayneses in One Plant

Editor Motor World: We are enclosing with this letter a picture of the largest smelter in the world, which makes pig lead and paint and other articles. We are the Tri-State Haynes Motor Co. of Joplin, Joplin, Mo., headquarters, this being the leading zinc and lead field of the world.

The picture shows nine cars which is a 1918 proposition. They have other plants around close. This plant works over 1000 men. They are Haynes believers, as you see. Thought this might make an interesting story for your wonderful automobile journal, so we are sending same to you.

The manager of this firm is O. B. Whitaker. This firm started in its infancy the first of 1917, and at the present time we control quite a large territory, and doing a great business.—Tri-State Haynes Motor Co., O. B. Whitaker, Manager, Joplin, Mo.

Lansing-Ottawa Drive-Away

Editor Motor World: We believe one of the longest drive-aways took place last week when Messrs. E. K. Emerson and T. Roberts of Ottawa, Canada, took delivery of two Oldsmobile demonstrators at the factory in Lansing, Mich., and drove them home by way of Detroit, Cleveland, Buffalo, Rochester, Watertown and Ogdensburg, one of the features of the drive being a non-stop run between Cleveland and Watertown, leaving Cleveland, Friday, April 12, at 2:30 p. m., and driving all that afternoon and night and all day Saturday, arriving in Watertown at 9 p. m. Saturday.

The Olds company's "Oldsmobile in Transit" drive-away cards are all right for the States of Michigan and Ohio, but are not countenanced in New York, where the drivers were made to buy New York State licenses by the first traffic cop in Buffalo.

The roads around Cleveland are miserable, especially so after the fall of 4 in.

The Tri-State Haynes Motor Co. sold all these nine Haynes cars to the employees of the big smelting plant that is shown in the background

of snow, which fell shortly before they passed over the road. A truck was passed mired to the chassis in the mud.

Mr. Emerson, eastern Ontario distributer for the Oldsmobile, states that business has every prospect of being very good for the coming season, the selling season being just about to open in this part of the country.

The two new cars, a sportster and a seven-passenger touring, stood the trip wonderfully, and gave absolutely no trouble during the long run.—T. Roberts, Ottawa, Ont.

Watch Your Speed

Editor Motor World: Please be informed that when you drive new cars from Chicago that you drive not faster than 15 miles per hour on Twelfth Street. In West Chicago out past the Chicago speedway they are picking up three-quarters of the dealers who take that route out of the city. I personally saw them stop every car that passed on that street for 3 hours. That is, those who were dealers in drive-aways for Iowa, Nebraska and Dakotas. The fines imposed are from $12 to $20 per car, owing to the value of the car.—From Brother Dealer, Newton, Iowa.

Use Special Publicity

Editor Motor World: We are now starting our publicity, which we write up every week for different papers, which we think would be of assistance to other dealers throughout the country, and if the inclosed item interests you I would greatly appreciate your publishing same. —Williams Motor Sales Co., Springfield, Mass.

ALL BUY BONDS

Williams Motor Sales Company's Staff Subscribe Liberally

With a 100 per cent subscription to the third Liberty Loan the Williams Motor Sales Company passed its quota last Wednesday evening after a short speech by Mr. Williams in which he cited the case of Peter, the office boy, who came to him inquiring how he could buy a bond, as being typical of every true American citizen to-day.

After the meeting Mr. Williams made arrangements for an entertainment at the Y. M. C. A., where sales and service departments met in a game of indoor baseball. It was closely contested, but in the last half of the ninth, with the game a tie, Lewis Reed, the service manager, connected with one of Warner's wide curves for a clean single and Piquott slid under Roos with the winning run.

A relay race followed in which the sales department's fleet runners easily outdistanced the heavy team of the service department. May showed lots of speed, giving Brosseau a long lead, but Brooks quickly closed up the gap and won in a walk.

In the aquatic contest E. D. Stewart, sales manager, easily showed his superiority in the water by winning the 50-yd. dash and high dive.

G. A. Hay, office manager, closed an otherwise enjoyable evening by announcing his engagement and inviting those present to be his guests at a farewell bachelor dinner at the Kimball Hotel, April 26.

This is the first of a series of monthly meetings in which the Williams Motor Sales Company employees will discuss problems connected with their work.

Dealers from Ogdensburg, N. Y.; Providence, R. I.; Boston, Philadelphia, and Syracuse, N. Y., came to the Springfield Auto Storage last week to drive away cars that have been stored here during the winter. P. A. Williams, Jr., president of the Springfield Auto Storage Company, announces that he can still make arrangements for free transportation for anyone who wishes to go to Philadelphia, Washington, D. C., Richmond, Syracuse, Boston or Providence the last of this month.

Return Loads Bureau For Detroit

DETROIT, May 3—Plans are on foot to establish a Return Loads Bureau in Detroit. Letters are now being sent out to all truckmen of this city and chambers of commerce in the surrounding towns, to make a survey of the extent to which Detroit concerns are making use of motor trucks in sending supplies to nearby cities and what assurance there is of securing enough tonnage on the return trip. Arthur T. Waterfall, traffic manager of Dodge Brothers, is chairman of the transport committee which will have charge of the new bureau.

The 1918 edition of "Correct Lubrication," a booklet published by the Vacuum Oil Co., has been issued. Lubrication, as applied to all automotive vehicles, is discussed, and remedies for lubrication troubles suggested. A feature of the booklet is a table of every make of car, tractor, motorcycle, railway motor car and motor boat engine, showing the grade of oil to be used in summer and winter, in each part of the car.

Here Is a Good Envelope Stuffer

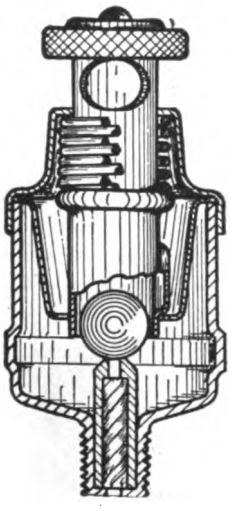
USED CARS

USED CARS are not always *abused cars.* We are constantly taking in cars on new Chalmers cars. These cars are, as a rule, dependable and still have lots of service left in them. We are very careful in making trades to see to it that the used cars have not been abused and that they are in usable condition when we get them.

If you contemplate the purchase of an automobile and feel that the higher prices of the new cars are prohibitive we suggest that you look over our stock of used cars. Our plan of selling same will make it absoluutely certain that the car is going to give satisfaction.

Yours truly,

FORT DODGE AUTO CO.



It is used with good results by the Fort Dodge Auto Co., Fort Dodge, Iowa

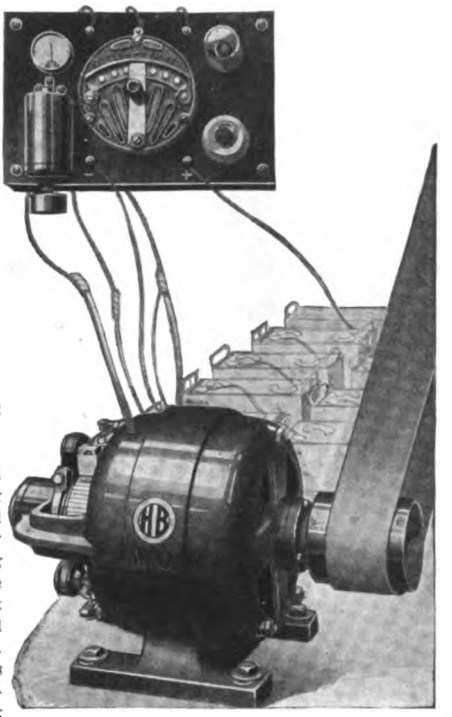
Accessories



CONSOLIDATED AUTOMATIC OIL CUP

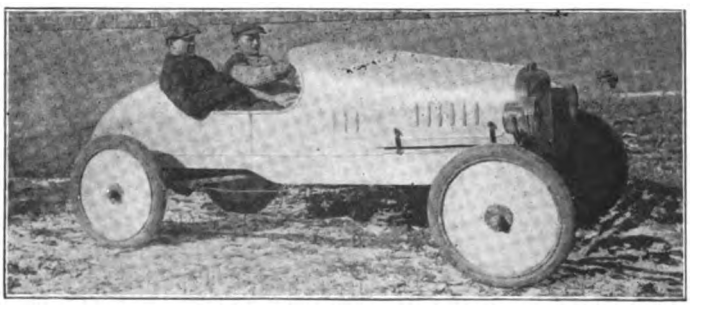
An oil cup with ball valve which is upset by vibration of car, permitting oil to drop onto bearing during time of vibration and shutting off the supply at other times. Made in various exterior shapes with the same internal characteristics.—Consolidated Machine Co., Detroit.

HB BATTERY CHARGING OUTFIT

A battery charging outfit consisting of generator and switchboard panel, to charge at once seven 6-volt batteries or their equivalent. The generator is belt-driven from line shaft or engine, requiring 1 hp. to operate. Switchboard is fitted with ammeter, pilot light, field rheostat, circuit breaker, fuses and cutouts. Outfit can be bought on extended payment plan.—Hobart Bros. Co., Troy, Ohio.

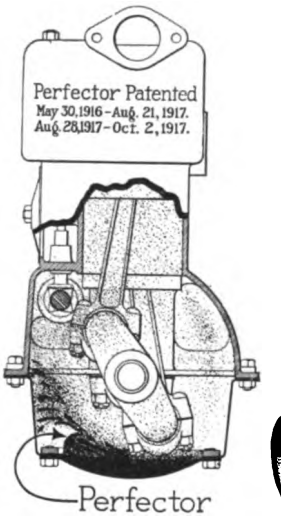
STAY-ON PETCOCK WRENCH

An extended handle to turn oil-level petcocks on Fords. The inner end is a socket which fits over petcock handle and is locked there, the rod extending out between the fender and runningboard shield with handle outside. A spring rests on fender to prevent rattling. Price 35 cents.—G. & H. Mfg. Co., 21 E. Fourth Street, New York City, manufacturer, Motor Car Equipment Co., 21 W. Sixty-second Street, New York City, distributor.



A. & H. VALVE TOOL

A combination of four valve tools in one, to recut outside stem threads, take off hexagon nuts, remove broken plungers and ream rough nipples. Retail price $1.50, dealer price $1.13.—A. & H. Mfg. Co., Inc., 505-507 W. Forty-fifth Street, New York City.

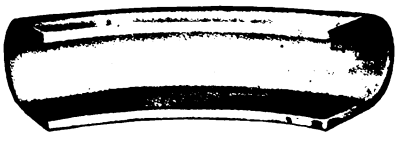


PACO RACING BODIES FOR FORDS

Racing bodies for Fords with low comfortable seats, receding rear end and long sloping hood and cowl. Lowest point of body is 8 in. below frame, hiding crankcase. Made of heavy gage sheet steel, oak sills and oak frame for dash. Bodies shipped ready to mount on chassis. Same steering post and pedals are used, complete fittings being furnished to lower steering column and fit pedals. Illustration shows Model 21 with disk wheels and V-radiator.—Paco Mfg. Co., Galesburg, Ill.

PERFECTOR OIL DEFLECTOR

A strip of sheet metal clamped under the reinforcing strip of the Ford engine base, its curved surface extending upward toward the crankshaft to intercept and deflect downward the excess oil splashed out of the pockets by the connecting rods. It is claimed that the oil which gets past the deflector is in the form of a mist for proper and efficient lubrication. Can be easily installed by removing crankcase lower cover and placing Perfector under reinforcing strip without any changes in engine. Price 50 cents.—Perfector Mfg. Co., Baker-Detwiler Building, Los Angeles.



QUAD-LAC WATERPROOF FINISH

A liquid finish for leather, Pantasote, mohair, cushions, etc., and for finishing brass and nickel in a black luster. Can also be used to touch up marred spots on bodies. Dries in 15 minutes.—Hall-Thompson Co., Hartford, Conn.

AKRON-WILLIAMS SOLID REDUCING SHELLS

Reducing shells for utilizing large molds for making repairs on small casings. Shells may be inserted or removed in a moment and are accurately machine finished with shell in contact with mold at all points. Made in 4½-5, 3½-4, and 2½-3. Size for sections an inch larger in each case. Prices from $15 to $23 depending on size and whether 1/5 or ¼ circle. Price of shell does not include bead molds.—Williams Foundry & Machine Co., Akron, Ohio.

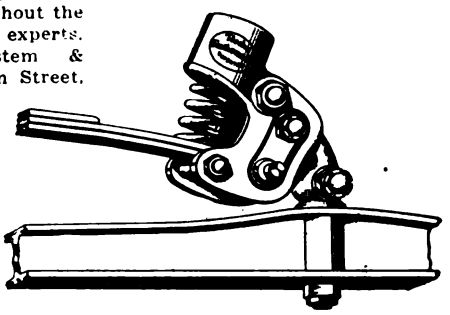
AKKURATE LEDGER

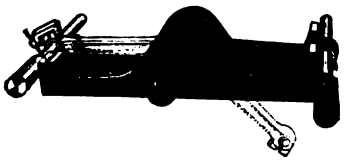
The "Akkurate" self-indexing ledger and statement system is designed especially for garagemen and supply dealers. It aims to give them in one book a simple and positive method of keeping accounts accurately without the aid of an experienced accountant and the more elaborate system of daybook, ledger, order book and statement pad.

Only one entry of any transaction is necessary, instead of the three or four usually made. Each entry is carboned onto a duplicate sheet (both carbons and duplicate sheet being furnished). At the end of the month a final entry is made, and the statements are then ready to be mailed.

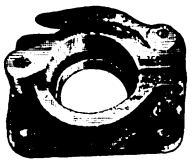


The system is contained complete in one loose-leaf book, with the proper alphabetical indices for easy reference. Under each letter the pages are indexed under the names of the customers. Additional pages are furnished upon order, to be inserted in the Akkurate as needed.

The maker claims for it an obvious convenience and a simple method of assuring a proper record of all transactions, a saving in time of billing and rendering statements, and the certainty of retaining a record of all sales after the bills are submitted, thus permitting an easy audit of all accounts. The fact that this is all possible with one book is the manufacturer's chief selling argument. A number of other systems are also made, designed to meet the need for a more careful record in garages and supply stores than is usually kept without the services of bookkeeping experts. —The Accurate System & Manifolding Co., 12 Elm Street, New York.

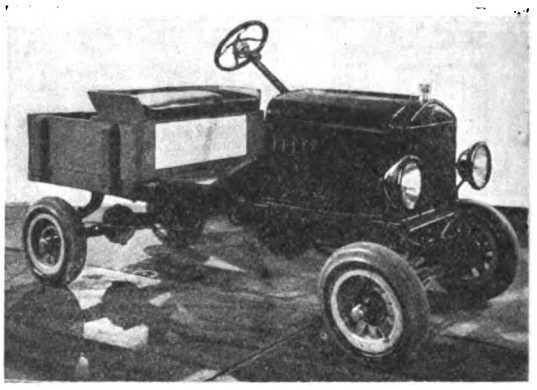


FEATHERRIDE ABSORBERS FOR FORDS



Coil-spring absorbers to check side sway and absorb rebound, consisting of two small malleable iron jackets, a heavy steel coil spring and two bolts. They fit over the front and rear shackles. Nothing on the car is removed or disturbed and the absorbers can be attached in a few minutes. Price $7.50 per set of four.—Roche Electric Mfg. Co., 215-17 N. Division Avenue, Grand Rapids, Mich.

STORM CONNECTING ROD GAGE



A gage for straightening and aligning Ford connecting rods, consisting of a casting or gage which is fastened to the bench, arbors for the crank end and piston pin end and a clamp to tighten split end on arbor. The testing surfaces are accurately ground and rod is accessible while in gage, and can be quickly inserted and removed. The testing surfaces show misalignment in both directions. Price $24.—Storm Mfg. Co., Thompson, Iowa.

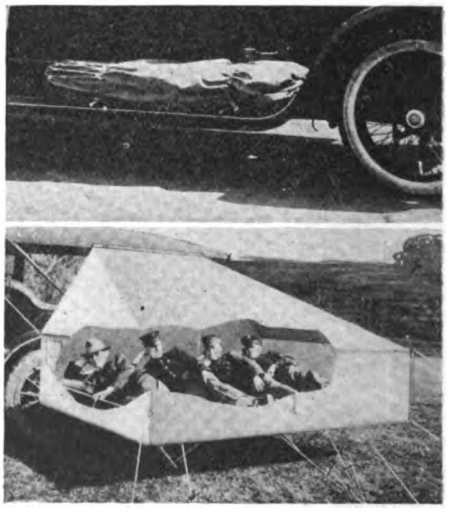
STORM PISTON VISE

A vise to hold Ford pistons while working on rings, bushings, pins, connecting rods, etc., consisting of a plate mounted on the bench, a hinged jaw and an eccentric lever to lock the piston in the vise. Jaws are lined with soft metal to protect piston, and a winged nut allows variation in opening to allow for over-size pistons. Large opening in center allows connecting rod to drop through. Price $10.—Storm Mfg. Co., Thompson, Iowa.

RUE-FORD SHOP TRACTOR

A shop tractor capable of hauling 15-20 tons is being made from a standard Ford chassis by the Rue Motor Co., 2441-45 Michigan Boulevard, Chicago, by decreasing the tread to 38 in., wheelbase to 82 in., and using a greater gear reduction and smaller wheels. The gear reduction is 4:1 instead of 3 7/11:1; wheels are artillery type fitted with 20x5 in. Fisk solid tires. With the standard Ford gear ratio and 30 in. tires, the vehicle moves forward 26 in. per revolution of the engine, while with the new gear reduction and smaller wheels, it moves only 15¾ in. Price with small box body and seat, $725.

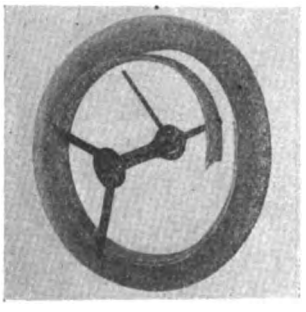
LIBERTY GUN



A radiator ornament comprising a small copy of a naval gun with sighting apparatus, elevator and breech lock. Made of durable composition metal, reinforced with steel and nickel plated. Price $5.—Liberty Sales Co., 366 Fifth Avenue, New York City.

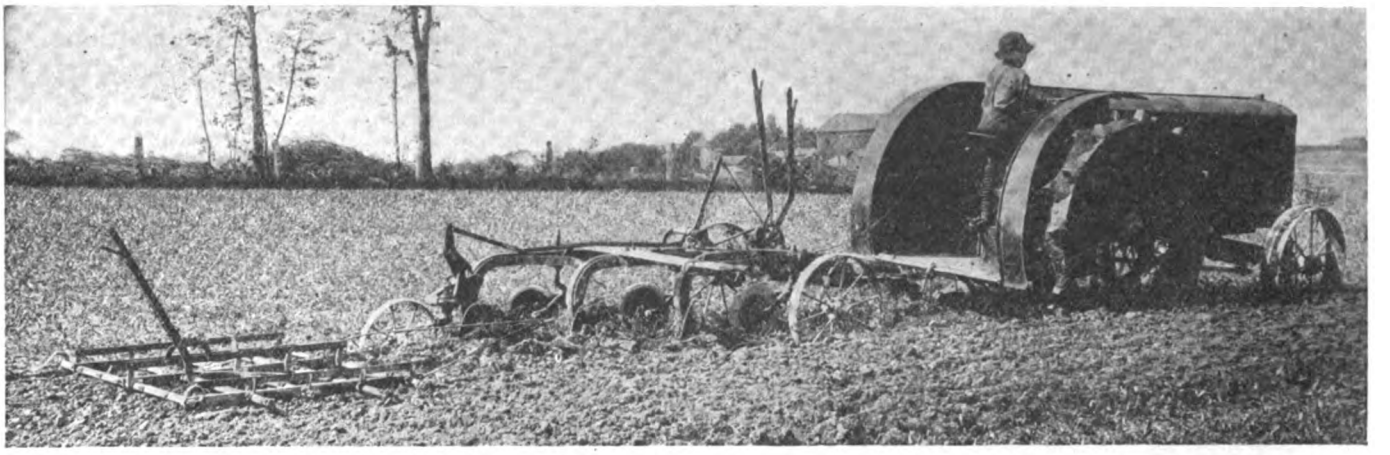
MACBETH LENS

Lenses to give long range and ample side lighting. Lenses have horizontal prisms to deflect the light and green visors to redirect the upward rays downward. Made to fit all standard size lamps, $5 per pair. Set of Fords, $4. West of Denver 50 cents higher.—Macbeth-Evans Glass Co., Pittsburgh.



WITTMAN AUTO-CAMP

A complete camping outfit consisting of tent, bed with flexible mat, tourist trunk and all attaching accessories. The bed is a patented one-legged construction that is not sagged or rocked out of the floor line no matter where the weight is placed. The bed and tent fold up into two packages. Camps with sleeping capacity of 1 to 4 persons at prices from $45.30 to $80.40. J. H. Wittman Mfg. Co., 347 Fifth Avenue, New York City.



MILLION RIM TOOL

A combination rim tool and emergency jack to remove and replace all makes and sizes of split rims without other tools or attachments. Can be folded up in small space. Two hooks on the tool are stationary and the third is attached to a screw ¾ in. diameter, No. 6 square thread. Price $2.50.—Million Motor Co., Adrian, Mich.

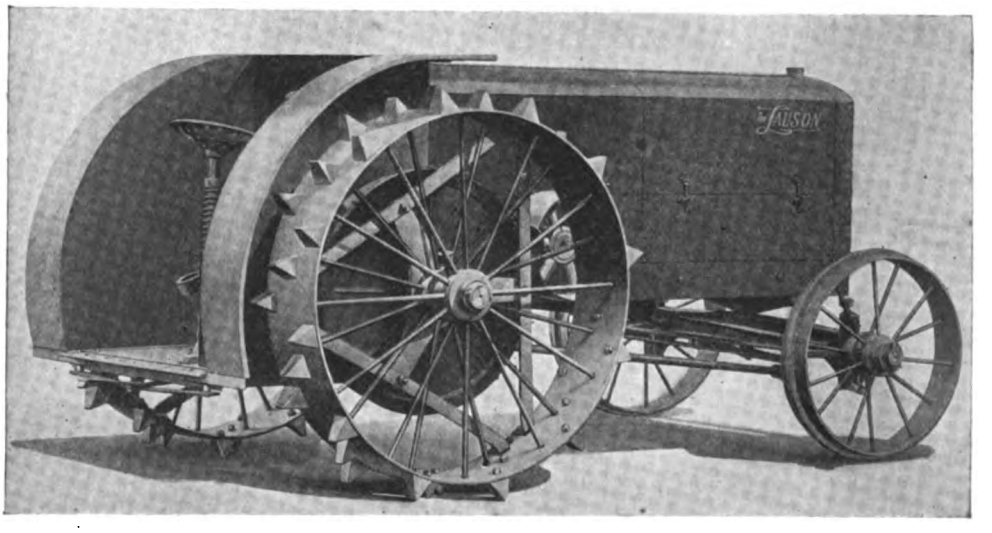
Lauson Building New Kerosene Tractor

"Full Jeweled" Model, with Unit Assembly Throughout and Dust-Proof Construction, Will Sell for $1,800—Can Pull Four 14-In. Bottom Plows

THE outstanding features of the new Lauson Full Jeweled kerosene tractor, manufactured by the John Lauson Mfg. Co., New Holstein, Wis., are unit assembly all the way through so that any part can be reached without disturbing any other part; anti-friction Hyatt or Timken bearing on every shaft; dust proof construction, which extends to the bull gear and the bull pinion, which are enclosed in a dust proof housing and which run in oil; special adaptability for belt work.

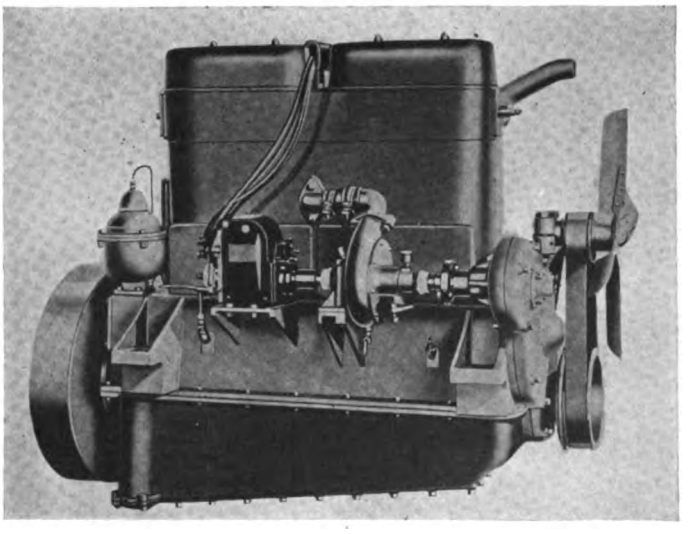
The tractor is of the 4-wheel type, is rated at 15 hp. on the draw bar and 25 hp. on the belt, although the engine will develop at least 20 per cent greater power as a reserve for emergency use. It weighs 5550 lb. without fuel, water, oil and lugs, distributed two-thirds on the drive wheels and one-third on the steering wheels. It has a plowing speed of 2½ m.p.h., a low emergency of 1¾ m.p.h., and a reverse. It will pull three 14-in. bottom plows under average conditions, and four under favorable conditions, and has belt power capacity for the largest sized silo filler or a grain separator up to 30 in. cylinder. It sells for $1,800.



Unit assembly and accessibility of parts are emphasized in the construction. Beginning with the flexible Clark universal coupling between engine and transmission, so that either may be reached without interference with the other, the principle of accessible unit construction is maintained throughout. Simplicity of construction also is a feature, particularly in the transmission, where gears have been reduced to a minimum.

Herein the unit construction prevents the possibility of spreading in the differential unit, as the secondary drive and the compensating gears constitute a complete unit and are an integral part of the transmission. The bull pinion shaft is splined so that it can be drawn out, making the differential unit removable. The cylinder head of the engine is readily removable, giving ready access to the cylinders and facilitating the grinding in of valves. The lower half of the crankcase has a plate at the bottom which can be removed, giving easy access to the crank bearings.

In all, 24 sets of anti-friction Wyatt and Timken bearings are used, giving rise to the name Full Jeweled. The rear axle is equipped with heavy duty Hyatt roller bearings, while the front wheels are supplied with dust proof hubs and Timken roller bearings. All shafts in the transmission, as shown in the illustration, have Hyatt roller bearings, and the fly-ball governor is mounted on ball bearings. The connecting rod bearings are brass backed and asbestified and have four bolts, insuring rigidity and providing a wider margin of safety.



All working parts are thoroughly protected against dust and dirt. The crankcase and the transmission case are dirt and dust proof, and the bull pinion and bull gear are enclosed in a dust proof case with felt ring joint and run in oil. As open gears usually are the first part of a tractor to wear out, and as they frequently last through one season only, this enclosing of the bull gears on the Lauson will materially lengthen the life of the tractor.

The fly-ball governor, of the company's own design, is an integral part of the engine, is enclosed in a dust proof case and also runs in oil. It is driven direct from the cam shaft, thus obviating the necessity of a governor belt. As an additional precaution against dirt the engine, transmission case and fuel tanks all are covered with an automobile type hood. This enabled the designer to give the

Lauson-Beaver engine

Lauson Tractor Specifications

Engine	Lauson-Beaver, 4-cyl., 4½x6, valve in head
Ignition	Sumter-Dixie
Carbureter	Kingston, Bennett air cleaner as standard equipment
Radiator	Perfex
Clutch	Internal expansion
Control	From back platform
Transmission	Selective
Pulley	Diameter 18 in., face 8 in., speed 475 r.p.m.
Wheels	Drivers, Diameter 54 in., face 12 in. Front—Diameter 32 in., face 8 in.
Wheelbase	86 in., length overall 136 in.
Width	74 in.
Height	62 in.
Tread	52 in.
Road clearance	11½ in.
Draw bar height	17 in.
Turning radius	20 ft.
Capacity of fuel tanks	13½-gals. (gasoline and kerosene)

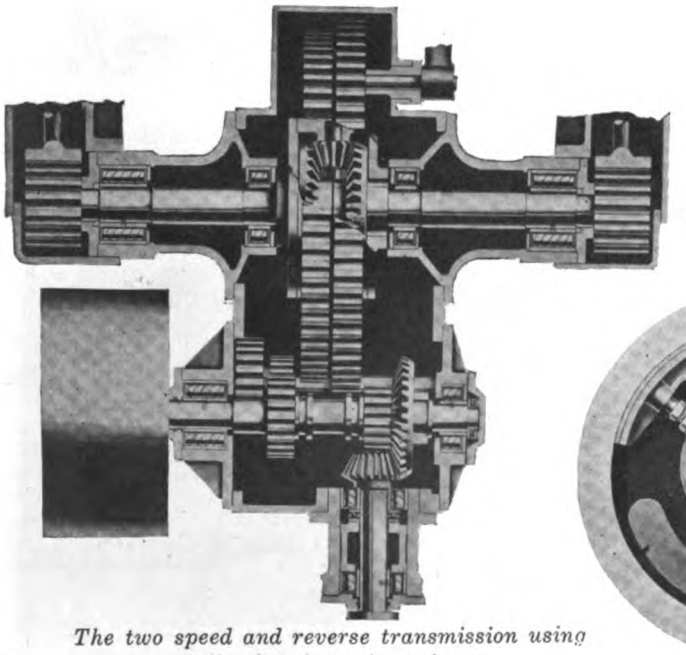
machine artistic lines, something which will appeal to the taste of the average farmer.

The Lauson tractor is not merely adaptable to belt work, it was especially designed to work on the belt. When the transmission is thrown into neutral the pulley derives its power directly from the engine and thus practically the whole power of the engine is transmitted to the belt. This is shown in the illustration of the transmission.

Lubrication is by pump which automatically oils all bearings and gears, including the governor and cam bearings. Oil is forced into the crank shaft bearings by the pump under 30 lb. pressure through ducts bored in the cheeks of the crank shaft. This force feed lubrication system is supplemented by the ordinary splash system.

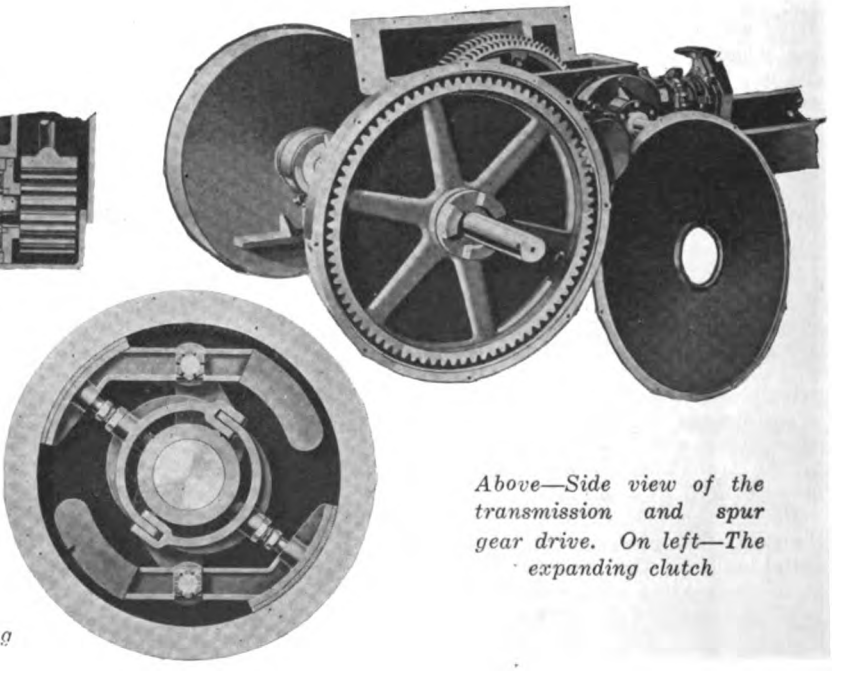
Gears are of hardened chrome nickel steel. Bull pinions are of steel and bull gears of semi-steel, all machine cut. The bull gear has 3½ in. face.

The draw bar hitch is of standard height, 17 in., and a stationary draw bar is used for plowing, thus providing the approved hitch when two wheels run in the furrow. For harrowing and other work a swinging draw bar is furnished.



Ohio to Improve Buffalo Road

DETROIT, May 6—Two of the most important roads in northern Ohio are scheduled for improvement this year. They are the Ashtabula-Conneaut link of the Buffalo route and the Northfield Road from Cleveland to Akron. It is hoped to have the work started on both roads this season. The Cleveland Automobile Club has for a long time been urging the expenditure of State funds on these highways. Committees have pointed out the commercial as well as military value of these roads. When the Conneaut link is completed a hard surface road will run from Toledo, by way of Cleveland, to Buffalo. Traffic between Akron and Cleveland is greater than between any other two cities in the State, and Akron industries are said to be almost entirely dependent on highway transport to Cleveland.



Work of N. A. D. A. Committee Endorsed
